## Just a Word

We broke our own record of "the swiftest news and picture service" in reporting the Republican Convention in The Independent of June 19-26. Only four days after the convention had nominated Senator Harding The Independent, with the candidate's portrait in colors on the cover, was in the hands of its readers. Inside the magazine were more pictures of Senator Harding, of Governor Coolidge, of the convention in session, and of its foremost figures. The leading article gave a first-hand account of the entire convention proceedings; the nomination and the platform were discussed at length in the editorial pages; the platform was published plank by plank; and the results of the balloting were summarized in The Story of the Week. This Convention Number of The Independent "scooped" the Sunday newspapers as well as the other weekly news magazines by several days. Charles Phelps Cushing wrote in *If You Don't Write Fiction*, a recently published book of advice to authors, "You should have tried The Independent, which makes a specialty of getting hot stuff into circulation before it has time to cool." The June 19-26 issue adds considerably to our reputation in that respect.

## New Plays

*Nightshade*. An American drama by an unnamed author which makes the most desperate efforts to be tragical but just misses it somehow. (Garrikk Theater.)

*Seeing Things*, a highly amusing farce by Margaret Mayo and Aubrey Kennedy. Frank McIntyre, a ouija-board and a jealous redhaired wife furnish the fun. Laughs and chaffs at Spiritualism. (The Playhouse Theater.)

## Remarkable Remarks

ETHEL BARRYMORE—I don't like New York. I do like Philadelphia.

SENATOR JONES—The nomination of Harding was a brilliant stroke.

QUEEN MARIE OF RUMANIA—Whatever I do I do naturally without effort.

GOV. HENRY J. ALLEN—We stand for justice for the submerged nine-tenths.

LUKE MCLUKE—What has become of the old-fashioned girl who used to think.

MRS. WARREN G. HARDING—I cannot see why anyone should want to be President.

CHICK EVANS—The picture of a man measuring a missed two foot putt is full of meaning.

HORATIO BOTTOMLEY—Let the United States be formally notified that, whether she comes into the League of Nations or

## Land of the Pilgrims' Pride

A Wild Westerner's Impressions of "The Home of the Bean and the Cod,  
Where the Cabots Speak Only to Lowells, and Lowells Speak Only to God"

By Chester T. Crowell

**A**BOUT thirteen years ago when I was a cub reporter on the San Antonio, Texas, *Express*, penniless and happy, eager, earnest, filled with the desire to know more about this wonderful world, a party of very distinguished men from Boston "appeared in our midst," so to speak, and I was assigned to interview them. In those days San Antonio was struggling to develop its tourist trade, there was a boom in Southwest Texas lands, and it seemed to me appropriate to ask the Bostonese for their impressions of San Antonio. Nearly everyone I had ever confronted with a similar question had proved eager for a first page headline by saying nice things about San Antonio. But not the Bostonese! One by one they cleared their throats, selected their words with great care, looked at me over their spectacles in a manner that indicated I was an interesting foreigner and expressed their all too frank opinion of "our beautiful city." Since we did not print that particular sort of opinion my afternoon was wasted.

They told me the streets were too narrow, which was true. San Antonio

simply grew up from a Mexican village. They called my attention to the fact that the streets were very crooked. That was also true. Many of the streets had originally followed the banks of little creeks or the cow trails leading to those creeks. They told me the streets were dirty, which was also true. That fact was especially disagreeable because the wind would blow dust around those streets in a most annoying manner. We were

As a cub reporter in San Antonio I was assigned to interview some distinguished visitors from Boston as to what they considered interesting about our beautiful city

having a dry winter. I have forgotten some of the numerous other disagreeable things they said about San Antonio, but most of them were painfully obvious.

In the years which have intervened San Antonio has changed nearly all of those conditions. The streets have been widened and straightened at tremendous cost. For several years those streets have been spotless. I could rave on for pages and pages about the beauties of San Antonio,

but I forbear, because this is an article not about San Antonio or Texas but about Boston.

From that interview—and more from the bearing than the words of those Bostonese—I gathered the impression that Boston was a very beautiful city. Last February and again in March I visited Boston. Imagine my astonishment on discovering that Boston is more like the San Antonio of thirteen years ago than any other city I have ever seen. The streets are narrow and crooked, and at that time they were filthy beyond what would be possible in the dry climate of San Antonio. Snow was piled three to five feet deep in the outlying districts and had not been cleared away for a month or more. In the business section of the city, frozen slush was a foot deep and on top of that was an inch to four inches of mud that splashed from under the wheels of every passing vehicle. Almost nothing was being done to remedy this condition, which I learned had existed nearly all winter. Boston Common does not compare with San Antonio parks, nor is Boston any richer in historic interest.

At the hotel where I stopped my room number was two-hundred-and-something, but I was on the fourth or fifth floor. I had a key that I needed a wheelbarrow to carry. This reminded me of the City of Mexico. Mexican door keys are always enormous, clumsy things. Also it would be like a Mexican to have the rooms numbered two hundred on some other than the second floor. I looked and looked and looked again for some persons like the Bostonese I [Continued on page 28]

Thirteen years ago a party of Bostonese highbrows visited, and passed judgment, on San Antonio. Its streets are too narrow, too crooked, too dirty, said they. Last winter I visited Boston. Imagine my astonishment on discovering that Boston is more like the San Antonio of thirteen years ago than any other city I have ever seen

# Harding Keeps His Eye on the Ball

By Donald Wilhelm

**N**OW, in the leafy month of June, comes the Republican bridegroom, Mr. Harding. He speaks a mellifluous tongue and stands a goodly six-foot tall, with a pleasant and forceful big hand extended. He says the Grand Old Party has honored him, etc., and you wonder a little whether it was the Grand Old Party so much as the Grand Old Guard. He says that he will serve the Grand Old Party faithfully. And you wonder if that implies he will serve the Grand Old Guard faithfully. For he is a party man. Not long before he was nominated he said:

I am not unmindful of the criticism that I have no specific platform. It is the truth. I have no personal ends to serve in platform-making. No one man can make a party platform. The covenant of our party must be the deliberate and harmonized convictions of representative Republican thought, digested in national councils. I am vastly less concerned about who is to be nominated than I am about the party victory so essential to the country. I have a confidence in the representative judgment of the national convention and shall accept its judgment and support its choice.

Such gracious homage to party rule describes the Senator as a party man. He would speak to his own hurt in defense of his party. He did so in 1912—Progressives, some of them now factors in the move of the Committee of Forty-eight to establish a third party, recall the day. He is a party man. His pride is that—that and his quiet and rather droll insistence, "I am an

Ohio Republican." And doubtless to many voters it is restful to know just "where he stands!" He is a modest man. His friends say that his paper, the *Marion Star*, has never printed a line to advance his political ambitions. Senator Harding's own record in the Congressional Directory in point of word places him as about the fifth most modest Senator. It states briefly:

Senator Harding was born in Blooming Grove, Morrow County, Ohio, November 2, 1865; has been a newspaper publisher since 1884; is married; was member of the Seventy-fifth and Seventy-sixth Ohio General Assemblies as Sena-

tor from the thirteenth district, 1899-1903, and Lieutenant Governor of Ohio in 1904 and 1905; elected to the United States Senate November 3, 1914. His term of service will expire March 3, 1921.

His colleagues like him for his modesty, no doubt, and for his graciousness, and personal charm. "He is," one of them said, too, "good to look upon, and is one of the best speakers on the floor." His enemies are few. Ohio pretty generally loves him—he has spoken in all but one of its eighty-eight counties and in many of those counties many times. Doubtless if he is elected the nation will consider how pleasant a figure as President he will prove to be, and doubtless will love him for his big stature and slow stride, for his simplicity and his kindness, for his appeal to steady-going confidence. There is no probability that he will be a Richelieu, or a Roosevelt, or a Wilson, in his study—or on his horse—alone. He will not be the solitary statesman. His appeal, rather, it may be surmized, will be that of a constitutional statesman who endeavors to express in finely-cut but conservative phrase the political creed of his party.

The Senator is a publisher. He has performed about every activity in that profession, called by dint of the resourcefulness required in it, the newspaper game. Perhaps the Senator's newspaper experience enhanced in his mind the benefits of heeding and of adjusting himself to public opinion, which figures imperiously, of course, in the counting-room. And public opinion, of course, is the opinion of the average man—"a cool, common person, with considerate heart, with figures in his mind, with his own business to attend to, with a set of ordinary notions arising from study of ordinary life. He can't bear novelties or originalities."

That experience may prove in many ways valuable. For good or ill the phenomenon of political representation of economic groups—which you can describe as the essence of Bolshevism, if you like—has come into existence in our National life. And in some respects its manifestations will affect the Senator's opportunity predictably. In short, it is foolish to imagine that the ballot is king. For there are ways to get behind the ballot. There are many groups, most of them economic, getting behind the ballot. Party lines were never so

Underwood & Underwood

Senator Harding's favorite sport is golf; he likes dogs and reveres Roosevelt. He would make honesty the first requisite attribute to every man entering public service. "We can never hope properly to raise the public standard until we elevate the individual standard," he has said. "The main thing is to get honest men. . . . There is no end to the reformation honesty will work. It exalts men and commands confidence. Colonel Roosevelt was a fine example. The American worship of Colonel Roosevelt is founded on the popular belief in his absolute honesty"

Underwood & Underwood

Warren G. Harding, the Republican nominee for President, is editor and proprietor of the *Marion, Ohio, Star*. An eloquent orator, he has the reputation of conducting whirlwind campaigns. At present junior Senator from Ohio, he was Lieutenant Governor of his home state in 1904-5 and was defeated in the race for Governor in 1910. Mrs. Harding, before her marriage in 1891, was Miss Florence Kling, daughter of a leading business man of Marion, where the Hardings still have a home

uncertain. For years capital exercised its economic prowess politically. It got behind the press and in other elemental ways got behind the voters. In 1913—and thereafter—the National Woman's party decisively demonstrated its new prowess politically, as a group largely economic, along with other less aggressive groups of women. The Adamson law was important historically because, along with other laws, it was the product of political action achieved by the labor group. In the present campaign, now, what is the situation?

Capital, of course, has made its demands known. Its prowess is exercised in both parties, however. It exercises great influence in both parties. You hear it said that it controls both parties. But that contention is far-fetched nowadays.

For labor has come of age in the last half-dozen years. Its huge army is disciplined. Its leaders know the game. Whereas the Senator never has risen above party, and probably never will, labor puts its aims above party. It has approximately 50,000 local-union and other non-partizan committees at work. It has been utilizing non-partizan prowess since 1881, but that

prowess was negligible as compared to the present year. Now, with railroad organizations and all others, the ranks of labor are well above five millions, not counting wives, sisters or other womanfolk.

There are groups, and cliques, and these huge numbers are not all subject to the desires of the American Federation of Labor by any means. But recalling to mind that in 1912 the total vote cast for Presidential electors was only 15,031,169 and in 1916 only 18,528,743, and assuming, let us say, that labor is dissatisfied with the Republican party, or Mr. Harding, and you can see the significance of this huge group vote.

And as a matter of fact not only is it fairly established that labor cannot expect much from the Republican party, but it is a matter of record that out of a total of twenty-seven opportunities during the last three Congresses, Mr. Harding voted favorably to labor only seven times, unfavorably ten times, was paired unfavorably once, did not vote at all in nine other instances.

He voted for the National Suffrage Amendment three times. But, at that, [Continued on page 26]

# The Real Head of the Ticket

By John Clair Minot

Literary Editor of the Boston Herald

ONE night during a Massachusetts political campaign several years ago Calvin Coolidge, not then Governor of the commonwealth but undeniably on the road to that office, dropped into the Boston *Herald* editorial rooms for a social call. He was sitting in as easy a chair as the sanctum boasted, reading a newspaper, when a mouse, rambling around in friendly fashion after the way of newspaper office mice from time immemorial, scampered directly over his outstretched feet. Did he start suddenly and perhaps emit an exclamation more emphatic than elegant? Most of us would have done just that thing, but sudden starts and unpremeditated remarks are not Coolidge characteristics. With the utmost deliberation he laid the newspaper down in his lap and said with a drawl, "That seemed to be a mouse!" He resumed his reading and spoke no more for another ten minutes.

So it has been and will continue to be. Governor Coolidge is long on caution and slow on speech. Slow and sure is his way—not too slow, but always absolutely sure. Silence and circumspection are virtues that he inherited from his ancestors, silent, square-jawed Vermont farmer folk. His father still lives in the Green Mountain state and the neighbors will tell you that the Massachusetts Governor is "a chip of the old block." Some may get the impression that he has a suspicious nature, but that is hardly a fair interpretation of the painstaking thoroughness with which he studies both those with whom he deals and

Paul Thompson

Calvin Coolidge, Governor of Massachusetts, is not what you would call an orator. He does not use verbal smoke screens to conceal his thoughts or to cover the lack of definite, positive views. He talks only when he has something to say and when he has well considered how he will say it. But he is a patient, self-controlled public servant, a silent, modest, conscientious Governor, courageous and as firm as the granite of his native hills

every problem set before him for solution. There are very few men in whom he confides, very few things that he takes for granted without a personal investigation.

Calvin Coolidge is not the good mixer that the man who succeeds in political life is popularly supposed to be. Neither in college nor in the twenty-five years that have passed since Amherst gave him his degree has he become a member of any fraternal organization. He says it is because he has not had time, but a more socially-inclined man in his position would have managed to find the time. His home—where he and Mrs. Coolidge have two fine sons—and his work have absorbed his interest. And on Sundays he has always been a regular attendant at the Congregational church of his Puritan ancestors.

If Governor Coolidge makes any enemies in the coming campaign it will be an utterly new experience for him. In his career from councilman and then mayor of the little city of Northampton to the governorship he has never made enemies in the usual sense of the

term or been opposed on personal grounds. He has had few critics. He has made few promises—certainly none that he ever broke. Yet he is not what you would call a tactful man, for his habitual reserve leaves him open to misunderstandings and misinterpretations. He has actually avoided the newspaper publicity that men seeking office commonly court with much zeal. And he has constantly given the impression of being indifferent to his own political fortunes—certainly he has

never neglected the job at hand to give time to plans for political advancement. It was so when he became Lieutenant-Governor and Governor; it was so during the progress of the Chicago convention.

He has not the ready smile and cordial manner that we usually associate with the candidate for office. The line of his mouth is too straight and his lips are too tightly pressed. Yet he radiates confidence rather than coldness. He has a whimsical sense of humor and his eyes readily light with a friendly twinkle. He enjoys a joke and has no false sense of dignity that prevents him from making one, but it is unthinkable that he would use his sense of humor to entertain a crowd or to win votes—life is too serious with him for that sort of thing. He talks only when he has something to say and when he has well considered how he will say it. He is a first class listener. Once a committee visited him to get his opinion of a proposed plank in the platform on which he was to run for Governor. The chairman of the delegation explained the plank and asked him what he thought of it. He remained as silent and as motionless as the Sphinx. The chairman repeated his question. The Governor remained silent, but slowly swung his swivel chair so that he could look out of the window, and he kept his mouth closed and his gaze out of the window till the committee retired from the room. It was not hostility or the display of "an odd streak." He simply had not considered the matter long enough to have formed an opinion and until he had something to say

he kept silent. That is his way. He does not use verbal smoke screens to conceal his thoughts or to cover the lack of definite, positive views.

When things were reaching a crisis in the Boston police strike and the city was under the anxious eye of the whole country, Governor Coolidge kept silent so long that the emissaries of chaos thought that they had frightened him. Police Commissioner Curtis was bearing the burden of the fight and providing the stiff backbone on which everything depended. Then the Governor spoke and to the trenchancy of his utterance—"There is no right to strike against the public safety by anybody, anywhere, any time"—there was corresponding vigor of action in backing up the police commissioner. From that day the country has been

Underwood & Underwood

Sprung from sure, silent farmer folk, Governor Coolidge was born at Plymouth, Vermont, in July, 1872. His mother died when he was twelve years old but his father, John Coolidge (standing behind him) still lives in the Green Mountains. The third generation is represented by Calvin, Jr. (left), and John, Governor Coolidge's young sons

watching this patient, self-controlled public servant, this silent, modest, conscientious Governor, who is as firm as the granite of his native hills when he is convinced that the side he takes is that of right and justice and the public interest.

Granted his absolute integrity, his fearlessness and his devotion to a square deal for all, is he to be classed as too conservative to satisfy progressive Republicans and the independents? Let the unqualified support that he has had from Massachusetts Republicans and independents of every shade and degree be one answer to that. For whatever office he has been a candidate he has unfailingly run many thousands ahead of his ticket. There is perhaps another answer in his advice to the

Massachusetts Senate when he was elected to preside over it: "Expect to be called a standpatter, but don't be a standpatter. Expect to be called a demagog but don't be a demagog. Don't hesitate to be as revolutionary as science. Don't hesitate to be as reactionary as the multiplication table. Don't expect to build up the weak by pulling down the strong. Don't hurry to legislate. Give administration a chance to catch up with legislation."

Over and over again in his public addresses you will find the note of spiritual appeal. The material triumphs of our civilization are all right so far as they go, but they are only a part of the story. "Man," he said to the Massachusetts legislature, "has a spiritual nature. Touch it and it must respond as the magnet responds to the pole. To that, not to selfishness, let the laws of the commonwealth appeal. Recognize the immortal worth and dignity of man."

When Governor Coolidge received the degree of doctor of laws from Amherst a year ago President Meiklejohn complimented him on teaching the lesson of "adequate brevity" in his [Continued on page 27]

Underwood & Underwood

Governor Coolidge has no false sense of dignity. He is not too proud to wear overalls and he enjoys a joke, his eyes readily lighting up with a friendly twinkle. His own particular brand of humor is very dry

### Some of Governor Coolidge's Remarkable Remarks

Do the day's work.

Expect to be called a stand-patter, but don't be a stand-patter. Expect to be called a demagog, but don't be a demagog.

Don't hesitate to be as revolutionary as science.

Don't hesitate to be as reactionary as the multiplication table.

We need more of the office desk and less of the show window in politics.

Let men in public life substitute the midnight oil for the limelight.

The man who builds a factory builds a temple; the man who works there worships there.

Men do not make laws; they do but discover them.

Fourth article in The Independent's Industrial Series on the big plants that are finding a successful answer to the problems of labor unrest

# Why the Leitch Plan Makes Good

By Professor John R. Commons, of the University of Wisconsin

In collaboration with A. P. Haake, O. F. Carpenter, Malcom Sharp, Jennie McMullin Turner, Ethel B. Dietrich, Jean Davis, John A. Commons

**T**HE Packard Piano Company had won the strike in 1912. But the workers who came back were sullen, production was low, harmony gone. In the midst of this distressing situation the president of the company, Albert S. Bond, chanced to hear John Leitch deliver a lecture on industrial democracy.

Leitch is an industrial evangelist. He converted Mr. Bond. Bond saw the error of his ways. He had been a salesman but he had not applied the psychology of salesmanship to his employees. He had been "driving" them, not "selling" them the Packard piano. Forthwith he changed his character and attitude toward labor. He accepted at once the four corner stones of Leitch's Industrial Democracy—Justice, Coöperation, Economy, Energy and the capstone, Service.

Next he induced Leitch to come over and convert his workmen. Mass meetings were held on company time. At first the men were cold and skeptical. They wondered what the management was trying to "put over." But after a few meetings they too were converted. When the psychological hour arrived, Leitch offered his resolution and it was adopted:

"We, the employees, officers and directors of the Packard Piano Company, recognizing that Justice is the greatest good and Injustice the greatest evil, do hereby lay, and subscribe to, as the first Corner Stone of our Policy, this greatest of all good."

We talked with Mr. Bond and thirty or more employees. They have unbounded faith in Industrial Democracy. They speak the common language of Justice. The firm that makes the best men will make the best pianos. The great end of Justice is "to construct broader character as individuals," as the foundation of "broader commerce as an institution."

Coöperation was the second corner stone laid by John Leitch. Coöperation is the way to obtain Justice. In the other Leitch plants which we visited we found the whole machinery of representative democracy according to the Constitution of the United States—a Cabinet, a Senate, a House of Representatives. But the Packard company did not find it necessary to have representative bodies for a force of less than 300. So everybody attends the meetings.

In the beginning they held a meeting every week; now about once a month. Factory problems are discussed and decided by the Committee of the Whole. If an investigation is necessary, a special committee of five, three elected by the employees and two appointed by the management,

John Leitch, industrial evangelist, whose plan of establishing coöperation between employees and employers is an outstanding feature in the solution of labor troubles today

make the investigation and report to the next meeting.

The factory was hard hit in 1914, following the outbreak of the World War. A cabinet maker arose in the Committee of the Whole and suggested that they work three days a week and spread the unemployment over the entire force instead of concentrating it. The foremen volunteered to reduce their own salaries twenty-five per cent. The Committee of the Whole agreed to operate three days a week, but the management was able to assure them four days.

A backmaker is stated to have told how coöperation worked in his department. "When I started in this week," he said, "it took two men ten hours to make six backs. That's the same as one man working ten hours to make three backs—or a back every three and a third hours. Now one man can complete a back in an hour, and the work is much easier than it ever was in the past. How did we do it? Well, it was because the Packard

Piano Policy got us to do it. The men at the head said to us, 'Now, boys, we all want to do our best, and sometimes doing our best doesn't mean working our heads off. The easier our work becomes, the better specialists we become—so try to see if there aren't better ways of doing things.' And what I have told you about this department shows what coöperation can do."

While we sat in the president's office, several workers came to the door, which is kept open without any sign, "Private." The workers halted when they saw us. In every case Mr. Bond excused himself and gave priority to the workers. These interviews cover every subject—shop problems, domestic, financial problems. It is the latter that give to the president his opportunity to win the confidence of the workers.

Economy is the third corner stone. The "Collective Economy Dividend" is John Leitch's inducement to economy. "I take the cost of a unit of production in the period preceding the introduction of Industrial Democracy," says Leitch, "and compare that cost with results after Democracy has gone into effect. If there is a saving, then one-half that aggregate saving is the amount of the economy dividend for the period and is paid to the men as an added percentage to wages."

In the Packard Piano Company it is simplified as follows: Three hundred pianos a month are the standard. If the factory turns out 300 pianos, the employees

get 5 per cent. dividend added to their wages; and 2½ per cent. additional for every 25 in excess of 300. The dividend is paid the first pay day in the following [Continued on page 32]

Next Month—Can the Leitch Plan Fall Down?

---

# Are We Backsliding?

# A Message from the British Nation to the American People

By the Rt. Hon. C. A. McCurdy, K. C., M. P.

## British Food Controller

THE month of May marked another milestone for Great Britain in the history of the war. The Liberal Party by a large majority at the Party Federation held at Leamington has resolved that the necessity for a war-time coalition of political parties no longer exists, and that the continuance of any such coalition is contrary to Liberal principles. The decision of the Liberal Federation was not altogether unexpected. We are now a long way from the war-time spirit which covered England with potato plots, largely increased the wheat harvest, and linked English and Irish, Conservatives and Radicals, in temporary bonds of closest coöperation and friendship. I am afraid that as a nation we are what the Methodists are falling away from grace, I imagine we are by no means the of whom the same thing might

The war was won by the closest and most loyal coöperation of men and women of all classes and of all parties, of all races and of all colors, of a great number of different peoples and of several continents. In the fire of war we were all welded into a white heat of single endeavor. At that time it seemed perfectly natural to suppose that whatever happened when the war was over never again could we come back to the party strife, to the racial hatreds, to the continental rivalries of what seemed a far distant past. It seemed impossible to doubt that the war which must change the map of Europe so profoundly would change no less profoundly the spirit and outlook of mankind. President Wilson's great speeches on the necessity for a League of Nations that should make forever impossible any repetition of the horrors of war struck a responsive chord in every English heart.

Up to the present we have not weakened very perceptibly upon the League of Nations ideal. We are still looking to the League of Nations as our best hope for the international future of the world, but the British Liberal Party has made the first definite step toward a break-away from war-time coöperation at home. I was present at the Liberal Federation meeting when this important decision was arrived at. At the same time the Liberal Party circulated among the delegates a statement of its continued belief in the desirability and necessity of a League of Nations. It seems a somewhat inconsistent decision to insist that the time has come when the French and Belgians ought to forget all the wrongs from which they have suffered so deeply and be prepared to take the hand of Germany as a friend and partner in a world league of associated peoples, but at the same time to insist that the time has come when there is no longer any necessity for

*London Passing Show*  
**Trying to keep his balance**

friendship or coöperation between political parties in this country.

I think it was Labriola, the Italian economist, who once pointed out that the progress of humanity is never in a straight line; it always moves in circles. From the earliest stages of recorded history there is no measured march of progress from barbarism to civilization, from chaos to law; always recurring circles in which mankind toils painfully up the slope, it may be for centuries or for thousands of years, always to fall back again until a new cycle of progress is commenced.

During the great war it appeared to most of us that surely mankind was now moving at terrific speed either to the de-

struction of the existing civilization in Europe, or to the commencement of some new and better stage in the human history. There can be no doubt that the pace of human affairs had been quickened. But already we can perceive the movement of reaction. To-day everyone is saying that the war is over; everyone is impatiently asking when we shall get back to pre-war prices, to pre-war politics. We are no longer dreaming dreams of the new world which peace was to usher in, we are content with the humbler and easier ideal of getting back as rapidly as possible to the old state of things. Most of them seem to be forgotten as soon as peace comes in sight.

In the action which the Liberal Party machine has taken it is only following at a respectful distance the action which the Labor Party took immediately the armistice was signed, when, as I explained in my last article, they at once called their men out of the Coalition Government and refused any assistance in the national work of reconstruction.

The motives of the Labor Party in taking that course, if not very creditable, were at least easy to understand. They are preparing for the great day when they expect to overwhelm all other political parties and assume the reins of government for Great Britain. This is a big job, and they were so impatient to get at it that they could not wait even for the soldiers to be demobilized before launching their new political campaign.

But the Liberal Party can entertain no such ambitions at the present time. The independent section of the Liberal Party, which is alone responsible for the Leamington resolution, numbers less than thirty members of the British House of Commons. The last twelve months of by-elections, with all their varied fortunes, have not added one to the number of the independent Liberal Party. They cannot, therefore, reasonably expect to capture the constituencies without friends or allies, at any rate in the near [Continued on page 31]

The American Red Cross has made its transition from a war to a peace time basis and is now busy carrying on its part of the work pertaining to after-war problems, which includes instruction in first aid, which it gives to miners, loggers, firemen, policemen and industrial workers

With a junior membership of 14,000,000—as well as an adult membership of 10,000,000—the American Red Cross is now making a special effort to eliminate the ravages due to disease. This class in home nursing is being held at a New York City High School

In Europe, the war caused widespread race suicide, even in Germany a comprehensive movement being started to train child-welfare visitors in order to conserve the lives of the few war babies. This baby is American

General Manager of the American  
Red Cross

Photos by American Red Cross  
Frederick C. Munroe

**I**T is the purpose of the American Red Cross, as its contribution to the work of reconstruction, to apply to after-war problems the *service* which it rendered during the war. One of the chief lessons taught by the greatest war of all time was that all individuals and agencies, public and private, must work together in order that the world of the future might be a better place to live in than it was before the assault in force on civilization. And so the confronting problems involve not only the readjustment of affairs from a military to a peace basis, but the improvement of health, the elimination of preventable disease and the raising of standards of living. Experience crowded into a few years has taught, not alone that improved domestic and social conditions will immeasurably strengthen the national life, but that there are practical means at command for removing many of the ills heretofore regarded as inevitable—notably the ravages due to disease.

The American Red Cross, which embraced a membership of a few hundred thousand before the United States entered the World War, has had its transition from the war organization stage and is now organized on a peace basis, with a membership of ten million—and a Junior membership of fourteen million—to carry on its part of the work pertaining to after-war problems. In accordance with its previously assumed obligations, the first duty of the Red Cross is to the men who were called to the colors in defense of the country. This duty, in addition to assistance in restoring disabled fighting men to health and strength, involves help in straightening our allotment and compensation claims and "Home Service" in matters of domestic concern that have been [Continued on page 29

Besides establishing tuberculosis dispensaries and hospitals in France, the American Red Cross has sent food and clothing to the Near East and is now emphasizing a comprehensive health campaign in Eastern Europe. It has branches at Geneva, Athens and Rome

Before the war steady progress was being made against disease—but during the war tuberculosis increased, malaria returned, the "cootie" spread typhus, sewage caused typhoid and an influenza pandemic twice encircled the globe. Work for the American Red Cross!

Beginning March, 1917, Red Cross work in France developed until it was perhaps the largest relief work ever undertaken. Today little is left to be done with the Allied armies so the Red Cross has turned its attention to the care of the convalescent

# Great Men and Great Work

By Preston Slosson

"**H**OW big was Alexander, Pa?" Was he bigger than his job or not so big? It is very hard to measure historic greatness because a man of mediocre quality may by chance find his hand on the levers of power in some world crisis and be unable to escape the greatness thrust upon him. On the other hand, there are historical characters whose concrete achievements seem the least important thing about them. That is what makes biography fascinating. By getting a close glimpse at the hero when he is off duty we can guess whether he borrows distinction from his position in life or lends distinction to it.

Of the great men who seem to be fully represented, or over-represented, in their achievements we may perhaps distinguish four types. There is, first, the quite unimportant person in an important position. Charles the Fifth looms as the most dominating figure of the international politics of the sixteenth century and his successor, Philip the Second, occupies a place in history scarcely less important. But if he had been born in a country town instead of to the throne, Charley Habsburg would have been barely adequate to run a grocery store and his degenerate son Phil would scarcely have been competent to be its clerk. Nine out of ten "great" hereditary rulers are of very commonplace timber. But an occasional king shows qualities which would have made him a marked figure even had he been born among the poorest of his subjects.

**T**HEN we have the type of man whose talents are unquestionable, but whose personality does not seem to extend to deeper insights and higher reaches of thought than are evident in his work. Anthony Trollope must have been a great man or he could not have invented Mrs. Proudie, but we are much more interested in Mrs. Proudie than in Anthony Trollope. The best of him is already on paper. Again, Ludendorff was a great general, as we know to our cost, but his memoirs show clearly that when he turned from military subjects to politics or anything else he was rather stupider than the average German. In this class belong all those men who are specialists, but outside their specialty just average human material.

The third sort of great man, who is known to be such only because of what he has accomplished, is represented perfectly by Shakespeare. Shakespeare may have had a most wonderful attractiveness in private life; it might have been a greater privilege to hear him talk for an hour than to read all his works. But we do not know that this was so. The man has vanished in the mists of the forgetful past and has left no monument to his great soul save his poems and plays. He is known to this generation, at least, only as the man who wrote "Shakespeare's works," and some would deny him even that! Perhaps the only other poet who can be compared with Shakespeare on an equal plane, the anonymous author of the book of *Job*, stands in the same class of the unknown great whose achievements all men know.

Finally, there is a sort of great man with most marked individuality, but whose life is lived on such narrow lines as to be a less successful expression of himself than his work. Such was Immanuel Kant and such was Herbert Spencer. To know these sages in their books would be to know the mind of the archangels; to know them personally would be to know two upright but rather fussy and eccentric pedants.

But there are other great men whose personality seems to overtop their work. An institution is said to be the lengthened shadow of a man, but some men have cast

shadows that extend beyond any institution. Monroe seems adequately represented to us by his remarkable message embodying the "Monroe Doctrine." But we do not think of Lincoln merely as the author of the Emancipation Proclamation. We get his unique quality as distinctly from the most trivial anecdote as from his most momentous public act. Had he lived and died in obscurity in Illinois he would still have been the sagest, kindest, most prophetic spirit of his time. Roosevelt was as great a man in his letters to his children, in his private hobbies, in his tilts with literary friends as when he made peace between Japan and Russia or launched the Progressive Party.

This incandescence of personality, this blazing originality of life, can alone explain why some men have so deeply impressed themselves on history. Luther was but one of many religious reformers; he was not so clear a thinker as either Calvin or Erasmus. What he excelled in was a certain titanic energy and enthusiasm which concentrated all the searchlights of the world on his burly personality. Doctor Johnson never wrote anything of first rate literary merit; his books are ponderous, prejudiced and often dull. But no one can read Boswell's report of his daily life and conversation without seeing why Johnson's name has been one to conjure with. Socrates never did anything in his life more important than to walk about the market place, buttonhole his friends and drop into easy converse with them. There have been scores of generals with as much military technique as Garibaldi, Joan of Arc or Chinese Gordon; but they have left no legends. There can be no question but that some of the men and women who have affected humanity most strongly regarded books and laws and battles as mere by-products. They were careless of fame and interested only in the adventure of life. But fame has come to them more than to others, for it clings about their lives instead of merely registering their deeds.

This is most notably true of the Founder of Christianity. A mere biographical outline of the story of the Gospels would sound meager and almost blasphemous. A working carpenter who spent three years or so in field preaching; who left not one written word to embody His teaching; who died in His youth with only twelve avowed disciples and only a few score followers to mourn His memory—is that the record of the greatest Life that was ever lived on earth? Yes, it is. For all our calendars are dated from His birth; all our institutions are modified by His teaching; all our ideas and ideals owe what is best in them to the few words which tradition has handed down from His day to ours. It is not when men put forth the greatest achievements but when their great achievements bear witness to still greater minds and hearts that human life most nearly approaches the stature of the divine.

## Sculduggery

"**T**HE League of Nations," says the very convalescent man in the White House, "lies too deep to permit of any political sculduggery." He has defined the situation exactly and with all his oldtime sharpness and wit. But a former President, in a very different connection, did still better. Can any one read the League of Nations plank in the Chicago platform without murmuring to himself something about "pussyfooting" and the "weasel words" prepared by some "Byzantine logothete"? After all, "it is a condition and not a theory that confronts us," and the politicians who take refuge in the gentle art of evasion will sooner or later be "relegated to innocuous desuetude." We can hear another President murmuring at the "bumble-

# Who's Who This Week

Giovanni Giolitti (left), who undertakes the office of Italian Premier since the fall of Signor Nitti, was one of the most powerful politicians of Italy before the war. On the outbreak of the war he urged that Italy remain neutral, which was at first a favor to France since it enabled all the French forces to be concentrated on the Belgian front, but which later caused him to be regarded as a pro-German when France wanted Italy to enter the war

puppy" indulged in by the managers of his party. Moreover, if "a house divided against itself shall not stand," can we say more for a platform? Not by the mouth of Wilson alone is the egg dance at Chicago to be condemned, but equally by the words of Roosevelt, Cleveland, Taft and Lincoln and of every other honest President who ever faced an issue squarely.

### The Morning After

*The President of Our Largest University*—A motley group of stock gamblers, oil and mining promoters, munition makers and other like persons seized upon General Wood and with reckless audacity started out to buy for him the presidential nomination.

*Our Most Distinguished Major-General*—The statement is a vicious and malicious falsehood. . . . it is necessary in this instance to brand a faker and to denounce a lie.

### The Paramount Issue

SENATOR Harding, are you for the League of Nations as it now exists, or for the League of Nations with the Lodge reservations, or for the League of Nations with some other reservations, or against the League of Nations?

## Getting at the Truth About Russia

By Norman Hapgood

FOR two and a half years various types of Americans have asked me how they could get information about Russia. They feel helpless in the grip of rumor and propaganda, but they know not how to break thru toward the truth. I have steadily replied that to follow all sources in several languages could be expected only of specialists, and that for the ordinary reader the *Manchester Guardian*, even its weekly edition, if read habitually, would cover fully and truthfully the Russian news. For facts about the economic situation the fairest single source easily available has been the *Russian Coöperator* of London. The opposing political standpoints can be followed weekly in *Soviet Russia* and in Mr. Bakhmetev's organ, *Struggling Russia*.

There has now been accomplished by the League of Free Nations Association a work of much value. That Association has realized from the beginning of its existence that the League of Nations would never be really started successfully on its course until it included Russia, as well as Germany and the United States. How can either it or the League to Enforce Peace keep out of the presidential campaign, while remaining true to its purpose, if the campaign results in a square issue on the essentials of the League? I have already indicated to the readers of The Independent that in my opinion Mr. McAdoo showed his usual political genius and courage when he came out flat-footed for trade with Russia and against any sort of interference with her. As these words leave my typewriter no other public man of prominence in this country has spoken with such comprehensiveness and lack of fear. This question of what will be done in the campaign by associations which exist for the purpose of helping to bring a League into being has, however, nothing to do with the purpose of the League of Free Nations Association in getting out its recent volume of Russian documents, *Russian-American Relations*, published by Harcourt, Brace & Howe. This purpose is entirely to give information, not to state conclusions. With unbiased and well-informed editorship the Association has put out a book made up of official documents tracing the relations of our Government to Russia since the revolution of March, 1917. Anybody who reads them carefully will find himself much better able to check off a good part of the material that is sent over by routine correspondents from Paris or decked up as special cor-

respondence from Washington. As long as the Poles keep up their offensive the statements prepared for the Washington correspondents by Mr. Bakhmetev and by some of his assistants in the Department of State will be indistinguishable from the stories put out during the Kolchak, Denikin, and Judenich enterprises.

The volume of the League of Free Nations Association will support the thesis, I believe, that President Wilson is not directly responsible for those parts of the American policy and propaganda that have been the discouragement of liberal elements abroad. On the other hand it will show that when he was acting personally he was expressing an enlightened policy. His views have been disregarded much as the sound plans of Mr. Lloyd George have been thwarted in London and Paris. A recent issue of the *Manchester Guardian*, reviewing the dismal obstacles to peace raised by obscure forces in the entente, treats the Polish adventure as the most serious of all the crimes of intervention. It makes a charge against the United States: "It is known that the Poles have the use of considerable American material—tho America has 'withdrawn' from European affairs—and the help of American airmen." The *Guardian* might have added that not only have we "withdrawn," but that we are not even "blockading" Soviet Russia, merely preventing free-born American citizens from sending things there, while permitting them to do what they like with Russia's enemies. Semyonov, the distinguished bandit chief, has declared himself the supreme ruler of Siberia. As Kolchak is dead, and Yudenitch and Denikin as good as dead, I presume Mr. Bakhmetev represents Semyonov. His influence and the nature of his propaganda must mean that he represents somebody beside himself and Mr. Sazonov. Why should we not have the courage to become an open ally of Poland and Semyonov? If we lack the decision to stop interfering with the course of Russian events, we might at least be thoro in our meddling.

### Recognizing Soviet Russia

WELL, why not? One recognizes an onion even if one doesn't like the odor.

### What the Old Guard Thinks

IF a man votes right it makes no difference whether he votes with enthusiasm or simply as a duty to the party; it counts as just one vote in either case.

## The Woman's Club and the Church

By Shailer Mathews

CHRISTIANITY is no longer a religion of a single institution. The Christian life finds expression in countless forms. Red Cross Societies, Juvenile Protective Leagues, Social Hygiene Societies are illustrations of this fact. The unity of Christianity is not to be sought in the church, but in the spirit of service that endeavors to make Jesus the teacher of social life. Institutions will increase in number as the opportunities to apply and organize the Christian spirit multiply. Ultimately every need will find its own ministering institution. The church will not be outgrown, but it will be more highly and more intelligently organized to perform its own particular function of spiritual inspiration and moral education.

The danger of rivalry is, however, imminent. Institutions which ought to coöperate are liable to compete. And it is difficult for any of us to serve heartily competing masters.

Particularly is this true of the Woman's Club and the local church. In these days when women are rapidly gaining rights too long denied, it is fortunate that they are to be found in the churches. To an extent every political convention helps us understand, women are potent in our

changing world. They have discovered admirable ability in organization; they do not fear being idealists; they are masters of publicity; they are indefatigable in the pursuit of their aims. In comparison with a Woman's Missionary Society, a Layman's Missionary Movement looks amateur.

The Woman's Club is an embodiment of this efficiency. There is no organization of men in the country that so persistently and intelligently considers matters of fundamental importance to nation and municipality. The program of a local, state, or national Federation furnishes a liberal education in things worth while.

Will the club compete or coöperate with the church? Any student of society will recognize the importance of the question. Hitherto the church has been the main sphere of women's social interests. They have made up the bulk of its congregations, they have been the support of its finances and its good fellowship. They have found in it not only the comforts of religion, but the outlet of their gifts of organization and leadership.

At the present time the same women who are active in church work are likely to be found in the Woman's Club. Some sort of coöperation between the two would, therefore, seem to be easy. At all events the church and club ought to plan certain work together. The club should have classes in Biblical literature and history of religions. Another field of study is the religious aspects of English literature. The philanthropic work of the club should be coördinated with that of the churches. In such a combination the churches will gain as well as the clubs. The clubs will be a laboratory of interdenominational effort, and the churches will become more significant as they appropriate the wider results of the Woman's Club work.

There is obvious danger that such coöperation may not always be present. The Woman's Club, because of its more complete organization and social prestige, sometimes monopolizes the attention of the more active women of the church. There is no remedy for this unless the church itself undertakes tasks as significant as those of the Woman's Clubs. When once coöperation between the two organizations is intelligently organized, women of leadership will have their proper recognition in the thought and activity of the church and community.

### Direct Primaries

Who directs them?

#### Hoover

HE might have had five million supporters in the country at large, but he could command only five votes in the convention.

### Labor and the League

THE American Federation of Labor in its annual convention has declared the Covenant of the League of Nations "the nearest approach to perfection that ever has been devised for prevention of war." We wonder if those sapient politicians who are so certain that the "people" do not want the treaty ratified and that the League of Nations is a "conspiracy of international bankers" really think that the American Federation is composed of bankers and contains in its ranks no "people"?

### The Parties Reverse rôles

THE Democratic party clings with tenacity to the policy of no expansion beyond the confines of the American continent, and cherishes the splendid isolation, geographically the portion of the United States, as a valued possession not to be lightly bartered away. The Republican party believes that the developments of the twentieth century have inevitably narrowed the confines of the civilized world and made the United States, whether it will or no, a

world power, with responsibilities and opportunities for service far beyond its continental borders."—The Independent, July 3, 1916.

## Absolutist Communism

By Franklin H. Giddings

WE offer our radical friends a phrase: brief, accurate and dynamic.

Since the French Revolution radicals have been trying to know what they want, and to define their objective. Vaguely most of them have known that their ideas have been vague. The others, Marxian Socialists, and theoretical anarchists, that have subscribed to creeds as dogmatic as Calvin's Institutes of Theology, have been unable to agree. Motor impulses to "do something," unresolved Freudian complexes, and emotional turbulences have driven them forward—the dogmatic ones no less than the temperamental ones—faster than they could think. They haven't known where they were going, but they have been grimly glad to be on the way.

Events that have driven and directed them have now informed them. Uncertain no longer and no longer clouded, their objective is revealed to themselves and to all the world.

Known or not, for what it is, absolutist communism has been the objective of the confluent streams of radicalism for a century. Now the flood, at sea level, is sweeping out upon the featureless ocean of equality, into the depths of which no light reaches, and the bitter waters of which offer only delirium and death to those that drink.

Absolutist communism, that is the objective, that is the end. The phrase is ours. The authoritative proclamation and description we take from Leon Trotzky. Readers that wish to check us up and satisfy themselves that we are not lying to them will find it in his proclamation converting the Soviet army into a labor militia, published in Pravda, March 16. Communism, he says, is the object and end of the revolution. For that all sacrifices have been made. To that all loyalty is requisitioned, all service must be rendered. Imperatives are its essence: it is no voluntaristic, or go as you please experiment. As an organization for production it is an army. Tasks are assigned, and discipline is military in character and in severity. The proletariat dictates. A supreme command gives orders. Here are the words:

As the militia has the object of preparing the gradual transformation of the Russian people into an armed communist nation, the militia in its organization should retain the character of a dictatorship of the working class.

A thousand questions suggest themselves concerning the reactions of joy or of consternation by the motley procession of Socialists, anarchists, social democrats, and radical industrial workers that is sweeping on to this objective, but the facts are few and simple. Those that protest, and those that rejoice, are alike powerless to turn back. Bureaucratic and parliamentary socialism have been left behind. Voluntaristic communism and voluntaristic syndicalism are forgotten as childish things.

The proof is that all radical writers and speakers, all radical journals, and pseudo-pacifists daily betray their sympathy with the Russian plan and purpose. Those that apologize for doing so explain that no other outcome of the social revolution is possible. Short of communism there is no stopping place and communistic society, it appears, must (like that abhorrent "State" which they have anathematized) have power and use its power to maintain itself against enemies without and rebels within.

It would be interesting also to analyze the psychology of this fateful drift, but here again the essential facts are few and simple.

There are only three possible ways in which human

# "Ships and the Sea—There's Nothing Finer Made"

© Underwood & Underwood

## THE VANITIE

For beauty everyone concedes first place to the New York Yacht Club's boat, the "Vanitie," with her gleaming bronze hull and huge white sails. But in point of speed it is a close question whether she can keep up to the "Resolute"

Levick

## THE RESOLUTE

With the America's Cup races taking their pre-eminent place once more in summer sport the famous Herreshoff yacht "Resolute" is competing with the bronze sloop "Vanitie" in a series of test races to decide which shall sail against the "Shamrock IV." The photograph above shows the "Resolute," sailed by Charles Francis Adams, near the victorious finish of a test race

Levick

This race came very near turning into a tragedy when the "Resolute's" mast snapped off, burying a couple of her crew in the water under the enormous sail. The photographer's launch saved the men by cutting thru the sail

© Underwood & Underwood

They say that there are very few thrills equal to those of sailing on a cup defender. And the crew more than earns its thrills. The "Resolute," for instance, won her first elimination race not only by the skill of the skipper and the design of the ship, but by the efficiency with which this crew broke out the sails

The British challenger of the America's cup, Sir Thomas Lipton's "Shamrock IV" (right), crossed the ocean under her own sail before the war. Above are the men who hope to sail her to victory on July 4 against the American defender: Captain W. P. Burton and Navigator Claude A. Hickman

society can be organized for defense or for achievement.

Men of superior ability may happen to be alert, strong and resourceful enough to get and exercise control. In that case we have government by aristocracy and for aristocracy.

Men of inferior ability by direct action, or by outnumbering votes, may obtain control. In that case we have a proletarian dictatorship, and it proclaims that the relatively incompetent who, it is assumed, are so because of no fault of their own, must be taken care of by the competent, who, it is assumed, are so as beneficiaries of luck or of injustice. Therefore production and distribution must be communistic. But inasmuch as the proletariat is unskilled in any but severely simple modes of administration, complex matters must be turned over to personal dictators (subject to recall or assassination) to organize the community on those military lines which uninstructed men can understand. Therefore a working communism must be absolutist.

The third and only other possible organization of society is the democratic. Democracy is comprehensive. It includes the competent and the incompetent. It ascertains the will of the majority and thru representative parliamentary bodies it governs in deference to public opinion. Denying the divine right of minority dictatorships, it is of all forms of human society the most detested by crooks and morons: by unscrupulous clever men who would amass wealth by exploiting the multitude, and by incompetent men who would live by enslaving ability.

## Ohio

THE Republican party has only twice elected a President born outside of Ohio; Lincoln and Roosevelt. Ohio was the birthplace of Grant and Harrison and both birthplace and residence of Hayes, Garfield, McKinley and Taft. Hence Harding.

## The Passing of Divine Right

By R. J. Caldwell

THE divine right of employers to rule industry is a thing of the past as surely as is the divine right of kings. But this change does not inaugurate the divine right of labor to rule either industry or the public.

Mr. Gompers in his recent published statement in answer to Governor Allen's question of what rights the public have in a dispute between capital and labor and what means organized labor would vouchsafe to the public for the protection of those rights declared that the public had no rights which are superior to the rights of labor. It might as truthfully be said that labor and capital have no rights paramount to the public interest, and we would be no nearer an answer than before.

Despite all the signs of the times, capital still grudgingly concedes to labor only that which it must. It thereby invites and receives from labor retaliation in kind, and labor is compelled to accept a condition of strife, as it can get recognition by no other means. Employers are as much responsible for strikes as workingmen, and the consequences fall heavily on the heads of both. While the great majority of employers deal with labor in terms of expediency instead of justice it is idle to expect anything but ill feeling on the part of labor, and it is equally idle under such circumstances to lay emphasis on the instances in which the ill will of labor takes the form of violating agreements. The highest authority in labor union circles has testified that "there are as many employers who have violated their agreements with them as there are employee bodies which have failed to abide by their agreements with employers." So long as both labor and capital attempt to exercise divine rights no solution is in sight.

It is stated that there were six thousand strikes during the war and that there have been four thousand since. This ceaseless warfare cannot continue, and should not be permitted to continue. Labor, in its own interest, should be the first to recognize the advantage to be gained by it in the substitution of a saner weapon than the strike, which injures vast numbers who have no direct concern in the issue and whose natural sympathy for labor thus becomes alienated.

The Kansas Industrial Court is based on the theory, derived from practical experience, that the disputants of industry cannot amicably settle their own affairs, but have to have them settled for them, and on the further theory that the innocent bystander should not suffer the penalty for the quarrels of others. The conclusion thus reached in respect to industrial affairs is no different from the conclusion reached long ago by all civilized nations in civil affairs, which resulted in our civil and criminal courts.

When criminal courts were first established in the West there were many protests of the usurpation of individual rights by the courts, but few today would abandon them after having lived under their jurisdiction, and it is difficult to see why results should be less satisfactory when orderly process of law under the administration of such courts as the Kansas Industrial Relations Court replaces the violence of strikes. Under the Sullivan Act it is not permissible in New York for any one to carry weapons on his person, and yet how infinitesimal is the damage done from the use of weapons in the hands of a few compared with the widespread ruin instituted by strikes. If one-hundredth part of the effort and expense incurred by labor in conducting strikes or negotiating industrial disputes were devoted to representing their interests before an Industrial Relations Court the results would be a hundred times more satisfactory to labor itself than the present crude, antiquated and altogether intolerable system of strikes, which visit their first cost on fellow workers and their families.

Since labor comprizes a great part of the public, it pays a corresponding part of the cost of strikes. Labor does not seem to understand that increased wages can only be paid out of the additional output of wealth derived from increased production. Otherwise, the cost of higher wages comes back on the public in the form of higher prices and the worker loses in high prices what he gained from high wages. It is a popular fallacy that increased wages can be taken out of capital. Lord Leverhulme determined that if all the income of Great Britain derived from interest, rent and profit from the use of capital were divided equally among all the people of Great Britain it would give but twenty-five cents a day to each man, woman and child.

The public good is not served by annihilating the capitalists, but by regulating them. It is true that capital has set labor a most unenviable example, but taking conditions as we find them we may reasonably ask that, if the Kansas Industrial Relations Court, is the wrong way for settling industrial differences, labor suggest a better way.

## Campaign Funds

WHAT does it profit to spend millions of dollars on a pre-convention campaign? General Wood or Governor Lowden might have won had they not been so eager to win.

## Coolidge

ONE good thing the Republican Convention did was to nominate a Vice-President fit to be President and thus break an evil tradition that the second place on the ticket is merely a consolation prize to be given to some inoffensive party hack. Indeed we have heard the Republican ticket this year called the Kangaroo ticket—biggest in the rear!

# The Story of the Week

## The Voice of Labor

THE American Federation of Labor has held its fortieth annual meeting and has declared itself clearly on many of the issues of the hour. The meeting was held at Montreal and more than five hundred delegates attended. It is somewhat unusual for a meeting of American labor unionists to take place on foreign soil, but the American Federation regards Canada as "one of the family," as many Canadian workingmen are affiliated with its organizations. President Samuel Gompers was reelected for the thirty-ninth time with little opposition. He dominated the convention with his usual skill, and very few resolutions were carried which had not received his approval.

The two resolutions which caused the warmest debate favored the League of Nations and the government ownership of railroads. Immediate ratification of the Treaty with Germany without reservations to the League of Nations Covenant was the policy approved in spite of the opposition of a few Irish members, who feared that Article X might prove in some way an obstacle to Irish independence. The resolution, as adopted, declared of the Covenant:

It is not a perfect document, and perfection is not claimed for it. It does, however, mark the nearest approach to perfection that ever has been devised for prevention of war. It must meet with the unqualified approval and support of the American working people.

In defending this resolution Mr. Gompers made the point that organized labor had never failed to place itself on record in favor of international peace.

Government ownership of railroads was approved in spite of the opposition of President Gompers; it was, in fact, the most serious defeat which he suffered during the course of the convention. The railroad workers themselves favored the resolution and were joined by the miners and the metal workers. The building trades, on the other hand, opposed government ownership in principle. 29,058 votes

were recorded in favor of the resolution to 8348 opposed. It read:

That the Executive Council be, and are hereby, instructed to use every effort to have the Transportation Act of 1920 repealed and legislation enacted providing for Government ownership and democratic operation of the railroad systems and necessary inland waterways.

A very significant step taken by the American Federation was the passage of a resolution requesting affiliated unions to abolish the "color line" and admit negroes to full rights of membership. The question was raised in connection with the Brotherhood of Railway Clerks, whose charter limited the privileges of membership to white men.

All forms of anti-strike laws and compulsory arbitration tribunals were condemned. The labor planks in the Republican platform were criticized as unsatisfactory, and it was determined to bring pressure on the San Francisco convention in hope of better results from the Democrats. The jail for profiteers and amnesty for "political prisoners" was urged on the Government. With respect to foreign policy, non-intervention in Mexico was favored and Irish independence approved, but all attempts to secure any sort of approval of Russian Bolshevism were defeated by overwhelming majorities. In fact, Bolshevism has rarely been so severely denounced in any discussion as it was in the fortieth annual convention of the American Federation of Labor.

## Wilson Talks Politics

THERE is one point on which no one can get a word from President Wilson: the name of the man whom the Administration is backing for the nomination. This has given rise to rumors that President Wilson would seek a third term, in spite of the fact that no evidence whatever has appeared to support such a statement. Others believe that he will indicate the candidate on whom his mantle is to fall when the Democratic convention meets, and still others take him at his word that he has no particular nominee in mind and is concerned solely with the issues of the campaign.

Candidates apart, President Wilson has spoken freely on politics since his partial recovery from the illness which prostrated him for so many weeks. He was particularly frank in the recent interview which he gave to Mr. Louis Seibold of the *New York World*. He insisted that the paramount issue must be the League of Nations in spite of the efforts of the Republicans to becloud the issue by attacks on the Administration:

I am extremely confident that the Democratic Convention at San Francisco will welcome the acceptance by the Republican party of my invitation to make the League of Nations the issue of the campaign. I am even more confident that the American people desire it above anything that a political party may now provide, and that they will condemn the Republican policy of denying them the consummation of their hopes. No one will welcome a referendum on that issue more than I.

He made an effective point by showing that President McKinley had advocated a League of Nations "more than fifteen years before I became impressed with its tremendous importance." Senator Burton, of Ohio, and Senator Lodge were also quoted by President Wilson as having advocated the principles embodied in the Covenant. In view of these facts he denied to the Republicans the credit of sincerity in their attacks on the Covenant and declared that the party policy on that question was "wholly political in intent and purpose."

President Wilson defended the continuation of the Lever Food Control Act after the cessation of hostilities as a de-

There's a gentleman waiting to be introduced

fense against profiteering. He insisted that the Espionage Act had not been used oppressively and he denied "that the rights of a single citizen have been unjustly invaded," a statement which will astonish the radicals. He declared that all the war measures would have come to an end months ago if the treaty had been promptly ratified, as it should have been. He professed complete ignorance as to the status of Mr. Root in establishing an international court.

He appealed for the support of the progressives on the ground that "the Republican convention was the apotheosis of reaction." He hoped that the attitude of the San Francisco convention would be different in every respect and that it would provide a platform "sufficiently broad, progressive, liberal, just and thoroly Democratic." He declared with reference to the nomination: "I have not raised my hand or voice to aid in the promotion of any ambition for the Democratic presidential nomination and I shall not do so."

## McAdoo Too Poor to Run

**W**ILLIAM G. McAdoo, former Secretary of the Treasury and the "favorite" for the Democratic nomination, has once again refused to enter the race for the Democratic nomination, and with such emphasis that he is now generally considered as out of the running, and his friends in the party (who are many) are busily engaged in looking over their lists of second choices. Mr. Jouett Shouse, Assistant Secretary of the Treasury and a vigorous leader of the progressive wing of the Democratic party, urged Mr. McAdoo to let his name go before the San Francisco convention, assuring him that he could be both nominated and elected. Mr. McAdoo replied that the same reasons which compelled him to resign his position in the Cabinet compelled him also to decline any other opportunity to reënter political life until he could "have a reasonable opportunity to rehabilitate my private affairs." "A presidential campaign," he declared, "imposes upon a candidate unavoidable expenses which I am unable to assume and which I do not want my friends to assume."

Mr. McAdoo added that victory would be certain if the Democratic platform were "straightforward, unequivocal, unevasive, honest and liberal," and if the candidate put forward could "command public confidence." He insisted that "we must stand squarely for ratification of the League of Nations without debilitating reservations, and we must be direct and explicit on the important domestic issues."

## On to 'Frisco!

**T**HE Democratic Convention meets this year in a mist of uncertainty. Candidates for the presidential nomination are quite as numerous as they were at Chicago, but their booms are not so definitely shaped. It is difficult to tell of any Democrat of national prominence whether he is seriously a candidate or simply "talked of" by his personal friends. Primary contests have been few, and it is estimated that of the 1096 delegates at least 775 are wholly without instructions. The refusal of Mr. McAdoo to enter the race, Mr. Hoover's refusal to let himself be considered as a Democrat, and President Wilson's attitude have added to the uncertainty of the situation.

Two issues dominate the convention: the League of Nations and prohibition. Friends of the Administration are chiefly concerned to secure the nomination of a candidate favorable to the League on an unequivocal platform. Senator Reed, the most truculent opponent of the Covenant within the Democratic party, was reëlected by a Kansas City district after the Missouri State Convention had rejected him. The National Committee, according to Chairman Cummings, will sustain the State Convention against the district and refuse the Senator a place in the National

© 1920, New York Tribune, Inc.

Yes, but lots of times they don't pay any attention

Convention. Senator Shields has been instructed by the State Convention of Tennessee to abandon his opposition to the League and support the foreign policy of the Administration, but he has refused to do so.

Mr. Bryan will be a center of the fight on both issues. While not positively hostile to the League of Nations Covenant in the same sense as Senators Reed and Shields, he is willing to accept such reservations as the Senate may desire rather than compel the Democratic party to wage the campaign on an issue of foreign policy. He is much more interested, however, in the prohibition issue. Here he has a double battle on his hands. He must block the attempt of the Tammany delegates to insert a "beer and wine" plank in the Democratic platform and he must prevent the nomination of a foe of prohibition. Governor Edwards, of New Jersey, has made his campaign for the nomination almost wholly on the one issue of nullifying the eighteenth amendment to the Constitution by legislation which would permit the sale of liquors of moderate alcoholic content. Governor Cox, of Ohio, has also been placed on the blacklist of the Anti-Saloon League as a "wet" or at least a "damp," altho he is not a man of one issue and is supported rather because of his great strength and popularity in the same doubtful state that produced the Republican candidate than because of his advocacy of a "beer and wine" law.

There would seem to be three main groups within the Democratic Convention. First, there is the "Administration" phalanx, supported by all the prestige of President Wilson and in control of the National Committee and of the "organization" generally. Hitherto it has tended to support Mr. McAdoo, but now it is without any particular candidate and is ready to support any good Democrat who is sound on the ratification of the treaty "without nullifying reservations." This group probably represents a majority of the party and of the convention, but in Democratic conventions a two-thirds vote is essential to control the nomination. Second in importance is the Tammany group, controlling under the unit rule the entire vote of New York and finding allies in New England, New Jersey and Illinois. This group wishes to keep the League issue in the background and to make the campaign on the issue of "the

right to drink," favors recognition of Irish independence, and, for strategic reasons, upholds the unit rule binding the vote of states and the two-thirds vote required for nominations. Its support appears to be divided between Governor Edwards of New Jersey, Governor Smith of New York, Vice-President Marshall of Indiana, and Governor Cox of Ohio. Finally, there is a small but very zealous group under Mr. Bryan's leadership which is out of sympathy with the Administration on questions of foreign policy but is determined above all things to uphold prohibition. Upon the wars and alliances of these contending forces depends the outcome of the San Francisco convention.

## Echoes of Chicago

SENATOR Harding's friends say that he is another McKinley. In one respect at least he will follow the example of his predecessor from Ohio: he is to conduct a porch campaign. Instead of careering around the country in a special train, following the fashion set by Mr. Bryan and since followed by Presidents Roosevelt, Taft and Wilson, the candidate will address delegations of pilgrims to Marion, Ohio. Chicago will be the Republican headquarters and Chairman Hays of the National Committee will be the chief director of the campaign. Senator Harding has been busily engaged ever since his nomination in polishing up his speech of acceptance and in holding conferences with the party chiefs on the strategy of the coming campaign.

Most of the liberal and radical Republicans, tho confessedly disappointed over nearly everything that happened at Chicago, have decided that the party should receive their loyal support. Senator La Follette may leave the Republican ranks to ally himself with some third party, but apparently all of the other men who received votes in the Republican convention have become reconciled to the result. Senator Johnson has not led a "bolt," tho he has not yet actively interested himself in the campaign. Mr. Hoover, while declaring himself "greatly disappointed over some tendencies that were apparent at Chicago," thought that nothing prevented the possibility of "a forward-looking interpretation" of the Republican platform. He reiterated his belief in the two-party system and pointed out that a government resting on a coalition of small groups would not work well under a constitution such as ours, which sharply separates the legislative and executive branches. This means that he rejects in advance any invitation to head or ally himself with a third party ticket.

The conservatives of the party are not only reconciled but enthusiastic, even the men whose own ambitions were blighted in the convention. President Butler, of Columbia University, congratulated the party on having discouraged the use of money in pre-convention campaigns by defeating

Thomas in Detroit News

### A question!

Major-General Wood. This drew forth a sharp reply from the General, the one indication of bad feeling, aside from the attitude of the Wisconsin delegates, which has developed within the party since the nomination. President Butler later "took it all back" and harmony once more reigned supreme.

In quite another quarter the Chicago convention has left the legacy of a quarrel. "President" De Valera, of the Irish Republic, was sharply criticized by some of his Irish-American supporters for spending funds raised by the sale of Irish bonds in attempting to insert a plank in the Chicago platform in favor of Irish independence and for failing, after all, to secure such a plank. De Valera replied that the money raised by the sale of Irish bonds was "subscribed for all legitimate governmental purposes" and that "there is no purpose so urgent as that of securing recognition." He insisted that he could consistently demand nothing short of complete recognition of Irish independence and that he could not work for a compromise plank such as was supported by Judge Cohalan and other influential Irish-American politicians. De Valera, having failed at Chicago, will now attempt to secure better results from San Francisco.

## Changes at Washington

THE Government has recently lost two valuable servants, General John J. Pershing, late commander of the American forces in Europe, and Mr. Frank L. Polk, Under-Secretary of the Department of State. General Pershing declared that it had "long been my desire to return to civil life," and that since the war was over and his present duties were not very exacting, he could relinquish them without detriment to the service." His resignation will only take effect after the reorganization of the military service according to the recent act of Congress, and in any case he stands ready to resume active duties should the necessity arise. It is very typical of this energetic man that in his letter of resignation he should complain that his present work was not sufficient to require more than a portion of his time and that he wished to "be free to engage in something more active."

Mr. Polk was corporation counsel of the city of New York at the time when he entered the Federal service. He filled the position of counsellor to the Department of State and later of Under Secretary. During the later days of the Peace Conference, after President Wilson, Secretary Lansing and Colonel House had returned to the United States,

Mr. Polk acted as head of the American Peace Commission, in conjunction with General Bliss and Mr. White. Those who served under him in Paris know with what great skill he conducted negotiations on the treaties with Austria and Bulgaria and maintained the prestige of the United States at the difficult hour when the Senate turned against the treaty with Germany. His successor as Under Secretary of State is Norman H. Davis, who acquired a reputation in the Treasury Department and was one of the most valued experts on reparations and financial affairs at the Peace Conference.

## Mob Law in America

THE National Association for the Advancement of Colored People held its eleventh annual convention at Atlanta early in June. Five hundred delegates from forty-three states were present to represent this widespread organization and to hear discussions on such problems as lynching, discriminatory laws and the movement of the negro population to northern cities. It was pointed out that during the year 1919, 84 persons were lynched in the United States, of whom 78 were negroes. Three-fifths of all the lynchings took place in the four states of Georgia, Mississippi, Arkansas and Alabama. For the whole thirty-year period of 1889-1918 there were 3224 mob murders in the United States, with 2522 negro and 702 white victims.

Instead of putting a stop to lynchings and race riots the spread of the negro population over the country has but increased the area of lawlessness. On June 15 the city of Duluth, Minnesota, was disgraced by the hanging of three negroes by a large mob which met with no effective resistance from the local authorities. There has also been a rather mysterious race riot in Chicago, in which "red" politics seems to have been involved as well as the usual color line between blacks and whites. A crowd of negroes belonging to an "Abyssinian" association, said to have for its object the colonization of Abyssinia with American negro emigrants, held a demonstration on the night of June 20. One feature of this demonstration was the burning of an American flag. A party of sailors and several of the police interfered at this point and there was an exchange of shots, for the "Abyssinians" had taken the precaution of going armed. An American sailor and a cigar store keeper were killed and a negro policeman was seriously wounded.

## Big Cities

"THE cities are full of pride, Challenging each to each," as Kipling said in his tribute to his native city of Bombay. Perhaps the proudest of them all is Los Angeles, which is now the most populous place in the western half of

North America and has left her rival, San Francisco, well in the rear. With a present population of 575,480 and an increase in the last ten years of more than 80 per cent, Los Angeles smiles with pity at her rival on the Golden Gate with but 508,410 inhabitants. Whether it is her much advertised perfect climate or her still more advertised monopoly of the moving picture industry that is responsible for the triumph of Los Angeles the census man does not tell us.

Probably the second proudest city in the United States just now is Detroit, Michigan, which has become the fourth city of the Union in population. With a population of 993,739, Detroit would be even prouder if 6261 more persons had moved to town in time to be counted and thus brought the city over the million limit. However, it is much for so large a city to have more than doubled its population within the decade. Perhaps those of us who own automobiles can guess why Detroit has been so greatly favored. Cleveland, Ohio, now ranks immediately after Detroit, with a population of nearly 800,000 and an increase of more than 40 per cent since 1910. Chicago has done fairly well and retains her place as the second city in the United States with 2,701,212 inhabitants and good hope for three millions by the next census.

The Census Bureau places the ten largest cities of the United States in the following order: New York, Chicago, Philadelphia, Detroit, Cleveland, St. Louis, Boston, Baltimore, Pittsburgh and Los Angeles. By the census of 1910 the cities ranked: New York, Chicago, Philadelphia, St. Louis, Boston, Cleveland, Baltimore, Pittsburgh, Detroit and Buffalo.

## The New German Government

ALTHOUGH the late election went to extremes in both directions, the net result is to put the middlemen in power. The former cabinet was in the control of the moderate or Majority Socialists but many of their party, dissatisfied with the slow progress made by the Government in the socialization of industries, went over to the Independent or radical wing of the Socialist party. The Majority Socialists also lost to the opposite side and the combined socialist vote fell from 14,000,000 in the previous election to 11,500,000 in this. So a bourgeois coalition Government had to be formed in which the Socialists declined to participate. The coalition cabinet will be composed of the Center, the People's and the Democratic parties and as such is expected to command 199 votes in the Reichstag. The Majority Socialists will not oppose it unless it should antagonize labor, in which case the two Socialist factions could combine against it and together would muster 190 votes. These in conjunction with other opposition parties would suffice to overthrow the Government. But the important thing now is to fix up some sort of government to receive the approval of the new Reichstag that meets on June 26 and to negotiate with the Allies at Spa immediately after in regard to the execution of the treaty.

The Center or Christian People's party as it is now called is the old Clerical or Roman Catholic party. Its support comes largely from the country districts and its chief aims are the strengthening of the Church, the maintenance of religious instruction in the schools, the strict regulation of public morals and the promotion of peasant proprietorship. The German People's party is the heir to the old National Liberal party. This was the party thru which Bismarck worked to make Germany the foremost industrial nation of Europe. It was the party of tariff and trusts and commercial expansion. Before the war it was being crushed out between the Socialists on one side and the militarists on the other, but is now again coming to the front to undertake the reconstruction of ruined Germany. It will give the country what is called in America a "business men's administration." The Democrats

Russell in New York Times

Labor to Capital: "Supposin' they are his toys, don't let's have that guy butt in!"

Wide World

## THE BOURGEOIS BOLSHEVIK

The Soviet Republic has sent as its first representative in England Gregory Krassin, a prominent Russian manufacturer who has had charge of trade and transportation under the Bolshevik regime. He brought with him a large staff of financial and technical experts and has rented an office building in the commercial center of London. He has been called in conference with Premier Lloyd George and the Cabinet and is now working out plans with them for the restoration of commercial relations between Russia and the members of the League of Nations. He wants to buy agricultural machinery, railroad material, shoes, seed, clothing, medical supplies and manufactured articles of all sorts and has \$20,000,000 in gold to pay for them. Italy and Belgium are, like England, eager to lift the blockade and engage in trade with Russia, but France objects on the ground that the gold is stolen property and that it should be paid to the holders of Russian bonds, most of whom are French.

correspond in a way to the old Progressive party in the United States in that they are less conservative than the Center and People's parties, but are not socialistic. Their chief concern is lest their associates in the new Government should turn it in the direction of a monarchy.

## Big Business in German Politics

THE leader, or, rather, the ruling power of the new German People's party, is Hugo Stinnes, whose picturesque career reminds one of Charles Schwab in America and Lord Northcliffe in England. Like the former, he began in coke and steel and showed remarkable genius in combining and coördinating differences. He found that he could not run steel mills successfully without control of the iron mines. Then he had to make his own coke and this led to the acquisition of coal mines. But this involved the acquisition of the means of communication, so he built his own railroads and fleet, and finally secured control of most of the internal waterways of Germany and of the Hamburg-American and other oceanic lines. The manufacture of coke involved the production of gas, which had to be sold to the cities for light and power. This led naturally to electricity, and Stinnes was one of the first to use electric power for coal mining operations. Thru his possession of electric plants he acquired the controlling interests in the street railways of many German cities. Lately he has followed in the footsteps of Northcliffe by going into the newspaper business on a large scale. He now owns a chain of sixty papers and, applying here also his policy of controlling the necessary raw material, he has bought several paper mills. He was worth 30,000,000 marks before the war, but now his fortune is estimated at a billion marks, tho it must be remembered that the mark is worth less than a tenth of what it used to be. The recent anti-profiteering law requires the surrender to the state of all money made during the war in excess of 200,000 marks, but it remains to be seen how the law can be enforced in a case such as this, where the money is continuously invested in new enterprises.

## Riots in Londonderry

LONDONDERRY, an Ulster town of about 40,000 inhabitants, is divided between Unionists and Nationalists, and here party feeling has often risen to the pitch of violence. On the night of May 15 there was fighting between the factions that resulted in the death of a policeman and the wounding of several civilians. On June 19 disorder again broke out in Londonderry and for three days the rival mobs waged war on one another in the streets and on the water front. On the 21st shops and schools were closed and the streets deserted except for the armed bands of Irishmen hunting one another thru the town and the British troops trying to suppress both. The mail and telegraph service was suspended. The streets were barricaded at strategic points with sandbags by the soldiers and armored cars patrolled the place. The Unionists charged the Nationalist quarter with songs and yells, but were repulsed by heavy volleys from the houses, and then the Nationalists took the offensive in turn. There were eight persons killed and over a hundred wounded. Among the wounded was a baby girl. One of the murdered men was an American named Price who went over to enlist in the ambulance corps early in the war and was about to return to the United States.

Military authority in Ireland is weakening because the railroad men frequently refuse to handle trains carrying soldiers or munitions. Premier Lloyd George asserts that he will brook no interference with the military movements of the Government by private persons under any pretext, and that if the union men persist in their attitude he will shut down all the Irish railroads. The troops are now being transported by warships and motor buses.

In a large part of Ireland the King's Government is no longer acknowledged and the people bring their disputes before the Sinn Fein courts instead of the established authorities. Taxes are paid to the republican leaders instead of the Government officials. Tax papers and official documents have been destroyed in many places by the burning of the record buildings. During the first four months of 1920 there were 1237 cases of murder, assault and incendiarism charged to the Sinn Feiners.

## The War in Turkey

WHILE the Allies are attempting to force the helpless Government of Constantinople to sign the treaty proposed by them the rival Government of Angora is becoming the real power in what is left of the old Ottoman Empire. Both the French and the British troops have been forced to retreat to the coast and to negotiate with the Nationalist commanders to secure the safety of their soldiers. A French battalion was cut off by the Nationalists at Bozano near Adana in Cilicia and obliged to surrender in a body, the officers and 550 men. After this the French command obtained an armistice with the Nationalists on condition of withdrawing from the interior.

On the British front a company of Indian troops from the Punjab was similarly surrounded near Ismid by a superior force of Nationalists. The British officer in command secured permission from the Nationalists to withdraw unharmed but as the British were marching away the Turks fired upon the rearguard wounding thirty men and capturing a British officer.

The British still hold the towns of Ismid and Scutari on the Asiatic shore opposite Constantinople but the Nationalists have reached both the Bosphorus and the Dardanelles and are only kept from gaining control of the entire coast by the guns of the British battleships. The Turkish airplanes have shelled the British trenches.

The entire British Mediterranean fleet has been ordered to concentrate in Turkish waters and the British troops stationed at Malta have been despatched to Constantinople.

The present British force about Constantinople is said to number 30,000, of whom 10,000 are white. The Nationalist army is supposed to number some 60,000, but is largely composed of Turkish peasants impressed into the service who prefer farming to fighting. Several German officers are said to have flown over in an airplane to join them.

The Nationalist Government has received recognition and support from the Russian Soviet and the Bolshevik Foreign Minister Tchitcherin is acting as mediator between the Armenians and the Nationalists. He is said to have almost reached an agreement on condition that the boundary line between the Armenian republic and Turkish Anatolia shall be drawn as nearly as possible on the line dividing the two races and afterward isolated groups of Turks enclosed in Armenian territory be transferred to the Turkish side and vice versa. The Nationalist Assembly that met at Angora last February adopted the principle of self-determination proclaimed by the Bolsheviks on their accession to power in 1917.

The Armenians are apparently coming to look upon the Bolsheviks as their only friends, for the French troops have withdrawn from Cilicia leaving the Armenians to be massacred by the Turks, the British have withdrawn from the Caucasus leaving the Armenians to be attacked on one side by the Georgians and on the other by the Tatars, and the American Senate refuses to listen to the appeal of the Armenians for an American mandate. Even if President Wilson were to draw the boundaries of Armenia the treaty would so limit them that the verdict would disappoint the ambitions of the Armenians.

## Greeks and Turks

NEITHER the British nor the French can now afford the troops necessary to put down the Turkish Nationalists under Mustapha Kemal, who now controls almost the whole of Asia Minor. But there is one country on the spot that is only too eager to undertake the job, and that is Greece.

When the French and British Premiers met at Hythe, England, on June 20 to discuss the Turkish situation, Premier Venizelos, altho uninvited to the conference, put in an appearance to urge again that he be allowed to advance against the Nationalists with the Greek forces at Smyrna. He said that he had six divisions of 15,000 men each at Smyrna and four more divisions in Thrace, besides three divisions in reserve. Field Marshals Foch and Wilson, who were at the Hythe conference, looked doubtfully at the project, for they thought that the Greeks underestimated the dangers and difficulties of

such a campaign, but Premiers Millerand and Lloyd George, seeing no prospect of aid from any other quarter, were willing to give the Greeks a chance.

Greece is now, as Venizelos pointed out, a greater country than the Ottoman Empire, as it has been cut down by the treaty. He seems very much afraid that Great Britain, faced by the growing rebellion of the Nationalists under Mustapha Kemal and by the threat of rebellion of all the Mohammedan subjects of the British Empire, will weaken on the treaty and withdraw part of the Turkish territory that had been ceded to Greece. Consequently he is anxious to substantiate the Greek claims by actual possession and by demonstrating the ability of the Greeks to make a stand against the Turks as the British and French have failed to do.

But the British and especially the French have hitherto been reluctant to give the Greeks a free hand because the Greeks were known to covet Constantinople and because they had not behaved themselves in an exemplary manner when they were empowered by the Allies to restore order in Smyrna after the armistice. When the Greek troops were landed at Smyrna a year ago last May they met with no armed resistance, but they treated the Turks with brutality and they penetrated into the interior far beyond the limits of the Smyrna district that they were authorized to occupy. The rumors of these outrages caused the appointment of a commission of investigation composed of a British, French and Italian general and Admiral Bristol for America. The report of the commission has never been published in full in England or America, but has appeared in Paris and Constantinople. The commission found that the landing at Smyrna and the occupation of Aidin were instigated by false information as to the danger of the Christian population; that the Greek military authorities were responsible for the atrocities at Smyrna and the massacre of the Moslems at Menemen; and that the Greek "occupation, far from appearing as a mission of civilization, immediately assumed the aspect of a conquest and a crusade." If now the Greeks again invade the hinterland of Smyrna it is feared by the Allies that the expedition will assume a similar aspect and that if it is victorious the Greeks will insist upon annexation of extensive areas of Turkish territory instead of being content with the temporary and provisional administration of Smyrna that the pending treaty grants them. But since neither the French nor British can spare forces for the subjugation of Mustapha Kemal they have empowered a Greek commander to open a campaign.

THE BOUNDARIES OF ARMENIA

President Wilson has accepted the invitation of the Allies to define the western and southern boundaries of Armenia, but the pending treaty with Turkey specifies that he must not go outside the beaded line on the above map. But the Armenians claim all the territory within the heavy dashed line which would give an extensive coast on both the Mediterranean and the Black Seas. The territory actually under the control of the Government of the Armenian republic is restricted to the stippled area about Erivan in the old Russian province of Trans-Caucasia. The infant republics of Georgia and Azerbaijan are now in the power of the Bolsheviks. The British hold Batum and Mosul. The French have evacuated the region north and east of Alexandretta leaving the Armenians exposed to massacre by the Turkish Nationalists who control all the country from Erzerum west to the Bosphorus

# A Little of Everything

## Are We Happy? Well I Guess!

By Ada Patterson

**A**N hour out of Chicago a unique experiment in education is being made. Mooseheart, which has been called the city of childhood, is proving that orphans can be reared and educated without the brand of an institution upon them. The Loyal Order of Moose has established there a home and school and town for the children of its deceased members. It is sending out healthy, highly individualized boys and girls who are equipped to earn their own living by head or hands. It guarantees that it furnishes good future citizens because the children have already been trained in the functions of citizenship.

Mooseheart is a children's republic. It is the only town in the world that is governed by children. Every child has a vote and voice in its affairs. In the students rests the administrative power of the town wherein live 800 of their own number and 200 of their elders.

At five o'clock on five afternoons a week the children meet in the Assembly hall to discuss matters of municipal importance. They are divided according to age into two branches. The wise seniors are the body of students of twelve years and older. The juniors are those between five and twelve years.

It is confession time and penalty time. Superintendent Matthew P.

Adams presides. The Mooseheart band begins and ends the meeting. Two students sit at a table on the superintendent's left. They have been elected town clerks. The children sit in groups in the amphitheater. The group living in each cottage or dormitory sit in a body. Each group has a clerk. That clerk is the spokesman of the group. The clerk rises. Each young offender rises and reports the mistakes of his day to the clerk, who in stronger tones reports them to the assemblage. The town clerks make a note of the offense and of its usual penalty. One demerit mark for being tardy. Two demerits for being rude to the matron. Three demerits for fighting, unless the assembly determines that the fight was a justifiable one, for which the motive was self-defense or the protection of another. The offender may appeal to the assembly, protesting against punishment and arguing his own case. Each child has this right and it is fre-

quently exercised. After the matter has been discussed the nature, the kind and amount of the punishment is fixed.

There is also a students' council which is to the assembly what the Senate is to the House of Representatives of the United States. It was the students' council that determined the one expulsion from Mooseheart.

Dr. Albert Bushnell Hart, professor of government at Harvard, drafted the course of study at Mooseheart. "You

No child is afraid at Mooseheart. A small boy once arrived from New Jersey with war-like eyes and a brick in the pocket of his too large coat. Shortly the brick sank in the waves of the small lake on the grounds. Mickey had drowned the brick. A boy has no need of an offensive or defensive brick in a town where everybody is his friend and in the governing of which he himself has a voice and vote. Notice the interest shown by these boys in the pre-vocational sheet metal class which they themselves have chosen to supplement their academic studies

There is a Mooseheart manner compounded of self-reliance and self-respect overlaid with sufficient modesty. What inculcates it perhaps more than anything else is the pre-vocational work in which the child is given a chance to find himself in one of six trades. This boy is a printer, as have been any number of men, great and near-great, before him, from Benjamin Franklin to the Republican candidate for President

will have the greatest school in America," he predicted. A Mooseheart boy or girl, sometimes irreverently termed a "Moosie," receives a common and high school education that takes him to the doors of a university, but what is more important, furnishes him with a double-barreled education, intellectual and vocational. Every pupil who is graduated from Mooseheart goes out equipped to earn his living by head or hands.

Many of the failures in life are made because the man has not found his work. Mooseheart saves a boy from the oft painful experience in the outer world. He is helped to find his vocation. This object is attained by pre-vocational training.

A child of school age confers with the instructors, expresses his preferences and is placed, let us say, at gardening. He concludes he doesn't like it. He is assigned to the garage or to the machine shop. Or the cement works. Or the carpenter shop. Or he is put at typesetting. If discontent pursues him he may try still another and another.

Each assignment continues for three months, assuring him a fairly thorough trial of it. For two years these pre-vocational trials continue unless a child makes a happy choice at the beginning. In two years he has had a chance to learn one of six trades. He finds the one that is his and stands smiling at the threshold of four years' tuition in the work of his choice. The beginning of happiness is finding one's job.

Prideful Moose claim that a son of one of their deceased brethren, if educated at Mooseheart, would know what to do if dropped at the corner of Broadway and Forty-second Street alone. A visit to Mooseheart convinced me that this claim is true. Experience in governing the town that covers 1000 fertile acres between the silver stream of the Fox River and the brown Lincoln Highway has taught him the art of governing himself and others and of working.

## Trees with Broken Backs

Slight diagonal streaks or wrinkles across the grain of a piece of timber betray not only weakness, but sometimes also the strains to which the tree was subjected while it grew. They may even be used to check the official record of windstorms. The marks are caused by what is known as "compression failures"—phenomena that occur when the fibers bend or buckle under too heavy a strain.

In cutting up logs collected for experiment at the forest service laboratory at Madison, Wisconsin, the investigators noticed that compression failures appeared on the north side of several trees from the same neighborhood in Florida. Knowing the date at which the trees were felled, they were able to determine by counting the annual rings that the compression failures were probably caused by a severe wind from the south about the year 1898. They made inquiries in Florida, and found that in that year a hurricane had, in fact, swept over the region. The experiments showed that the strength of a piece of wood may be seriously impaired even by the slight compression failures caused by rough handling. If a beam is dropped across a skid, and a compression failure occurs at the point at which it strikes, it will give way at that point whenever subjected to too severe a strain. Compression failures, owing to windstorms or to hard usage by lumbermen or manufacturers, thus may explain the hitherto unaccountable breaks in hickory wheel spokes, and in other articles made of equally tough woods.

## Why Buy Ice?

As the weather grows warmer, ice tries to slip into the ranks of commodities that march under the banner of H. C. L., but if you are handy with tools you can build an iceless ice-box at a trifling cost, and the cost of operating will be nothing. Here is the way it is done:

A wooden frame, 42 by 16 by 14 inches big, is covered with screen wire, preferably the rustless kind. The door, made to fit closely and mounted on brass hinges, can be fastened with a wooden latch. The bottom is fitted solid, but the top should be covered with screen wire. Adjustable shelves can be made of solid wood or strips, or sheets of galvanized metal. Shelves made of poultry netting on light wooden frames, as shown in the illustration, are probably the most desirable. These shelves can rest on side braces placed at desired intervals. A bread-making pan, 14 by 16 inches, is placed on the top and the ice-box rests in a 17 by 18 inch pan.

All the woodwork, the shelves, and the pans should receive two coats of white paint and one or two coats of white enamel. This makes an attractive surface and one that can be easily kept clean. The screen wire also may receive the coats of enamel, which will prevent it from rusting.

A cover of canton flannel, burlap, or duck is made to fit the frame. If canton flannel is used, the smooth side should be out. It will require about three yards of material. This cover is buttoned around the top of the frame and drawn down the side on which the door is not hinged, using buggy hooks

In this iceless box, evaporation of water is found to lower the temperature as effectively as ice

and eyes or large-headed tacks and eyelets worked in the material. On the front side arrange the hooks on the top of the door instead of on the frame and also fasten the cover down the latch side of the door, allowing a wide hem of the material to overlap the place where the door closes. The door can then be opened without unbuttoning the cover. The bottom of the cover should extend down into the lower pan.

Four double strips, which taper to eight or ten inches in width, are sewed to the upper part of the cover. These strips form wicks that dip over into the pan.

Operation of the refrigerator is as simple as its construction. The lowering of temperature inside the refrigerator depends upon the evaporation of water. To change water from a liquid to a vapor, or to bring about evaporation, requires heat. As evaporation takes place heat is taken from the inside of the refrigerator, thereby lowering the temperature of the inside and contents.

The upper pan is kept filled with water. The water is drawn by capillary attraction thru the wicks and saturates the cover. Capillary action starts more readily if the cover is first dampened. The greater the rate of evaporation the lower the temperature which can be secured. Under ideal conditions the temperature has been known to be reduced to 50 degrees Fahrenheit. Obviously, weather conditions have a lot to do with this refrigerator. A warm, dry day, with a slight wind, if possible blowing on the cover, produces the best results in maintaining coolness of contents.

## Sawdust

The British bought 16,000,000 pounds of American honey in 1918.

\*\*\*

There are 63,000 steam locomotives now operated in the United States.

\*\*\*

Los Angeles is now the largest city in the world west of the longitude of Saint Louis.

\*\*\*

Seventy per cent of Germany iron ore in 1914 was in that part of Lorraine which has since been annexed by France.

\*\*\*

A National Radium Bank has been established in New York with a capital of \$375,000—consisting of three grams of radium salts.

\*\*\*

The first cafeteria ever seen in Paris was thrust upon the innocent public last month when a new Y. W. C. A. opened in that city.

\*\*\*

Under a ruling of the Post Office, children cannot be sent by parcels post—not even if they are under the weight limit and are U. S. males.

\*\*\*

With 6 per cent. of the world's population and 7 per cent. of the world's land area, the United States produces:

- 20 per cent. of the world's gold.
- 25 per cent. of the world's wheat.
- 40 per cent. of the world's iron and steel.
- 60 per cent. of the world's cotton.
- 85 per cent. of the world's automobiles.

## How Much Is Too Much?

Governor Smith of New York professes himself unable to say whether or not beer with 2.75 per cent of alcohol was or was not capable of causing intoxication. Dr. Harvey Wiley, former chief of the Federal Bureau of Chemistry, says that it all depends on who does the drinking. In his statement to Governor Smith he said: "You cannot standardize a poison as to the quantity

required for intoxication. You must standardize the individual. There are as many different sensibilities to toxic substances as there are individuals. You cannot say that 2.75 per cent beer is not intoxicating until you try it on every man, woman and child in the United States." He said that it was possible for the system to be poisoned by alcohol without any visible manifestation of drunkenness.

It is evidently Dr. Wiley's opinion that the intent of prohibition is to protect the weak head and stomach. That a man with a cast iron head can drink a dozen steins of 2.75 alcohol beer without caressing the lamp-post on his way home is possible enough, but if he can get beer so can the man who is poisoned by a single stein. The only safe rule is the rule that is safe for all.

## An Apostle of Preparedness

The resignation from Lehigh University of its distinguished president, Dr. Henry Sturgis Drinker, recalls his services to the nation in mobilizing the educated man-power of the nation for war-time service. Since the organization of the Military Training Camps Association in 1916 he has been chairman of the governing committee and as such the active head of the association. He was also secretary of the Advisory Board of University Presidents on Summer Military Instruction Camps. Ever since the organization of the first students' training camps in 1913 he has devoted himself largely to this work and has been an advocate of universal training. It may be pointed out that this apostle of efficiency in war was also a member of the Executive Committee of the League to Enforce Peace.

## Colleges or Dreadnaughts?

The latest quotation for the last word in superdreadnaughts seems to point to their costing about \$35,000,000 apiece. Placing this beneath one arm of a balance, an attempt to offset this was made by placing the total investments of some American colleges under the other arm. When Amherst, Bowdoin, Tulane, Smith, Vassar, and Wellesley had been added, the beam began to fall, but it required the addition of Beloit to bring it nearly to horizontal. According to statistics in the latest report of the Commissioner of Education, the total investment of these seven colleges was a little over \$34,000,000. This includes the value of

the libraries, scientific apparatus, grounds, buildings (including dormitories), and the entire endowment.

Two of these colleges have been in existence for a century, while the youngest has had an existence of nearly fifty years, yet the total value of the property and endowment accumulated by these seven colleges during this period would not quite suffice to build a modern battleship. In these colleges are to be found 881 members of the faculty and 7022 students. When we think of the time, the thought, and the sacrifice which has gone into the slow accumulation of the property of these institutions with their capacity for usefulness, it seems remarkable that we should put an equal amount into one battleship to be scrapped in a few years as obsolete. In our expenditures we may have been more lavish than any other nation, but assuredly our institutions of learning have been obliged to count their pennies.

## Let's Eat Musk-Oxen

By Aubrey Fullerton

On three islands at the top of Hudson Bay the most out-of-the-ordinary experiment in animal husbandry in all America is to be made, by order of the Canadian Government. Southampton, Mansfield, and Coats Islands, which lie between the Bay and the Arctic waters, have been set aside as grazing grounds for musk-oxen, whose domestication in this way is believed to be both possible and practicable. If the experiment proves a success, the far North will become a factor in supplying America with meat and wool.

The idea grew out of a similar project that Canada tried out several years ago with buffalo. At Wainwright, Alberta, the Dominion Govern-

ment's national parks branch established a bison preserve and stocked it with several hundred head purchased from the Michael Pablo herds in Montana. That was in 1907. The buffalo population of the Wainwright park has since grown to over 4000—the largest herd in existence.

Now why not do with musk-oxen what has already been done with the buffalo? That, in effect, was the question proposed by Vilhjalmur Stefansson when, in the course of his Arctic exploration, he came upon big and little herds of these curious animals nearly everywhere he went. On his return to civilization he put the question up to the Government, backing it with evidence to the effect that if the musk-oxen were protected and domesticated, they would in a short time be numerous enough to furnish both Canada and the United States with a good part of their fresh meat. A commission was appointed to look into the matter, and the reservation of the three Hudson Bay islands, on which Stefansson's big pasturing-out scheme is to be given a trial, is the first result.

Beef as good as any on the market is promised from this novel experiment in the sub-Arctic. The flesh of the musk-ox, when in prime condition, is sweet, tender, and highly nourishing, but at certain times of the year it carries a strong flavor of musk, which has given the animal its name. To the Eskimos, who eat musk-ox beef as a part of their steady diet, this flavor is not at all objectionable, and the inference is that the rest of us might grow to like it, too, in time.

Not only for his meat's sake, but for his wool, this far North denizen, we are told, is worth getting acquainted with. He carries about fifteen pounds of wool as good as any sheep's, which forms a thick cold-proof vest under a shaggy hair topcoat. In fact, the musk-ox is pretty nearly as much sheep as cattle.

Southampton and the other islands chosen for the musk-oxen experiment are natural grazing grounds, covered with great stretches of vegetation, such as the musk-oxen revel in, and the climatic conditions, too, are entirely suitable. When the island preserves are outgrown, there are a million square miles of grass-strewn prairie in what is commonly known as the Barren Lands, between Hudson Bay and the Mackenzie River, where musk-oxen and caribou can together find room and feed enough to make meat for all America.

Domestication and protection of the bison has resulted in the development of a four thousand head herd on the Canadian Government's preserve at Wainwright, Alberta. It is now proposed to turn similar attention to the musk-oxen

## Safeguard the Investment

Every installation of a heating or plumbing system represents an investment to be safeguarded for the longest life and serviceability. For this reason it is to the advantage of owners and architects to make their complete selections from the Crane Line.

They can do this consistently because Crane Service supplies, through the trade, all of the heating and plumbing fixtures and incidental equipment needed for the small home or the great public institution, on the same quality basis.

We are manufacturers of about 20,000 articles, including valves, pipe fittings and steam specialties, made of brass, iron, ferrosteel, cast steel and forged steel, in all sizes, for all pressures and all purposes and are distributors of pipe, heating and plumbing materials.

The accompanying illustration of a huge special cast steel return bend is indicative of Crane ability to meet unusual requirements in the industrial markets.

# Harding Keeps His Eye on the Ball

(Continued from page 5)

he was not one of the most enthusiastic champions of suffrage. His record, then, does not offset the burdens placed upon it by the fact that the Republican Convention did not appease by any means all of the demands of the National League of Women Voters, which organization automatically takes over the province of the National American Woman Suffrage Association as rapidly as individual states grant woman suffrage. Thus, Mrs. Maud Wood Park, chairman of the National League, says, "We do feel that the Republican party has committed a serious oversight, and one that we regret, in turning down one plank which makes the strongest and most general appeal to the women of the country—that relating to infancy and maternity care." And coming at the situation from another angle, the National Woman's party, which picketed the Chicago convention, assumes that the Republican party prefers to wag through the coming campaign without the suffrage amendment. Miss Paul, a leader of the Woman's party, said the other day:

The Republicans think they are better off if women nationally cannot vote. But there are 17,000,000 women who can vote anyway, and whereas the 10,000,000 or so who haven't the vote are in the South or in "solid states," the 17,000,000 are in more or less doubtful states—such states as California, Colorado, Minnesota, Michigan, New York, Wisconsin, Illinois, Tennessee, Idaho, Arizona, Oregon, Washington, Utah, Montana, and so on. In such states even 500 or 1000 votes may tell the whole story. We need one more state to get the amendment ratified; Vermont is the logical one. There the legislature is set, the question is up to the Governor, and his party. Our proposition is simple: If the Republicans won't get that state for us, we'll throw our influence against them in the campaign.

Turning now to one more group—the farmers. Their organizations did not get what they asked for at Chicago. "The majority of the farm leaders have expressed disappointment both as to the platform and the candidate," Charles S. Lyman, secretary of the National Board of Farm Organizations, told the writer. "Farmers generally, I think, wanted a candidate of progressive tendencies. The Republicans did not accept our planks; probably the Democrats will. A great deal depends on what the Democrats do, and whom they nominate." In any Presidential year the farmers, with their huge numbers, could, if massed together in a one-way group, defeat either party. They are divided now, yet they are organized better than in many years. It may be seen then, why Mr. Harding must have a keen eye to this economic group.

There are other economic groups. The "dry" organization lays down the law to candidates: Vote right, or our group will get you! The wets likewise. Senator Harding is "dry." At least drier than Governor Cox, of Ohio. Which is

important because Ohio is prone to be damp. Suffrage in Ohio was thwarted for a time by the coupling of the two issues, and Governor Cox not only may be the Democratic nominee but if the nominee, he could be elected, you hear, if he could get the South, which the Democratic Party always does, the West, and Ohio, the fourth most valuable state in terms of electoral votes. It is thought to be a good guess, however, that the Democrats in their platform will not advocate repeal of the Prohibition Act; at the most, probably, they will merely by inference imply a little of the sodden dew.

In relation to the League the Senator calls himself a reservationist, but many call him all-but-a-bitter-ender. Many conclude that were he other than an all-but-bitter-ender Messrs. Lodge, Penrose & Company would not have subscribed to him. In the last speech in the Senate on the League, in the last paragraphs of that speech, in phrases made at the moment—such easy phrases as give the Senator the repute of being one of the best speakers in the Senate—he said:

We have traded away America's freedom of action in order to establish a super-government of the world, and the League was never intended to be any less. I speak for one who is old-fashioned enough to believe that the Government of the United States is good enough for me. In speaking my reverence for the Government of the United States of America, Senators, I want the preservation of those coordinate branches of government which were conceived and instituted by the fathers; and if there is nothing else significant in the action of this day, you can tell to the people of the United States of America and to the world that the Senate of the United States has once more reasserted its authority, and representative government abides.

Again, the Senator is a party man. Clearly, then, if the Democratic Party takes up the torch and leads on for the League, as the President advocates that it shall do, the Republican nominee will reap the reward, or the penalty, for being an all-but-bitter-ender.

As a party man—one, incidentally, with the cleanest of personal lives and with no skeletons in his closet anywhere—it is to be doubted if Senator Harding will, on one hand, entirely grant that to the victors belong the spoils, but, on the other hand, it is to be doubted that he will go to the other extreme. The best to be hoped for would be that of two men about equally qualified for political office, Mr. Harding would incline to choose the lesser of two evils. But as soon as that is written again one entertains the specter of the Old Guardians, in the background. Also it is probable that tho the predisposition of the Republican Party may be accepted as looking to reorganization of the governmental departments, how far President Harding and a Republican Congress would go in the matter is of course debatable. On the other hand certainly no progress has been made

in the direction of reorganizing the departments during the Democratic regime—the war vastly extended and complicated the situation, which was bad enough, and the President, it may be ventured, has not taken advantage of the Overman Act to effect reorganization and the Democrats have not manifested either so much interest or ability in grappling with the problem as have the Republicans.

This question, incidentally, is vastly important. Just as bad tools work their evils even in skilled hands, so does an inefficient and worn-out organization. The means by which our Government handles its problems are the departments. Those departments at present, after a century of "just growing," without any trueing-up such as every efficient corporation performs continuously, are, from the point of view of experienced organizers, a monstrosity. The wonder is they function as well as they do; and there can be no wonder that the spectacle they present, and the waste and blunders they imply, result in dissatisfaction, resentment, unrest, at a time—the first time in our national history—when almost every one of us has to submit to direct taxation. An organization after the pattern of a modern corporation would proceed at once to the perfection of its instrumentalities before blunting the edge of all governmental effort by the use of antiquated tools. Senator Harding has had all that a town of 30,000 offers a citizen in the way of experience in grappling with organization problems. He has had no big executive experience such as Governor Lowden has had, such as Mr. Hoover has had, or Mr. McAdoo has had. Whether he would effectively grapple with the problem is debatable, since the reorganization of the biggest business in the world is far and away the biggest and most harassing organization task ever presented to any one man. And whether he could, with the Old Guardians disposed to relax in victorious easy-chairs, is problematical.

Altogether, then, it seems, the Republican nominee without question owes his progression very largely to the charm of an enviable personality. He has not the aggressiveness or the fire of Senator Foraker, of Ohio, when that individual was in his abler, admirable days. He has not the shrewd subtlety and resourcefulness that made Mark Hanna, of Ohio, notable. He has fine personal poise, however—were he President we should have a true patriot in the White House. He would pick the premises for the future largely from the past, albeit he is a newspaperman. He would be Republican all thru—probably old shibboleths like protection would loom up again, along with some renewed consideration of military preparedness for our youth but no great emphasis on industrial preparedness, the major difficulty in national preparedness. He

would, he said "rather make Mexico safe and set it aglow with the light of new-world righteousness than menace the health of the republic in old-world contagion." He would have done with "the imperialism of Wilson." He would have done with government ownership of railroads "or any compromise with insistent socialism which proposes to fix our goal within the limits of mediocrity."

In his speech of acceptance, or in his First Inaugural, he might even reiterate:

I think our country has a bad case of auto-intoxication. Our auto-intoxication is due in the main to the high living and the excesses and abnormal indulgences incident to the war. I do not know that I can prescribe the cure, but I know a way to remove the cause. Stop the excesses, omit the

indigestible things, get the healthful exercise of honest toil, give nature a change with pure air and physical activity, and take a stimulant to aid elimination. Break the shackles of wartime legislation for both business and citizens. Cut out the extravagance of government and of individuals. Get back to the Constitution and stand on it immovably. Those who complain at the inefficiency of party government are really criticizing the substitute they propose, because every weakness of the present day is chargeable to the impaired party system. For such failure to meet the people's expectations as our party must answer to today, I answer an insufficient party sponsorship. To alter our political system now, after the marvel of American achievement, would be the abandonment of that which made us what we are, and endangers the republic more than the threat of destruction by force.

Washington, D. C.

## The Real Head of the Ticket

(Continued from page 6)

public utterances. Just how adequate his brevity can be, just how eloquent and stimulating it can be, appears from the perusal of the compilation of his speeches and addresses—about forty of them and all short, of course—that appeared a few months ago under the title of "Have Faith in Massachusetts." More than 60,000 copies of that little volume have gone into circulation into every part of the Union and there is no measuring its influence in bringing about the state of public opinion that resulted in the stampede when Governor Coolidge's name was presented at the Chicago convention.

That book mirrors the man. It shows how straight he thinks, how directly he goes to the heart of the subject under discussion without frills or flights of oratory. He wastes no word and every word is in the right place. Nor do his speeches give the impression of careful condensation or of being polished for scholarly effect. They are the utterances of a clear-thinking man, with a fine cultural background, who has sane ideas of public service and civic responsibilities and who has a rare gift of the pithy expression of the sound principles that underlie such service and such responsibilities. "We need more of the office desk and less of the show window in politics," he says. "Let men in public life substitute the midnight oil for the limelight." Very revealing epigrams, those, as regards the ideals and the career of Calvin Coolidge!

Governor Coolidge may not seem an effective and inspiring campaign speaker in those parts of the country where political candidates cling to the old style of waving the flag and making the eagle scream above the platform. He is not a big man with a big voice—as is Senator Harding, for example. He speaks simply, directly and with obvious sincerity, as a business man with something to say, not as a politician with much to conceal. Those on the outskirts of the crowd, where his voice may not carry, will find that the speech reads convincingly and impressively enough in the paper the

next morning—especially if they share his prejudice against loose thinking and loose phrasing.

Governor Coolidge is literally a poor man. He was on the way to a big and lucrative law practice, but his duties at the Massachusetts state house—as he sees such duties—have given him little time for anything else in the past decade. The idea that public office might mean "something on the side" could not possibly have a place in his way of thinking. He has never owned an automobile and he lives in half of a double house for which he pays a monthly rent of \$32. His Boston home is a \$2 a day hotel room. In some governors that sort of thing might well be suspected of being a pose, but everybody in Massachusetts knows that the democracy of Calvin Coolidge is the real thing. And no one who comes close to him makes the mistake of thinking that the simplicity of the man indicates littleness of nature or that his reserve of manner indicates coldness of nature.

Vice presidential candidates have been nominated before now because they possessed a "roll," or because they hailed from doubtful states or because they would balance the ticket geographically. Governor Coolidge is a poor man; Massachusetts is not doubtful this year, and geographical considerations would have dictated a vice presidential candidate from west of Ohio rather than from New England. There is something refreshingly wholesome, something of inspiring promise in our political life, when the national convention of a great political party thus disregards the so-called political strategy of the campaign and selects a man because his name, to people from coast to coast, has become the synonym of law and order—because the American people are convinced that he is the embodiment of honesty and quiet efficiency in public office. The times are far from degenerate when a good name is thus politically counted as better than great riches or residence in a pivotal state.

# Secret of Writing Successful Letters

A New Self-Teaching System, including 500 Successful Letters, by AD-MAN DAVISON, the highest paid Letter Writer in the World.

"THE MASTER LETTER WRITER" is the most authoritative, clear, understandable, far-reaching work of this kind ever written. It contains 976 pages. Part I embraces 531 pages of new ideas on how to appeal to every class of reader. Every point of view, every emotion, ambition, need, and the most effective ways to reach it, are explained.

Part I also covers Routine Correspondence, illustrating order letters, answer-to-order letters, complaints, letters of inquiry, contract and credit letters. These, with the typographical arrangement of letters including a section on Business English, are important to correspondents, secretaries, stenographers, typists, students. A special section of 100 Collection Letters, completely covering the needs of individuals, firms and collection agencies, is included.

PART II contains the 500 Master Business Letters—selected from the private portfolios of Ad-Man Davison, whom Elbert Hubbard called "the scribe supreme of Advertisingdom."

In this remarkable collection are endless new word-pictures to help you revivify your business story. Uncommon phrases of pith and power. Warm, winning, human arguments, adaptable to your own selling talk. Straight-to-the-mark sentences that compel action. The collection includes direct merchandising letters, advertising letters, sales managers' letters, letters to dealers, to agents, letters selling service, order-getting letters, collection soliciting letters, accountancy, insurance, investment and real estate letters; letters applying for positions as executive, salesman, correspondent, secretary, stenographer, bookkeeper, typist; letters selling instruction-by-mail, and advertising space; soliciting and sales letters for every business.

Conveniently arranged, classified and indexed. Beautifully bound in rich blue extra cloth, with gold top and gold lettering. Sent postpaid upon receipt of price \$5.

If you want quicker results from your letters, if you want larger sales, more remittances, if you want a better salary, swift promotion, Success—here are all the Success Secrets of the master writer—MAKE THEM YOUR OWN—order this great Course and Collection today. Address Desk 42.

### A Micro-Psychic Machine

Amazingly increases the strength of the feeblest psychic impressions. A mechanical ouija. Operates for one person. Prepaid \$5.00. Free booklet. "Psychics and the Syco-Graf"

THE AUBURN COMPANY  
64 North Main Street, Providence, R. I.

## "I Would Not Part with it for \$10,000"

writes an enthusiastic, grateful customer. "Worth more than a farm," says another. So testify over 100,000 Men and Women who have worn it.

## The Natural Body Brace

Develops erect, graceful figure. Brings comfort, health, strength and pep.

Conserve Your Life. Keep Yourself Fit.

Replaces and supports misplaced internal organs; reduces enlarged abdomen; straightens shoulders; relieves backache, curvatures, nervousness, ruptures, etc., in both sexes. Write today for illustrated booklet, measurement blank and our very liberal free trial proposition. HOWARD C. RASH, Pres. Natural Body Brace Co. 321 Rash Bldg., Salina, Kan.

## BON-OPTO

### SHARPENS VISION

It's a system of treating the eyes at home; is practiced daily by hundreds of thousands of people with great satisfaction. The Bon-Opto system quickly relieves inflammation of the eyes and lids. It cleanses, soothes, and rests tired, dusty, work-strained eyes and is a help to better eyesight. Ask your druggist. He knows. He will refund your money without question, if you are dissatisfied. There is no other home eye treatment like Bon-Opto.

## Land of the Pilgrims' Pride

(Continued from page 3)

had met in San Antonio. But Boston seemed to be made up largely of Irish and Greeks. A great many of the names on shop windows I could not pronounce. Where were the high brows? The Boston Transcript was lost in a jungle of dailies of yellow proclivities.

After presenting my letters of introduction, however, I met quite a number of persons who were precisely like the Bostonese I had met in San Antonio years before. They formed their sentences with great care, chose their words with painful precision, and looked at me over their glasses, evidently suspecting that my long residence in a land so distant from Boston might have developed a trace of cannibalism.

It is a strange thing about certain sections of the United States that they can see the faults of other sections with such clarity and remain blind to the same faults in their own communities. Boston is that way. Indiana is that way. Washington, D. C., is that way. They are so completely pleased with themselves that they insult you by being kind and condescending. I watched with amused interest while my Boston acquaintances struggled to think of something nice to say about Texas. They earnestly desired to be kind and to make me feel at home. The very excessive earnestness of their desire was insulting—or rather it would have been if I were the sort of person to wear my state pride on my coat sleeve.

I am very proud of Texas, but Texas is too big for one to have a petty state pride about it such as I observe in citizens from Ohio, Indiana, Massachusetts and a few other commonwealths. Texans recognize that they do not lead in anything particularly and they are not crouched for the opportunity to spring at you with some foolish state claim. But Texans are amused at the provincialism of other parts of the country which have so little excuse for it. Some of my Boston acquaintances seemed to think that Texas is all inland cattle ranches—yet Texas has a port which does not greatly suffer when compared to Boston. Queer that they had not even looked at their maps recently. While Texas cities are not so large as Boston they have the advantage of having been constructed in more recent years and many of their facilities are more modern. The only difficulty Boston presented to me as a stranger from a pioneer state was to learn the intricacies of its out-of-date arrangements along certain lines. Bustling Dallas makes Boston look like a prayer meeting. And then, too, I was impressed by the paradoxical truth that Boston is farther from Texas than Texas is from Boston. There is not a club in the Lone Star State in which a man could safely make misstatements about Boston or New York City or St. Louis. If as many as ten persons were present there would

certainly be among them men who were familiar with all three cities. But in Boston one could tell about chasing wild Indians thru the sixteen story office buildings of Dallas and probably be asked to continue with more experiences.

It interests me to learn that Boston does not know that Texas has newspapers which compare favorably to those of Massachusetts. I wonder why it is that the view from Texas east is clear while the view in the other direction is so clouded. There is no particular reason why Texans should know anything about Massachusetts newspapers, but they do. Why then, can a city like Boston remain so ignorant of what goes on in Texas?

But there are a number of characteristics of Boston which I had expected to dislike that please me very much. For instance I had always been amused by stories of Boston's interest in ancestors. That had seemed to me an expression of decadence—as un-American. But on closer acquaintance I observe that the ancestor worshippers pay tribute to the spirit as well as the mere list of names. Americanism means something very definite and very fine in Massachusetts and I am inclined to think it does in the remainder of the New England states. I was especially impressed by the spirit of New England women (whom I met thru clubs and other organizations) toward their new duties of citizenship. There is a stern Spartan quality about New England women citizens that I have not always found among women voters elsewhere. I am led to believe that their votes will be cast with the same spirit which has made New England a fountain of Americanism thru all the years of our history.

Boston bankers and big business men impressed me as being the sort who have not changed one tiny iota from the time-honored belief that trade and industry rest upon honor—personal honor. They believe that men prosper because they make honest goods and that they can borrow money because they are honest men. That reminded me of the spirit of the cattle country, Western Texas especially. Out there the cattle men's credit bears only a theoretical relation to their assets. The old time cattle man has always had good credit. It is limited only by the condition of the market and range and by his managerial ability. Honor he has always had, so that assets counted for the minimum.

The word Yankee has a new meaning to me since I have met Boston. That which is best in the old New England spirit is still the best there is in America. Every state has something to learn from the Bostonese highbrows, even if they are queer folk. I wish all of Texas could know them intimately. And for their own sakes I wish they could meet the United States.

Boston

## Your Red Cross

(Continued from page 9)

disrupted by reason of the enforced hiatus in the work-a-day life during the period of military service.

I assume that the obligation of the American Red Cross to our soldiers, sailors and marines is thoroly impressed on the minds of all the people. It need only be said that this obligation will not be fulfilled until the last of them has been discharged from the hospitals—not, indeed, until the diminishing tasks of relief and aid of all kinds pertaining to the country's defenders in the World War have been completed. The work in question is greater than those not closely in touch with it may realize; and as it lessens in certain phases it calls for more intensified effort with respect to others. The Red Cross has been regularly commissioned to aid the Government in the care of men in hospitals by providing the recreation and home contacts that form such an important part in the restoration of bodies and minds; it is coöperating with the Federal Board for Vocational Training in the retraining of men whose disabilities prevent resumption of their former means of earning a living; along an entirely different line it serves as a sort of liaison agency between the service men and their families and the Bureau of War Risk Insurance.

Add to this abstract of after-war activities the general statement that the Red Cross aims not only to meet these fixed obligations but to exert its influence and its strength of organization to the end that opportunities for ex-service men shall be broadened, and you have as comprehensive a declaration of effort and purpose as it is possible to encompass briefly. It will be a permanent objective of the American Red Cross to serve, in its accepted capacity, the armed forces maintained by the United States in time of peace.

Aside from its obligations to soldiers, sailors and marines, now and in the future, the forward-looking program of the Red Cross, broadly speaking, falls under two heads:

1. Relief of distress in general and preparedness to meet the emergencies of sudden disaster.

2. Development of health and community work, with emphasis on the prevention of disease and improvement of general living conditions.

In the matter of relieving distress the world is confronted today by the most serious problems in its whole history. The health of the peoples of the entire earth and the safety of civilization are menaced by the disease, the destitution and the indescribable misery afflicting vast populations in the European area stretching from the Baltic to the Black and Adriatic Seas. Reaction from the war tension in Eastern and Central Europe has developed a situation incomparably worse than anything pictured as the direct result of hostilities. We are daily becoming more impressed with the necessity for prompt relief of conditions in

## TRAVEL AND RESORTS

The Independent invites inquiries from its readers pertaining to Travel for pleasure, health or business; the best hotels, large and small the best routes to reach them, and the cost; trips by land and sea; tours domestic and foreign. order to save humanity from unspeakable catastrophe.

Put all altruistic aspects of the situation out of consideration, if you will, there remains the fact that the safety of our own country is imperilled, and in fighting distress abroad we are defending the homes of the American people against dangers terrible to contemplate.

This problem is, of course, too stupendous for solution by volunteer agencies. The American Red Cross duty in the premises is to give such aid as lies within its power to a task that requires the utilization of machinery and resources that governments only can command. We have sent our doctors and our nurses to the plague spots in Europe where needs have been most pressing and are sending medical and other supplies to meet in some measure the pitiable local and national lack of such requisites. American Red Cross units are scattered all over the infected and afflicted regions, battling to stay the westward sweep of typhus and other scourges; here and there victories have been won; in graves in many isolated places rest the bodies of American workers who have fallen victims to the disease they have fought—martyrs in humanity's cause. But all the time, despite the progress in control of disease in certain districts, the general situation grows more menacing.

The American Red Cross units engaged in relief work in the foreign fields are numerically small and their efforts are designed to help the distracted peoples to help themselves. It is the intention to turn matters over to local agencies as fast as they can be developed and become able to function.

Recently there came from Lieut. Col. Robert E. Olds, American Red Cross Commissioner for Europe, a cablegram reporting shocking conditions due to lack of clothing for men, women and children, based on personal investigation by Red Cross representatives in Central and Eastern European countries. In one place babies are being sent from maternity hospitals wrapped in newspapers; in whole districts the adult population is in rags, the children practically naked. Colonel Olds concluded his cablegram with an appeal for some action by Red Cross workers in America to help relieve these terrible conditions.

In response to this appeal I have addressed letters to Division Managers of the Red Cross thruout the United States, urging resumption of production activities by Chapters, which ceased when the military demands no longer existed, so as to meet in some measure the needs for garments for the destitute. In one restricted district there is a call for 200,000 layettes for babies; there is urgent use for all the garments we can supply for many months to come. Fortunately the organization developed by the Red Cross during the war is intact and ready to cope with the situation—ready to render the duty which confronts a people who have escaped the horrors of the

conflict in which mankind in general was involved.

The disease epidemic in certain parts of the world today reflects an abnormal situation, brought about by unparalleled causes. But in contemplating this situation we are reminded that disease, even in normal times, is mankind's greatest menace. It was a handicap in the waging of civilization's struggle for existence, but it served to arouse a realization of the fact that a very large percentage of it is preventable. We have spent billions of treasure, sacrificed millions of lives and given the world's best blood to make liberty safe and peace a permanency. In the light of the knowledge forced upon us, shall we stop there, or shall we follow matters to their logical conclusion and help to make the world safe against preventable disease—put civilization on a plane of health that is consistent with the meaning of the term?

Here, indeed, is the paramount task in the work of reconstruction, for reconstruction, as already indicated, means more than mere reestablishment of the *status quo*. The response of the American people to the last Red Cross Roll Call, just after the peace-time program of the organization had been announced, indicated beyond question that Red Cross wartime experience and power of organization should be continued in the people's service. To what better advantage could this service be directed than to the work of combatting preventable disease and raising the standards of health?

The Surgeon General of the United States Army has made the startling revelation that the examination records of over two and a half million of drafted men showed that out of every one thousand examined there were 468 physically defective and that about 30 per cent of the men were so unfit that they could not enter military service at all. Additional facts brought to light show that at least 50 per cent of the defects found could have been prevented or corrected had they been attended to in childhood and had each individual been trained in proper habits of personal hygiene.

It is impossible within the limits of this article to speak in more than general terms of the health work which will engross Red Cross attention when the "cleaning up" of post-war obligations is accomplished and which already has made notable progress along educational and other lines. Results are beginning to show in connection with extension of the nursing program, child clinics, training in the care of children and the establishment of community health centers. In carrying on this work the Red Cross neither intends nor desires to usurp the functions of other organizations. Its purpose is to work itself in fields not already occupied and in addition to do whatever it may to bring about more united and effective effort by those agencies for health promotion already in existence. In connection with the general health program it will continue campaigns

for the spread of First Aid training and the prevention of accidents that exact inexcusable tolls of life and depreciate the industrial effectiveness of the nation. It will also continue even more intensively than at present to carry education in Home Care of the Sick into the homes of the country. Already Red Cross courses in Home Care of the Sick have been taken by hundreds of thousands of American women. No better contribution to the self-reliance of our people could be made.

For twenty years there have been growing up in this country many private movements for the prevention of

this or that preventable disease. But in the building up of all these movements ineffectiveness and confusion have inevitably resulted. For the last ten years leaders in this field have been dreaming of the possibility of coordinating them, of getting all this energy so united that there would be a massed movement that would produce results. They were unable to find the necessary coordinating agency. But now that the war is ended there appears, by reason of the war, an organization that has the power to do this thing. That organization is the Red Cross.

Washington, D. C.

## Are We Backsliding?

(Continued from page 8)

future, and the declaration made in the name of the Liberal Party at Leamington, that coalitions of any kind are inconsistent with the principles of Liberalism, would, if acted upon, appear likely to condemn the party to something like political extinction.

The two party system of politics in Great Britain is now, in all probability, closed. In the future we are never likely to have more than four or five distinct political groups represented in the House of Commons; and it seems extremely improbable that any one of those groups will for a long time to come be sufficiently strong to carry on the government of the country by its own strength. Probably the Leamington resolution may be regarded more as a symptom of political unrest than as a considered policy, binding the future of the Liberal Party.

If we turn from politics to trade we find the same impatience to get back to pre-war conditions. The war was only a few weeks old when individual enterprise in armaments was superseded by a great coöperative effort on the part of the state. At a little later date Mr. Lloyd George threw into the task of coordinating and organizing the national production of munitions all his dynamic energy. For the first time in our history the Government made it its business to really take stock of the people's needs for clothes, and boots, and food and houses. It is true that the people in whom they were most interested were the soldiers and the munition workers, but they made up a very substantial portion of the population and the needs of the others were not overlooked. The effort was not unsuccessful.

Until the Ministry of Food was created in Great Britain in 1917 food prices were rising more rapidly in this country than in any country of the world except Norway. After 1917 the process was reversed, and since then we have been in the tail of the procession of rising prices, and not in the front. But as the war disappears the public impatience at any form of government interference or control of the operations of trade or commerce, even with regard to the most essential food-stuffs, becomes more marked with every

month that goes by. A section of our people want to forget the war, and to get rid of everything that could remind them of it.

I have come to the conclusion that after all there are some good points to be put to the credit of war. For one thing it makes people less callous than they are at ordinary times about the destruction of human life. Last spring the total death rate from influenza in this country was greater than the death rate from war casualties at any period during the fighting, but nobody bothered about it because deaths and casualties in times of peace seem natural; in war they seemed altogether unnatural. When the Germans sent the Zeppelins and aeroplanes to raid London the result was to reduce the death rate from casualties on the London streets by something like twenty a week. In the piping times of peace there are five hundred casualties every week from accidents in the London streets, but nobody worries. When the Zeppelins came and we disappeared from the darkened streets at an early hour the saving of human life and limb was appreciable; but a much smaller number of deaths from bomb fire was sufficient to create the most profound impression, altho I am assured that it is just as painful to be run over by a bus as to be hit by a German bomb.

In times of war it seems easy to put class feeling, racial prejudice, national antipathies all on one side, and to all be friends. In times of peace it seems to be the most difficult thing in the world to maintain the harmony secured in times of war.

My mind goes back to the last years of the war when President Wilson's scheme of a League of Nations had seized on the imagination of great masses of our people, and was gradually securing the unanimous acceptance of all political parties. It was a commonplace at that time to say that whatever happened after this war we could never rest until we had made the world safe from any recurrence of the troubles thru which we were then passing. That ideal still seems a long way from realization. Here at home I often heard the view expressed that it would be a great thing if, when the

war was over, we could maintain for even a few years of peace the spirit of comradeship and cooperation which the time of trial had brought forth; if we could turn to the solution of social problems, the force, energy and resolution with which we had grappled

with the material problems of the war. Today the old Liberal Party leaders are saying that any continued cooperation and comradeship of that kind would be contrary to the principles of the Liberal Party.

London

## Why the Leitch Plan Makes Good

(Continued from page 7)

month. Every day the bulletin board announces the number of pianos for the day before and the number up to that day for the month. This bulletin board is the focus of every eager eye in the factory. It tells them whether they are approaching or losing that cooperative economy dividend. Individually they are paid piece-rates. Collectively they get this added collective piece-rate.

The economy dividend is really the superstructure that holds together the three corner stones, Cooperation, Economy, Energy. It works wonders. During three months in the fall of 1913, an average of 242 employees, working ten hours a day, turned out 746 pianos. For the corresponding months in 1919, an average of 235 employees, working eight hours a day, turned out 1100 pianos. The increase in efficiency amounts to 45 per cent. on the basis of plant output, and reduces overhead proportionately, while the increase in efficiency is 86 per cent. on the basis of workman's output per hour, and increases wages more than proportionately. The average rate of wages per hour, for the same periods, advanced from 28 cents to 58 cents, an increase of 106 per cent., due entirely to increased output and economy dividend.

See how it works. Every employee is directly interested in the efficiency of his fellow-worker. Absenteeism cuts down the economy dividend. Slow work cuts it down. Wasteful work cuts it down. Careless shop planning and routing of materials and pianos thru the factory cuts it down. A dozen placards on the walls tell us "200 scientific managers in this factory." Every employee is a scientific manager. It was an efficiency engineer brought in from the outside, whose scientific time and motion studies provoked the strike of 1912. That outside expert is gone, but industrial democracy and the economy dividend filled the workers in the shop with the spirit of scientific management. The evidence of it is everywhere. Not long after the efficiency engineer left the plant, they had reduced the hours to nine. Five months later they came down to eight, and on each reduction in hours production was increased.

Furthermore, the corner stones, Justice and Cooperation, prevent the piece-rate from being cut arbitrarily. Every worker is secure in earning as much as he can at piece-rates, for he knows that the rate will not be cut without his consent. The president cited one instance of a voluntary cut in the piece-rate from 42 cents to 11 cents. The workers could earn more at the new rate than formerly at the old rate.

The foreman is no longer a "boss."

He is one of the cooperators. Here is where the other corner stones, Economy and Energy, come in. Piece-rates fixed by cooperation on the principles of Justice; economy dividend added to piece-rates on the principles of Economy and Energy—this is the greatest combination of inducements to output that we have found anywhere, measured by results. In no place have we found the men working with greater initiative, energy and speed. They are completely absorbed in their work. Courteous, willing to talk with visitors, proud of both their principles of democracy and of their hard, speedy work, they keep on working while they talk. No boss stands over them; no outsider times their motions; they speed themselves up cooperatively.

This is the only place we found where pure efficiency outran the increased cost of living. In other places piece-rates have been advanced. Here they have, in some cases, been reduced, in others equalized, but not generally advanced; yet their earnings per hour, the correct unit of efficiency, have increased 106 per cent., while their earnings per day have increased 66 per cent. Assuming that the increase in cost of living has been 80 per cent., the workers' daily earnings indeed have not kept up with the cost of living, but they have swallowed the difference in the increased leisure per day.

This comes about in two ways, partly by greater output per individual at the same or even lower piece rates, and partly by the economy dividend, or collective piece-rate, added on to their individual earnings. It is not increased rates of pay, but increased output per man that has increased their earnings.

That the profits of the company have greatly increased is evident. Even without an increase in price to the consumer the economy-dividend has added its share to profits as well as wages, against which should, of course, be set the increased prices of raw material.

Lastly the capstone of industrial democracy is Service. In a way each worker can see his contribution to the music of the world, as the growing piano moves along thru the factory. "Quality shall always be the first element of our service, and quantity shall ever be the second consideration." Each worker is an inspector of his own and the work of others. At the very last, before the instrument leaves the factory, the highly skilled piano tuners epitomize the motto of the business: "If there is no harmony in the factory, there will be none in the piano."

# The Independent

FOUNDED 1848

## About Ourselves

It is not often that we talk about ourselves, for we believe that whatever merits The Independent may possess will be discovered by its readers for themselves. But since so many of our readers are new subscribers we want them all to understand the meaning of the new make-up of the editorial staff and our plans for future development.

Every American citizen should take at least two journals, one the local paper for home news and the other a national weekly for the wider outlook on the world. Unless one can afford the money and time to take and read several weeklies he must see to it that the one he selects contains at least these two features: information and opinion, the news and the meaning of it. It must provide him with a running narrative of current events, more comprehensive and comprehensible, more critical and correct than that printed in the dailies, in order that the reader may have the facts in hand on which to form his views. Second, the weekly must be a magazine of opinion—but not of one opinion. It must provide comment and discussion of pending questions from various standpoints by competent writers. This process of arriving at sound conclusions is the same as that which has been developed thru centuries of court practice; first the facts of the case are established as accurately and completely as possible by the testimony of witnesses and then the question is argued pro and con by competent advocates and finally it is submitted to the grand jury of all the readers of the periodical for their verdict.

The Independent aims to supply the first of these essentials in our Story of the Week, which is intended to be a careful and impartial report of important happenings in the world at large. The second essential of sound journalism, the interpretation of these events, the criticism of public men and measures and the advocacy of appropriate action, is more difficult to attain. It can only be met by the coöperation of a group of writers who have common ideals and purposes, yet differ sufficiently as to the means and methods to present the diverse aspects of the vital questions of the day. Such a group we believe we have at least succeeded in getting together in the names that now appear at the head of the title page of The Independent.

The next few months will be a critical period in American history, for it will determine the dissection of national policy in foreign and domestic affairs for years to come. In order to give our readers the advantage of varied viewpoints we have added to our staff as contributing editors for the current campaign a liberal Republican, a liberal Democrat and a liberal Socialist. By "liberal" we mean one who is sufficiently in sympathy with the aims of his party to speak for it with sincerity, yet who is sufficiently detached and independent to criticize or condemn it when he thinks it so deserves. Dr. Talcott Williams, by his recent resignation from the directorship of the Columbia School of Journalism, is again able to engage in the practice of journalism to which he has devoted more than forty years, largely spent on the *Philadelphia Press*. good, who speaks for the Democratic party, is particularly well known to those of our readers who came to us from *Harper's Weekly*, for he was editor of that journal before its merger with The Independent in 1916. He formerly was in charge of *Collier's Weekly* for ten years. John Spargo has written more than twenty books on Socialism. He broke with the Socialist party because of the disloyal attitude of that party in the war, and since he is not a partizan, he is all the better qualified to speak for that large and increasing number of radicals of varying beliefs who do not find themselves adequately represented by either of the old parties.

Besides these three editors, whose interests are mainly political, we have recently added to our staff, to look after the religious side of life, Prof. Shailer Mathews, of the University of Chicago, director of religious work in the Chautauqua Institution and former president of the Federal Council of the Churches of Christ in America. He was editor of *The World To-Day*, and is editor of *The Biblical World*.

The Independent has had for the last twenty years published almost every week an editorial by Prof. Franklin H. Giddings, of Columbia University. He was a vigorous champion of American intervention.

Now that we are calling the roll we may complete the list of editors by introducing the office staff. Hamilton Holt became Managing Editor of The Independent in 1897, and in 1913 succeeded the late William Hayes Ward as Editor in Chief. He is personally known to a large number of The Independent readers as he lectured in all parts of the country on the League of Nations. He also has devoted much attention to the promotion of industrial peace and was one of the three arbitrators under the Peace Protocol in the Garment Workers trade.

Edwin E. Slosson has been on The Independent staff since 1903. He writes the foreign portion of the Story of the Week and has an occasional department of his own called "A Number of Things."

The present Managing Editor is Miss Hannah White, who came on The Independent staff after her graduation from Smith College in 1914.

Preston Slosson, who writes the American news in the Story of the Week, served for more than a year on the staff of historical experts of the American Peace Commission at Paris.

Our observant readers will have noticed that we have dropped the editorial "we"—except on occasions like this. All important editorials are signed so that each man may say what he thinks right in his own way without having to tone down his expressions or modify his style to suit the sentiments and taste of his colleagues. But in order to secure team play for The Independent it is the custom for the nine editors to lunch together every Thursday and discuss frankly the issues of the day and consult as to the improvement of the periodical. In this way we hope to combine diversity of view with effectiveness of action and to make The Independent the one weekly that every American citizen must take no matter how many other periodicals he may want to take. THE EDITORS.

# We Want a Million Names

Your Influence is Worth  
More Than Your Money

## A Dime Saved a Child in Alabama

Is there a little one in this whole world who has any pull on your heartstring? If not, STOP READING: if so give us just five minutes of your time out of the love you bear for it, and your child will help all other children by stimulating you to listen to our story.

In Alabama the National Child Labor Committee helped save 153,000 children from possible exploitation by spending \$15,000 in laying facts before the Legislature, which resulted in bringing education, health and child labor laws into existence.

85% of the child workers of America are without the protection of the Federal Child Labor Law. They must be saved to save the nation from decadence. We are about to undertake an Interstate Campaign for good laws where none exist. We want every man, woman and child to enroll in our

## Army of Influence

We must know our friends in each state before we begin, and we must measure the opposition. We must get the name of every person who will stand with us in this (for the child) life or death struggle. We need only your name and a dollar. Are you with us? Are you with the baby, the boy or the girl fighting against odds? Your co-operation means more to us than you can possibly know. Let us repeat, just sign your name and pin a dollar to the slip and our "Army of Influence" will become a million.

## Do You Want to Go Hungry?

A Message from the United States Government to the American People

By E. T. Meredith

Secretary of Agriculture

**R**EPORTS received by the Department of Agriculture from all the States in the Union tell of a serious labor shortage on farms. They are full of striking sentences. For example, the report of the farm management demonstrator in the State of Washington states that: *"The situation is not so serious from the farmer's standpoint as from the consumer's."* This does not mean that the situation is not serious from the farmer's standpoint. The situation is always serious for the farmer when he cannot plant, cultivate, and harvest a normal acreage in a satisfactory manner. The shortage of labor presents a difficult problem for the farmer, because it means that he will have less to sell, but to the city man it means that, just to the extent the farmer is forced to retrench in his farming operations for lack of labor, will there be a smaller food supply for the city man to buy.

I do not say that there is going to be a serious shortage of food for city consumers this winter. Given a favorable season from now until harvest, I believe that enough food will be produced to meet, in fairly adequate measure, the demands of the cities. I do wish to point out, however, that reduced production means higher prices to city consumers. Unfavorable weather conditions between now and harvest may result in an actual food scarcity. Looking ahead to another crop year, it seems certain that, if the wages paid to city labor continue to attract farm labor at the present rate, there will undoubtedly be a further curtailment of the acreage sown to food crops for 1921 and, in consequence, the supply may be inadequate in the winter of 1921 and 1922.

Bear in mind the fact that if this comes about the farmer, himself, will still be comparatively safe from any considerable measure of actual want. He will have at home enough meat and bread and other essentials to feed his family. He can make his old clothes last another season. He has done that many times in the past, and if he has no surplus crop to sell, he will undoubt-

© 1920, New York Tribune, Inc.

A nice little problem in social economics for somebody to work out

edly do it again. It is, therefore, the city consumer who will feel the pinch if we permit conditions to continue which will result in a food shortage, and the city laborer who will be deprived of a market for the product of his labor.

I do not wish to convey the impression that the farmer is making any sort of threat. On the contrary, he is doing his best, under existing conditions, but the point I wish to emphasize is that he is confronted with conditions over which he has no control. He is not able, in competition with the wages offered by industry, to pay wages which will secure him enough labor to produce and harvest a normal acreage this year. If the present drain becomes more accentuated, he must still further curtail his operations and the prices for that which he produces will tend to go higher. Isn't it clear, therefore, that the city reader is personally and vitally interested in

helping to find the solution for the farm labor problem?

The Department of Agriculture has made an effort to learn the extent of the present farm labor shortage. The machinery of the Bureau of Crop Estimates was employed for this purpose. That machinery is finely adjusted and comprehensive. It covers the country so thoroly and does its work so accurately that it has, for example, forecast crop production within less than one per cent of the actual yield at harvest. I mention this merely by way of showing that it was no mere guess when, in April this year, the Bureau of Crop Estimates reported that there was a shortage of almost 30 per cent in the farm labor supply, taking the United States as a whole.

The shortage is greatest in the North Atlantic States, and least in the North Central States, west of the Mississippi River, where it is only about 24 per cent. The effect of this situation is apparent in the acreages planted to food and other crops. It is more serious because of the unusually late season—from two to five weeks later than normal in the Mississippi Valley and eastward to the Atlantic Coast. [Continued on page 57]

# Bad Housekeeping in My Ward

By Urban A. Lavery

**T**HE ward in which I live in Chicago lies close to the heart of the city, and is famous for its contrasts, both in its appearance and in its human material. Along one side runs the lake, like a majestic sea, while to the north lies a famous and lordly park. The area along the lake and park with its adjacent streets has been dubbed "The Gold Coast," because of its splendid houses and fine towering apartments. The other end of the ward skirts along the river front with its bad smells and rotting timbers, and then the boundary turns to the north, thru a sodden "Slum" area, where the densest population of the city swarms. Curiously these two expressions, "The Gold Coast" and the "Slums" hold in themselves a sort of condensed history of the ward. Each has about it an aroma of its own, a mingled smugness and contempt. They stand like two menacing figures poised ready to strike, murmuring whispered threats for each other, and for the community as well.

The ward, and indeed the entire city, presents a constant series of contrasts—it has no character, no uniformity, no blend, no atmosphere, no individuality, all of which go to give European cities the sense of "good housekeeping," which makes their charm. But remember—the ward is not yet three-quarters of a century old! Along one side of the ward much of the social aristocracy lives; while along the opposite side, the mingling thousands make up the source of power of one of the notorious "low-brow" politicians of the city.

Thru the decades he has held his sway because of his diligent attention to two problems—giving shelter and protection and financial aid to the poor, and giving shelter and protection and levying financial toll from those who make a profit out of vice. In between these two extremes lies a sort of drab no-man's-land, the domain of the boarding house. Here lives a large part of the homeless army of the city, that army of young men and women recruited like the army of the Great War from the strongest and best, gathered from far and near. It is an interesting and sometimes a startling group, for it is made up of clerks, and artists, and stenographers and stage-folk, and lawyers, and students, and salesmen, and loafers of all kinds—a varied army which furnishes much of the grinding energy for the great dynamo which is the city. Many of our leading men and women have passed thru those boarding houses—and those who are there now have often promise of big things to come. In the ward too may be found many of the famous dives of the city, shady places below the sidewalk where the sodden and the socially-elect rub elbows in the dance. Here are notorious saloons which plied their trade in spite of tightest war-time prohibition; here are smutty streets, where beguiling faces beckon between drab curtains of parlors that once saw revels of a finer type;

here are homes now mostly filled with strangers, where a very considerable number of the city's leading men and women were born and spent their early years.

After the Great Fire of '71, the ward, which was hardly touched, became a sort of beehive for the city, and in the following years many very fine houses were built, some of them still standing in their desolate dignity, close to the heart of the sooty city. In time the very throb and hum of the incredibly amazing and growing town made them undesirable as homes for the well-to-do. Then began one of those "migrations" for which Chicago is famous. Shops and factories and garages and small stores began creeping onward like the enormous all-consuming sand dunes along the south end of the lake not so many miles away. Here, as in other parts of city, like the Prairie Avenue district, and the negro section farther south, there has gone on those processes of disintegration, and deterioration in real estate values which leave great sores in the life of the city. Recently there has arisen an interest in preventing such things, and shortly serious and effective efforts toward city "zoning" will try to cure these ills. And so it is that time has changed and is still changing the aspect of the ward, until some of the spots which a few years ago were "show-places" for city visitors have now become "shabby-genteel" and even worse.

Such is a hasty picture of a localized area in a typical modern American community. Some parts of Boston or San Francisco or New York might have been chosen instead, but they could not be more picturesque. It is doubtful if a better illustration than my ward could be found anywhere to show the confusion and the contrasts which modern city life exhibits; or to show how badly the familiar doctrine that "everybody's business is nobody's business" works in our community affairs. My ward has great possibilities; it has vast wealth, an intelligent, industrious and inherently powerful citizenry; and on the whole it has the best of good intentions. Why then do we have there so much of rottenness and corruption in local politics? Why do we have dirty, ill-kept streets when clean streets would at once be so much more lovely and so much better as an investment? Why do we have old decrepit and over-crowded schools in a neighborhood which can afford the finest churches and apartments and hotels in the city? Why must the public service of the

community, and the public business, be transacted in buildings and with equipment which no private business or private society would tolerate? I have often wondered what is the real cause—not the superficial causes which are easily named—

Brown Brothers

The vehicular congestion of the wholesale markets is paralleled by a sodden slum district where the densest population of the city swarms—in my ward

Brown Brothers

My ward holds a municipal court and a county jail. But where is the civic conscience that would not tolerate these sinks of crime-and-vice where a large part of the dirty linen of the city is washed?

but the real basic reason for this breakdown in community life which is so apparent. Here is a community which has in most respects unmatched possibilities—why then does it lag and slumber and decay?

The first thing which always challenges attention in city life, and which seems always like a dull red sore, is the local politics. The history of my ward shows a recurrent effort to “clean up” politics by electing “reform” aldermen, but the last decade or two holds out little promise

in this direction. There have been many good aldermen from the ward, quite above the average indeed; one became mayor of the city, one is a Federal judge, and four have become judges of the state courts. But the wave of moral enthusiasm which elected them has generally been followed by a back-wash of lack of interest by the mass of voters. And so the movement has slumped nearly back to the old level. The ward boss already mentioned has been beaten, but he is tenacious and experienced. And he has no sense whatever of his civic responsibility as a “boss.” The efforts to oust him and his like have been repeated so often that most of the forward looking residents have become blase and take little stock in new appeals. There have always been three main groups of voters in the ward, the two “machines” of the old parties, and the unorganized public, which is the largest group of all. Sometimes the aldermen are of one party, sometimes another—just now there is one of each. What is the reason for the “slump”? Why is the public so “blase”? The reason seems to be a simple one, the average man feels that his responsibility to his family is abiding and permanent; while his responsibility to his community is haphazard and gratuitous. The public in a reform wave has sometimes elected its candidate—and then promptly dumped the whole burden of keeping up the good work upon him alone. The moral enthusiasm engendered was lost; the sense of community responsibility died out; the public, one by one, “got out from under.”

We now have in Chicago so-called “non-partizan” election of aldermen, by virtue of a new enabling act of the Legislature which was recently approved by the people by a heavy vote. But I wish you would try to get yourself elected in my ward—“You” being a thoroly qualified and genuinely “no party” man. I can hear you laugh at the suggestion, or if you try, I can hear the public laugh at you. There are, roughly, 20,000 registered voters in the ward, men and women. Five thou-

Brown Brothers

At one extremity the Gold Coast with its beautiful homes and apartment houses, at the other the river front with its bad smells and rotting piles—my ward is famous for its contrasts

sand votes have consistently elected the alderman—4600 elected the one whose term is expiring. Only 7300 citizens voted in that ward election! But in American cities we specialize in minority rule—the small compact minority rules the majority. In my ward about one-quarter of the voters rule the ward, as I have shown. But for that matter Mayor Thompson was elected by 32 per cent of the actual registered vote of the city. He received 259,828 votes out of a registration of 806,984 men and women.

In this matter of local politics we have the most apparent defect in community life—a complete breakdown of the social order because the best citizens of the community refuse to vote. Their “disgust” is too deep. If they had voted on election day we would not have our mayor—Q. E. D.! Have we not proved our case? Ask anyone in Chicago.

The lack of interest of the community in its “good housekeeping” is shown in another striking way, if we turn our attention toward the old police station in the ward. It is more than a station-house for the police—a criminal branch of the Municipal court sits there, where cases up to felonies are tried. It is a sort of sink-of-crime-and-vice, where a large part of the dirty linen of the city is washed. A hundred cases are frequently called there in a forenoon, tho it is only one of a half dozen police stations in the city where “Civic Pathology” may be studied first hand and with profit. Its shabby reeking interior swarms with human vermin any day of the week; while corrupt lawyers and petty politicians and divekeepers and all the flotsam and jetsam of one of the city’s worst whirlpools, nearby, are milling about like cattle in a pen. Its mere existence with its vile prison cells in the basement, and its dilapidated rooms, and ancient facilities seems impossible so close to the fine mansions on the boulevard a few blocks away. The wretched building seems to befoul everyone who passes thru it, and the “justice” which is dispensed there is naturally a strange mixture—a beverage made up of kindness and charity on the part of the overworked police to an extent that is quite unknown; then add a goodly dose of levying toll by petty politicians and corrupt bondsmen; add also some considerable bloodsucking for fees by shyster lawyers; and pass it all up to an overworked judge, who is the dispenser of the product. The judge can’t improve matters in such a foul place, and he must tolerantly do the best he can because the very physical equipment makes it necessary [Continued on page 55

# The Human Touch

Some entertaining anecdotes of how folks act when they're approached for money for a worthy cause

By Violet M. Leroy

"CAN I interest you in the Liberty Loan?" I asked, as he hurried past my booth. "Not in the *Liberty Loan*, darling," came the answer, accompanied by an ingratiating smirk, and he started to retrace his steps. I swallowed hard, tried to remember it was all in the day's battle; shot a forty-two centimeter glare at him, and then bravely resumed my bombing for bonds. And that's how the Great War began for me!

Did it ever occur to you what a world of experiences one could gather at a booth during a drive, where all one had to say was: "Have you bought your Liberty Bond?" . . . "Anything to spare for the French babies?"

. . . "Won't you buy a Red Cross button?" . . . "Just a dollar for the Salvation Army!" . . . And so on indefinitely. It's wonderful! So wonderful, in fact, that, being a veteran of seventeen drives, I'm almost tempted to work on eight more, and have a silver anniversary!

You've all heard, I'm sure, of Belgian Reliefs and Armenian Reliefs, and even of American Reliefs, haven't you? But have you ever heard of a Conversation Relief? No? Then I'm going to tell you about it. I know you'll be interested, because it's all about yourself. Each and every one of you has contributed your share to the "human" side of my "touch" system. And this is how it began:

Once upon a time, in the year 1914 A. D., a war was started. Of course, we all know who started it. But why talk about that any more. All we care about is, who won it. And of course we're each of us equally sure of that, too. Only, our individual opinions may differ. For instance, I know that the woman who lives across the way from me, thinks *she* won the war, because she refrained from using any sugar in her tea, until after the armistice was signed (and she has *such* a sweet tooth!) But that's all nonsense. *I* won the war and I can prove—but, I'm getting away from my story. "As we were saying." . . . When we got into the war a Liberty Loan came along. Now the average American is a generous, kindhearted person who gives freely—even at 3½ per cent and at 4¾ per cent—but he has to be given a mental anesthetic while the operation is being performed. And so the country, and particularly New York, was turned into a three-ring circus to dope the patient during the financial vivisection. And one of these forms of diversion was a booth, or table, placed in the lobby of a hotel, a theater, a shop—or any similar center of activity—and a girl in charge, known as a captain, whose chief requisites were: a fair disposition, an R. S. V. P. smile, and a "damn-the-Germans" feeling

"When I get to Heaven," says Miss Leroy—who is the veteran of seventeen drives, "I know I shall hurriedly proceed to pluck the feathers from the angels' wings, pin a captain's badge on my celestial raiment, install myself comfortably on a nice, fat cloud; and then sell the quills to all newcomers for a quarter apiece—at work on my very last drive—Free Milk for the Milky Way!"

her mind would come up and leave it at my counter. But as they soon found out, those who came to chat remained to pay. I was lucky enough to sell some twelve million dollars worth of bonds for Uncle Sam, but that's a mere trifle compared to the bonds of interest his sons and daughters gave me. Most of them I received from his sons. Women rarely wax confidential, where money is concerned. It was quite different when I helped take the census, at one time during the war. To begin with, the first question, asked of them was, "How old are you?" And it seems that when a woman has had to tell her age she feels she may as well tell you everything! And then, too, it costs her nothing. Women do hate to give money away, especially to another woman.

The "men folks" are another story. They're so funny—and tragic, and fascinating and boring, and they each tell a story; from the openfaced breezy young man, who when I asked him if he had his Liberty Bond, said: "You bet I have; I got my divorce this morning;" to the Weary Willy type, who walked the length of the lobby back to my booth to say: "Do you know, little girl, this is the fifth time this morning you've asked me if I've bought my bond?" and I think I surprized him when, instead of apologizing for spoiling his morning, I said, "And do you know, young man, that it makes me just as tired to *ask* you, as it does you to answer?" "By George, I guess you're right," said Willy, "I think I'll buy a bond from you!" . . . So you see, you mustn't judge too quickly; and you mustn't let anything discourage you.

Some say that the surest way to a man's heart is, thru his stomach. I've come to the conclusion that the surest way to his character is thru his pocketbook.

Of course one must practice painless dentistry to be successful; and it often [Continued on page 56]

in her heart, oh—and of course, a sense of humor. And I became one of these captains!

My post was in the lobby of a hotel—somewhere between Fifty-ninth and Thirty-fourth streets; one where East and West and North and South all meet, and exchange income tax grievances. I never knew there were so many "home towns," in all America. And each man "gives his" in his own "home town"—and each seems to think his is the "best ever." Oh, yes, I know all about them!

You see that's why I came to call these booths (which they afterward continued to have during all the drives, after the Loan) "Conversation Relief Booths." Anyone who had anything on his or

Was the recent von Kapp attempt to overthrow the Ebert Government merely a week-end revolution or is it symbolic of the probability of a return of junker control in Germany?

## Kaiserdome Again?

The American wife of a German nobleman prophesies the return of the Hohenzollerns to the German throne and gives some pertinent first-hand information

By Countess Alida von Krockow

THE elections in Germany will not put an end to the question as to whether junkers will come back into power. Too many deep-rooted factors are involved for any act of balloting to be accepted as decisive, or even as indicative, especially balloting at the present time. The voters are still in an abnormal condition of mind. Their indicated choice of government may be confirmed, or it may be utterly reversed when the course of time and circumstances shall have habituated them to their fallen estate—if the junkers permit time and circumstances to take their course!

We are in a world of "ifs" when the German people and their junkers are concerned.

We recognized the fact during the war by confessing that Anglo-Saxons could not understand the psychology of Teutons; then, in the face of different, new events, we forgot it again. And we forgot it the more readily because the new event of Germany turning republican aroused our democratic partizanship. At once, and as if by conspiracy, out of a desire to encourage ourselves and the Germans, we overlooked the fact of their having resorted to democracy in an emergency, that up to the time of the upsetting crisis in their war affairs the people were devoted to monarchy, and that monarchy had plainly meant to them the rule of a Hohenzollern with his inseparable junkers (*junker* means "young lord"). And we have gone on in the same spirit. The new government pays deference to the old notables, abstains from exposing abuses of the old régime, supports the people in their protest against delivering to an Allied tribunal officers who were as fatal to them as they are criminal in the eyes of humanity—does any number of things contrary to right democratism, in accord with their native tribal secrecy and tribal fealty, and we ignore the significance.

No foreign correspondent in Berlin obtained an inkling into the junker plot that led to the *coup d'état*, any more than in the case of the junker planning that led to the war, tho both took place under their noses, yet we continue to trust in the acumen of such reporters where junkers are concerned.

We have even built up a philosophy regarding junkers and the people. Germany is a modernized state, so we conclude that the people ought to be desirous of

maintaining the democracy which its politicians and mutinous marines set up and they hysterically confirmed. And, since other European democracies, like France and England, keep their demoted privileged class leveled politically to the rest of the citizenry, we think they will take care to do so. The trend of the times is on their side. They must hate the junkers, in whose defense, indeed, nothing can be said, even by themselves.

Now, as a matter of fact, very much is being said for them. It is said thruout the eloquent pages of all German modern histories, still in households, libraries and schools. And current articles and pamphlets are repeating the substance of the old laudations, in a form adopted to present times. The junker propaganda that was prepared for the recent Reichstag election abounds in expressions of bold assertiveness, some of which afford replies to our American arguments against them.

The *noblesse* of France, it says for instance, was dissolute and the aristocracy of England past its military prime when the commonality dislodged them from their political position of supreme authority in the state. Junkerdom is still virile. It is nearer its origin as a conquering military caste. Its racial and social sense of superiority have been fostered moreover without intermission, by living at home in the country on great estates in the midst of alien Slavic underlings, and by public careers in positions of command. There is no junker sound of limb who has not been drilled in arms and therefore none in whom the instinct of combativeness has not been cultivated. All are potential fighters. None of their younger sons have been dispersed by system into money-getting trades. The caste remains intact. And the caste ideal of virtue has remained the Spartan ideal of discipline, service and plain living. The scorn felt for junkers by richer foreign nobilities and by richer German classes is repaid by them with a contempt righteously more deep.

The mission of governing was carried on by them with vigor; but with an honesty, beneficence, and enlightenment so excellent that the people had no grievances that were real, the state no rival in repute. Are the pages of history that tell of the return of the English and the Dutch peoples from a commonwealth to monarchy, and of the repeated reversions of the French and Spanish peoples from a re- [Continued on page 61]

# The San Francisco Answer

By Norman Hapgood

IN nominating Governor Cox the Democratic convention went into Senator Harding's state and selected a man of much more positive record, more popular, progressive and firm where Harding is colorless and reactionary. Harding fitly embodies in his emptiness the spirit of a convention with no message except hatred of the President, whereas Cox's record as Governor, combined with what he has said about national and international affairs, would seem to indicate ability, idealism, and the power of growth.

We are entering upon a brief stretch of time—three months and a half—in which momentous decisions will be made. Is the United States prepared to act in foreign affairs as it thinks other nations ought to act? That is one of the two dominating questions, and the other is the familiar contrast between liberalism and reaction: ought the economic power of a country to be in the hands of a few or in the hands of the many? It is well for a self-governing country to look these things in the face, and the lines this summer are clearly drawn. If as a nation we want to go back to the days of Mark Hanna, and keep labor in its place, we have a candidate who thinks he is an imitation of McKinley, and who voted against confirming a great exponent of labor's rights and of industrial progress when President Wilson put him on the Supreme Court of the United States. I do not know whether Senator Harding wished to reject Mr. Brandeis because he was a Jew, or because he had championed the rights of producers and consumers against exploiters, or because Henry Cabot Lodge used the Senator as a rubber-stamp, but I do know that while on other votes Mr. Harding may wriggle and explain, on this one there is no explaining: the lines between the progressive and the exploiting forces were too sharply drawn.

IF the domestic issue is thus clear as a candle on a dark night the foreign issue is clear enough for practical purposes. Do we no longer care what we fought for, or what happens, or who starts another war? Do we wash our hands of foreign responsibility? If Hiram Johnson had been nominated we could have faced this issue with more neatness, but even with Harding on his front porch consulting the most expert pussy-footers the question can hardly be dodged all the way to November. Just for what purpose did we go into the war? How we talked ourselves hoarse about its being a war to end war! How we explained that never again would a single nation be "permitted" to start a general conflagration! What did we mean by all this? According to the Republican platform, precisely nothing; according to Johnson and Borah, straightforwardly nothing; according to Lodge and Harding, confusedly and meanly nothing. According to the Democratic platform we meant what we said. This war shook the bases of civilization. We do not yet know whether the recovery is to be rapid or whether the rest of Europe is to be dragged down by the more exhausted parts. What we do know is that another war, with its germs, its breakdown still further of moral standards, with its improved gases, air fleets, submarines and explosives, would put an end to what is best in France, Germany, Italy, England, Belgium, Holland, Switzerland, Denmark, leaving the future to Asia and to Russia.

And ourselves? Trust me, I shall not put this appeal on the ground of danger to ourselves. It is not easy to conceive of this country being prostrated, as Europe will be prostrated and practically destroyed, by the next war. No, we shall spend some billions of dollars, lose some hundreds

of thousands of boys, but again emerge rich. Only Europe will have perished, only the culture of the Western world, and for ourselves alone we shall have lost little except our character and our just pride.

Democratic success in November will depend on the success with which the issues are made clear and dramatic not only by the candidates and leading speakers but also by that division of the national headquarters that is charged with the task of circulating the right facts in the right quarters. For example, will Senator Harding, in defending whatever position the pussy-footers may tell him to take on the League, endeavor to repudiate what his newspaper has been saying? Here is one of the attacks of that paper on Mr. Taft for recommending a league: "No one can feel sorry for Mr. Taft because of the ridicule to which this is bound to subject him, for his support of the League of Nations and his blind muddling in politics have brought down upon him the anathemas of those who fought earnestly for him in the rout of 1912." In reality I think the bitterness of Harding's paper against Taft was not so much on account of the League as because Mr. Taft's partizanship and stand-patism in general were not looked upon as one hundred per cent. pure. Mr. Taft favored the Payne-Aldrich tariff law, which should be enough to satisfy the most exacting worshiper of back-door privilege, but it is not enough for Senator Harding's paper. It attacks him because his defense of the League may, in the paper's opinion, make it more difficult to build up the tariff in the way it was managed in the good old days of Hanna and Aldrich. And the Senator in his own person says: "You cannot reduce the cost of living and keep up the present American wage." Be sure you take it all out of the laborer. The Senator says: "We have taxed the big industrial enterprises until they are almost paralyzed." And in his praise of the German system in 1916 he said: "German industrial self-reliance is the sequence of her adoption of a Republican protective tariff."

No wonder such a complete reactionary felt as bitter as he did against Colonel Roosevelt in 1912. No wonder the Roosevelt followers of that dramatic year have heavy hearts and disillusioned spirits in so far as their notions of regularity compel them to eat their most cherished convictions now. If Mr. Harding's paper called Mr. Roosevelt "the greatest fakir of the time," and compared him to Benedict Arnold, Aaron Burr and Dr. Cook, and if it said Hiram Johnson was "both a liar and a blackguard," these gentle judgments were not personal. They were the rage of the bourbon when he fears some of the pet privileges of his friends and himself may be endangered.

Now I come to what is perhaps the most discouraging and mortifying touch of all. It may on the surface seem less impressive than the things I have mentioned—than littleness and cowardice in regard to our responsibility for preventing another war, than subserviency to the big controlling interests, than a brutal attitude toward labor, than the Brandeis vote—yet it strikes at the very heart of sound and rising standards in our public life. The people have perhaps not quite forgotten the Newberry case. How did the Republicans get their majority in the Senate? By the presence there of Truman H. Newberry. For purchasing his seat Mr. Newberry has been convicted by a Federal court and sentenced to a long term of imprisonment, but he has kept his seat while the case is being appealed, and has helped Senators Harding and Lodge in their fight for the noble purpose of seeing that no constructive effort led by Woodrow Wilson shall be permitted to reach a successful conclusion. Of Senator Newberry's method of getting the

## League of Nations Endorsed

The Democratic party favors the League of Nations as the surest, if not the only, practicable means of maintaining the permanent peace of the world and terminating the insufferable burden of great military and naval establishments. It was for this that America broke away from traditional isolation and spent her blood and treasure to crush a colossal scheme of conquest. It was upon this basis that the President of the United States, in prearrangement with our allies, consented to a suspension of hostilities against the Imperial German Government; the armistice was granted and a treaty of peace negotiated upon the definite assurance to Germany, as well as to the Powers pitted against Germany, that "a general association of nations must be formed, under specific covenants, for the purpose of affording mutual guarantees of political independence and territorial integrity to great and small states alike."

We endorse the President's view of our international obligations and his firm stand against reservations designed to cut to pieces the vital provisions of the Versailles Treaty and we commend the Democrats in Congress for voting against resolutions for separate peace which would disgrace the nation. We advocate the immediate ratification of the Treaty without reservations which would impair its essential integrity, but do not oppose the acceptance of any reservations making clearer or more specific the obligations of the United States to the League associates.

We demand prompt Finance action by the next Congress for a complete survey of existing taxes and their modifications and simplification with a view to secure greater equity and justice in tax burden and improvement in administration.

In the interest of economy and good administration, we favor the creation of an effective budget system that will function in accord with the principles of the Constitution. The reform should reach both the executive and legislative aspects of the question. The supervision and preparation of the budget should be vested in the Secretary of the Treasury as the representative of the President.

We reaffirm the traditional Tariff policy of the Democratic party in favor of a tariff for revenue only and to confirm the policy of basing tariff revisions upon the intelligent research of a non-partisan commission, rather than upon the demands of selfish interests, temporarily held in abeyance.

The Farmer We favor such legislation as will confirm to the primary producers of the nation the right of collective bargaining and the right of coöperative handling and marketing of the products of the work-

shops and the farm and such legislation as will facilitate the exportation of our farm products.

Strikes In private industrial disputes we are opposed to compulsory arbitration as a method plausible in theory but a failure in fact. With respect to Government service, we hold distinctly that the rights of the people are paramount to the right to strike.

Merchant Marine We pledge the policy of our party to the continued growth of our merchant marine under proper legislation so that American products will be carried to

this country entered the war, and victory established this principle.

Within the limitations of international comity and usage, this convention repeats the several previous expressions of the sympathy of the Democratic party of the United States for the aspirations of Ireland for self-government.

Armenia We express our deep and earnest sympathy for the unfortunate people of Armenia, and we believe that our Government, consistent with its Constitution and principles, should render every possible and proper aid to them in their efforts to establish and maintain a government of their own.

Woman Suffrage We endorse the proposed Nineteenth Amendment of the Constitution of the United States, granting equal suffrage to women. We congratulate the Legislatures of thirty-five States which have already ratified said amendment and we urge the Democratic Governors and Legislatures . . . to unite in an effort to complete the process of ratification and secure the thirty-sixth State in time for all the women of the United States to participate in the fall election.

Welfare Legislation We urge coöperation with the states for the protection of child life thru infancy and maternity care; in the prohibition of child labor and by adequate appropriations for the Children's Bureau and the Woman's Bureau in the Department of Labor. Coöperative Federal assistance to the States is immediately required for the removal of illiteracy, for the increase of teachers' salaries and instruction in citizenship for both native and foreign born; increased appropriation for vocational training in home economics; reestablishment of joint Federal and State employment service with women's departments under the direction of technically qualified women.

The Federal Board for Vocational Education should be made a part of the war risk insurance bureau in order that the task may be treated as a whole, and this machinery of protection and assistance must receive every aid of law and appropriation necessary to full and effective operation.

We pledge our party to the enactment of soldier settlements and home aid legislation affording genuine Government assistance unencumbered by red tape.

Railroads There should be a fair and complete test of the law until careful and mature action by Congress may cure its defects and insure a thoroughly effective transportation system under private ownership without Government subsidy at the expense of the taxpayers of the country.

Immigration The policy of the United States with reference to the non-admission of Asiatic immigrants is a true expression of the judgment of our people.

## The Platforms Compared

	Republican	Democratic
League of Nations	Covenant denounced; an "agreement" based on international courts favored	The League of Nations with none but interpretative reservations
Mexico	"Firmness" urged	Friendship with any Government maintaining law and order
Armenia	Mandate opposed	Aid promised to independent Government
Labor Question	Arbitral tribunals for industrial disputes in public utilities	Opposed to compulsory arbitration in private industry
The Farmer	General encouragement of agriculture	Stands on record of party
Finance	Budget recommended; inflation denounced	Budget favored; tax revision urged
Railroads	Private ownership and operation	Private ownership "without Government subsidy"
Shipping	Private ownership and operation	General encouragement of merchant marine
Tariff	Protection in "principle" but application deferred to future	Tariff for revenue only
Immigration	Restriction favored	Exclude Asiatics
Equal Suffrage	Favorable action urged on state legislatures	Favorable action urged on state legislatures
Prohibition	Not considered	Both wet and dry planks rejected
Soldiers' Bonus	Not considered, but care for disabled approved	Care for disabled approved; no general bonus
Race Question	Lynching to be repressed	Not considered
Welfare Laws	Child Labor Law approved; hours of labor for women to be restricted; equal pay to women in federal employ	Child Labor Law approved; working women to be protected and given equal rights in federal employ
Military Policy	Universal "physical" training recommended but not compulsory military service	Not considered

all ports of the world by vessels built in American yards, flying the American flag.

When the new Government Mexico of Mexico shall have given ample proof of its ability permanently to maintain law and order, signified its willingness to meet its international obligations, and written upon its statute books just laws under which foreign investors shall have rights as well as duties, that Government should receive our recognition and systematic assistance.

The great principle of national self-determination has received constant reiteration Ireland as one of the chief objectives for which

*Harris & Ewing*

### President Woodrow Wilson

Taken at the White House on Saturday, June 19, this is said to be the first photograph which the President has approved and authorized since he was stricken with illness on his League of Nations tour of the country in September, 1919. The photograph was made while the President was transacting his regular morning business

place from which he rendered this service, Senator Harding's paper finds justification in the fact that Newberry "is 100 per cent. American" (which God forbid!), and that his use of money was to overcome the influence of the administration in the election, which influence was "unfair and un-American." The intellect of this is on a low enough level, but what is still more impressive is the moral degradation.

And this brings me to the contemplated war against Mexico, for I believe the men who are planning that war—the group to which Fall and Lodge and Penrose and Harding belong—are led to it not by the idiot expressions about hundred per cent. Americanism with which they decorate their Newberrys and their worship of wealth, their distrust of labor, their unwillingness to give Armenia anything but words, their unwillingness to help in the safeguarding of the world—no, not by these decorating phrases, but all simply because those interests which have obtained possession of some of Mexico's resources desire to get the rest. The threat in the Republican platform is clear enough, and Senator Harding's paper says: "The next Republican administration will find the Mexican problem on its doorstep. It will be removed in short order."

I have not before me the speech in which Mr. Harding declared his "deference and devotion" to the man who was probably the lowest boss Ohio ever had, but no doubt some kind friend in Ohio will send me a copy for later use in the campaign. It is not necessary, but it is well to be complete. It is not necessary, because a progressive independent cannot doubt that in the fight on which we are now entering one side represents the best that is practically possible in the present condition of American civilization, while the other represents a remorseless and dull defiance, a lapse toward the grossest materialism this country has ever known. Penrose is the master and Harding is the puppet.

The situation calls for a positive, aggressive campaign. What the Republicans are relying on is no positive idea or belief but the inertia, fatigue, accumulated discontents that have accumulated in these seven strenuous years, and to win the Democrats must stir the people and make them think. But the principle almost always holds good. The side that can capture and hold the offensive usually wins. Bryan never could manage a sustained offensive because counter-attacks found such weak points as free silver. Roosevelt always sought the offensive but in 1912 he could not seize it because he had to defend his party's position on tariff and trusts. Hughes might well have won in 1916 if he had had any clear issue and had confidently pursued it. The business of the Democrats this summer is to drive the Republicans into the open until they have to say things that mean something on the League, on industrial justice, on Mexico, and on such lesser but still characteristic planks as Panama tolls. If the Republicans can campaign for three months without saying anything, however, they will win.

### Consolation

WELL, after all, the United States is no worse off than Russia. Both countries are still in a state of war. The difference is this: the present Russian Government is such that other nations cannot recognize it, whereas the American Congress is such that it can't recognize other nations.

### Queer Customs

ONE of the strangest forms of government I encountered on my trip to the earth," said the Martian, "was that of the United States of America. That country was inhabited mainly by two hostile tribes, whose totems were the elephant and the donkey. The cause of their hostility I could not discern, since both tribes contained

all shades of opinion and representatives of every social class and group; no doubt it was some old hereditary feud. But instead of fighting with guns, like the neighboring Mexicans, the two tribes united into one Government, the Chief Donkey being President and a Herd of Elephants being a majority in Congress. Everything that the President tried to do the Congress would prevent, and everything that the Congress tried to do the President would veto. Hence the nation lived virtually without a Government until a sacred, mystical period of years elapsed, when both tribes strove once more to obtain the Presidency and the Congress. They chose the candidates for these offices by a method of "counting out" like that used in children's games. Prominent men were induced to spend vast sums to capture local councils, called primaries or conventions, and then were rejected because they had been too successful or had spent too much. After the biggest chiefs had thus been counted out the offices were distributed to lesser men and all was ready for the battle between the tribes in November. By a very chivalrous but rather perplexing custom the tribe which was victorious in November waited four months before taking the power which it had won and in the meantime the old President and Congress went on ruling (or keeping each other from ruling) just as if nothing had happened. Yet in spite of their absurd ways of conducting public business these same Americans were notably efficient and businesslike in all their private affairs."

## The Republican Tide for Harding

By Talcott Williams

THE Republican vote will be cast solid for Harding, plus the vote dissatisfied with Wilson, but much may yet come to raise doubt as to the result before election. Harding's "canned speech" with its narrow chauvinism has already done that.

Harding is a man of the McKinley stamp. Derisively, this is said. What is a "man of the McKinley stamp?" McKinley was the first candidate for President in either party, after twenty years of silver agitation, who dared to come out for the gold standard and carried his party with him. Cleveland came out for gold after election and the persuasion of devastating panic and he lost his party. McKinley freed Cuba. He urged the law which prohibited concessions to Americans until a native Legislature existed. He did not hesitate to plant the victorious feet of the Republic beyond the Pacific. He annexed the Philippines when all the idealists, without ideas, who now object to Harding, were shrieking against annexation and a majority of Democrats in the Senate voted against this step. McKinley did not hesitate to use the army to save the Philippines from the tyranny of Aguinaldo and the Tagals. He courageously settled in the archipelago the most difficult church question ever presented to an American President. He defied the pressure of the German Kaiser at Manila. He set our currency in order. He annexed the Hawaiian Islands. He began the unhesitating enforcement of the Sherman Act. He was the first President to enforce the Interstate Commerce Act. He stood for world wide arbitration, when Roosevelt opposed. In his last utterance, before Czolgosz's bullet, he sounded the summons to international trade, a trumpet call to worldwide responsibility for the world's peace.

When our citizens were in danger in Peking he sent an army to succor them, an unprecedented responsibility for a President to assume. His instructions to General Chaffee, in command, never fully published, brought it about that when the allied commanders, French, English and the rest, delayed days and then discussed in council for resultless hours, the American commander rose and said: "I am in-

International Film

structed to start for Peking tomorrow. My troops march at daybreak."

This is what a "man of the McKinley stamp" did and what Harding will do. A vigorous policy will be his; but it will not be guided in the international agreements he makes by French desires to collect the exorbitant profits of oppressive concessionaires or English appetite for territory. He will not gather troops on the Rio Grande and do nothing. He will not abuse powers given to gain efficiency in war to infringe on the liberty of public opinion in peace. He will not incur debt after war is over, depreciating the market price of bonds purchased by patriotic self-sacrifice.

The Democratic party, after eight years of control, leaves an inflated currency. For a generation the party had urged inflation. Business men, the small investor and capital engaged in developing natural resources want to be rid of this peril. They want to see the railroads paying dividends, as they once did. Prices are falling and as they fall, quiet will come. Unflinchingly, the Republican party has resolved that no organization, labor or other, shall be stronger than the law and public needs. Republican legislation thru the homestead law multiplied the small farmers. Its next task must be to increase the small homeowners in our cities. The South neglects negro education. The Republican party proposes to use federal revenue for education. Life insurance must be made cheap for the small policyholder, as already for the soldier. Our exports and imports must not be dependent on foreign steamers. The lack of labor on the farm must be made good by improving rural conditions, providing new methods and relieving the farmer of taxation by national aid. The suppression of lynching is only part of the problem of bringing protection to all, where the local police is weak, as it is in all our farming districts.

The Republican party has steadily extended the federal powers and its return to power will continue in this path to the end that a quiet, peaceful prosperity may increase happy families, better educated children, diffuse wealth, put the Government on a business basis and spread sanity.

### Washtub Rhythmics

A TEACHER of Greek rhythmics in London has given a public demonstration of how such movements may be used in washing clothes and dishes and transform this distasteful task into an easy and graceful exercise. If we could only get this fad started in America it would do much to settle the servant problem for our girls could then apply physical culture in the home instead of seeking it on the stage or the lawn. A phonograph playing "The Song of the Shirt," "Rub-a-dub-dub," or "Louisiana Blues" could serve to set the pace.

### A Footnote to a Platform

THE recent lynching of three negroes in Duluth gives sad proof of the necessity for the anti-lynching plank in the Republican platform, and incidentally shows that the northern states require it as well as the southern.

## The Ohio Idea

By Franklin H. Giddings

WE have come around again to the Ohio idea. We always do come around to it when we are not at war nor doing a moral jazz. It is the normal political content of the American mind.

It has never been defined. You could no more describe it than you could portray the face that somebody reminds you of; but, like the haunting face, it is known by the company it keeps.

Ben Wade was the Paul that planted, and Mark Hanna

was the Apollos that watered the Ohio idea. Many Buckeye statesmen have been inhabited by it; Rutherford B. Hayes was its incarnation.

All of its embodiments have been born of poor but honest parents who have sent them to school and reared them decently in non-ritualistic communions. Arrived at competence they have lived on reputable village streets in two storied houses of American architecture with verandas in front and kitchen "stoops" behind. Eminence has never torn them from plain thinking nor cut them off from simple intellectual interests, but they have not permitted theory to get away with common sense. Without denying that Adam Smith was a moral man they have been unable to forget that he invented free trade, and they have never conceded that Gresham's law is of equal authority with an Act of Congress. Of culture they have partaken temperately. They have known that the Medici were Frenchmen or Italians and more than one of them could have told you whether Can Grande was a British stallion or a Spanish drink.

Of course not every Ohio statesman has inherited, or embraced, or otherwise been or become identified with the Ohio idea. William Howard Taft, a Unitarian and otherwise differentiated, has never exemplified it. Wade's political antagonist, Joshua R. Giddings, a kinsman of mine, was its antithesis.

Giddings believed that slavery was wrong and said so. He believed that the way to get rid of it was to get rid of it. Such simple and forthright politics make politicians tired, and they turn from Giddings to Wade. The Ohio idea tranquillizes them. It never meddles. Above all it never goes crusading. It never muck-rakes, nor upsets business, nor concerns itself with "abroad." It never has enacted a "seven sisters law," nor drawn up a creed of fourteen points for the human race, nor invented a League of Nations. It never will.

The world has been at attention for six strenuous years and it wants a rest. The simple life allures. Perhaps rest and mediocrity are necessary. The work that we set out to do has not been done, but possibly it can't be done until we have relaxed awhile and collected our wits. Tremendous problems challenge us, but if we can't react to them, we can't. Under such circumstances presidential government of the positive sort (Rooseveltian or Wilsonian) wearies us, and we turn with relief to the Ohio idea, that has no power to make us think.

Neurasthenia is expensive, but the rest cure is better than collapse. For the best results (as all doctors agree) cheerfulness is essential, and the great value of the Ohio idea is found, it would seem, in its optimistic quality. Once you surrender yourself to it you cease to worry. You know for a truth that America is God's country. Our government is the best that man has yet invented, and as for the constitution, not even the eighteenth amendment can queer it. Undoubtedly we shall have strikes, railroad deficits, and income taxes; but the Home Market is safe and Protection will be protected from profanation.

Once, down in the Black Belt, I heard a young theologian preach his ordination sermon. With fervid eloquence he told his breathless hearers for what compelling reasons he had consecrated his life to the service of Jesus Christ. They were, he said, firstly "because he am de lily ob de valley"; secondly, "because he am de shadow ob a great rock in a thirsty lan"; and thirdly, "because he am de horn ob Judah." I doubt if that young man could have defined the Ohio idea, but he could have grasped it.

### Unskilled Labor

THE chief branches of unskilled labor in the United States about 1920," said the "Martian," "were teaching in its various branches, the ministry, the lower ranks of the Government civil service and of municipal employment, scientific research and poetry. This is shown not

only by the fact that incomes were lower in these occupations than in any of the organized trades, but also by the slight esteem in which politicians and publicists held the opinions and activities of those engaged in them. Great respect was paid to the mandates of a labor chief or a captain of industry and even the farmers were regarded as men to be conciliated, but anything said by a college professor, clergyman, scientist or poet was without further consideration labeled 'visionary,' 'impractical' or 'academic.' Public servants were set down as 'bureaucrats' or 'red-tapeworms' and their advice was ignored by Congress and the Administration on all occasions. It is evident that these classes were the mudsills of society."

## The Theater as a Place of Worship

SEVERAL years ago a small Protestant church in Chicago hit upon the plan of holding its morning services in a moving picture theater. It did not use pictures, it did not attempt to disguise the religious character of its meeting, but it immediately found an audience. Men and women who would not go into a meeting-house would go to a religious meeting held in a movie theater.

A second theater was then taken in another part of the city. It was again filled with those who were interested in the presentation of the simple Gospel message.

The plan is worth extending. A church to be efficient must in some way represent a community feeling. If it cannot find that feeling in homes, it must find it in whatever the community itself makes central. In many localities this is the movie theater. Theaters are not used Sunday mornings. Why should they not become places where religion is brought to a community which has already come to make them its center of interest?

## Harding and the Hoodoo

SENATOR Harding is not a superstitious man. He is not daunted by the fact that no man was ever elected President from the Senate, tho Senators have been nominated and defeated, as was Douglas. No Baptist has ever been elected, tho Baptists have been nominated and defeated, as was Hughes. No journalist has ever been elected, tho journalists have been nominated and defeated, as was Greeley. If Senator Harding is elected he will have broken a triple precedent.

## How to Be a Realist

By Preston Slosson

REALISTIC fiction, as preached to us by the critics, is a different thing from the humdrum romanticism of everyday life and must not be confused with it. In life as we actually experience it there are such things as heroes, villains, romantic love, hairbreadth escapes, victory against odds and even happy endings. But when we step from life to the higher plane of realistic art we must reject all such commonplaces. One might as well be a mid-Victorian at once and have done with it!

It is really not easy to be a realist unless you are a Russian. The French are too romantic and rhetorical; even Zola sometimes gets himself mixed up with Dumas. The Scandinavian realists run into symbolism, as did Ibsen; the Germans into mysticism, as did Hauptmann; the English into propaganda for social reform, as did Reade. But if you can begin in the true Slavic style—

Babushka sat pensively on the up-turned washbasin, wondering if Petroff would be too drunk that night to cheat the English traveler over the ikon with the false jewelry which they had stolen from the illiterate priest, old Malinkoff with the three fingers and the cataract over his left eye—

your task is well in hand. Truly indeed did Dreiser say that if he had been born a Dreisersheffsky the American public would have worshipped his books. (But that worship wouldn't have made them any better).

There are three reasons why Russia is the Happy Hunting Ground of the realist. In the first place, nobody knows anything about Russia. It is a land of mystery with very eccentric customs from the western point of view. This might be thought to stimulate the romanticist; but it offers greater opportunities for the realist, since it is essential for the realist not to be found out in the lies he tells whereas the romanticist doesn't pretend to accuracy and can lie as easily about the mysteries of Paris as the mysteries of Petrograd. In the second place, it is currently believed that Russia is a very miserable country where no life story ends happily. Russian literature certainly encourages that view, and so do the newspapers. In the third place, Russia is a rather dreary country, flat, cold and monotonous. And you can't have realism against a pretty background. Realism is only possible in a sordid slum or a dismal countryside. We must either paint the background in the following fashion—

As Mrs. Scruggs gulped her second bottle of gin and sent her eye wearily over the back yard where the grimy garments of her family were drooping from the washline.

Or thuswise—

The peevish wind was grumpily snoring over the bleak moors and grey steppes which stretched into the distance in all the drab unloveliness of late autumn.

A good beginning is important to the realist, but a good ending is all important. It goes without saying that the end must be unhappy. It may not even be unhappy in the heroic vein, for then we step into traditional tragedy. Your hero must not die like Othello or Cyrano de Bergerac. A better ending would be—

Two fat tears oozed down his pasty cheeks as he remembered how youth had cheated him. With a final snort of maudlin self-pity the broken old man reached for the Prussic acid.

Or the ironic vein—

Count Grampski once dead the whole peasantry flocked in gala array to the wedding of the Countess with Ivan Feodorovitch. It is true that Grampski had emancipated all his serfs, but Ivan was now the big man of the village and to the peasant a live dog is more to be propitiated than a dead lion. Also it was amusing to see how pale the Countess looked and to hear the priest lisp his way thru the marriage service.

If your beginnings and endings are effective, you will be a successful realist no matter what comes in between. A French realist will often leave out the plot and half of the characters and descriptions and then boast of the superb artistry of a short story "without one unnecessary word." The British realist will take up two-thirds of the book with a description of the school days of the hero at the worst school in England. The Russian will fill in with a few dreary atrocities and some drearier conversations on metaphysics. Most of the Latins, and some of the Germans, will simply run a series of love affairs until the reader ceases to care whether the plot is the eternal triangle or an everlasting polygon. The Scandinavian will drown somebody so that somebody else will be unhappy. All methods of filling in are good so long as you remember to keep the hero and heroine from having a run of good luck for more than five chapters and do not fall into the error of supposing that there is a real distinction between a hero and a villain.

## Balancing the Constitution

THERE is some plausibility in the view that the Presidency has become too strong an element in the Government with reference to Congress. But the real remedy is not to select weaker Presidents but to choose stronger Representatives and Senators. If Congress were full of Websters, Clays, Calhouns, Blaines, Sumners, Shermans and Roots the legislative branch of the Government would not need to feel humiliated even by such vigorous executives as Roosevelt or Wilson. Level Congress up, do not level the Presidency down!

# The Story of the Week

## The Democratic Keynote

THE San Francisco Convention opened with President Wilson's hands firm on the reins of power. He did not make any attempt to dictate from Washington, but his ablest lieutenants and warmest friends were in the convention as its directors. Senator Glass of Virginia was chosen as chairman of the Resolutions Committee entrusted with the preparation of the platform, the important parts of which we print elsewhere in this number of The Independent. Chairman Homer Cummings of the National Committee was temporary chairman of the convention and was succeeded as permanent chairman by Senator Robinson of Arkansas. Both men are strong Administration supporters. The Palmer delegation from Georgia was seated in opposition to the Hoke Smith-Tom Watson faction, and Senator Reed was denied a seat as delegate from Missouri. A majority of the cabinet were on the spot to see that the Administration point of view received due recognition.

On June 28, the first day of the session, there was an outburst of enthusiasm for President Wilson and the convention voted unanimously to send him a message of greeting. In this message the President was congratulated on the recovery of his health and strength and resentment was expressed at "the malignant onset which you have most undeservedly been called upon to sustain from partizan foes."

Chairman Cummings delivered the keynote address. In its idealistic tone and sweep of enthusiasm it formed the strongest possible contrast to the purely negative and critical keynote speech of Senator Lodge at Chicago. It began with a summary of the progressive legislation enacted during Wilson's first term and the war record of the Administration, but the greater part of it was devoted to an uncompromizing defense of the Covenant of the League of Nations. He said in part:

The Republican platform, reactionary and provincial, is the very apotheosis of political expediency. Filled with premeditated slanders and vague promises, it will be searched in vain for one constructive suggestion for the reformation of the conditions which it criticizes and deplores. The oppressed peoples of the

Knott in Dallas News.

### THE LEAGUE OF NATIONS SPECIAL

earth will look to it in vain. It contains no message of hope for Ireland; no word of mercy for Armenia, and it conceals a sword for Mexico.

The opponents of the treaty cry out, "Shall we send our boys abroad to settle a political quarrel in the Balkans?" Immediately the unthinking applaud and the orator records a momentary triumph. Have we forgotten that that is precisely what America has already done? Have we forgotten that we sent more than 2,000,000 men to France, spent more than \$20,000,000,000 and sacrificed nearly 100,000 lives to settle a Balkan question?

What plausible reason can be suggested for wasting the one great asset which has come out of the war? How else shall we provide for international arbitration? How else shall we provide for a permanent court of international justice? How else shall we provide for open diplomacy? How else shall we provide safety from external aggression? How else shall we provide for progressive disarmament? . . . Until the critics of the League offer a better method of preserving the peace of the world, they are not entitled to one moment's consideration in the forum of the conscience of mankind.

## Boss Murphy Indicted

THE prestige of Tammany Hall at the San Francisco Convention was somewhat blighted by the indictment of its leader, Charles Francis Murphy, on the charge of conspiracy to defraud the Government of taxes. Included in the indictment are John A. McCarthy, a building contractor and a political associate of Murphy; Arthur J. Baldwin, Murphy's lawyer; James E. Smith, Assistant District Attorney, and Ernest B. Walden, Vice-President of the Corn Products Refining Company. The indictment sets forth that Baldwin, acting for Murphy, secured an agreement in 1918 by which the Corn Products Refining Company delivered glucose to the North Kensington Refinery, owned by Louis N. Hartog. The refinery was greatly expanded and Murphy invested heavily in it. Under this

Underwood & Underwood

The largest concrete ship yet launched is the "Cuyamaca," which went into the water broadside without strain recently at Del Monte, California

arrangement enormous profits were made, as Hartog had a contract for corn syrup with the British Government amounting to \$7,000,000. These profits were concealed on account of the high excess profits tax. Eventually Murphy wished to withdraw from the business and demanded that Hartog return the money which he had invested, together with one-quarter of the profits with no deduction for taxes, 15 per cent of future profits and other payments in consideration of continued deliveries of glucose by the Corn Products Refining Company. To compel Hartog to agree to these extortionate demands Murphy and his associates threatened to cut off his glucose supply and to prosecute him for hoarding and profiteering, as well as to blackmail him in other ways. Pleas of not guilty have been entered on behalf of all the accused persons.

## The Democratic Ticket

**G**OVERNOR Cox of Ohio was nominated for President after one of the longest convention deadlocks on record. In the cool air of San Francisco the Democratic delegates were less in a hurry to complete their work than were the Republicans in stifling Chicago. The platform was not finally adopted until Friday, after many hours of debate on the prohibition question had ended in the decision to accept neither the Bryan "bone dry" plank nor the Cockran proposal for admitting light wines and beer under Congressional legislation, but to ignore the issue as the Republicans had done. Only two ballots were held on Friday evening.

Twenty-three candidates received votes on the first ballot. McAdoo stood out from the rest with 266 ballots to his credit, but Palmer pressed him closely with 256. Governor Cox, with only 134, did not greatly overpass Governor Smith, who held the solid ninety votes of New York and enough outside support to bring his total up to 109. On the seventh ballot, the fifth vote held on Saturday, Cox outstripped Palmer and became a good second in the race. He was the beneficiary of most of the support which had been previously given to Governor Smith of New York and Governor Edwards of New Jersey, who practically dropt out of the race after the sixth ballot. On the twelfth ballot Cox became the leader. McAdoo had made important gains, tho not so rapidly as Cox, but Palmer was already losing his strength and most of the favorite sons had fallen by the wayside.

After the twenty-second ballot the convention adjourned till Monday. No one had the necessary two-thirds vote or even a bare majority. Governor Cox now led with 430 votes; followed by Mr. McAdoo with 372½. Attorney General Palmer had only 166½ votes. Ambassador Davis, much talked of as a "dark horse," came fourth with 52. Senator Glass of Virginia and Senator Owen of Oklahoma were the only other candidates able to hold even their own state delegations. The situation had simplified, but it had hardly cleared. The twenty ballots of Saturday had but emphasized the deadlock between the leaders, McAdoo and Cox; the former supported mainly by "Administration" men; the latter, tho not personally antagonistic to the President, having become a rallying point for the "wets" and the anti-Administration forces generally. Mr. Bryan, however, remained uncompromisingly hostile to both. It was necessary to ignore Bryan to reach a nomination.

All day on Monday and far into the night the fortunes of war shifted from one side to the other. On the thirtieth ballot McAdoo once more took the lead, only to fall behind Cox again on the thirty-ninth in consequence of the withdrawal of Attorney General Palmer from the contest. On the forty-fourth ballot Governor Cox stood triumphant. The convention adjourned; postponing any consideration of the Vice-Presidency until the following session on Tuesday.

Governor James Middleton Cox, thrice Democratic Gov-

ernor of a Republican state, owes his nomination in large part to the accident of geography and the nomination of Senator Harding of the same state at Chicago. He is popular with labor, inclined to progressive policies, and is believed to support the Administration on the League of Nations.

## The Republican Campaign

**S**ENATOR Harding will not go out on the stump (or rather on the porch!) until he delivers his speech of acceptance, at the formal notification of his nomination. But he has made a speech already to an audience of one—phonograph. The subject was Americanism and the theme the danger of loss of nationality thru foreign entanglements. Governor Coolidge also made an address by way of the phonograph on the duties of citizenship. Apparently

Paul Thompson

Jonathan Stone Raymond, Jr., Yale class baby for 1917, threw the ball that opened the Yale commencement game against Harvard which was played in the great stadium at New Haven

canned speeches will play a considerable part in the coming campaign.

In order to remove the reproach that the party is financed by rich corporations Chairman Thompson of the Ways and Means Committee has stated that "there has been no contribution to the Republican national organization in excess of \$1,000 and we mean to go on with that limitation." Numerous contributions under the thousand dollar maximum are solicited for the expenses of the campaign. Missouri Republicans have demanded the resignation or removal from office of the state chairman and the national committeeman from that state, accused of accepting money from managers of the Lowden campaign for the Presidential nomination. Ex-Governor Hadley declared that Missouri politicians had received money from managers of Presidential aspirants in the Republican conventions of 1908, 1912 and 1916, as well as in 1920.

Mr. Hoover seems to have made up his mind to support the Republican ticket unconditionally. But he urges the party to adopt a more definite and constructive policy with reference to international affairs. In a recent statement he said that the party should declare for ratification of the Treaty of Versailles subject to the condition that the United States accept no obligation to use military force under Article X of the Covenant. An economic boycott of an offending nation would, in most cases, prove as effective as military coercion:

The League is in being today with twenty-eight nation members, and if we frankly examine its effectiveness in Europe at this moment it will become apparent that the Council is hesitating in attempts to restrain aggression because of the knowledge

Paul Thompson

Former President William Howard Taft and Mrs. Taft at the Yale-Harvard baseball game which was a feature of the Yale commencement exercises

that in the present temper of the world no nation, except those which have immediate and material interests at stake, will furnish a single soldier for its assistance. Yet I do not hesitate to say that a firm moral and economic boycott would stop every war now in progress in Europe.

He scouted the idea that a "new Treaty" or a "new League" could be established by the Republican party if it should assume power next year:

The thing that the public—and even those who have been debating the Treaty—apparently fail to realize is that the Treaty is now in effect and cannot be scrapped, as so many have urged. Europe has regretted, but it has not been waiting upon, the divided mind of the United States. The Treaty, as distinguished from the League, is in large part already executed; the new states have already been set up and their boundaries settled and accepted, except on the Russian front and two or three isolated points. . . . The League of Nations now embraces the membership of many neutral nations, and it is today governing several neutralized areas. Under it commissions are at work on plans of disarmament of the world, international courts, and many other items. Those American statesmen who conceive that Europe will meet our dissensions by abandoning the Treaty and summoning a new world peace conference are entirely ignorant of the European situation.

## Suffrage Prospects Brighten

THE defeat of equal suffrage by the legislature of Louisiana on June 15, coming after the defeat in Delaware and the refusal of the Governors of Connecticut and Vermont to call special sessions of the legislature in their respective states, made the prospects of a nineteenth amendment before November seem very dark. The first ray of sunshine came in the decision of the Supreme Court in the Ohio case that ratification by state legislatures was sufficient to meet the conditions of the federal constitution, irrespective of any provision of state law concerning ratification of constitutional amendments. This removed Ohio from the list of doubtful states since the legislature had already acted and confirmation by a popular referendum was now no longer necessary.

But soon it became evident that the decision in the Ohio case could be used as a precedent in other states. Tennessee had a provision in the state constitution forbidding ratification of a federal amendment by the legislature unless that legislature had been elected after Congress had ap-

proved the proposed amendment and submitted it to the states. The purpose of this law, like the Ohio referendum, was that public sentiment on a federal amendment should be directly tested at the polls. In theory there is much to be said for this point of view, but the practical question was not what is the best method of ratifying amendments to the federal constitution but whether the Tennessee law was consistent with the method of ratification laid down in the constitution as it now is. According to the Supreme Court, Ohio had no right to alter the method of ratification prescribed by the constitution; had Tennessee that right? Assistant Attorney General Frierson considered that the decision in the Ohio case made it possible for Tennessee to ratify this year and so reported. Governor Roberts has summoned the Tennessee legislature into special session on August 9. If Tennessee fails to act favorably there is still hope that North Carolina may save the situation for equal suffrage and for the Democratic party. President Wilson, with some suffrage sentiment to build on, is urging action on both Tennessee and North Carolina.

## The Minnesota Primaries

LOCAL elections are seldom of interest to the nation at large, but an exception must be made of the recent primaries in Minnesota. There was, first of all, a test of the strength of the Nonpartizan League, which has for

© Kadel &amp; Herbert

### A GREAT MAN KNEELS TO A MEDIOCRE MAN

It is a curious and to American eyes an unpleasing spectacle to see the famous Oxford scholar, Charles William Chadwick Oman, the historian of the Byzantine Empire and of the Peninsular War, on his knees before a man who owes his position as the ruler of one quarter of the world purely to the accident of birth. Formerly the accolade was delivered in the form of a box on the ear from the hand of the royal master, but King George V, in making a knight of Professor Oman, simply pats his shoulder with the sword of state

many months been firmly entrenched in office in North Dakota and has regarded Minnesota as a destined conquest. The tactics pursued by the League involved an attempt to carry the Republican primaries and thus turn over the Republican organization bodily to the purposes of the League, in the same manner in which Hiram Johnson seized the Republican organization in California in 1912 on behalf of the Progressive Party. But the complete state ticket of the "regular" Republicans was successful. Mr. J. A. O. Preus was nominated for Governor with about 140,000 votes to 120,000 for Dr. Henrik Shipstead, the candidate of the Nonpartizan League. It is very possible that the League will refuse to support the regular Republican ticket in November and will interest itself in the organization of a third party in Minnesota. The Democratic vote at the primaries was small and Mayor Hodgson of St. Paul was nominated for Governor with little opposition.

Another feature of interest in the Minnesota primary election was the defeat of Representative Volstead, the author of the famous Volstead Act for the enforcement of prohibition. The issue was not a clear one, however, as his victorious opponent, the Rev. O. J. Kvale, is also a "dry." No doubt many foes of prohibition voted against Mr. Volstead as a personal rebuke, but Mr. Kvale was also helped by the support of the Nonpartizan League, Representative Volstead having displeased the League by voting for the Esch-Cummins Transportation Act, returning the railroads to private ownership.

Senator Cummins himself, however, emerged triumphantly from the Iowa primaries with about 21,000 plurality over his opponent, Mr. Brookhard. Organized labor opposed the Iowa Senator on the ground that he had advocated the insertion of a compulsory arbitration clause in the railroad bill. In spite of this handicap, however, he won the Republican nomination.

## Villa on the Warpath

INSTEAD of accepting a pardon from the present Mexican Government on condition of retiring to private life the indefatigable bandit, Francisco Villa, has declared open war on the followers of Obregon and de la Huerta. Ten

"generals" and some fifty other officers of the Villista faction have issued a manifesto to the Mexican people proclaiming their intention of remaining in rebellion. This "platform" declares for the restoration of the old constitution of 1857, describes Villa as "the only leader who disinterestedly and patriotically combats and will continue to combat for the welfare of the people and for the reestablishment of constitutional order," and denounces the "treason, intrigue, disloyalty, cowardice and crime" of the party in power. General Sanchez has ordered the military forces in Vera Cruz to be moved to the northern part of Mexico to crush Villa's new movement. A wild story comes from Chihuahua that Villa executed three hundred women recently captured after a skirmish with Government forces.

The Mexican Government announces Congressional elections for the first of August and Presidential elections on September 5. General Obregon, the "boss" of the ruling party in Mexico, and de la Huerta, the nominal President, continue to profess the friendliest feelings for the United States. The new Minister of Foreign Affairs, Miguel Covarrubias, former Mexican Ambassador to London, is reported to be strongly pro-American in his sentiments. The feeling in Mexico appears to be general that in basing their foreign policy on an expected German victory the Mexicans "put their money on the wrong horse."

The mystery of the death of the late President Carranza has not yet been fully cleared up. The official theory now is that he committed suicide with his own revolver, but some of Carranza's partisans refuse to credit this version of the story.

The existing Mexican Government finds encouragement in the fact that the United States has recognized another revolutionary government which seized power at about the same time. The new Guatemalan Government has been formally recognized "as the constitutional successor of the Government of Estrada Cabrera," the dictator deposed in April by a popular uprising. Ex-President Cabrera is now a prisoner and several of his military chiefs have been condemned to death on the charge of having ordered a bombardment of the capital city during the recent revolution.

## Sinn Feiners Kidnap British General

THE most audacious exploit of the Sinn Feiners is the capture and imprisonment of Brigadier General Lucas in County Cork. The General was returning from a fishing trip with Colonel Danford and Colonel Tyrell when his automobile was ambushed by masked men near Rathcormack, five miles from Fermoy. The three officers, talking in Arabic, agreed to make a dash for freedom, but in making the attempt Colonel Danford was shot in the arm. Colonel Tyrell was left with him and General Lucas was carried away to parts unknown. A letter from his captors informed the authorities that he was being held a prisoner of war with all the respect due to his rank. A letter from Lucas followed, mailed at Fermoy, in which he said that he was being well looked after and giving instructions for sending him clothing and letters. But the military have scoured the surrounding country and the aviators have scanned it from the sky without discovering where the general has been hid. His soldiers smashed up the shops of Fermoy and scattered their contents in the streets out of retaliation for the disrespectful treatment of their commander.

The disorders at Londonderry have been brought to an end after a week of street fighting, in which seventeen persons were killed and twenty-nine persons wounded. Several women and children were among the victims.

Keystone View

Underwood & Underwood.

#### CIVIL WAR IN IRELAND

A city of the dead is Londonderry, Ireland, the scene of civil war, with no mail deliveries or no vehicles on the streets. In the outskirts of the city British guards search all civilian passers-by

Locomotive engineers and trainmen generally refuse to run trains when soldiers or police get on board. The result is that the tracks are frequently blocked by abandoned cars. The British Government, however, is resolute not to surrender to strikes or terrorism. Lloyd George says:

Lincoln faced a million casualties and four years of war rather than acknowledge the independence of the Southern States and the Government will do the same thing, if necessity arises.

Sir Edward Carson has warned the Government that unless the people of Ulster receive adequate protection from Sinn Fein depredations he will call out the Ulster Volunteers. These are supposed to number a hundred thousand men, most of whom have seen service and are well armed. Since the Sinn Fein forces are equally numerous and determined this would mean civil war in its worst form.

## The Albanian Rising

**T**HE occupation of Avlona and other Albanian towns by the Italian troops and the prospect that the major part of the country was likely to become an Italian protectorate aroused the patriotic fury of the Albanians and incited them to a desperate effort to maintain their independence against invasion from all quarters. A large force gathered around Avlona and on June 11 delivered an ultimatum on the garrison demanding evacuation of the place by the Italians within twenty-four hours. At the end of that time the Albanians attacked from the land side and the Mohammedan part of the population rose inside the town so the Italians caught between two fires were obliged to give way and more than two thousand of them, including a general, were captured. The Albanians persisted in their efforts for several days and at one time came within 300 yards of the shore, but under the shelter of the fire of the Italian warships in the harbor the Italians held their own until reinforcements were brought in. At Alessio, a post farther up the coast, a battalion of Italian troops was annihilated. At Tirana 330 Italians are said to have been taken prisoners and killed out of revenge for the assassination of Essad Pasha. The Italians have been forced to withdraw from all points in the interior and all ports except Avlona. The Italian warships have bombarded Alessio and other places along the coast and demolished several villages.

The report of a few weeks ago that D'Annunzio had captured the Albanian port of Durazzo seems to have been a canard.

Essad Pasha was the most renowned of the Albanian leaders. He was the richest man in Albania and commanded a large following tho accused by his enemies of all forms of corruption and crime. In the Balkan war of 1912 he defended Scutari, the capital of Albania, for months

against the combined siege of the Montenegrins and Serbs, yet he is accused of selling out and surrendering the city to them in the end. When the European powers set the Prussian prince, William of Wied, on the throne of Albania, he intrigued against him till he fell and Essad became the real ruler of Albania. He espoused the cause of the Allies in the Great War and saved the Serbian soldiers from destruction by giving them safe passage thru Albania when they were driven out of Serbia by the Austrians. For his gallant service with the Allies at Salonica he was decorated with the Grand Cross of the Legion of Honor by the French General Serrail. The Italians, however, regarded him as an enemy because he opposed their plans in Albania. The young Albanian who shot him at the Hotel Continental in Paris on June 15 had just come from Rome and the Albanians suspect the Italians of instigating the removal of Essad. The new Italian premier, Signor Giolitti, has declared in favor of ultimate Albanian independence.

## Albania and America

**T**HE Albanians like the Armenians appealed to America to save them from national annihilation. In the cable sent to President Wilson and Senators Lodge and Hitchcock the Albanian delegation to Paris said:

Albania, after struggles to recover its liberty and after being deprived of half of its territory in favor of its neighbors, in 1913 established an independent state. Just as Belgium's neutrality guaranteed by the great powers was violated, so was Albania's from the beginning of the war, first by Allied troops, then by enemy armies.

Albania was transformed into a battlefield and knew the horrors of war. It saw itself covered with ruins, and thousands of its children perishing with hunger. At the proclamation of the principle of the rights of peoples, issuing from America, the Albanians took up arms to fight alongside of the Allies in an effort to save their country.

After the Entente victory, which signified the triumph of

THE WAR IN TURKEY

The Greeks, with the coöperation of the British and French, have undertaken to subdue the Turkish Nationalists who refuse to submit to the peace terms and have set up a Government at Angora, independent of the Sultan at Constantinople. Three Greek expeditions have set out from Smyrna to get control of the railroads radiating from that center. They have taken Aidin and Philadelphia and if they can reach the junctions of Afion-Karahissar and Eskisher they have Angora isolated. Panderma, the northern terminus of the road running from Smyrna to the Sea of Marmora, has been in the hands of the Nationalists but they have been ousted by the landing of a Greek force under the protection of the guns of the British warships. The British have held on to Ismid in spite of persistent attacks by the Turks. In the south the French have been driven from Marash to the coast with heavy losses and have consented to a temporary armistice with the Turks.

right and justice, the Albanians . . . had the certainty of seeing the restoration to their country of the Albanian territories incorporated into the neighboring states as a result of the Balkan war. . . . But, instead, they see their country today menaced with dismemberment.

In the application of the secret treaty of London of 1915, Italy insists, with force, upon annexing Valona, with the large hinterland; Greece claims northern Epirus, and Serbia claims the northern part of Albania.

The cry of distress of the Albanian people is smothered by the powerful imperialism of their neighbors. The hope which the Albanians have fixed their eyes upon is America, and from her again they expect salvation. All Albanians prefer American assistance to guide them in their political life.

In January, 1920, the British, French and Italian premiers proceeded to divide up Albania according to the secret treaty of London, but President Wilson interposed in behalf of the Albanians by reminding the premiers that this was a violation of their pledge to make peace in accordance with the fourteen points, the eleventh of which says "the relations of the several Balkan states to one another should be determined by friendly counsel along historically established lines of allegiance, and nationality and international guarantees of the political and economic independence and territorial integrity of the several Balkan states should be entered into."

The protest of President Wilson roused some resentment among the Allies, but was effective in securing an amelioration of the original plans for the partition of Albania. The Yugoslavs set a good example by voluntarily renouncing their share in the spoils, the city of Scutari. The representative of the Provisional Government at Washington, C. A. Chekrezi, expressed the gratitude of the Albanians when he said: "The salvation of my country is due, I do not hesitate to say, wholly to the action of the United States Government."

But the United States Senate, in spite of its professed intention to abstain from interference in European affairs, took action in one of the most delicate questions of the Balkan settlement by passing a resolution prepared by

Mr. Lodge favoring the annexation of Koritza, a district of southeastern Albania, to Greece. According to Albanian estimates nine-tenths of the population of Koritza are Albanian and opposed to entering Greece.

Under the present arrangement more than a million Albanians have been placed under the rule of the Greeks, Serbs and Italians, and in these alienated districts the Albanian schools have been suppressed.

## Greeks Take Philadelphia

THE Greek campaign in Asia Minor starts off with encouraging successes. The first blow was struck on June 25 when the Greek expedition sent eastward from Smyrna took Ala-Shehr, a walled town eighty-three miles from Smyrna and better known to our readers by its ancient name of Philadelphia, the seat of one of the seven churches of Revelations. The loss of the Turks in killed, wounded and prisoners is put at 8000. More than 2000 dead were counted.

From Smyrna as a center the Greeks have also despatched expeditions to the northeast and southeast along the railroads for more than a hundred miles. If the Greeks can secure control of the railroad system of western Asia Minor they can cut off Angora, the headquarters of the Turkish Nationalists, from connection with both the Aegean and the Mediterranean.

The British are coöperating with the Greeks by the use of the fleet in the Sea of Marmora to protect the northern terminals of the railroads. The Turkish trenches encircling Ismid on the landward side have been shelled by the British naval guns and a thousand Turks killed. The British Mediterranean fleet has been brought up the Dardanelles for the defense of Constantinople and the British troops from Malta have landed at Ismid.

The army of Mustapha Kemal Pasha, the leader of the Turkish Nationalists, is said to be largely composed of Anatolian peasants who have been forced to leave their farming and are more anxious to get back home than to fight. Besides the Turks are not so well provided with munitions and other military necessities and being isolated from the outside world they will be at an increasing disadvantage compared with the Greek, British and French forces attacking them from all sides. It is true that the Nationalists have the recognition and favor of the Bolsheviks, who, by their capture of the Caucasus, have completed connections with the Turks, but since the Bolsheviks are themselves short of such material and crippled for lack of locomotives they will not be of much material assistance. Premier Venizelos speaks optimistically of the prospects:

We hope to take all the objectives planned by our general headquarters staff inside of two or three weeks, but if necessary we are ready to increase our army to a half million if the Turks cannot be beaten by less.

It is the greatest pity that we were not allowed to put our troops into action when it was first suggested ten months ago. The situation would have been easier to face, and opposition in certain allied political circles to the present operation against the Turks would not have had a chance to develop. We asked then merely for permission to go ahead, not for troops or money.

But altho the final success of the Allied invasion of Asiatic Turkey may be assured if it is persisted in, the immediate effect is unfortunate, for it affords opportunity and pretext for a general massacre of the Greeks and Armenians who are scattered thru the interior. The Turkish Government at Constantinople, while itself nominally engaged in making war upon the Nationalists who have defied its authority, has protested to the Allies against the occupation of Asia Minor while the treaty is pending.

The Italians who are inclined to be jealous of the extensive territorial acquisitions of the Greeks and British have declined to take part in the military movement. Many of the French take the same view, among them ex-Premier Briand.

# Here Are Books—and Books

## Stories for Summer Time

This summer seems, fictionally, to be one of rest and calm. The war novels have been written; the after-the-war transition novels have been written, and now there is a let down, the atmosphere has grown less tense and earnest. Consequently the vacationist may look forward to a summer of novels which will try neither to stir him unduly nor to move him to accomplish something he does not want to do.

An excellent example of the type is Horace Annesley Vachell's *Whitewash*. The war has dwindled to a convenient device for getting the hero on and off the stage at appropriate moments. The problem of the book is how to convince a charming landed lady that it is better to repair the leaking roofs of her tenants' cottages than to present the tenants with flannel petticoats, and the really vital issue is a love affair. It is pleasant, leisurely writing with some excellent character drawing, particularly in the case of the charming lady, her daughter and her daughter's friend, who are the most important people in the story.

On this side of the Atlantic we have Sophie Kerr's *Painted Meadows*, whose scene is laid in a little southern town in the last decade of the nineteenth century. It is a story of matrimony and it deals with age-old problems, two men and one girl, should the wife or the husband be the weaker vessel, should a widow marry again. It is simply told, effectively, poignantly. The three chief characters are very real. There are several secondary characters with possibilities only half developed, for the author is intent on her main theme, and her details of which there are many, gather round that.

The highest praise you can give an author in these days is to say that his or her book is "thoroly American," from which, alas, it does not necessarily follow that it is an excellent piece of workmanship. Edna Ferber's *Half Portions*, however, wins on both counts. They are stories about people who couldn't possibly live anywhere except in Chippewa, Wisconsin, and the thousand and one towns of which it is a prototype, and who, at the same time, have international human emotions. They are stories with perfectly good plots, but both the plots and the backgrounds exist for the sake of the characters. You become genuinely interested in Aunt Sophy and her millinery business; in Chug Scaritt, the youthful proprietor of the Elite Garage; in Tessie, whose fella went to France; in Old Lady Mandle and her son Hugo; you really care what happens to them, and you are proud of the fact that they are typical citizens of the United States.

Less typical are the citizens and citizenesses in *Affinities*, by Mary Roberts Rinehart, a book of short stories about the smart set and their matrimonial escapades. Mrs. Rinehart always writes entertainingly and she

tempers humor with rare human sympathy and common sense. These stories are just the thing for hammock reading on a lazy afternoon. And in spite of herself Mrs. Rinehart couldn't help leaving one or two thought-provoking sentences about in them.

Ben Ames Williams's *The Great Accident* is a story of middle western small-town politics which somehow just misses being good. By a political joke a young and rather wild lad is made mayor of his home town. He makes a plucky fight to fill the job, and tho he himself is rather too fond of a drink, to make the town dry in fact as well as in name. It is a perfectly good idea and the characters are interesting enough, but the author seems to be a little bit tired; it all needs to be keyed up to a higher pitch.

Speaking of authors being tired, you seldom meet one who is less so than Virginia Woolf. She seems to write for the pure joy of it; she is so interested in some people she knows that she wants you to know them too, she is so fascinated by a particular atmosphere that she wants you to share its charm. The only modern who enjoys the technic of his work in a similar degree is Joseph Hergesheimer; but the results of their enjoyments are different as the poles. *The Voyage Out* is about some English people on their way from London to the little island of Santa Marina off the coast of South America, and then of their life on the island, in a villa and the hotel. There is an almost perfect description of being at sea, a vivid picture of the tropical island, an extremely clever one of the hotel. It is delightful writing; you don't want to skip a

single word until the last quarter of the story, when one character after another begins to have unreasoning impulses and to minutely analyze his or her emotions after the manner of a Dorothy Richardson or a May Sinclair heroine. The story is strangely lacking in construction: It has neither beginning nor end nor single point of view, but it is thoroly interesting, a distinctly unusual book.

*Whitewash*, by Horace Annesley Vachell. George H. Doran Co. *Painted Meadows*, by Sophie Kerr. George H. Doran Co. *Half Portions*, by Edna Ferber. Doubleday, Page & Co. *Affinities*, by Mary Roberts Rinehart. George H. Doran Co. *The Great Accident*, by Ben Ames Williams. The Macmillan Co. *The Voyage Out*, by Virginia Woolf. George H. Doran Co.

## Youth Will Be Served

Only twenty-eight men in the senior class at Princeton answered, No, to the question, Have you ever kissed a girl? put to them in the yearly compilation of vital statistics; and when you read *This Side of Paradise* you can well believe it. This first novel, written by a very recent Princeton graduate and dealing largely with Princeton men, has not been enthusiastically received by the university. The chief objection, however, is not the picture of the modern girl but to its description of Princeton as "the pleasantest country club in America" and to the author's callous manner of making copy of all his friends and acquaintances. That, to the non-Princeton reader, is rather beside the point and as for the atmosphere of the college Mr. Fitzgerald adds to the country club "spires and gargoyles," the moonlight on Holder tower, walks and talks and friendships. The book is well written and its picture of modern

THE PRODIGAL SON

Illustration of a shadow play given at the Chat Noir, famous cabaret of Montmartre in Paris, from Helen Haiman Joseph's "A Book of Marionettes," published by B. W. Huebsch. "The Chat Noir has an art of its own," writes Anatole France, "that is at once mystic and impious, ironical, sad, simple and profound, but never reverential." Here have been given comedies, spectacles, military epics, oratorios, mysteries, Greek scenes, burlesques and pantomimes

youth is so obviously founded on solid fact that Victorian mamas are likely to be quite upset by it. Part of the story is thoroly amusing; part of it goes deep into the serious thoughts and desires and ambitions of its hero-author; in the last third he dives so deep that he gets well over his head. Amory Blaine is conducted thru a curious childhood, boarding school, Princeton, the war, which, inexplicably, affects him not at all, a year or two in New York and numerous love affairs to a point where he exclaims, "I know myself," but the reader doubts him.

*This Side of Paradise*, by F. Scott Fitzgerald. Charles Scribner's Sons.

### Daisy Ashford's Latest

"The Young Visitors" was the most popular book which ever came from the pen of a nine year old girl. It is a consolation to find that there are other stories from the same author. *Daisy Ashford, Her Book*, contains a preface by Irvin Cobb, four novelets by Daisy Ashford and a story by her sister Angela. Tempted to violate the copyright act and defy the high price of paper by quoting half the book we will content ourselves with a single paragraph from "A Short Story of Love and Marriage" written (or rather dictated) by Daisy Ashford at the age of eight:

The strong and bold bridegroom wore a red swallow tailed coat, with a green silk sash tied in front. He had black knickerbockers and white woollen socks, and black dressing slippers, and he carried a bowler in his hand. When they arrived at the church the marriage was splendid, but the bare legs of Burke were not much appreciated.

*Daisy Ashford, Her Book*, by Daisy Ashford. George H. Doran Co.

### Snapshots of Hell

*Now It Can Be Told*, by Philip Gibbs, is war journalism at its best and grimmest. Perhaps it should rather be called post-war journalism, for it contains many details of horror, discouragement and bitterness of spirit in the front trenches which were not written up during the war lest the narrative weaken the morale of those who read it. Now that everything can be told, Mr. Gibbs omits nothing. Not only the butcher shop of battle but the rats in the trenches, the seas of filthy mud, "trench foot," poison gas, boredom, passionate resentment against the blunders of generals and politicians, half-confessed fears before the attack, rotting corpses, madness—everything that makes modern war sordid or hideous is set down unsparingly. The indictment of war is written in the same spirit as Barbusse's famous novel *Le Feu*, or Sassoon's war poetry, and with as much literary skill as either.

Mr. Gibbs' emotional reaction to the horrors of war fuses the miscellaneous details of the book into a powerful picture of the whole. His intellectual reaction is not so clear. He admits that it was necessary to beat Germany and yet, somewhat inconsistently, rails against the diplomats, statesmen, jour-

nalists, ministers of religion and others in places of power and safety for encouraging the war to continue until the Germans were beaten. After all, the only way to win the war was to go on fighting no matter how dreadful and disgusting the fighting might be, and if the common soldier was doing his duty so were President Wilson and

Sir Philip Gibbs he is now; this English war correspondent who set down with patience and compassion a chronicle of how the British soldier lived—and died

Premier Lloyd George. But even if Mr. Gibbs does not always think clearly, he can always describe clearly what he has seen and known and for the reader of his book that is the important fact. And everyone who is inclined to take war either as a matter of course or as a glorious experience should read this book.

*Now It Can Be Told*, by Philip Gibbs. Harper & Brothers.

### Just a Good Story

*The Strong Hours*, by Maud Diver, is an interesting story about some interesting English people before and during the war. It is in no wise a remarkable book; there are a good many pages of it which bear skipping, but those are chiefly the pages in which Miss Diver describes scenery, an art in which she does not excel. The story is a good one, there are plenty of likable people, some of them very skillfully drawn. Miss Diver has a liking for dramatic and emotional scenes and she does them well.

*The Strong Hours*, by Maud Diver. Houghton, Mifflin & Co.

### A Freudian Novel

All the young novelists seem to be taking to psycho-analysis nowadays; some tactfully like Rebecca West in "The Return of the Soldier," some bluntly like Beresford in the present volume, *An Imperfect Mother*. The latter reads like a case book on the "Oedipus complex," a typical case, all the stigmata present and accounted

for. The cure also results from the orthodox treatment. The young man is freed from his excessive love for his mother as soon as he has been forced to recall the psychic traumatism of infancy. But in spite of the author's effort to get everything right according to Freud it is not a bad story.

*An Imperfect Mother*, by J. D. Beresford. Macmillan Co.

### The Same Old Locke

W. J. Locke used to write about impossible things so that you wished they were true. He lost the art some half dozen novels back but, in *The House of Baltazar*, he is beginning to regain it. The book is a fantastic tale of an impulsive, dynamic genius who, living in seclusion and disgust with the world, knew nothing of the war until it had been going on for some two years. Mr. Locke's prolific powers of invention have crammed into the book not only an exceedingly active plot, but enough material to make, if developed, at least three interesting psychological novels.

*The House of Baltazar*, by William J. Locke. John Lane Co.

### "A Clear and a Sincere Soul"

Poignant with the beauty that is bought with death is the verse in *Poems* by Gladys Cromwell, who with her sister Dorothea, after doing war work in France, jumped from the deck of the "Lorraine" just a little over a year ago. Three months later, the two sisters were buried in France with military honors, and the French Government awarded them the Croix de Guerre and the Médaille de Reconnaissance française. Unconsciously perhaps, but truly, Gladys Cromwell voiced her fate in her poem, "The Extra."

THE EXTRA

Sheltered and safe we sit.  
Our chairs are opposite;  
We watch the warm fire burn  
In the dark. A log I turn.  
Across the covered floor  
I hear the quiet hush  
Of muffled steps; the brush  
Of skirts;—then a closing door.  
Close to you and me  
The clock ticks quietly.  
I know that we exist  
Two entities in Time.  
Our vital wills resist  
Enclosing night; our thoughts  
Command a truth above  
All fear, in knowing Love.  
But a voice in the street draws near;  
A wordless blur of sound  
Breaks like a flood around:  
"Trust not your hopes, for all are vain,  
Trust not your happiness and pain,  
Trust not your storehouses of grain,  
Trust not your strength on land or sea,  
Trust not your loves that come and go,  
Trust only the hate of the unknown foe,—  
War is the one reality."  
Are we awake or dreaming?  
On the hearth, the ashes are gleaming.  
Listen, dear:  
The clock ticks on in the quiet room,  
It's all a joke, a poor one, too.  
Or else I'm mad! This can't be true?  
I light the lamp to lift the gloom.  
My world's too good for such a doom.  
One fact, if nothing else, I know,  
I'll die sooner than have it so!

*Poems*, by Gladys Cromwell. The Macmillan Company.

## Bad Housekeeping in My Ward

(Continued from page 37)

for him to submit to the quarreling and pawing, and whispering in his ear, of bailiffs and lawyers and policemen. For the grist *must* be ground and the judge cannot wait; tomorrow he will have another grist, and in the afternoon of today he must hold court some place else. Here again a live civic conscience would not endure so intolerable and dangerous a sore in the community. But do the good citizens in their fine houses, or who ride by in their fine limousines, *feel responsible* for the police station? Hardly—indeed few of them probably have ever taken enough interest to know anything about its true nature. If they knew, they could hardly escape pangs of conscience that men and women should be confined in its horrible cells, or brought to dock in such a place.

There are two or three famous Social Settlements, in or near the ward, each doing a great intensive good work—they have often been beacon lights that have led the way in such matters as playgrounds, and making real Americans out of swarming immigrants. But somehow here also distrust exists; for the “best people,” and indeed a large part of the public generally, have come to feel doubtful of the good they do. For the settlements, especially since the war, are under suspicion; I state simply a fact. Some years of life in social settlements, now long enough past to give a bit of perspective, has left a great respect for the work they have done in focusing other microscopes than mine, and long before it, on civic problems. But “social workers” look down on those not engaged in professional reform; and the outside world abundantly returns their contempt.

We might search further, for the ward has much of interest still. But have we not come upon the touchstone of our problem in the utter lack of a sense of civic responsibility on the part of the everyday man and woman? Even the best of us say in a plaintive voice, “Why if I vote—what more can I do?”—forgetting that defensive tactics never won a battle. Our sense of sacrifice and of service is deep and abiding in matters which touch our families, or which touch our country; but as for our community, oh! that is a different matter. We must have some recompense, some reward there; we must hold office or have a public contract before public service can be expected of us. Virtue is its own reward—everywhere but in good citizenship! Is it not fair to say this? Is it not true? Is it not true to say our sense of public service is sicklied o’er with the ferment of self interest? Has not the acid test of distrust eaten deep into the life of the body-politic? I think it has.

What is the cure? Well our problem was to analyze and not to answer.

Chicago, Ill.

## “I knew him when..”

Throw a railroad across the continent—and all along the line, towns and factories and farms begin to spring up over night.

Civilization follows the railroad.

The railroad as a fore-runner of progress has never been more truly presented than in the part the steam railroads of America have played in making known the uses of electricity.

Each station along the iron trail stands as an outpost where first were seen the products of electrical development in practical operation.

Thus between 1880 and 1890, for proof that you could actually talk with a man through one of Alexander Graham Bell’s “new fangled contraptions”—the telephone—people from Maine to California turned to the railroad’s equipment and saw that it was true.

Then, in the early nineties, even remote communities perched high up in the Rocky Mountains saw the tales of Thomas Edison’s achievement borne out by a glittering array of electric lights in railroad station and yard.

Familiarity thus gained with the electrical idea was the first step to a widespread demand for the telephone as a common carrier of speech and the electric light as a guardian over highway and byway.

To the extent that these conveniences were adopted, life and property received a new security, and the conduct of business acquired greater facility.

So when we think of a railroad only as a means of transportation, we do not appreciate its pioneer service in spreading the use of one modern improvement after another—not the least of these being electrical apparatus.

requires a stupendous lot of conversational laughing gas to extract a perfectly healthy dollar from a victim and to make him believe it doesn't hurt! I feel as tho I'd taken a post-graduate course in the science of Understanding. I've become such a competent judge of people—at least, financially—that I can almost tell, by looking at a man's feet, just how much he's going to contribute.

I wonder if you know the big, jolly, generous looking fat man, who is waiting for his "luncheon date" to arrive, and proceeds to entertain himself by telling me of all the charities to which he belongs. He thinks mine is just splendid. (It's the A. T. C. P. drive this time.) Why, money means nothing to him, except to give away. And while he's talking, he drops something in my box "unconscious like;" and the casual listener, hearing the coins clink on to the others, as they fall thru the narrow slot, would be impatient for evening to come to count the money, feeling sure that he's put in a gold piece or two. But I know better. I can tell, by the way he holds his fingers over the opening, that he has slipped in two pennies, and I smile gently, as he leaves—abruptly. His "date" has come! Then as he walks past my booth on his way out, I pretend never to have seen him before, and ask: "Don't you want to give to the poor of New York?" just to hear his answer. He smiles—first at the lady, who toddles at his side, trying to keep step with him, and then at me—and he has such a melting "pleased-to-meet-you" smile—and he says: "Don't you remember, Miss, I just contributed?" And I can't help wondering which one of them is going to pay for the lunch!

Then, while I'm still half angry and half amused, I see looming up before me two sumptuously arrayed daughters of Eve. One of them is swathed in baby lamb and chinchilla, and the other in Russian sable, and birds of paradise have found a home in the waves of their luxurious hair, hair grown blonde in service. As they come closer I hear the clinking of mesh bags against vanity cases, a mingling of "Chypre" and "Ambre Antiques" is wafted toward me; and I quickly recall my ready-to-wear smile, and ask the driveworn question. As my lady parts her soft, red lips to answer I am at once struck and blinded by a dazzling gold tooth, and fairly asphyxiated by a whiff of Spearmint, as in dulcet tones she tells me: "Dearie, I have *did* all I can!" "Oh, blessed Father, alike of the New Poor, and the "Nouveau Riche;" why didst Thou so misplace Thy gold?" Money covers such a multitude of grammatical errors.

But, just because this is all funny—in a way—don't think that every person left a laugh in my memory. Some of the drives had more tears in them than most everyday hearts could stand. It wasn't very funny when a

splendid, glorious-looking boy in khaki came up and said he wanted to give me something for the Red Cross; and asked me to take a dollar out of his left hand coat pocket. I thought it a bit queer, and started to say something, jokingly, about his wanting to teach me to pick pockets, but the words never reached my lips, because, as I looked at him more closely I realized that the sleeves of his coat hung loose and limp at his sides—both of them empty. The poor boy saw the look of pain that must have shot across my eyes, and he smiled, a rather tired but courageous smile; the smile of youth that's dead, of wounded hope; and he said: "It's darned good of you to care so much, Miss, but it's really not so bad. I still can dance, you know, if I can get a girl to lead me. I just can't ever play on my fiddle again, that's all." And when I said nothing—only because I *could* say nothing—he asked again: "Do take the money, won't you? I want to give it to you. Those Red Cross girls were angels!"

It's not surprising that we won the war, with boys like that to fight for us!

And then one day, and on another drive, a wrinkled little lady limped towards me, and she handed me a very old and thin gold watch. "Please, to give this to the Salvation Army." I begged her to keep it. I tried to convince her that they would appreciate her thought quite as much as the gift. But she insisted: "Don't refuse to take it, child; it's all I've got and I couldn't sleep nights if I thought I hadn't given something to the Salvation Army." So you see I had to take it. I tried to thank her, but one can't say, thank you, for a gift like that.

By way of contrast take the day the Sun Flower Club gave a jubilee luncheon in the hotel. I gazed fascinated at the little darlings (the youngest of whom must have been at least forty-nine) as they tripped gayly past me, in starched white frocks (this was January); and out of the flutter a big broad Britisher appeared, stalked up to me, and said: "I beg pardon, Miss, but may I sit next to you? I'll buy a hundred dollar bond from you if you'll let me stay and watch the baby parade go by. I'm sorry I can't afford any more; because this is really the rippingest show I've ever seen! Gad, but they're all done up like sore thumbs, aren't they?" And you say the English haven't a sense of humor!

And it was during the Boy Scout drive, I believe, that the dentists' convention met. Ivory specialists' (as George Ade would say) poured into the hotel from all over the country. An earnest looking lot. One tooth doctor came up to me and handed me five dollars. He said he was very glad to give the money to the Boy Scouts, as he had several of his own at home. And then he proceeded to tell me that what he really gave me the money for was to know what kind of tooth paste I used. Can you see the "cat-that-

swallowed-the-canary" expression that crept into his face when my answer told him that the particular make in which I indulged was the same as he advocated for his own patients? Then he said: "I thought so," gave the Scouts another five dollars, and was gone. And I never stopped smiling till the convention packed its false teeth and were scattered over the globe again.

Then followed the "Braid and Trim-mings" convention, and the "Ready-to-Wears," and the "Fillum Magnates," and the "Daughters of Mississippi" and the "Sons of Oklahoma!" And each put a daub of color on my futur-ist's "Study from Life." Even the hon-est looking young liar, who told me he had but a few months more to live, and then asked me to cash a check for him. I wondered, afterwards, when I'd been told he was a fraud, and when the cashed check came back marked "no funds," why I had trusted him. I don't think it was just his being in khaki and that my sympathies were played upon; I believe it was because, among other things, he told me he had four platinum ribs, and as I was contem-plating the resetting of a ring at the time, I knew how expensive his inside was. But it was all in the game—and all a part of the day's drive. The drive which seems never ending. For wars may come and wars may go, but drives go on forever.

New York

## Do You Want to Go Hungry?

(Continued from page 35)

Frequent rains interfered with plant-ing and made it impracticable to uti-lize such labor as was available to the best advantage.

Even under these handicaps, how-ever, the farmers can plant a larger acreage than they can harvest with the available labor. The greatest diffi-culty, therefore, is to be expected at harvest time. If the weather during the remainder of the season should be favorable and crops should be abun-dant, it will be absolutely necessary for the farmer to have more outside help than is now in sight. It is highly im-portant, therefore, that industries other than agriculture should spare, for a short period during harvest, men who have had farm experience and who will be willing to aid in gather-ing the crops. Industrial plants which discontinue their operations for a period each year should, so far as is practicable, see that their shutdowns are made during the harvest season in their localities, thereby relieving labor at a time when it is most needed on the farms. Unless this is done, great loss of matured crops may result and will be keenly felt by consumers next winter.

I have recently made two sugges-tions to chambers of commerce and other commercial and civic bodies in cities. The first suggestion is that each look into the problems of the truck-ing areas around its own city. Each city has, in this regard, a problem that

# August Nights

## Will bring to millions Bubble Grains in Milk

Don't put aside your Puffed Grains when breakfast ends in sum-mer. Children want them all day long, and there's nothing better for them.

The supreme dish for luncheon or for supper is Puffed Wheat in milk. The airy grains—puffed to eight times normal size—taste like food confections. Yet every morsel is whole wheat with every food cell blasted.

## The finest foods ever created

Puffed Wheat, Puffed Rice and Corn Puffs are the finest grain foods in existence

Never were cereals so enticing. The grains are fairy-like in tex-ture, the flavor is like nuts. They seem like tidbits, made only to entice.

Yet they are major foods, with every food cell steam-exploded, so digestion is easy and complete.

They will take the place of pastries, sweets, etc., if you serve them all day long. And at meal-time they will make whole-grain foods tempting.

### Puffed Wheat

### Puffed Rice

### Corn Puffs

### The Three Bubble Grains

On ice cream

Puffed Grains taste like airy nut-meats, and they melt into the cream. The dish is made doubly delightful.

Puffed Grains are made by Prof. Anderson's process. A hundred million steam explosions occur in every kernel. They are the best-cooked grain foods in existence. Serve all three kinds, at all hours, in all the ways folks like them.

# Make Your Brain Pay Bigger Dividends!

THE men who make big money are not so different from those who don't—but the *methods* used by the men who reach the top are as superior to the ordinary man's methods as a modern rifle is to an Indian's bow and arrow. Arm yourself with their weapons of success—and you too will

## Succeed—in a Big Way

Here are six wonderful courses which are briefly described on these two pages. Read about each one carefully. See how each course will train and develop one of the great faculties that will qualify *you* for a "big money" position. Taken together, these six courses are a

veritable Ambitious Man's Success University. Each course has been prepared *out of actual, practical experience*, by an expert of country-wide reputation, a recognized authority in the subject covered—such as David M. Roth, the famous memory expert; Katherine M. H. Blackford, M. D., the celebrated character analyst; Dr. Frederick Houk Law, well-known public speaker and teacher; Arthur Newcomb, nationally-known salesmanager and phenomenal salesman; Edward Earle Purinton, foremost efficiency engineer and organizer; and Wesley W. Ferrin, prominent economist.

Each of these specialists in mind-training for bigger success is ready to teach *you*—through these courses—at a ridiculously small investment on your part. Big executives with whose names almost everyone is familiar, have paid as high as \$1,000 per class for Mr. Roth's *personal* services in giving instruction in Memory Training to their employes. Dr. Blackford has been paid thousands in counsel fees by big corporations such as the General Electric Co. and other large firms. Yet you can now get the benefits of their systematic teaching at a trifling investment. It is an investment—be-

### Improve Your Memory in One Evening

A BETTER memory in one evening. It sounds impossible. Yet this is exactly what Mr. Roth, the world-famous memory expert, has given over a million men and women. Evidence from people who have actually done things is conclusive.

Have you ever heard of "Multigraph" Smith? Real name H. Q. Smith, former Division Manager of the Multigraph Sales Company, Ltd., in Montreal. Here is just a bit from his letter:

"Here is the whole thing in a nutshell: Mr. Roth has a most remarkable Memory Course. It is simple, and easy as falling off a log. Yet with one hour a day of practice anyone—I don't care who he is—can improve his Memory 100 per cent in a week and 1000 per cent in six months."

There is no need to say more. For you can see for yourself, at no cost, exactly what the Roth Memory Course will do for you. Merely fill in and mail the coupon. Send no Money.

### Little Signs That Reveal Character at a Glance

EVERYONE knows that a high forehead indicates weakness, while a receding chin denotes weakness, while a pronounced chin shows determination. But often there are other signs, just as apparent, which the average person doesn't know how to recognize.

As a consequence, we often jump to incorrect conclusions about people, because we don't carry our observations far enough. Yet, once you have the secret, you can get at once a complete picture of the characteristics of every person you meet, as easily as you read this page.

Katherine M. H. Blackford, M. D., the foremost character analyst in this country, has written a simple seven-lesson course, "Reading Character at a Glance," which quickly gives you the knack of knowing all about a person at a glance. This complete course will be sent on Free Examination. Learn how to look thru people not merely at them. Let Katherine M. H. Blackford, M. D., show you the way to bigger success in business and social life. Mail coupon NOW.

### Talk Convincingly—and the World is at Your Feet

WHY can one man sell where another fails? Why can one man get the sought-after job when another, better qualified, is turned down? The thing that counts is not only what you say but how you say it.

The world is full of good men earning less than they're worth; all because so few know how to use that God-given faculty of speech which is one of man's greatest weapons.

Let Dr. Frederick Houk Law teach you how to carry conviction—how to make what you say have the effect you intend—how to overcome timidity.

Learn to talk convincingly and whatever you wish can be yours. Dr. Law's new course will give you the secret of swaying men's minds—of literally talking your way to big business success and social popularity.

One of the remarkable things about this method is that it requires little study and time. Nearly everyone can grasp the principles in an evening. Send no money. Just mail the coupon, and you will receive "Mastery of Speech," Dr. Law's Course in Business Talking and Public Speaking by return mail postpaid. Mail coupon NOW.

# Examine Any Course 5 Days Free

cause each of these wonderful courses furnishes you some of the tools, the methods, that all big, successful men use to earn their phenomenal salaries. You can earn more too—much more—with these modern weapons of business life.

## Send No Money

Read about all the courses described on these pages, select those which will give you the kinds of mind training you need most, and check on the coupon those you want to examine free for five days. Then, mail the coupon—without a cent of money! The courses you select will be sent you at once, all charges prepaid. Examine them thoroughly for five days. Then, if you have the slightest cause for dissatisfaction—and we feel sure you will not—return any or all, and you will owe nothing. But if you feel, as thousands of others do, that you have found the methods that will make your brain pay you bigger dividends, send the small amount for each course noted on the coupon.

You take no risk. You have everything to gain. Send no money! Just mail the coupon.

Owing to the constantly changing costs of paper, printing and binding, this offer is made for only a limited time—so act today!

## Mail Coupon NOW!

### Learn the Secrets That Will Make You a Master Salesman

IN his wide experience as a record-breaking salesman, and a successful sales manager, Mr. Arthur Newcomb discovered the "secret" the devices, that star salesmen use in getting their marvelous results. Let him teach you, in his astonishing seven-lesson course, the permanent rules which will enable you to become a Super-Salesman.

Every word of this course is written out of practical achievement in selling. You have something to sell; you must make the other man buy. Arthur Newcomb shows you the way. No preaching, no theorizing, no tricks, no stunts. In this course, "Super-Salesmanship," Mr. Newcomb has broken away from the old theories of salesmanship: they did not go far enough. After years of study he found these great fundamental secrets from which the theories came. He has employed and trained hundreds of salesmen and knows exactly the problems salesmen must solve, and how to solve them. Send no money. Just mail the coupon and "Super-Salesmanship" will be sent at once.

### Do Twice the Work With Half the Effort

ASK yourself this question: "How many things have I failed to do that would have advanced me in business—simply because I could not find time?" You're going to do them all—when you find time—but you never will, until you learn the secret of getting things done with little effort.

Edward Earle Purinton, world-famous Business Efficiency Expert, will teach you the secret. His great discovery, which has revolutionized the lives of bankers, manufacturers, educators, executives, business and professional men, is told in his new seven-manual course in Personal Efficiency.

Send no money—merely the coupon, and the Purinton Course in Personal Efficiency will be sent at once.

### How to Make Your Salary Worth 10% to 30% More

How much are you earning? It doesn't matter. Whatever your income, you can extend its buying power 10 to 30 per cent. A plan, which will really mean as much to you as an increase in salary, is incorporated in the Ferrin Money-Making Account System. It will enable you to save each year and enjoy more pleasures than you ever did—because you will know you can afford them. The Ferrin Money-Making Account System comprises: The Ferrin Money-Making Calendar for the household, The Ferrin Pocket Account Book, The Ferrin Investment and Insurance Register, The Ferrin Household Inventory and Fire Insurance Record, No red tape or complicated bookkeeping in this system—so simple that a child can keep it. Send no money. Just mail the coupon and the System will come by return mail.

is somewhat different from that of any other city. The United States Department of Agriculture is doing what it can toward the solution of these problems but our advice and our aid must necessarily be of a general sort. Frequently, not even the state agencies can give to them the close attention that a local organization is in position to give. Each organization knows the extent to which the food supply of the city in which it is located depends upon the trucking areas immediately surrounding it. It knows, or by conferring with the truck growers may know, the peculiar labor problems that have to be met. It can go far toward solving them if it will give them serious consideration—and I think all will agree with me that the matter is worthy the attention of any organization.

The other suggestion is that everything feasible be done to add to the comfort and convenience of the men of each community who may be induced to spend their vacation in helpful farm work. Arrangements might be made, in many instances, for the men to go out in groups of, say ten or twelve, or even fifteen or twenty, using their own automobiles or other machines secured for the purpose. Camps might be established in which the men could live, and they could be made comparable in comfort, convenience and pleasure to hunting camps. The men probably would perform no more strenuous physical work in the fields than most men do in a hard day's hunting. With the camp available, they would be certain of a comfortable relaxation period at the end of the day's work. In other words, form groups to go out this season and establish "harvest camps" instead of "hunting camps."

Seasonal farm work of this kind gives college students and city men an opportunity to earn good wages during their vacation period. The camp system would give them the additional opportunity of securing a good wholesome, recreating vacation. Many business and office men would probably undertake special farm work under an arrangement such as this, with acquaintances making up the camping party, who would not enjoy it under ordinary conditions. These suggestions, if acted upon, will bring temporary relief.

The existing drain of industry upon farm labor must not be permitted to continue, however, and it is the mutual problem of all to locate the fundamental problem and help solve it. The answer lies somewhere in the neighborhood of "Make farming sufficiently attractive from both a financial and social standpoint, to attract and hold a sufficient number of our people upon the farms to give us a proper balance in population between the cities and the country."

Washington, D. C.

I kissed her tempting ruby lips,  
An act quite diabolic;  
For since I stole those honied sips  
I have the painter's colic.

—Pelican.

## Independent Opinions

Dear Sir:

The Republican platform in five words:

Damn Wilson; Dodge the Issues.

Very sincerely,

WM. P. ATKIN.

All Americans are not so deaf as the Senators to the piteous appeal of Armenia. If the United States assumed the mandate for Armenia offered by the Allies it would not be necessary to send any unwilling soldiers for enough gallant young Americans would respond to the call to provide the temporary force for the maintenance of order in the new republic. The Armenians in America say they could raise 5000 to 10,000 from their own population and besides there are others who would go to the rescue of Armenia if they were only allowed to as the following letter shows:

At this critical moment, when the people of Armenia are abandoned by those governments which should be their protectors, many soldiers in Camp Devens would like to have a way opened to them as soldiers for going to the relief of Armenia. The motive which animates us is one of pure chivalry. The idea of aiding Armenia is in the air, but it needs to be crystallized into action. A campaign of meetings and agitation should be started at once. Many

soldiers in Camp Devens (and probably in other camps) are anxious to go to Armenia, but Congress refuses to back us. Without some kind of public support we can do nothing.

EDWARD H. JAMES,  
Private, 36th Infantry.

Camp Devens, Massachusetts

Dear Sir:

Why not a Pollyanna ticket, with the motto, "the greatest happiness of the greatest number"? I suggest:

President—Norman Hapgood.

Vice-President—Congressman Bland.

Secretary of State—Speaker Thaddeus Sweet.

Secretary of the Treasury—James L. Laughlin.

Secretary of War—General Tasker M. Bliss.

Secretary of the Navy—Will Levington Comfort.

Attorney-General—Daniel Smiley.

Postmaster-General—Rev. Austin H. Jolly.

Secretary of the Interior—Henry B. Joy.

Secretary of Agriculture—Ruffin G. Pleasant.

Secretary of Commerce—H. Nelson Gay.

Secretary of Labor—Owen R. Lovejoy.

Yours truly,

O. B. HAPPY.

We commission our correspondent to prepare forthwith the Campaign Glad Book.

## Kaiserdom Again?

(Continued from page 39)

publican to a monarchical form of government, not to tell of a single return of the German people to monarchy, where monarchy means such virtue, strength and progressiveness?

"We are the sane party in the state, the other parties the insane ones," a junker relative wrote to me on this head. "We take our stand on the firm ground of human experience and nature, while the Democrats and Socialists are leagued to nothing more stable than inflated theories about economics. Put your question about, my dear cousin. Ask if the people will come back to us."

The argument that the trend of the times is against them is met with in a spirit of calm assurance. "Who knows better than we?" they ask.

"What is the trend of the times? We have been facing and managing so-called trends of time in Prussia for centuries. After the Napoleon wars we lent efficient aid in stemming the flood tide of revolution thruout the north of Europe. In 1848, we dammed the tide of republicanism in Germany. When the tide of social democratism arose in the empire and we saw it could not be stopped, we diverted it to the uses of the state. Have our hands lost their cunning because we hoisted puppets into the seat of government to bear the odium of signing an ignominious peace? Or will a time arrive instead when the Fatherland not only, but the whole world, will turn to us as the one existing group skilled and intrepid

enough to master a trend which, this time, is one that threatens to overflow civilization and disintegrate all its social structures?"

Morally junkers are unbent. No sense of repentance over the past oppresses them. A minority affirm they would have won had the people backed them enough; the rest say stoically: "A great war was lost; poverty and social discord have ensued, as they ensue in all cases of unsuccessful wars. Against this one failure on our part remains the record of a long succession of victories. Moreover the end is not yet." Their attitude is one of poise. To the factions opposing them none of their offenses is more irritating; tho many are the individuals who despite everything feel a certain pride over the Fatherland possessing a body of men capable still of world-defying arrogance. It is the self-confidence, the solidarity and known competency of junkers as a political group and adversary, that disturbs them. For it is a maxim of political science that when an inter-group struggle takes place as is occurring in Germany between the bourgeoisie, the junkers and the laboring classes, that that group gets the upper hand in the long run which is the best organized and the most competently led, the period between being characterized generally by the emergence on top first of one group and then of another, for a brief space of time.

At present, the burgher group is in

## Your Hotel in New York

WHEN you come to New York, make the Hotel Astor your home. It is more than a mere stopping place. It is New York epitomized.

Situated in the very heart of the metropolis, the Hotel Astor is the logical scene of New York's most impressive functions. Here Big Business meets for consultation. Here are held receptions for distinguished foreign visitors and ambassadors. The Hotel Astor is chosen for great National festivities.

Whether you need a single room or an elaborate suite, you will obtain at the Hotel Astor the utmost in comfort.

## Roof Garden

From the magnificent open air Roof Garden to the cool Orangerie and the numerous lounges, promenades, writing rooms and restaurants you will find a spot to fit your every mood. The cuisine and service are superb.

Do not run the risk of marring your visit by accepting less than the Hotel Astor offers you—nor waste time in an effort to obtain more elsewhere.

## SCHOOLS AND COLLEGES

### THE STONE SCHOOL

Cornwall-on-Hudson, Box 5, New York  
FIFTY-FOURTH YEAR

A School in the Heart of the Open Country. Lower School for Boys 9 to 12.

**LOCATION:** 50 miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. Healthful, invigorating, unusually adapted to a sane and simple out-of-door life.

**WORK:** Preparation for College or Business Life: recent graduates in 12 leading colleges. Each boy studied physically and mentally to increase individual efficiency. Small classes: A teacher for every seven boys.

**ATHLETICS:** Two teams with excellent facilities for all sports, under supervision: hiking, woods life, swimming pool.

You are invited to come and see for yourself. Catalog sent on application.

ALVAN E. DUERR, Headmaster

### DEAN ACADEMY

FRANKLIN, MASS. 54th YEAR

Young men and young women find here a home-like atmosphere, thorough and efficient training in every department of a broad culture, a loyal and helpful school spirit. Liberal endowment permits liberal terms, \$350-\$450 per year. Special course in Domestic Science.

For catalogue and information address

ARTHUR W. PEIRCE, Litt.D., Principal

### NEW-CHURCH THEOLOGICAL SCHOOL

48 Quincy St., Cambridge, Mass.

Established 1866. Three years' course. College preparation desired. The curriculum includes systematic study of the theological writings of Emanuel Swedenborg and spiritual interpretation of the Scriptures. Courses by correspondence when desired.

For catalogue and information, address

WILLIAM L. WORCESTER, President.

### SALESMEN—City or Traveling

Experience unnecessary. Send for list of lines and full particulars. Prepare in spare time to earn the big salaries—\$2,500 to \$10,000 a year. Employment services rendered members. National Salesmen's Training Association. Dept. 160-H, Chicago, Ill.

## New Invention

IMPROVES YOUR

# ENGLISH

In 15 Minutes a Day

Sherwin Cody, the well-known teacher of practical English, has perfected a new patented invention which, in 15 minutes of your daily spare time, will quickly give you unusual command of language. Students of this "100% Self-Correcting Method" secured more improvement in five weeks than had previously been obtained by other pupils in two years. 15 minutes each day of YOUR spare time can now, thru Sherwin Cody, make you speak or write clearly, forcefully, correctly, and convincingly.

### "100% Self-Correcting Course"

The average person in business is only 61% efficient in the vital points of English grammar. That is because the methods of teaching English in school left the student only a hazy idea of the subject—the "rules" did not stick in his mind. But Sherwin Cody's new invention upsets all old standards of teaching English. And it overcomes the only weak point in instruction-by-mail. It actually takes the place of an instructor at your elbow. It assigns you lessons in Letter Writing, Spelling, Punctuation, Grammar, Reading and Conversation, corrects them for you, and anticipates your questions. It even guides your paper and assigns you your percentage till you reach the 100% mark.

### Interesting Free Booklet

Mr. Cody has written an interesting booklet entitled "How to Write and Speak Masterly English," explaining his new course in detail. If you feel your lack of Language Power, if you are ever embarrassed by mistakes in grammar, spelling or punctuation, if you cannot command the exact, correct words to express your ideas, this booklet will be a revelation to you. Send for it now. Learn how Sherwin Cody's new invention makes command of language easy to gain in 15 minutes of your daily spare time. Mail a letter or postcard for this booklet, at once.

SHERWIN CODY SCHOOL OF ENGLISH  
Dept. 197, News Building, Rochester, N. Y.

### Training for Authorship

How to write, what to write, and where to sell.

Dr. Esenwein

For many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. Real teaching.

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes; descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 20 cents, annual subscription \$2.00. Besides our teaching service, we offer a manuscript criticism service.

150-Page illustrated catalogue free. Please Address

311 Sixth Avenue

New York

control of the government, but it is a heterogeneous mass, quite lacking in a developed sense of group loyalty, as distinguished from factional loyalty. The Moderate Socialists in it have undergone discipline only as Socialists; the Centerists, discipline chiefly as Catholics, while the record of other factions has been one of veering opportunely from the liberal to the conservative side. None of the parties had any experience of the democratism to whose flag they resorted in the after-crisis of the war. As a fighting body, the coalition is devoid of any element of *esprit de corps* except a sense of the need of common forbearance. Its leaders are unversed in the practise of government and strategy on a large national scale. They are dependent on precedence or the advice of officials of the old régime in international affairs. The coalition attitude is one of wary shifting.

A psychical power of passion that could fuse the bulky group into a compact mass is wanting to it. Spiritual force has served in other cases to transform revolutionaries into an efficient combative force vehement both in purpose and power, as witness the citizen group in France a century ago and the Reds in Russia. But this force seems to be only evoked where there are accumulative stores of wrath; and, as junkers know, there exists no ancient stores of resentment in the hearts of German burghers against Kaiserism.

Ardor of wrath, due to an idea of injustices to be avenged, is the possession of the Left, the Independent Socialists and Communists. This group is small comparatively, but it counts more as a potential fighting power, in the eyes of junkers, than the big middle group. The units composing its core, besides being inspired by fierce passion, are disciplined and imbued with a spirit of group loyalty. It is the only group of the three whose ideas have been narrowed to a clear-cut purpose. The purpose is the speedy imposition of pure socialism on the country by any means whatsoever.

The situation, as seen by junkers, is thus one of simplicity; over against them are two groups, an end group seething with morose passion, impatient of politics and eager for bodily combat, and a middle group whose chief concern is the passive one of holding its dominance by holding together. Every day, out of a feeling of uneasiness over the aggressive attitude of the Communists, individuals desert the middle group for theirs; or, out of misery, march over to the Communists. It is never the other way about; the big middle group gets no accretions. "Democracy secured us peace with the Allies, yes," the deserters say, "but that was long ago. And the peace pact itself was poor enough. Since then democracy has done nothing but try to bind us with promises, while license has been replacing our old German order." And on returning into the ranks of the junkers' conservative flag, it is ten to one that they

are not reflecting on how they had always been told that the boasted freedom of democracy is another name for license and rule by the majority, a rule by nobody. Their leaders are doubtlessly honest and clever men. But they are feeble rulers. It is only a monarchy like the old one that can restore kultur.

And the junkers, whose prevision caused these ideas to be inculcated into the minds of people, and who still put out propaganda of the same nature, see the time coming when deserters from democracy will include sophisticated men in hosts. For thousands of property owners are among the burgher parties, and should the Communist group appear about to win, they would join in a flight to the militarist junker camp.

Communists made their first attack directly the new government was first established. And so early as then, junker chiefs had the satisfaction of beholding it make a tactical mistake. For tho it was without the prestige of royalty, it treated the insurgents with royal rigor, so turning what was a handful of individual mad theorists into revengeful leaders, who built up a party at its left.

Then in December, 1919, Democrats published their "program," a tactical mistake in respect of the time chosen; since the mutinous working classes were being held in leash mainly by the promises of their (majority) Socialist colleagues of socializing industries, and the program demands coöperation in industries. "The socialization of the means of production in the sense of their gradual acquisition by the state would be a fatal bureaucratization of industry," it declares. And with what dynamic results!

Ignorant as the masses are of the shifting balance of power in coalition cabinets, inept even at distinguishing the democratic party from their so-called democratic government, and, sticking in the old conception of government as a single-minded power, they mistook the program for something like a fiat which extinguished their hopes of a new order of things and left them subject to capitalism, something they hate worse than militarism.

On January 13, enraged workingmen were assailing the Reichstag. The Government had them repelled and decimated by arms; then declared the situation in Germany cleared; and correspondents of the foreign press in Berlin, who had failed to report the issue of the program or to perceive its connection with the riot and its probable enduring effects, so cabled to the outside world! My junker correspondents described the situation as "volcanic."

Here again is another point in which junkers enjoy an advantage over their opponents. Their own secrets are impenetrable; whereas they can command sources of information on every side. The army department is under the tutelage of royalist officers, many of whom have refused to

# Why Men Use Shavaid

## It makes lather doubly effective

Applied to the dry beard before lathering, Shavaid completely softens it, so that the razor cuts with new ease

Men the nation over have welcomed this scientific beard softener because it frees them from the old methods of shaving. No "hot towels." No "rubbing in" of lather. And a more comfortable, thoroughly satisfactory shave.

Hot water is injurious. It brings the blood to the surface at the wrong time. It ages the skin prematurely. It causes wrinkles. And Shavaid accomplishes instantly what the old methods failed to accomplish as well. It completely softens the beard. And it leaves your skin cool and comfortable, perfectly normal, even after a close shave.

Just squeeze a small quantity of Shavaid out of the sanitary collapsible tube and spread it over the dry beard with the tips of your fingers. Then apply your favorite lather with your brush, as usual. But do no rubbing in.

You will enjoy the cooling, soothing sensation. The lather stays moist and creamy on your face. And you will find that the razor cuts with surprising ease and smoothness. And afterward, you will need no healing lotion. Shavaid is in itself a soothing, healing emollient. Its daily use keeps the skin smooth and clear.

## AMERICAN TELEPHONE AND TELEGRAPH COMPANY

A dividend of Two Dollars per share will be paid on Thursday, July 15, 1920, to stockholders of record at the close of business on Saturday, June 19, 1920.

G. D. MILNE, Treasurer.

## AMERICAN TELEPHONE AND TELEGRAPH COMPANY

Thirty Year Four Per Cent. Collateral  
Trust Bonds, Due July 1, 1929

Coupons from these Bonds, payable by their terms on July 1, 1920, at the office of the Treasurer of the Company in New York, will be paid at the Bankers' Trust Company, 16 Wall Street.

G. D. MILNE, Treasurer.

## UNITED STATES REALTY AND IMPROVEMENT COMPANY

111 Broadway, New York.

June 24, 1920.

The coupons on this Company's Twenty-year Debenture 5% Bonds due on July 1st next, will be paid on July 1st upon presentation at the Company's office, Room 1115, Trinity Building.

ALBERT E. HADLOCK, Treasurer.

## Getting Ahead

is the story of Peter Perkins and how he accumulated \$10,000 in ten years by investing \$25 a month in high-grade listed stocks and bonds, on a novel plan. "Getting Ahead" is as interesting as anything you ever read. Thousands have read it and are now "getting ahead" financially on the same plan.

You will be fascinated with it. But better still, it will show you a new way to invest your savings monthly—how to get interest, plus a PROFIT, on your money—without sacrificing safety. We send it free. WRITE FOR IT TODAY.

## LEARN FROM ADVERTISING

THE main thing an advertiser wants to do is to tell you plainly just how and why his goods are worthy of your consideration. You can learn a great deal from that alone, because many things you see advertised are the things you buy and use in your regular daily life. By reading the advertisements, you can learn the names and read descriptions of the things that are best and most satisfactory.

give their oath of allegiance to the Government that is, vowing only to serve "the state." The civil departments are likewise full of adherents of the old régime, the coalition not having trained men enough of their own to replace them; and many of the officials, having also refused to take an unmodified oath, feel free to blab. Scores of entirely oath-free informants of prime value were released to their group furthermore when the Government abolished the office of Landrät (county governors). The act deprived them of office. But it did not, and could not, deprive them of their knowledge of the best agents, ways and means of collecting information about men and affairs in provincial town and rural districts. They were the ears and the eyes of the crown. Ah, it is only foreigners who can belittle the resources of junkerdom, even in its eclipse!

I, who lived in its midst for years, felt shaken when I received a note on the fifth of March from one of its members, asking me to sell certain precious objects in my keeping and to reserve the money against "a critical moment;" a moment I understood to mean when she should need funds outside the country. For the few hurried lines said further, "We are nearing a social cataclysm, taking an extreme form against the better situated classes."

On March 13 occurred the *coup d'état*. On the same day, radicals seized local governments in various parts of the country, manufacturing plants and villages.

The end groups had fallen simultaneously upon the middle, or government, group! Was there connivance between the two? My conjecture is that there was not. The intimation I received of the pending revolution and peril threatening the better situated classes implies, in my opinion, that the junker party had obtained information of a projected radical rebellion, and had determined to act on its own part. The leaders expected civil war to be the result of the clash, and had therefore advised defenseless members of their caste to provide themselves with means for escaping from the country. This interpretation finds support in the visit which General von Lüttwitz paid at the war department in Berlin on the eve of the *coup*, in which he is reported to have warned the ministry of the urgency of the situation, and then wound up the colloquy with a "Here's where I quit your sloppy mess."

Royalists would have punished his impudence and treason with instant arrest at any cost. The Coalitionists let him depart, took counsel among themselves and fled. They had put down the insurgency of workingmen with ruthless bloodshed; before the threat of insurgency on the part of a junker general they lost their nerve, a fact which reactionaries laugh over, but which workingmen have written in the score against them.

Lüttwitz took possession of the for-

saken seat of government on the following morning, at the head of troops, and established a civilian confrère as chancellor. A "proclamation" was then issued announcing a new régime, and among other things it invited the friendship of the Independent Socialists; one is justified in thinking either for the purpose of deterring these enemies from acting, or of dividing radicals by arousing suspicion against this portion of their Communist group. Whatever the object, the diplomacy was of no avail. The news of the capture of Berlin by junker troops had already maddened radicals into precipitate action and workingmen on their side were capturing what local seats of government they could and establishing soviets. The civil war which junkers had apprehended was thus getting under way when activities were stopped on both sides by the response to the fleeing government's appeal for a general strike.

Junkers had been unable to imagine high dignitaries of state resorting to this weapon of proletarians. Indeed, Herr Ebert set up a new landmark in history by doing so. But his appeal was effective only because the leaders of the labor group had been summoned on the night of his flight to a secret council held in the ministry in Berlin, and had there given their consent to it, for the purpose of checkmating the junkers and of getting concessions for their own party. When Ebert ordered the strike ended, his order was not obeyed; the rank and file of Communists holding out to obtain more and new concessions.

So the junkers in the end had the grim pleasure of seeing the leaders of the middle group again forced into straits and commit another error. Then it wiped out the concessions which it made but could not grant, in blood, shed in the towns of the Ruhr basin, by troops, some of the regiments of which were the same that had marched into Berlin. On the whole, their first skirmish (as junkers call the *coup*) was quite worth while. It disconcerted the plans of the radical group, disclosed the timorous feebleness of Ebert and his ministers to the world, put to the test the feeling of the country, and accelerated a diminution in the size of the middle group.

What they wait for is the dissolution of this latter group. They expect to see dissolution begun by it yielding so much to the radicals, pressing it on the opposite side, as to finally scare every conservative at heart out of its midst. Then, when but the one rabid adversary is left on the field, and the issue cleared down to Communism against Monarchism, the struggle to the death will begin. Junkers harbor no doubt how it will end.

"It will end with a Hohenzollern on the throne and the Germans all united and reconciled by the assurance that he will give them what he promised before the crisis in the war—the freest, most progressive country in the world."

Woodridge, N. Y.

## Just a Word

We feel entitled to give another crow over our handling of the Democratic Convention. The delegates at San Francisco prolonged their debates beyond all precedent, as if on purpose to spite us, and yet we were able to give in our issue of July 10, which went to press on the very day that Governor Cox was nominated, not only a news narrative of the convention but an editorial by Norman Hapgood on the significance of the nomination. We were, of course, unable to give you an appropriate cover, but we have it for you this week, and with it Mr. Harold Howland's first-hand account of what happened at San Francisco, Mr. Donald Wilhelm's sketch of the personality of Governor Cox and Mr. Richard Boeckel's impressions of Assistant Secretary Roosevelt of the Navy. In short, we think we have done quite as well by our Democratic readers as we did by our Republican readers when we handled the live wires from the convention at Chicago.

## Pebbles

He—What would you do if I should kiss you on the forehead?

She—I'd call you down.—*Tar Baby.*

"Waiter, I say, this soup is cold."

"Shouldn't be, sir; this is the third time that soup has been warmed up today."—*Blighly.*

E. M. Gooding writes in to ask "How much wood alcohol would also haul if Alcohol would haul wood alcohol?"—*New York Globe.*

Tom—They say your divorced wife has made up her mind to marry a struggling young lawyer.

Harry—Well, if she has made up her mind, he might as well cease struggling.—*London Opinion.*

Scout Bill (on a summer hike)—Say, Jack, let's divide our rations.

Scout Jack—Let's. I have a canteen of water.

Scout Bill—And I have dried tongue.

Scout Jack—Now that you have had your share of the water I'd like a bit of that dried tongue.

Scout Bill—I haven't got any now.—*Boys' Life.*

When Lo, the Poor Indian, suddenly found His blanket too short at one end  
He sat down to think in a manner profound  
Of a way the said shortage to mend.

He studied and fretted around quite a while,

Till of wrinkles he had quite a crop;  
But at last he arose with a triumphant smile

And whacked a piece off the top.

Then with a sly nod of his crafty old head  
He grunted and said, "Now me gottum;  
Poor Lo go and gittum a needle and thread  
And sew that piece on to the bottom!"

We laugh at poor Lo in our cynical way,  
Yet I dare say he reasoned as well  
As those who expect frequent raises in pay  
To keep up with the H. C. of L.

—*Indianapolis Star.*

## Remarkable Remarks

OSCAR S. STRAUS—I love a fanatic.

THOMAS A. EDISON—Democracy is inefficient.

BABE RUTH—I'm afraid some day I shall kill some pitchers.

MRS. CALVIN COOLIDGE—The Governor chooses all my clothes.

CHRISTOPHER MORLEY Mr. Bryan is the Balaam of the Democratic donkey.

TOM MIX—I believe every girl should be brought up on the Western plains.

MRS. WARREN G. HARDING—I am content to bask in my husband's limelight.

WALTER CAMP—There has been a lack of interest in the spring football practice.

ELEANOR GUNN—An envelope chemise and a nightgown that match have unusual charm.

EDNA KENT FORBES—I do not think it is vanity that keeps a woman in front of her mirror.

FANNIE HURST—When I got up this morning the day was the color of cold, unskimmed soup.

M. L. BLUMENTHAL—A mother's idea of a tremendous achievement is one accomplished by her son.

LINA CAVALIERI—The number of your freckles depends greatly on the color of the veils you wear.

QUEEN MARIE OF ROUMANIA—If a queen goes around shabby and red-nosed it makes a great deal of difference.

LUKE MCLUKE—A clean shave would do more to improve a woman's complexion than cold cream and powder.

NORMA TALMADGE—Don't make any mistake about it—we have it on those early Victorian maidens considerably.

ROY K. MOULTON—The trouble with some laundries is that instead of cleaning the collars they only sharpen them.

PRESIDENT A. LAWRENCE LOWELL—The man who knows what he wants and how he means to get it is very apt to succeed.

FRANKLIN P. ADAMS—Most of those in the profession of making good people better and bad people good, make most people tired.

BISHOP JOHN COLE MCKIM—As a Catholic, I am necessarily opposed to propagandist teetotalism and consequently to prohibition.

CORINNE LOWE—Your golf score may be poor, but your piazza score is apt to be excellent if you choose a crepe-de-chine for the country club afternoon.

THEDA BARA—Anybody who has watched the toil of motion picture acting would know that a vampire on the screen simply couldn't vamp off the screen.

FRANK B. GILBRETH—There should be a national law that all enclosed stairways should be painted completely white on the entire ceiling and down to the floor.

*Developed for speed!* The ambitious son of a cart-horse never wins in the great race—only thoroughbreds dominate there. Through many generations the Mimeograph has been trained for speed. It might print even better than does a fine engraver's press, but it would not command the place it does in the business world of today were it not for the remarkable rapidity of its delivery. With it the inspiration of this hour becomes the business-building power of the next. Five thousand splendid reproductions of a letter, or other typewritten sheet or drawing, is its customary hourly output—forty and more thousands a day. A means of saving those two most important things—*time and money*—for you, as for thousands of others! Send for booklet "E-7"—A. B. Dick Company, Chicago—and New York.

## You Can Lead a Donkey to Water But the Jackass Won't Drink

By Harold Howland

THE story begins when the "Unterrified Democracy" emerged from its nine days of conventioning and its forty-four ballots at San Francisco the unprejudiced observer would have said that its single purpose had been to give a flawless imitation of the Republican performance at Chicago. Oh, there were differences—just about as much difference as there is between your right hand and your left. Lift up your two hands and you will see what I mean. They are identical except that one faces north and the other faces south. Each has a thumb where the other has a little finger. Each a palm where the other has a back. But thumb varies from thumb, finger from corresponding finger, palm from palm only in that indescribable and mysterious quality of oppositeness. Einstein and Doctor Slosson tell us that if we only had access to the fourth dimension we could turn one hand into a precise replica of the other. It is exactly so with the two conventions. They are as alike and at the same time as opposite as your two hands. But if you have access to the fourth dimension of the mind, the sense of humor, you can turn either one of them inside out and make a duplicate of the other. The trouble is that the great sacred unwritten law of political conventions is: Sense of Humor—if any—leave at the door.

Hence it is, that a gathering of a thousand presumably human beings can solemnly draw up for utterance to a waiting people the document known as a party platform. In it they not merely intimate but boldly assert that everything that their own half of the community ever did was marked by wisdom, high-mindedness and efficiency, while anything that the other half of the community has ever done was an act of folly, perfidy and bungling ineffectiveness. Of course it is bunk and the men who write

it ought to know that it is bunk. But I suspect that they don't entirely. Partizan politics have a curious effect even upon straight thinking minds.

There was plenty of that balderdash in both the platforms. But cut it all away and the startling similarity of the remainder is apparent. Try an experiment, get some one to take out of both platforms the planks on any given subject, let him cut away all references to either party, leaving only the bare bones of what the party adopting the plank is supposed to believe. Mix the bones, pick out, and tell whether it is Republican or Democratic. You can do it on the tariff—but no one cares a fig about the tariff now. You can do it about the Philippines, because the Republicans say nothing about them. But I do not believe that you could do it on the planks relating to labor, the farmer, free speech, taxation, cost of living, suffrage, Mexico, economy, national budget, or practically anything else. The Democratic platform is better written, clearer cut, more outspoken, but they both stand for the same things. Except on the League of Nations. There the Democratic platform means just what Mr. Wilson means, the Treaty and the Covenant entire and unchanged, and the Republican platform means nothing.

The Democrats, like the Republicans, had their platform fight. It lasted five days. Unlike the Republicans they let it get out of committee on the convention floor. But the Republicans did not have Mr. Bryan to deal with. Mr. Bryan was the chief disturbing element, as Hiram Johnson and his fellow irreconcilables were at Chicago. There were two main points at issue, the League of Nations and prohibition. From the first Mr. Bryan wanted something different from the 100 per cent endorsement of the Wilsonian achievement and position which the administration

Action speaks louder than the platform

© Morton & Co. and R. J. Waters & Co., San Francisco, from Underwood & Underwood

The opening of the Democratic Convention at the Civic Auditorium in San Francisco, which the author describes as a flawless imitation of the Republican performance at Chicago

supporters had written at length into the platform. His proposal was a curious one calling for a constitutional amendment permitting the ratification of a treaty by the Senate by a majority vote. Bryan fought for it by tooth, nail and other weapons all round the clock in the resolutions committee. He got nowhere with it there. Then he brought it to the floor in a minority report and unloosed some old-time oratory in its behalf. But Bainbridge Colby, quondam Rooseveltian and now Wilsonian Secretary of State, was there apparently for the sole purpose of spiking any attempt to weaken the administration's League plank. In a speech of masterly effectiveness he opposed the Bryan proposal. Some of his phrases are worth recording. "The Republican party looks upon a platform as an inexplicable survival of some political legend." "There is a great main current of wisdom wiser than the wisdom of any one man." He spoke of the "intellectual lockjaw" acquired by men who debate a subject for months to no conclusion. He referred to "little men who know more than there is to know." His climax on the League went something like this: "Mr. Bryan has said that the President brought back a better treaty than we had any right to accept. He said that he brought back a better treaty than any other man could have gotten. For God's sake then ratify it." Bryan and Colby are perfect contrasts as orators. Bryan always speaks in an alpaca coat. Colby leaves the impression of having been dressed in an immaculate London morning coat. Bryan's appeal is emotional. Colby's intellectual. Bryan strives to convert, Colby to convince. But both are masters of their craft.

Carter Glass, the administration chairman of the resolutions committee, also took a fall out of Mr. Bryan in a speech marked by irascibility and a voice worn to shreds by three days of fighting in committee. Then the convention decisively voted Mr. Bryan down and his quaint League proposals.

The prohibition question came before the convention from two opposing angles. The administration wanted to say nothing about it. The "wets" wanted to declare in favor of wine and beer. Mr. Bryan wanted a plank demanding that there should be no increase in the percentage of alcohol permitted in beverages. In committee they could not agree. So the silver-tongued orator of the Platte and the silver-haired orator of Tammany Hall, Bourke Cockran, came before the convention to argue for their respective planks, dry and wet. They were titanic efforts, both speeches, but the convention preferred the administration's plea "to keep the subject out of politics." They voted "a plague on both your houses," defeating the wet plank two to one and the dry six to one. All the other planks presenting a minority report demanding independence for Ireland, soldiers' bonus, a government newspaper, jail for profiteers and denunciation of compulsory service in time of peace were defeated by acclamation.

The administration platform went thru without the change of a word. It was demonstrated that Mr. Bryan's influence in the councils of the Democratic party had almost reached the vanishing point. What a contrast to 1896 when the "cross of gold" speech gave him the first of three nominations and to 1912 when at Baltimore he fought Tammany Hall to a standstill and made Woodrow Wilson president.

The platform fight proved that the administration's leadership of the convention was unquestionable. At least two-thirds of the delegates were ready to back the President in whatever he wanted if they could only find out what it was. Up to the point where the selection of a candidate began they had no difficulty in discovering. The "administration crowd" pointed the way step by step. They led a docile donkey straight to the water. But then for some reason, whose mystery could probably be solved only behind the inscrutable front of the White House, they took their hands off the bridle and quit. The beast for four days stood planted there in perfect asinine immovability. Then head down and tail in air it wheeled and dashed in the opposite direction.

The convention having by a two-thirds vote turned down the "wets" proceeded at the end by a two-thirds vote to nominate a "wet." It was proposed during convention week to substitute the rooster for the donkey as the Democratic emblem. They would better stick to the jackass.

The naming of the candidate was also reminiscent of Chicago. It was the triumph of the professional over the amateur. It was one more practical demonstration of the truth that men demand leadership. Without leaders they go nowhither. Give them good leadership and they will follow, provided it is skilful, human and single-minded. Lacking such leadership they will follow the bad, for the bad is always skilful, human and single-minded. So it was at Chicago. So it was at San Francisco. There were differences but they were slight. At Chicago the leadership ultimately triumphant was reactionary. At San Francisco it was "wet." At Chicago the candidate was chosen by "ten men in a hotel room at 2 a. m." At San Francisco the candidate was chosen by four men in a hotel room at French Lick Springs a month before. The Chicago choosers were United States Senators Lodge, Wadsworth, Brandegee, Smoot, and the rest. At San Francisco the choosers were State Bosses Murphy, Taggart, Brennan and Nugent. I don't know which group you prefer. For my part judging by the fruits of their leadership I find precious little to choose.

There were three chief candidates at San Francisco, Palmer, McAdoo and Cox. Two of them were close to the administration, the third close to the state boss group. One was Mr. Wilson's Attorney General, one his son-in-law and the "whole works" in his war administration, one the Governor [Continued on page 90

# How You Can Help Italy

A Message from the Italian Government to the American People

By Francesco Quattrone

Acting High Commissioner for Italy in the United States

**A**LARMING reports have been published recently in several American newspapers in regard to the labor and economic situation of Italy, altho all of these reports have received an emphatic denial which the American press in general has been very eager to publish.

Unfortunately, for reasons beyond control, news concerning Italy sent here for publication, is compelled to pass thru other channels and this offers the opportunity for its distortion, sometimes thru lack of knowledge of the correspondents, sometimes, thru the influence of a group of financial and industrial interests that strongly believe the conquest of the Italian market to be exclusively made for their benefit. In this way, sensational statements prepared in European countries, are cabled to the United States for the simple purpose of discouraging that spirit of industrial and commercial collaboration existing between the United States and Italy, which, in the long run, no matter what may be the political intrigues, will be the principal factor in the work of reconstruction of Italy and in the solid program of future business relations between the two countries.

The exchange situation has been the subject of a great deal of pessimistic news in regard to the internal situation of Italy. Switzerland, some time ago, was paying twenty-five centimes for the lira; America four cents; England two and a half pence; and France, probably more generous than others, or perhaps by reason of her difficulties, was paying seventy centimes. On the twelfth of last April the exchange situation was so critical that Italy had to pay 26.64 lire to the dollar (normal rate is 5.17). At that time it seemed to everybody that Italy could not possibly get a dollar for less than thirty lire. Before the windows of an American bank, supposed to be friendly toward Italy, some of the responsible clerks were discouraging the buying of Italian exchange because in a few days the situation would have been such that with one dollar forty lire could be bought. Even the U. S. Bulletin of May 3, sent confidentially in circulation, speaking of the labor situation in Italy, stated the following:

This revival of radical activity in Italy will most certainly influence the exchange rate of that country and depreciate the lira. One with commercial interests should watch these events for a drop in the Italian exchange rate.

The Italian exchange rate on May 3 was 22.20. The astrological knowledge of the U. S. Bulletin, fortunately enough for Italy, has been given a flat reaction by the financial market which on July 3 was quoting 16.22.

Students of this matter are frequently asked by other people to decide if such reports are put in cir-

The Saturday Westminster Gazette

The Laocoon

ulation by the American press as a consequence of lack of knowledge of the real conditions in Italy, or of aprioristic views more or less encouraged by private interests. It is very difficult to answer these questions, but these facts deserve a very careful consideration and people spreading news of this kind must be at least more careful than they have been, unless their ultimate purpose is to encourage Bolshevism, not only in Europe, but also in this country.

I must frankly admit that during the rush hours of the war, and also during the time following the ar-

mistice, everybody was more than eager to get supplies of raw materials. Such supplies in war time were necessary to win the war, and necessity knows no law. When the armistice was signed, everybody thought that in order to come sensibly to normal conditions, the principal basic commodities of every industry and commerce had to be secured; rush and impulsiveness were in both cases the determining factor when orders for supplies were placed in the foreign markets. This reason, quite apart from other banking speculative purposes, must account for the *sensible and artificial drop* in the Italian exchange. But even this drop has had the most beneficial effect on the minds of the Italians, because they kept cool, and the Italian Government, working with the collaboration of banking, industrial and commercial Italian concerns, established discipline in the purchase of materials in foreign markets.

New marked improvements in the exchange situation are expected as is shown by the fluctuations in exchange of the lire from April to today.

On account of lack of raw materials, during the war, Italy had to build siderurgical industries, notwithstanding the lack of coal and basic material, thus creating a passive factor in her economic rehabilitation; but there have been already marked improvements in the metallurgical and mechanical industries, which will prosper in Italy not less than in any other European country.

Italian labor will help greatly in this direction.

The Italian Embassy and the Italian Delegate for Financial and Economic Affairs in this country have given out from time to time statistical data regarding the financial situation of Italy. I do not need to repeat the series of facts, but only to remind you that Italy, whose rapid reconstruction has been delayed to a great extent by the lack of coal, which due to existing conditions in Great Britain and in the United States is still given to her not in sufficient quantity, has a potentiality of 5,000,000 horsepower of hydro-dynamic force of which up to 1918 24 per cent. [Continued on page 94

# James Middleton Cox

By Donald Wilhelm

**T**HE leading question now is, Harding or Cox? And Coolidge or Roosevelt?

In any event we know that the next President will be an Ohioan. We also know that he will be a business man, the first, as we define one these days, to serve in the White House. And we know that he will be a newspaperman, the first among the multitude of those who have served in various high offices, to enter the White House.

Soon we shall vote. "A vote," insists George Creel, "is about as thrilling a thing as one can conceive of. But the only elections in which there is any real feeling are those in which we all get drunk on political partizanship." Soon, then, we shall all have got drunk—on political partizanship—or on energetic and protesting efforts to thwart it. Then one night we shall go home victorious or feeling—to use the vernacular of baseball—as if we had started out like winners and ended up, like Philadelphia. Then Mr. Harding, or Mr. Cox, will enter the White House, to be looked over appraisingly by the servants there, while Congress, which is an entity with rather feminine susceptibilities, will gather up her skirts and seat herself in her high chair on Capitol Hill, to look appraisingly upon the new occupant of the White House. And meanwhile the rest of us will also look, and ponder, and realize once more that politics is exegesis—that the man we elect to the White House has as his responsibility the business of interpreting us to ourselves and to the rest of the world. Day by day the newspaperman is engaged in gathering from the tumult of world affairs such order as he can. The next President must confront tumult and such complexities as no preceding President has confronted. Perhaps it is a salutary thing, then, that the next President was trained, not in college, but in grappling with the complex realities of the newspaper world. Nevertheless, even while all the world waits expectant at the White House gates, no doubt the next President, newspaperman tho he be, will wake and ponder what a shut-in place the White House is, how few pyrrhic victories there are for its occupant, what a prodigious job is handling the big stick and making copy for a col-

umn four years long—a column of synthesis and exegesis, a column of interpretation, by which we and the wide world and the changing years to come judge a President and ourselves.

Then, since we have tried—as well as this poor pen can scratch on scarce white paper—to understand what manner of man is Mr. Harding, let us meet Mr. Cox!

First a word about him physically—for of course when you meet a man his physical person describes no little of his character. Behold, then, a vigorous individual with a certain eagerness in his quick step and smile. He is exactly fifty years of age, but he seems hardly more than forty, perhaps because, if you can read a face aright, he loves the good things in life, loves its everlasting challenge most of all, perhaps because of the hours he spends in the saddle and that month or so of each year that he spends with his boys in the woods. And when he meets you—of course the manner of a man's demeanor toward fellowmen defines one—he displays a capacity of acquiring intuitively a knowledge of men and surroundings; indeed he has the gift of making each acquaintance feel that each offers to him a revelation of personality. In a word, it seems the common verdict is that he is attractive—he challenges your interest, whether you are friend or foe and whether you are one or the other does not discount you. It was characteristic, it did not come as a shock, for him to say, the evening after he was nominated, to the homefolks of Middletown, Ohio: "I am from the life of the common man. I feel I am a representative of that class." Again, it was characteristic of him to settle back one day with his personal Ohio friend, Judge, and former Congressman, T. T. Ansberry, and take from his wallet an old and precious promissory note, for \$10,000. It was made to the order of Paul J. Sorg. It bears 118 endorsements, each representing payment of principal or interest. It is dated February 14, 1898. And it represents the loan with which the payee bought the *Dayton News*. Six years later he bought the paper that is now the Springfield

Governor Cox was born on March 31, 1870, in the red brick homestead, shown above, at Jacksonburg, Ohio. Today he and his family live in a beautiful country estate near Dayton called Trail's End, altho it is possible that the end of the trail is not there

*News.* He established a news service. And now he is a wealthy man, whereas, before February 14, 1898, he had been merely farmer boy, country school and high school boy, teacher, reporter. His career is founded on an act of friendship; it is no wonder he can be a friend.

In 1908 he was elected to Congress, wherein he had served as Congressman Sorg's secretary. He served two terms, and served on the important Committee on Appropriations. In 1912 he was elected Governor on a reform ticket. He sent for Professor Charles McCarthy, a pioneer in the reorganization of state governments, who also framed the bill creating the Federal Trade Commission. Mr. McCarthy says, exclusively for publication here:

In 1913 Mr. Cox sent for me. He asked me to outline a plan for the reorganization of the state government of Ohio. I did so. He looked over the plan and the bills I drafted. "That's all right," he said. "But if I pass this program thru, I will be defeated for reelection. On the other hand, if I am defeated I will be reelected, for I know that when the people have time to think they will realize that this work is good."

He put the program thru successfully. Mr. Bryan himself said in a speech before the Pennsylvania legislature, May 13, 1913: "Look at Governor Cox of Ohio. There's a reformer who asked thirty-six reforms and got thirty-six." He was defeated, his reforms lapsed, he was reelected. He is the first Democrat to serve three terms as Governor of Ohio—Mr. Hayes, the only other who did so, a Republican, progressed to the White House. Incidentally he achieved an enviable war record. In Volume 60, of the *Forum*, incidentally, he tells what the State achieved.

The writer's guess is that he is not so wet as he has skillfully let many wet ones think. Without any equivocation he has expressed his disgust with the officeholder who does not enforce existing laws.

He is open-minded, apparently, about the League. He

Governor Cox is a good friend, fond of his family and his home, and a great sportsman, his favorite horse being called The Governor

said emphatically, at the Jackson Day banquet, that our boys did not go over the top with reservations, but since then he has even advanced a suggested reservation by which we might withdraw from the League.

Anent Labor, when in Congress, with respect to measures affecting labor, his attitude, and Senator Harding's to date, is reflected in the following votes:

Cox—Favorable, 2; unfavorable, 0; paired unfavorably, 0; not voting, 9.

Harding—Favorable, 7; unfavorable, 10; paired unfavorably, 1; not voting, 9.

However, a high executive officer of the Ohio Federation of Labor telegraphs, in

answer to an inquiry on the part of the author:

The Governor has consistently refused to use the militia in industrial disputes. He used his influence to pass the Ohio workman's compensation law, the mine-run law, the fifty-four-hour-a-week law for women, other similar laws. He demanded from the Federal Government representation for labor on draft boards and appeal boards and gave labor adequate representation on the Ohio Council of National Defense.

Also, it is pointed out, he enforced pre-war legislation affecting women and children during the war, when many Governors did not. And it is nevertheless common knowledge that he has proven in the long run to be a successful and practical friend of industrial peace.

The farmers liked his conduct of affairs affecting them. As far as one can gather from farmer organizations he is on their honor roll, with a knack for getting people from cities to farms and a passion for all "Own your own home" programs.

In no instance has he conflicted with woman suffrage organizations.

He is an excellent public speaker, a "whirlwind" campaigner—a fascinating and worthy competitor of that other distinguished Buckeye journalist, Senator Harding.

Washington, D. C.

# All the World Likes a Roosevelt

By Richard Boeckel

**F**RANKLIN Roosevelt is young. His youth, and the friendliness that is a part of it, are the most striking things about the Democratic Vice-Presidential nominee. He is as friendly as an Airedale pup and young enough to want to look older.

Talking with Roosevelt, you may be impressed with other things about him, but the thing that will strike you first is his youth. He is thirty-eight, but fine frank eyes, wavy hair and an athletic build make him appear to be much younger. There is a story that when in college he washed his hair with ammonia water to make it grey. If he did, it withstood the treatment admirably.

There was only one among the business executives who came to Washington to assist in running the war

with whom Roosevelt found it impossible to get along. He was a tall, dignified gentleman of the age of thirty-four, but looking at least forty-five. Roosevelt confesses that envy of this man's prematurely grey hair may have had something to do with his aversion.

He always has believed that his youthful appearance was a handicap in the working out of his political career. He may have changed his mind on this point, however, since San Francisco. An astute politician, he may have foreseen his nomination, but no one else in Washington did and his actions at the convention would not indicate that he expected it.

Undeniably his name had something to do with his success. The country bears a good will toward the name of Roosevelt. There is a feeling that all the Roosevelts are made of the right stuff. The Republican branch of

the family, which is the more numerous, is not a little chagrined to think that the Roosevelt name is to be made a talking point by the Democrats in the solicitation of votes.

What was the relationship of Franklin Roosevelt to the Colonel? Was he a fifth or second cousin to the great man? Does he in any way resemble T. R.? These are the questions most frequently asked about the Democratic vice-presidential nominee.

His father, James Roosevelt, was a fourth cousin of Theodore Roosevelt.

The daughter of his half brother, James Roosevelt, is the wife of Theodore Douglas Roosevelt, a nephew of Colonel Roosevelt.

His wife, Anna Eleanor Roosevelt, was the daughter of Elliot Roosevelt, the only brother of Colonel Roosevelt.

Figure out the relationship for yourself. Roosevelt, himself, when asked the question direct, says he is a "distant relative" of the former President and adds that the relationship is "too complicated to explain—almost too complicated to remember."

Colonel Roosevelt gave his niece away when she married into the Democratic branch of the family. So much he did for the younger Roosevelt, but no more. In politics he gave him neither assistance nor instruction. What he knows about politics—and the presence in his office of an eight drawer filing cabinet containing names and histories of all Democratic appointees in the State of New York indicates he knows a great deal—he learned for himself.

Newspaper biographers of Franklin Roosevelt have pointed out an analogy between the careers of the younger Roosevelt and his "distant relative" and have asked the question, "What next?" There are points at which the career of the younger Roosevelt duplicates that of the former President, but in personality, temperament, interests and methods the two men were utterly different.

Both graduated from Harvard. Both began their political careers at Albany. Both served as Assistant Secretary of the Navy just prior to foreign wars. Both received Vice-Presidential nominations largely in recognition of their war service, the one in the field and the other at Washington. So far the analogy holds.

To Franklin Roosevelt it is the simple life and not the strenuous life that appeals—altho he has been strenuous enough in politics. He likes sports, hunting, tennis, auto-mobiling and sailing off East-port, Maine, but does not give much time to them. The most of his time after office hours is spent with his youngsters, one daughter and four sons. He and Mrs. Roosevelt attend only those social functions that are inescapable.

Like Governor Cox, the head of the ticket, he boasts that he is a practical farmer. It is not an experimental farm or a war garden he maintains near Hyde Park, Dutchess county, New York, where he was born, but a farm that raises crops and lots of them.

"This high cost of living is getting to be a serious problem," he admitted to a labor leader pressing for higher wages for navy yard workers during the war. "The other day I went over with Mrs. Roosevelt the prices she has to pay for food. They are ridiculous. Something should be done. It is getting so that a man with five children and eleven servants can hardly live."

Keystone View.

Franklin D. Roosevelt

It turned out, however, that the most of the "eleven servants" were farm hands.

It was a farm issue—whether there should or should not be standard sizes for apple barrels—that led to Roosevelt's election to the State Senate at Albany. He ran as a progressive Democrat in a district that had been represented in the Senate by Republicans for twenty-eight years, and was elected by a narrow margin by farmer votes. He was then twenty-eight years old.

Entering the Senate he forgot all about apple barrels and launched into a war against Tammany during his first week in public office. William Francis Sheehan was Tammany's choice to succeed Chauncey M. Depew as a member of the United States Senate. It looked easy, and there was a smile on the face of the tiger when it first heard of Roosevelt's opposition. However, with the assistance of nineteen other members of the legislature, Roosevelt blocked Sheehan's election for sixty ballots and on the sixty-fourth another candidate was chosen.

Roosevelt's ultimately successful fight brought him "into the news" immediately and gave an impetus everywhere thruout the country to the struggle for a constitutional amendment for the direct election of United States Senators. For nearly ten years Roosevelt fought Tammany unceasingly. Only his nomination to be Vice-President brought a truce to the war that is certain to be renewed whether the Democratic ticket is successful or unsuccessful in the fall.

Several times Tammany moved for a truce by offering its support if he would become a candidate for Governor of New York. Each time he refused the offer and turned closer attention to the sport of routing Tammany men out of federal jobs.

In the Democratic convention at Baltimore in 1912 he fought Tammany and Tammany was defeated when Woodrow Wilson was named the party's standard bearer. In the Democratic convention at San Francisco he fought Tammany, but Tammany won. Tammany on the morrow of victory bears no malice—particularly when it is politically unwise to do so. It forgave him the fist fight that developed when he wrested the New York standard into a demonstration for Wilson in violation of Tammany orders. It forgave him his persistent opposition to Cox, who was Tammany's favorite. It forgave him all his past and agreed to his nomination to be Vice-President. [Continued on page 91]

You may be impressed with other things about Roosevelt, but the thing that will strike you first is his youth

Fifth article in The Independent's Industrial Series on the big plants that are finding a successful answer to the problems of labor unrest

# Can the Leitch Plan Fall Down?

By Professor John R. Commons, of the University of Wisconsin

In collaboration with A. P. Haake, O. F. Carpenter, Malcom Sharp.

Jennie McMullin Turner, Ethel B. Dietrich, Jean Davis, John A. Commons

THE Cabinet and Senate at the plant of William De Muth & Company, manufacturers of smoking pipes, hold their positions by virtue of their experience in the business. The Cabinet is composed of the chief executives of the company; the Senate of the foremen and heads of departments. The House of Representatives is the only elected body, elected by the employees by secret ballot, approximately one representative to every thirty workers. The only qualifications for membership in the House are ability to speak and understand the English language, employment in the works for at least one year, and "on the level."

The United States Government, on which the De Muth plan is modeled, has no provision for collective bargaining. But when the De Muth House of Representatives began to talk about wages the Cabinet replied that they could increase their wages by increasing production, since increased production would increase the collective-economy-dividend.

John Leitch had not worked out an accounting system to back up his collective-economy-dividend. The company did not know for any month just what the increase in efficiency or collective savings had been, and was obliged to approximate the amount every two weeks. The employees finally detected this defect and lost their zeal for speeding up. But, at first, it worked. The first employees' dividend was 6½ per cent. As high as 17½ per cent was paid. Contests were worked up between departments, the prize being a large American flag. A department winning the highest efficiency honors the third time in succession was dined by the other departments. The losing departments began to put pressure on the loafers and slackers. A committee was appointed by the House to work out a penal code for careless, tardy and shirking workers. "You are stealing my dividends," said the worker to the shirker. The latter were gradually squeezed out.

Yet the company, at the end of two years, could not say definitely whether or not industrial democracy had reduced the costs of production, altho convinced that under the old system they would have had a much more rapidly rising scale of wages and the other difficulties suffered by other firms.

No plan of industrial government that we have found has accomplished more in the way of increasing the output than the John Leitch plan of industrial democracy and collective-economy-dividend. We saw in a previous article in this series that it had almost doubled the efficiency of the workers of the Packard Piano Company. But the limit had apparently been reached at De Muth's in the summer of 1919 when it had added something less than 50 per cent to wages.

Yet the cost of living had gone up 80 per cent.

The workers at De Muth's could see about them in

In The Independent of July 3 Professor Commons described and analyzed the success of the Leitch Plan as it worked out at the Packard Piano plant. Here he discusses another aspect of the plan and draws some important conclusions.

Brooklyn and New York that other workers had increased their wages 80 per cent, even 100 per cent, without increasing their efficiency and without industrial democracy. Somebody in the House of Rep-

resentatives suggested an increase without waiting for a further increase in the economy-dividend.

But the remarkable success of industrial democracy smothered the suggestion. About that time the company printed a statement of one of the representatives elected by the workers. He said:

I have seen industrial democracy in operation at this factory for the past two years, and the main reason I am for it, heart and soul, is because I know that thru it I can always get a square deal.

When a man in my department has a grievance, he comes to me and tells me about it and he knows that I will take the question up at the next meeting of the House of Representatives, and consequently the foremen in the Senate and the "bosses" in the Cabinet will know about it. They will act on it one way or another and my experience has been that every question has been settled fairly.

Before we had industrial democracy a man with any cause for dissatisfaction would most likely keep it to himself or tell the other workers about it. Perhaps the manager would be too busy to listen to him, so he would nurse his grievance and very likely he would quit. Industrial democracy prevents just such little troubles before they get big.

Nowadays at the plant you never hear a foreman urging the men to get on the job. There is no need for it. We all know that by doing our best all the time we are increasing our own dividends. Now whenever a man "knocks off" early, comes in late or takes a holiday, it is the other men and women workers whose dividends he is lowering. Before industrial democracy was put into effect, it was every man for himself; now, it is all for one and one for all. I have been in this shop for twenty years and I have never seen the desire to cooperate with the other departments and help the other fellow out so strong as it is now.

Years ago if a worker had a grudge against the foreman he would probably lay down on the job whenever he thought he wasn't being watched; but that is a thing of the past, for whatever complaints a man has are now always quickly settled in a way satisfactory to everybody.

And another thing. Industrial democracy has proven that some of our men had, stored up in their minds, ideas for new machinery and other labor saving devices; but they kept these plans to themselves because they were not sure of the reception they would be given by the management. Now, a man with a good idea knows that not only will his suggestion be welcome, but that if practicable it will be rewarded. In our plant today, labor and time-saving machinery invented by the men is lowering the costs, increasing production, and thus earning dividends.

Industrial democracy has given us our say in the management of the shop; it has reduced our working hours per week from fifty-three to forty-eight; it has given us insurance; it has given us a lunch room where we can get good meals for twenty cents; it has made this shop a bet-

ter place to work in; it is teaching English to our foreigners and helping them to become Americans; it has taught us that the firm has troubles and worries just the same as we have, and that by working and coöperating together, we all benefit.

That is what I think of industrial democracy as I see it at the De Muth plant and I think that all of the nine hundred workers here agree with me.

This was in the spring of 1919. Each one of the four cornerstones and the capstone of Leitch's Industrial Democracy—Justice, Coöperation, Economy, Energy and Service—apparently was solid and in its place. But wages were not keeping up with the cost of living.

Really, it was too much to expect. If every factory and firm in the United States had adopted industrial democracy and doubled its output, prices would still have gone up, if the world's supply of gold, paper money, and credit instruments had more than doubled. We know that all of them did not adopt industrial democracy nor double their output, and so, much less than double the supply of money and credit was needed to double the prices.

Industrial democracy at De Muth's might have sailed triumphant had John Leitch grasped the currency situation. As it was, when someone suggested an increase of wages, he only answered the House of Representatives in effect: "See what you have already done. You have increased your earnings 50 per cent and reduced your hours from fifty-three to forty-eight! Industrial democracy is no longer an experiment. You have it in your own power to increase your earnings 70, 80 and 100 per cent. And see the service you have rendered to society. You have increased earnings 50 per cent, but society is not compelled to pay any more for smoking pipes on that account. The labor-cost of a pipe has not increased. Keep it up. Raise your wages 100 per cent, but do not force us to raise the price of pipes."

The House of Representatives could not answer this appeal. The Representatives were silenced. Democracy was a success, and they knew it. But somehow, democracy was not keeping pace with the cost of living. Other places without democracy were keeping pace. It was puzzling. Other places were even doing better. In the clothing trades, immigrants like themselves, Jews, Poles, Lithuanians and a dozen nationalities, had gained forty-four hours a week, and much more than 50 per cent increase in earnings.

The acquiescence of the House was bringing it into discredit. Representatives were taunted. They began to drop out of the meetings. Mistakes had been made. In 1918 twenty-five men in a certain department desired an increase in wages. An outside agitator was urging them to strike, but they submitted their case to the House. A committee of the House investigated. It denounced the twenty-five, charging that they were "absolutely unfair in their demands." The

## Next month—Why Mary Smith wants to work at Filene's

House accepted the report. The company published it as a triumph of "industrial democracy." It was really a "handle" for the trade union organizer.

While the House was dormant on the wage question the union organizers were at work. The union promised action and results. Workers began transferring their allegiance to the Smoking-Pipe Workers' Union, not affiliated with the American Federation of Labor. The House was spurred to action. This time it was the forty-four hour week. The spokesman of the company in the House denounced it as Bolshevism and gave high praise to the American Federation of Labor and Samuel Gompers, who, he said, stood for the American forty-eight hour week. The "Bolshevists" were voted down.

But this did not end the discussion. The House again broke silence and demanded both the forty-four hour week and 20 per cent advance in wages.

The company came forward with a compromise. They would grant the forty-four hours. By economy, coöperation and efficiency, as much could be produced in forty-four hours as in forty-eight hours. Former reductions in hours had actually increased the output. So would this.

But the 20 per cent increase in piece-rates would compel the company to increase the price of pipes to society and this was contrary to the capstone, service. Besides, society would buy less pipes. This meant less work. This meant unemployment and less earnings. No. The employees must earn their increase in wages by greater production and thus maintain the capstone, service.

A deadlock followed. The union gained. Industrial democracy was set aside. The strike began. The company countered with a lockout. The union came to the aid of the strikers with strike benefits. Then, after six or seven weeks, the other companies ordered their employees to stop support of the De Muth workers. Then the general strike.

The De Muth Company resumed after two weeks of lockout. Many of the old workers returned. The union claimed that one-third had quit for good. The company claimed that it had eliminated the undesirable element.

Industrial democracy was resumed, with few changes. The minutes of the meetings are now posted in the shop. Each employee is given a copy of the plan and required to sign a pledge to abide by and uphold industrial democracy. No person not speaking English and not a citizen, by fact or declaration, is employed. A 12½ per cent increase in wages is granted.

It is no reproach on industrial democracy that it should have failed to cope with the jumping cost of living. Democracy, autocracy, collective bargaining, all of them fail, when  
[Continued on page 94]

The De Muth plant is organized after the manner of the United States Government, with a Senate composed of foremen and heads of departments and a House of Representatives elected by secret ballot, there being approximately one representative to every thirty workers. Believing in the Leitch plan of collective bargaining, these groups thresh out the employee's differences with his employer, the latter being represented by a Cabinet which is composed of the chief executives of the company

© Underwood & Underwood

### Another Fighting Roosevelt

Like his distinguished kinsman the late Theodore Roosevelt, Franklin Delano Roosevelt was educated at Groton and Harvard, began his public career in the state legislature, was Assistant Secretary of the Navy and became nominee of his party for the Vice-Presidency. Mr. Roosevelt was born in Hyde Park, Dutchess County, New York, on January 30, 1882, the son of James and Sarah Delano Roosevelt. The Roosevelt family is of Dutch origin, having come to this country in 1648

# The Usefulness of Legends

By Norman Hapgood

**M**EPHISTOPHELES, in Goethe's *Faust*, says something to the effect that if we get tangled up in our facts and ideas it should usually be possible to catch hold of some words that will do as well. Americanism is a word that has earned its salary recently. Law and Order is the phrase that can usually be relied on in a crisis to make people lose any interest they may have had in the facts.

Calvin Coolidge has a rather good record. As Mayor of Northampton, in both branches of the state legislature, as Lieutenant-Governor, and as Governor he has been a careful and honest performer. Moreover, he is said to be dominated by Mr. Murray Crane, one of the soundest political observers, probably the soundest, in the Republican party. Crane is in a way the Colonel House of the conservatives. It is a good thing that Coolidge takes his advice.

But Coolidge's national reputation rests on a disputed interpretation of facts. The forces of labor, if they show any brains in this campaign, will have the story well written up and widely circulated. All the benefit that can be obtained out of one of these law and order scares has been obtained by the Governor, and if there is another side it is now time for him to pay the reasonable price. President Wilson, or one of the advisers by whom he is sometimes surrounded, fell for this particular specimen of the most reliable of scares and sent a telegram of congratulation to the Governor.

The leading facts are accessible. Most of them are in the files of the Boston newspapers. My impression is that they will be found to run somewhat as follows: There had been for a long time no trouble on the Boston police force. The men were badly paid and had other grievances, but they recognized their public function and submitted. Finally was appointed to be at the head of the department a man named Curtis, who began to make trouble. The discontented men tried to join the A. F. of L. Curtis put them on trial for that breach of the rules. A committee of the best known citizens of Boston looked into the matter and reported at the request of Mayor Peters, but in Boston the police commissioner is a subordinate not of the Mayor but of the Governor, so the committee's report had no effect. Their recommendations were that the police should recognize their public function and admit that they had no right to join the A. F. of L. or to strike; that Curtis should stop his trials; and that the grievances should be taken up and handled seriously. The police were willing. Not so Curtis. He insisted on his trials. The police struck. There was some rioting. Some leading citizens say that Coolidge was alarmed, and expected widespread public disapproval. They state that it was Murray Crane who said: "Go to it. Be aggressive. Boast about it." So Coolidge, to replace perhaps 150 policemen, sent some 7500 soldiers, who shot around and killed bystanders, and there was a special bond issue required to pay the bill. It was Ole Hansen over again. It never fails.

## A Sure Thing

The next President will be a newspaper man from Ohio.

## What Has Become of the War?

**A**LTHO we are still technically at war with Germany and but a few months ago were losing thousands of men in the bloodiest combats of human history, neither political convention seems to have cared to make use of the war either for candidates or issues. No military man save only Major-General Wood, who was unable to go to France,

received any considerable vote for President. None of the war ambassadors, such as Gerard or Brand Whitlock, reaped political profit from their work. None of the war administrators in Washington, such as Mr. Hoover, Secretary of War Baker and Secretary Daniels of the Navy, figured in the result. Neither party endorsed a general bonus for veterans. Neither party came out for universal military service, or had much to say about military or naval policy. Save for the dispute over the Treaty, it might be said that the Great War had less influence on American politics than the Civil War, the War of 1812, the Mexican War or even the little skirmish with Spain in 1898. That there has been no positive reaction towards pacifism or pro-Germanism is evident enough from the cold reception given by the two conventions to Bryan and to La Follette. But there has been an amazing reaction toward indifference.

## Outlook for Protestant Cooperation

By Shailer Mathews

**T**HE Northern Baptist Convention has severed its connection with the Interchurch World Movement. The action was not due to unwillingness to coöperate with other Protestant bodies, but to the conduct of the Interchurch World Movement itself. This is clearly explained in the resolution embodying the action. At the same time it is well known that a widespread hostility to the Movement has been fostered by certain Baptists who expect the speedy return of Christ and are therefore opposed to any sort of religious work that transgresses their views of the Bible, the church and the meaning of the gospel. They have published a large amount of literature attacking the Movement, the contents of which, along with some more serious matter, abound in innuendo, gossip and misrepresentation of motives. The effect of such propaganda has been injurious both to the Interchurch Movement and the New World Movement of the denomination. The friends of the Movement found difficulty in meeting this overt hostility because of the odds against them set by extravagance and mismanagement. The Baptists will, however, meet the obligation due to underwriting the expenses of the Movement to the great amount of \$2,500,000.

This action of the Northern Baptist Convention coming upon the similar, even if less drastic, action of the General Assembly of the Presbyterians of the North, makes the future of the Interchurch World Movement problematical. The situation is a tragedy, in which noble plans have been killed by amateur administration in a financial orgy.

Several courses of action now seem possible. The Interchurch World Movement may continue in a restrained and economical effort to complete certain tasks and raise money to pay its debts. The various Mission Bands and other denominational agencies may set up a coöperative bureau to make surveys and maintain a sort of Intelligence and Publicity Department. Or the Federal Council of the Churches of Christ in America may step into the breach, assume the legitimate but uncompleted tasks of the Interchurch World Movement and become a clearing-house and investigating publicity agent for the denominations.

Of the three possibilities the last seems to offer the most advantages. The Council is a strictly denominational body, it is not a super-church or superintendent, it is favored by most churches, it has a good record of accomplishments and with certain readjustments would be able to serve the denominations very effectively in this field.

The entire situation makes it evident that the new and

strong denominational self-consciousness is opposed to anything like organic union (with the probable exception of various small groups of the same general polity as the great denominations) and at the same time is coöperative. Real statesmanship will recognize this double characteristic. Denominationalism is not going to disappear, but it can be utilized as a means of forwarding a common effort of Protestants to render service to the world. The way Protestants can get together is to work together, particularly in evangelism, social service and church expansion at home and abroad. But they must work as self-determining denominations, neither dissipated into individuals nor subject to some holding organization. Here is a real opportunity for the Federal Council to become a servant of its constituent bodies. Let us hope that its great meeting in December will seize the opportunity. Otherwise one must fear the establishment of new machinery or loss of what momentum coöperative movements have gained.

### What's in a Name

Once again a Roosevelt has been nominated for Vice-President.

## Elusive Democracy

By Thomas Steele

THE idea of amending laws and constitutions from time to time is rather a modern one. The ancient world experimented with politics just as we do; Athens had as many changes of constitution as France and even the stolid Romans amended their political institutions more frequently than the United States has done. But at every change the lawgivers breathed a sigh of relief and said: "Well, we've got it right *this* time for good and all!" They could not understand that social and economic changes were continually warping the intention of the law. They believed that it was possible for statesmanship to discover a "fool-proof" form of government. This belief was carried down thru the Middle Ages and well into modern times, either by the influence of Greek thought or by the natural inability of people to realize what great changes and unexpected crises would come to test their handiwork. Even today many Americans believe that the 1787-model Constitution under which we live will never get out of date, and there is an equally foolish minority which looks forward to the "social revolution" as a sort of Last Judgment when evil institutions will crash and good laws be established forevermore. But the last word in politics has not been said either by George Washington or by the reddest Bolshevik. Politics will last at least as long as two human beings remain alive on this planet, the earth.

There are, of course, principles of permanent value which underlie all constitutional change. Democracy and political liberty are good things and they always will be good. But they cannot always be realized in the same way. Suppose you were called upon to make a constitution for a new nation and had the power to keep it permanently in effect. You would find some very strange results when you returned to the same country a few centuries later. Let us say that you were legislating for Russia and believed that the needs and traditions of the people required an aristocratic rule. You would secure this by establishing a powerful Czar and a Parliament elected by the few persons who knew how to read and write and who enjoyed an income of 10,000 rubles a year. But by the year 2200 A. D. the powers of the Czar might all have fallen into the hands of a Prime Minister responsible to Parliament, as happened to the kingship in England, where everything is still done in the "name" of the powerless George V, but in reality by the will of the uncrowned George whose first name is David. Your literacy qualification for the franchise might have become meaningless with the spread of

universal education, and a sudden fall in the value of money might permit everyone but absolute paupers to meet your property qualification. Without changing a letter of its aristocratic constitution Russia would have become a democracy.

But it is just as hard to maintain a democracy as an aristocracy. The Jacksonian Democrats thought that pure democracy could be secured by establishing direct election of public officials. That worked well enough in thinly-peopled America of the "thirties" when everybody knew the names and qualifications of his fellow townsmen. But today the voter in the great city is confronted by a mammoth ballot on which are the names of scores of men he never heard of and dozens of public offices of whose very nature he is ignorant. How can the average New Yorker choose the best among a score of candidates for judicial offices when he himself has no training in the law? How can he find the ideal State Engineer? What does he know of the duties of the Comptroller? As a rule he selects the man he wants for Governor and for Mayor and for all other offices votes the straight party ticket—or, in other words, the selection of the party bosses. This is a travesty of democratic realities under the forms of democracy.

The long ballot is one example of a democratic institution which changing social conditions have made an instrument of oligarchy. The party primary and the party conventions furnish another. Originally these institutions were devised as a popular substitute for nomination by a Congressional caucus. But in time they became little more than committees of professional politicians. The direct primary was then devised to meet this evil. Alas, it degenerated in turn into a spending competition with the odds on the rich man! The Board of Aldermen elected by city wards was democratic in the days when people "stayed put" and knew their neighborhoods. Today friends of municipal reform demand the abolition of the Board of Aldermen and of the wards.

The conservatives should not be worried about such "new fangled" devices as the referendum, the recall, proportional representation, commission government and the like. They are not revolutionary changes in our political ideals. They are but modern machinery to realize for an industrial, cosmopolitan, migratory and populous nation the very same democratic theory which our past and present constitutions made possible for a nation which was agricultural, homogeneous, stationary and thinly settled. The referendum replaces the town meeting because the town has grown too big to meet together in one place. The expert civil service replaces "rotation in office" because the tasks of government now are so complex as to require a life-time of study. We are not more enlightened and progressive than the "fathers"; neither are we more rash and radical. We are simply realizing the eternal principles of popular government in the way which is possible to us, as they did in the way which was possible to them.

## The Presidential Regatta

The Democratic crew has found its Cox-swain.

## The Glass House

THE way in which the Republicans are digging into the back files of the Dayton *Daily News* to prove that Cox was pro-German in 1916 and the Democrats are sifting the Marion *Star* to show how hostile Harding was to Roosevelt, indicates clearly why it is that no journalist has hitherto been elected President. Every politician writes or says something which can later be used against him, but a newspaper publisher must go on record to the extent of several thousand words of editorial comment every day for 365 days in the year, and it would be strange indeed

# A Pilgrimage to the Battlefields

This is the famous relief train with its engine at the rear to deceive the enemy, which took 3000 French troops to Poivres. Only nine came back

The refugees of the devastated districts have come back to bale the rain water from their ruined cellars and pull weeds where their gardens used to grow. All available wood and metal has been used to build temporary shelters and the flowers and field grasses have taken over the front line trenches

During the battle of Verdun an officer under the Crown Prince lived in this sumptuous apartment in the woods near Grurie

A shelter of sheet iron tunneling makes this home in the devastated region at Crouy near Soissons

An heroic statue of the doughboy guards the American lads who sleep under the white cross at Suresnes

A French restaurant and a British tavern rub elbows where there were once homes, then ruins, on the battlefields of France

Photographs © Kadel & Herbert

When the early morning mist hung over the trenches, food used to be taken up to the German firing line thru this tunnel at Vauquois, now overgrown with daisies

if nothing embarrassing could be discovered in such a forest of material. Every journalist is an architect of glass houses.

## England Hugs Its Chains

WHATEVER the merits of Ireland's demand for independence from England, we cannot understand why England does not secede from Ireland. Of the two unhappy partners to the "union" John Bull should be more eager for a divorce than Kathleen-ni-Houlihan.

## The Cult of the Spendthrift

By Allen Campbell

HAVE you ever noticed that recent magazine fiction is pursuing a policy of its own directly counter to the grandfatherly lectures on economy and thrift contained in the editorial pages of the same periodicals? Within the last few weeks our vigilant eye has fallen upon at least six excellent short stories by different writers in different weekly and monthly periodicals which were built (with minor variations) on the following plan:

An estimable young man has fallen victim to the insidious vice of economy. He has a very moderate salary and occupies a routine office position. His wife (or sweetheart as the case may be) notes this flaw in his character and also notes the inferior condition of her own wardrobe. She resolves to reform her husband. She thereupon embarks on a career of extravagance that swamps his financial reserve and forces him to seek a more remunerative career. He therefore takes up salesmanship and becomes wealthy, discovers that it was out of love and not selfishness that his wife jolted him from his rut by wild expenditure, and lives happily and luxuriously ever after.

It cannot be merely coincidence or a shortage of good plots which accounts for the veritable epidemic of short stories on this theme which have recently appeared. We are loath to assume that it is another capitalist conspiracy between the authors and the profiteers. Rather it seems to be a sort of artistic insurrection on the part of the respectable salaried men who buy most of the magazines against the good advice which they are compelled to give themselves. Just as the most staid and sober of good citizens enjoy a moral holiday in stories of outlawry and desperate deeds, so do the most methodical of servants of the pay envelope and the Family Budget Book enjoy in imagination a break away from both. We trust that not too many take these stories as guides to real life. Out of every ten underpaid bank clerks or college instructors perhaps one would be morally and financially benefited by an extravagant or make-believe extravagant wife who would plant his feet on the highroad to fortune which lies thru the gateway of business risk. The other nine would come to extreme grief by taking up a line of work for which they were temperamentally unsuited. If all men could become rich by salesmanship there would be nobody left in other, and perhaps equally essential, occupations.

At all events, it is interesting to contrast this latest literary fashion with the short story of a decade or so ago. In those days the extravagant young man always came a cropper with his speculations on Wall Street or his gay raiment from Fifth avenue, and after a due interval of repentance married the sweet young girl who had loved him even in his wildest days, secured a steady job and settled down to a life of thrift that would have satisfied Poor Richard himself. There has since been what Nietzsche termed a transvaluation of all values. The sluggard is no longer asked to model himself after the industrious ant, but rather to imitate the self-indulgent grasshopper. The wife is no longer commended for doing her own housework, but rather for rebelling against housework. The subordinate is no longer to win the favor of his employer by obedience, but rather by some daring and fortunate stroke of disobedience. The three traditional virtues by

which Captains of Industry rose to wealth, or claimed that they did, were honesty, industry and thrift. In place of honesty the fiction writers would have us admire the ability to carry thru a bluff and swing a giant transaction with a shoestring capital. In place of industry, which means energy in an orbit, we have the related virtue of initiative, which means energy at a tangent. In place of thrift we have the virtue of the gambler spirit which will face any risk and assume any expenditure in the hope of ultimate profit. Which moral code is the sounder or truer we will not undertake to say, but if fiction is a witness to what people really admire we need not seek far for one cause of the increasing cost of living.

## Vice-Presidents

COOLIDGE and Roosevelt are not a whit too good for the potentially all important office of Vice-President, but they are too good for an inactive four years of presiding over the Senate. Let the next President establish a precedent of making his running mate an unofficial member of his Cabinet and a much-needed link between the executive and the Senate.

## The Rule of Three

### *The Constitution*

John Randolph of Virginia in 1787:

It shines and it stinks and it stinks and it shines like a dead mackerel lying in the moonlight.

### *The Covenant*

Warren G. Harding in 1919:

Either the Covenant involves a surrender of national sovereignty and submits our future destiny to the League, or it is an empty thing, big in name, and will ultimately disappoint all of humanity that hinges on it.

Warren G. Harding in 1920:

The Federal Constitution is the very base of all Americanism; the Ark of the Covenant of American liberty; the very basis of equal rights. The Constitution does abide and ever will so long as the Republic endures.

The Republican Nominee in 1960:

The Covenant of the League of Nations is the very base of all Americanism; the Ark of the Covenant of human liberty; the very basis of equal rights. The Covenant does abide and ever will so long as the world endures.

## Lynchings

TUSKEGEE Institute, which keeps tab on the matter, announces that during the first six months of this year twelve negroes were lynched. This is seventeen less than during the same period last year, and thirty-three less than in 1918. Minnesota heads the dishonor roll with three lynchings, Alabama and Georgia have two each, and Florida, Kentucky, Kansas, South Carolina and Texas have one each. All of those lynched were negroes.

As our Congress took it upon itself to pass a resolution championing the cause of Ireland as against England, it would now seem to be in order for the British Parliament to protest against our inhuman treatment of our "subject race."

## Root's Capitulation

ELIHU Root, the reputed author of the ambiguous Treaty plank in the Republican platform and a hostile critic of the President's foreign policy, has now gone the whole distance in accepting the League of Nations. When he first went to The Hague he may have had some idea of organizing the World Court as a thing apart from the Assembly and Council of the League; it is enough to know

that now he is the advocate of an exactly opposite policy. To quote word for word the Associated Press despatch: "The jurists' commission voted to adopt in principle the Root-Phillimore plan for the make-up of the Court. The jurists accepted Mr. Root's most important principle—his method for the election of the Judges by the Council and Assembly of the League of Nations voting separately on lists submitted by The Hague tribunal." Without repudiating Mr. Root it will be impossible for the Republican party to hold up "a World Court" or "some sort of association" as an alternative policy to an international Court depending directly on the Assembly and the Council of the League.

## The Puritan and the Bolshevik

By Preston Slosson

THERE are many striking parallels which may be drawn between the United States and Russia, which are all the more striking because one nation stands at the top of civilized humanity with respect to prosperity, stability and popular enlightenment and the other at the bottom. Yet one nation had almost as good a chance in the world as the other. Three hundred years ago the Puritans founded the first democratic commonwealth of the New World. At about the same time the Romanoff dynasty was established in Russia. Westward from the Atlantic to the Pacific the pioneers from the "Mayflower" saw a great land of stimulating climate, fertile soil and enormous natural resources awaiting settlement and development; a land inhabited only by wandering bands of savages. Eastward from the Baltic to the Pacific the Russian peasant and the Cossack pioneer saw the great land masses of Russia and Siberia, including millions of acres of fertile "black soil" and the greatest forests of the world as well as oil wells and metal mines of the highest value; an imperial domain almost empty but as well adapted to a white man's civilization as the greater part of Europe or North America. The two peoples most favored by nature were the Russian and the American.

Century by century the two peoples overspread the vast spaces open before them. The Slav and the American showed equal courage in facing the hardships of the frontier. Both peoples had stalwart bodies and keen minds; both showed a remarkable gift for assimilating alien stocks. The Russian Slav was strengthened by crossing his race with the sturdy Finn, the industrious German, the talented Pole, the business-like Armenian and, in spite of race prejudice on both sides, with the keen-witted Jew. The mixture of Englishman, Scotchman, Irishman, German, Swede, Italian, Jew and Slav which we call the American people is not racially very different from the Russian blend. The relatively small Turk and Tatar element in Russia is not much more important than the Indian element in the United States; and perhaps less important than the negro.

Neither in land nor race may we look for the difference between the happy fate of America and the dismal lot of Russia. Perhaps one difference lies in the fact that Russia lacked the Puritan tradition. At least it is certain that the virtues in which the Puritan specialized are just the qualities in which the American excels the Russian. If the "Mayflower" had landed in the Baltic instead of at Plymouth Rock, who can say what the destinies of the two nations might have been?

First of all, Puritanism exalts the individual. Every man has a soul—even if only a soul to be damned. The stalwart self-reliance of the Pilgrims is the note of American philosophy from Franklin thru Emerson and Thoreau down to William James. Each home on its own soil; each town with its own school system; each state with its own constitution. While Russia dangled its huge bulk in help-

less dependence on the bureaucrats of Moscow and Petrograd, the United States built self-government from the bottom up, beginning with the self-respecting individual and thence proceeding to the town, the county, the territory or state and the Union. No distant and almighty Czar; no overshadowing religious hierarchy; no peasant communism; no tradition of Oriental immobility, has ever established itself in any community erected on a Puritan basis. Had Russia been a Puritan nation it would no more have endured the despotism of the Czars or of the Bolsheviks than Puritan England endured the despotism of the Stuarts or Puritan Holland the despotism of Spain. Puritanism is sometimes called the enemy of "personal liberty" and yet wherever you find the Puritan tradition you find a free commonwealth.

Again, Puritanism emphasizes civic discipline and team play. The Russians knew no alternative to slavery but anarchy. They had never learned to respect the will of the majority of their fellow-citizens. Between obedience to an hereditary overlord and obedience to an elected representative of the people they drew no distinction. The Russian, like the Mexican, thinks in this fashion: "Here is an order. I must submit or rebel. Which shall I do?" The American thinks in other terms: "Here is an order. From what source does it come? If it comes from an authority which I have myself established I must obey, even tho I do not like this particular command or the particular individual who gives it. If it does not come from such an authority it is my duty to resist." The compact drawn up in the cabin of the "Mayflower" lies at the basis of every Congress and legislature, yes every labor union and debating society, in the nation. If Mr. Harding is elected this November every Democrat will recognize his title to the Presidency; if Mr. Cox is elected every Republican will do the same by him. But the Bolshevik has never seen in a political defeat any reason for not continuing the campaign with machine guns instead of ballots.

Thirdly, Puritanism emphasizes education. From John Knox to Horace Mann the Puritan has been athirst to acquire knowledge and eager to spread it. New England, like Puritan Scotland, has been a treasure house of intensive education. Individual Russians have achieved great things in art, science and literature, but the masses have always been content to remain in the grossest ignorance and the ruling classes were content that they should so remain.

Finally, the Puritan believes that all things sink into insignificance when weighed in the balance with character and conduct. He would be as incapable of the treachery and falsehood of the Bolshevik as he would be of their inhuman atrocities. Even about the nobler Russian revolutionists there clings an atmosphere of moral looseness; as Dillon pointed out they lack "bones" to their souls. Their great novelists teach a pity for human weakness and error which is perhaps nobler than Puritanism, but they also teach an indulgence and indifference to good and evil which is replete with danger. To the Tolstoyan the tyrant is to be pitied rather than resisted and the sinner is to be forgiven without exacting too much in the way of reformation. As to the Russians who were not revolutionists nothing need be said. To do them justice they never pretended to morality; a whitewashing of formal religion sufficed to cover any degree of self-indulgence and indifference to the public welfare.

The Russian has great virtues—a capacity for heroic self-sacrifice in a cause and for infinite depths of sympathy and compassion when his emotions are stirred. But what he needs more than anything else is a stiffening of the Puritan virtues—industry, public spirit, honesty, cleanliness, domesticity, sobriety and self-respect.

# The Story of the Week

## Germany Must Disarm

GERMANY is once more back in Europe. This is perhaps the chief significance of the present conference at Spa between Germany and the Entente Allies on the carrying into effect of the conditions laid down in the Treaty of Versailles. Two questions in particular are to the fore: reparations and disarmament. It is admitted that the Germans have not lived up to their pledges in either particular; their defense is that it was impossible for them to do so. The main purpose of the conference is to reach a basis of agreement as to the best practical solution of the problem presented by Germany's failure to live up to the terms of peace.

At the first session Premier Lloyd George insisted on the reduction of the German army to the 100,000 volunteers. The German delegates protested that internal conditions forbade any further reductions in the armed forces of the nation. They pointed out the dangers of Bolshevism on the one hand and of a reactionary conspiracy on the other. The Germans claimed that the present force of 200,000 was essential for the present emergency; the Allies not only contested this but contended that the German Government had organized "police" forces which were in reality a camouflaged army and had failed to surrender all the arms and ammunition demanded in the Treaty. After several days of discussion the Allies offered to Germany an extension of time for disarmament. By October 1, 1920, the German army must be reduced to 150,000 men and by January 1, 1921, to 100,000, the figure fixed by the Treaty. All civilians must be disarmed. The Allies will be permitted to occupy the neutral zone in western Germany with sufficient armed forces to ensure civilian disarmament. If the Germans violate the disarmament agreement the Allies "will proceed to the occupation of a further part of German territory." Chancellor Fehrenbach, Foreign Minister Simons and the rest of the German delegation eventually agreed to the terms demanded. The first difficulty was passed.

After the disarmament agreement the conference discussed the failure of Germany to deliver coal to France as promised in the Treaty, the delay in the punishment of the war criminals by the German courts, and the general question of reparations. At a preliminary meeting in Brussels the Allies attempted to formulate not only a common program with which to confront Germany, but a basis for

the division of the reparations sum among the Allies. The United States was represented "unofficially." The chief difficulty was Italy's demand for a share proportionate to her efforts in the Great War in spite of her comparatively small loss from invasion as compared with France or Belgium.

## Poland in Peril

REPORTS from Russia, Poland and Germany agree that the Polish army which undertook the invasion of Soviet Russia has met with reverses so serious as to imperil the safety of the Polish Republic. The Bolshevik armies attacked along a front of 720 miles and gained ground at almost every point. The fortress of Rovno is now in Bolshevik possession. Both Galicia and Lithuania are endangered. At one time the rumor ran that the Russians had entered Lemberg, the chief city of eastern Galicia, but the report appears to have been exaggerated, or at least premature. Poland has rallied in the face of imminent danger and even women and children have responded to Pilsudski's appeal for volunteers. Even the Polish Socialists have declared against the Bolshevik invasion.

The attitude of the nations of western Europe appears to be one of "watchful waiting." The British were inclined to view with disfavor the Polish advance into Russia, although Lord Curzon, the British Foreign Secretary, replied to Lord Robert Cecil's note urging the League of Nations to prevent Poland from attacking Russia that "such an attempt would certainly be regarded as intervention in favor of the Bolsheviks and against our allies—a result which it would be difficult to defend." The French, who favored active aid to a Polish war against the Bolsheviks last year,

## JAPAN AT PLAY

The most picturesque of civilizations delights in pageants such as this religious procession at Nikko. The banners are brave with all the colors of the rainbow and the marchers wear the robes and trappings of ancient Japan

now seem either unable or unwilling to send effective reinforcements.

The Allies, however, have promised to send aid to the Poles should the Bolshevik advance beyond the eastern frontier of Poland. It is understood that the Poles will evacuate Lithuania, White Russia and the Ukraine. The Ukrainian Government, allied with Poland, has collapsed under Bolshevik attacks and its leaders have been forced to seek refuge on Polish soil.

If the Bolsheviks accept the Allied proposal—a general peace in eastern Europe may be arranged, in which the republics of the Baltic may also participate; if the Bolsheviks continue to press their advantage against Poland they may find themselves openly at war with western Europe.

On the Crimean front another anti-Bolshevist army, mainly Russian, is fighting with uncertain fortunes. The Bolsheviks claim to have checked the progress of General Wrangel, the successor of Denikin in southern Russia, but the British War Office announces that General Wrangel's forces have recently annihilated a Bolshevik cavalry corps consisting of eighteen regiments.

General Brusiloff, commanding the Russian army against Poland, has appealed "to all former Russian officers wherever they may be" to forget the injuries they have suffered under Bolshevik rule and to fight in the cause of Russian nationalism against the foreigner. Brusiloff is the most distinguished of the old royalist generals who have consented to serve under the authority of the Soviet.

## Trade with Russia

IN spite of the objections of the London *Times* and the French Government, Leonid Krassin, the Soviet Minister of Trade and Commerce, carried on negotiations in London not only with the British cabinet but also with the Supreme Economic Council, which includes France, Italy and Belgium. He has now returned to Russia to consult with the Soviet authorities.

When Premier Lloyd George was questioned about the propriety of dealing with the Bolsheviks he replied: "It is a new doctrine that you must approve of the habits and customs of any Government before trading," and reminded the House of Commons that "this country has opened up most of the cannibal trade of the world."

It is calculated that by the resumption of trade with Russia, England will draw \$300,000,000 in gold from Moscow. This will greatly strengthen British credit by raising the gold reserve of the Bank of England, which is now reduced to \$570,000,000.

The chief cause of the French reluctance to enter into relations with the Soviet is that they will lose their large loans and investments in Russia under the old régime. But Krassin reaffirms the statement made many times previously by Bolshevik officials that the Soviet Government will re-

pay the external obligations of Russia in exchange for peace and commerce. The Soviet will also promise not to engage officially in propaganda outside of Russia, but, as Tchitcherin, the Soviet Foreign Minister, adds, "Of course, if revolutions break out in other countries we will rejoice."

The Norwegian Government has been authorized by the parliament to resume commercial relations with Russia immediately, but this does not involve the recognition of the Soviet as the legal Russian Government.

Trade with Sweden has already begun. A Swedish steamer carried a cargo of automobiles and harvesters to the Estonian port of Reval for the Russian Coöperative Societies and returned with \$5,000,000 in gold. The largest locomotive works in Sweden, the Nydquist and Holm at Trollhattan, is said to have been bought by the Soviet Government. It is reported that Ludwig Martens, the Soviet representative in America, has contracted with a Canadian firm for several million dollars' worth of Canadian agricultural and railroad machinery and flour to be shipped thru Sweden and Estonia.

The delegates of the British Labor party in conference at Scarborough, representing an enrollment of about three million, passed a resolution demanding recognition of the Soviet Republic, but voted by ten to one against affiliating with the Third International, the Bolshevik organization of world-wide socialism, started at Moscow.

The Italian coöperative societies, like the British, have sent a delegation to Moscow to negotiate trade.

And now at last the United States joins other nations in reopening trade with the parts of Russia under Bolshevik control, tho in no way recognizing the *de jure* or

Underwood &amp; Underwood

## NOT IN KANSAS

Premier Lloyd George is not standing in a field of sunflowers but posing for his photograph against a background of the quaint head dresses of the fishwives of Boulogne

even the *de facto* authority of the Soviet Government. The Department of State warns merchants that they still trade "on their own responsibility and at their own risk" and that "American citizens availing themselves of the present relaxation of restrictions are warned against the risks incident to the acceptance of commodities or other values, the title to which may later be brought into question." There is still, of course, restriction on the shipment to Russia of "materials susceptible of immediate use for war purposes," but for the rest Americans are as free to trade as the general confusion of Russia, the lack of facilities of transportation and the breakdown of the postal service between the two countries permit.

If the Bolsheviks persist in their invasion of Poland, in spite of the warning given by the Allies that they would make common cause with the Poles if the eastern frontier of Poland proper were crossed, all commercial negotiations will naturally come to an end.

## Japanese Hold Saghalien

JAPAN has occupied the province of Saghalien, in eastern Siberia, as a pledge for reparations from Russia for the massacre of several hundred Japanese at Nikolaievsk. After the Japanese captured the city they released a number of American, British and French prisoners whom the Bolsheviks had captured.

The Japanese have announced their intention to evacuate all of Siberia except Vladivostok and Saghalien. Vladivostok will be occupied temporarily as a security to Korea and to keep the Pacific coast open to Nikolaievsk. Saghalien will be evacuated when Russia has given "satisfaction" for the outrages at Nikolaievsk. Such temporary occupations, however, have a tendency to become permanent; especially in view of the fact that Japan has owned the southern half of the island of Saghalien (or Sakhalin) ever since the Russo-Japanese war and is very naturally tempted to round out her empire by annexing the northern part of the island and the opposite mainland. There is a movement on foot to organize an independent republic in eastern Siberia which would include the provinces east of Lake Baikal: Trans-Baikalia, Amur and the Maritime Province, which includes Nikolaievsk and Vladivostok. This neutral republic would form a buffer state between Japan and the Russian dominions.

## The League Reports Progress

WHETHER or not American politicians believe it, the League of Nations is already very much alive. The Council of the League is meeting frequently and has already had several important international controversies submitted to it for adjudication, such as the dispute between Finland and Sweden over the Aland islands. The Assembly of the League will meet for the first time on November 15. President Wilson, by special courtesy, was commissioned to summon the meeting in spite of the fact that the United States is outside the League. It is in the Assembly that the small nations will find their opportunity to take part in the consideration of international issues. The third principal agency of the League, the International Court, is now in process of formation and a committee of jurists are working on the final details. Elihu Root and Lord Phillimore together worked out a plan for the selection of judges by the Council and the Assembly, voting separately, which plan was adopted by the advisory committee.

Special agencies of the League are also very active. Dr. Royal Meeker, the United States Commissioner for Labor Statistics, and one of the ablest officials in the Department of Labor, has resigned his post at Washington to become editor of the monthly bulletin of the International Labor Office. A special Labor Conference, dealing with maritime labor, has met at Genoa to consider an international agreement on the limitation of the hours of labor of seamen and other improvements in the lot of the sailor. The League of Nations also has for several months had general supervision over the Government of the Saar Basin and the Free City of Danzig.

Kadel &amp; Herbert

### KIPLING WILL BE SHOCKED

In spite of all we have heard of the unalterable traditions of the immemorial east here is a group of Hindu ladies who attended the International Woman's Suffrage Alliance at Geneva. The equal suffrage idea is rapidly making progress in all countries, even India and the United States

procity and went down to defeat with it. Premier Borden remained in office thruout the Great War, tho he was compelled to face another general election on the issue of conscription. To carry thru the compulsory service law he welded together into one party the Conservatives and the conscriptionist wing of the Liberals and became chief of a coalition Government very similar to that headed by Premier Lloyd George in Great Britain. He attended the Peace Conference at Paris as representative of the Dominion of

Canada and did much to secure the separate representation of Canada in the Assembly of the League of Nations.

The Honorable Arthur Meighen, Minister of the Interior in the coalition cabinet, has been asked to become Borden's successor at the head of the Canadian Government. The coalition has decided to continue its existence under the somewhat clumsy name of the National Liberal and Conservative Party. The two chief opposition groups are the anti-coalition Liberals and the United Farmers, an agrarian party somewhat similar to the Non-Partizan League in the United States.

## North Dakota Primary

THE Non-Partizan League has captured the Republican primaries in North Dakota. Governor Lynn J. Frazier has been renominated over his "regular" Republican rival,

Kadel &amp; Herbert

### THE STATESWOMAN OF SUFFRAGE

Mrs. Carrie Chapman Catt, president of the International Woman's Suffrage Alliance, is representing America at Geneva

William Langer. Even more sensational was the result of the Senatorial primary. Dr. E. F. Ladd, President of the North Dakota Agricultural College, obtained a small but safe majority over Senator Gronna who now represents the state. Senator Gronna is a disciple of La Follette, one of the six senators who voted against the declaration of war with Germany, and a declared opponent of the League of Nations. His radicalism and his personal popularity with the farmers were relied on to secure his renomination in spite of the fact that the Non-Partizan League had put up a candidate of its own against him. The vote in three Congressional districts resulted in the nomination of James Sinclair, Non-Partizan and present incumbent; George Young, "regular" Republican and present incumbent, and O. B. Burtness, "regular," who defeated John M. Baer, the Non-Partizan Leaguer who now represents the district and is known to fame as the "cartoonist Congressman." In spite of the defeat of two candidates for the House of Representatives, the capture of the Republican nomination for Governor, Senator and the entire state ticket encourages the League to hope for a victory in November which will maintain its hold on the state and enable it to play an important part in national politics as well.

## Cox and the Democrats

THE nomination of Governor Cox seems to have restored the party harmony which had been stretched to the breaking point by the long continued and hotly contested fight over the Presidency in the convention. If he

Mrs. Maud Wood Park, of Boston, is national chairman of the National League of Women Voters, an organization which played an important part in the recent Democratic convention

was not the first choice of a large portion of the party he was a general second choice. He is "sound" on the League of Nations and President Wilson was one of the first men to send him congratulations, and it is reported that the President will write some articles during the campaign on behalf of the Democratic ticket even if his health forbids him to do any speaking. On the other hand the foes of the administration within the party are pleased with the nomination because Cox has never been directly associated with President Wilson in national politics. The half-rebellious chieftains of Tammany Hall and the wholly rebellious Senator Reed have expressed their delight that by means of Cox they were able to keep the main prize of the convention out of the hands of the President's official family. Mr. McAdoo, who has never admitted that he was really a candidate for the nomination, expressed pleasure that the choice of the convention did not fall on himself. Most of the other candidates for the nomination have added their congratulations. Even Senator Harding has sent friendly greetings "as an Ohioan and a fellow publisher."

William Jennings Bryan alone is openly cherishing disappointment. Not even the overwhelming defeat of the proposed "wet" plank in the Democratic platform can console him for the defeat of all his proposed amendments to the platform and for the nomination of a man who, in Mr. Bryan's opinion, is at heart hostile to prohibition. Former Representative Hobson of Alabama has warned Governor Cox that "dry forces are restive" and begged him to make some reassuring statement to the prohibition element of the party. On the other hand, the anti-prohibitionists are wistfully waiting for some word of encouragement of opposite character. Whether "beer and wine" will be an issue in the campaign or not rests on the decision of the nominee and will doubtless be made clear in his speech of acceptance.

Labor is very well pleased with the nomination because of the progressive legislation which the Governor has fathered in Ohio. Samuel Gompers, president of the American Federation of Labor, has come out openly for the Democratic ticket. The suffragists also are delighted to notice the zeal with which Governor Cox has urged immediate ratification of the equal suffrage amendment on the Democratic states which have not yet acted or have acted unfavorably. Louisiana, however, rejected his plea to have

Columbus Citizen

## THE BUCKEYE NEWSBOYS

This cartoon made history. Senator Harding, in sending his congratulations to Governor Cox, said: "I recall a much remarked cartoon which portrayed you and me as newsboys contending for the White House delivery"

the question reconsidered and the legislature adjourned without ratifying the amendment.

The League of Nations issue has been somewhat obscured by the readiness of the "bitter enders" in both parties to dull the sharp edge of their convictions for the sake of party regularity. Senator Hiram Johnson has at last come to the conclusion that in spite of all the vagueness of the Republican platform and the unsatisfactory character of the candidate, "the issue leaves those who believe in safeguarding, protecting and preserving our Americanism but one choice, and that is to support the Republican party." But Senator Reed, whose attitude to the Treaty was identically that of Senator Johnson, has sent his congratulations to the Democratic nominee.

## Roosevelt the Second

**A**FTER the nomination of Governor Cox for President on the forty-fourth ballot the convention adjourned. It met again the following day, July 6, to select a Vice-President. Seven men from western states were formally placed in nomination and various others were considered or privately suggested, but when it came time to vote all candidacies were withdrawn save that of Franklin D. Roosevelt, Assistant Secretary of the Navy, who was warmly supported by Governor Smith of New York and nominated by acclamation.

In nominating Mr. Roosevelt, the Democratic party followed the example of the Republicans and chose a Vice-President with regard to personal merit and general popularity rather than geographical expediency. To balance a man from Ohio, which is today an "eastern" state, the choice should have fallen on someone west of the Missis-

sipi, but no Republican abler than Coolidge of Massachusetts and no Democrat abler than Roosevelt of New York could be found willing to take the place. The choice of Vice-President seems to have been the only act by either convention which pleased all parts of the nation and all factions of the party.

Franklin Roosevelt is only thirty-eight years old. Altho he is related both by blood and marriage to the family of the late Theodore Roosevelt he has all his life been a member of the opposite political party. Like his illustrious namesake he graduated from Harvard, like him he was an active reform leader in the local politics of New York State and, again like him, he first attained prominence in politics outside his native state by making a brilliant record as Assistant Secretary of the Navy. Altho he is a loyally regular Democrat on election day, in the fights within the party Mr. Roosevelt has always been found on the anti-Tammany side and his career in the Legislature sent many cold chills up and down the back of the Tammany tiger.

## What to Do with a Vice-President

**S**ENATOR Harding has announced that if elected he will invite Vice-President Coolidge to attend and take part in Cabinet conferences. He said further:

The sort of government I have in mind ought to take advantage of the capacity and experience of a man like Coolidge by bringing him into council. It will be a fine thing and I don't see why it shouldn't have been done long ago. Coolidge is an eminent American and has had experience as an executive and should be helpful. I think the Vice-President can be a most effective agency in keeping the executive offices in touch with the legislative.

The Senator's first formal utterance in the campaign will be his speech of acceptance on July 22. Governor Coolidge will accept his nomination for the second place on the Republican ticket on July 27. On July 31 the first visiting delegation to the Harding "porch" will initiate the active campaign. In the meantime he is using the porch as a "listening post" for conferences with party leaders in the interests of Republican harmony. Governor Cox will not follow the example of the Republican nominee, but will tour the country and make speeches in many states. His running mate, Mr. Roosevelt, will also go out after the votes in person.

© Harris &amp; Ewing, from Paul Thompson

## CANNED CANDIDATE

An Alaskan native who had greatly admired the white man's skill in transporting food in tin cans remarked on first hearing a phonograph: "Ugh, canned missionary!" Senator Harding is now the chief canned missionary of the Republican party, and he is here shown in the act of putting his speech on Americanism into a phonograph

## Not a Drop to Drink

By Robert H. Moulton

The most valuable thing in any given region is apt to be that which is hardest to obtain there. In deserts, without any doubt, it is water. And next to the life-giving fluid itself, the desert traveler values any indications of where he will be able to find it—its direction, its distance, its character. The existence or nonexistence of such indications often spells life or death to him.

A little over a year ago Congress began the work of supplementing the few water signs that nature affords by sprinkling the desert regions of the Southwest with printed signboards, telling of the nearest water. It is also mapping the watering places and improving them. An appropriation of \$10,000 was made as a starter, and within a few weeks after it had become available, the United States Geological Survey had four outfits, each in charge of a geologist, at work in the hottest, driest, sandiest, and least explored part of the desert region. Within a few months more than 60,000 square miles of the region had been mapped, examined and signposted.

The geologists who did this work are now in Washington preparing maps that will show practically every watering place in the region and the roads leading to these watering places. These maps will be published in a series of guides which will contain descriptions of the routes, detailed information regarding each watering place, tables of distances between watering places, and analyses of the water. These guides will cover not merely the principal roads, but are especially designed to give information regarding the water places in the less frequented regions remote from the main routes.

The work was placed in charge of geologists, so that not only should existing water places be located and marked, but an intelligent understanding of the water supplies below the surface should be obtained.

A rather romantic event in connection with the field work was the planting of signposts in the vicinity of Tinajas Atlas, along the Mexican border, in Arizona, where between three hundred and four hundred persons once perished by thirst. It may be somewhat surprising to people in the East, however, and possibly to some in the West, to learn that Death Valley, whose unsavory name and reputation give it a certain terrifying notoriety thruout the country, contains

Some thoughtful Indian marked this spring in the days when to the tenderfoot the only water on the desert seemed to be a blue lake with palm trees toward which he set his weary feet only to find it a mirage

large springs which afforded excellent swimming to the Survey party that was in the valley last winter.

The entire region, that is so arid as to require guides to watering places and signposts directing to these watering places, comprizes a fan-shaped area covering approximately 570,000 square miles, or nearly one-fifth of the country. The handle of the fan is in Southern California; one side

is formed by the Sierra Nevada and Cascade mountains; the other side extends 800 miles along the Mexican border, while the outer edge is traced by a line extending from eastern Oregon, thru Salt Lake City and Sante Fe, to the mouth of the Pescos River. The highly developed coastal section of Southern California is situated, so to speak, at the handle of the fan, and the railroads and automobile highways that extend eastward and north-eastward from this section may be regarded as the ribs of the fan.

## More Delay in the Mail Service!

There is no greater professional happiness to a journalist than getting an event on to paper without delay, and no greater exasperation than being compelled to announce news a few days overdue. We can sympathize, therefore, with the Harvard astronomers who have chronicled an important event which happened 217,120 years ago. It is two years since a new star was first noticed in the constellation of the Eagle (Aquila) and was christened Nova Aquila. Since then astronomers have watched it grow, and by noting the time taken for this star to reach a particular size as seen from our planet they have at last been able to estimate the length of time the light from the star required to reach us. They believe that it has taken the light from the new star 217,120 years to bring us the news. Nova Aquila is evidently on the very "edge" of our universe for this is almost the greatest distance ever measured. Most of the visible stars are very much nearer. Our next-door neighbor Alpha Centauri is only about four "light years" away from us; light traveling at the rate of 186,000 miles a second.

What is the nature of this news which is over 200,000 years stale? The bursting into visibility of a star which was previously invisible probably means a big accident. A "dark star" which, like our own world, is too cool to radiate any light on its own account, hits something and then blazes

up like the sun. Such accidents do not happen very frequently in our well-regulated universe, but astronomers have recorded several instances. Usually we get the news a little quicker than in this instance, but perhaps it doesn't matter, for if the light from Nova Aquila had reached the world the day the big explosion took place there would have been no astronomical observatories on earth to record it. Two thousand centuries ago there were men on the earth, but they were a practical folk, more interested in chipping flint knives and keeping the cave warm than in looking up to

## Mexican Metric System

Ten bandits make one revolution.  
Ten revolutions make one government.  
One government makes ten revolutions.—*Boston Transcript*.

## Another Objection to the Metric System

The editor of a religious denominational paper makes objection to the metric system on the ground that he would not want the Bible to read "neither do men light a candle and put it under a hectoliter. . . ."

## Must We Get Out and Push?

With the railroads consuming about fifty million barrels of fuel oil a year, the steamship companies converting their boats into oil burners and a new American merchant marine that is largely oil burning, what is America going to do about Tin Lizzie when the available oil supply is exhausted? Geologists connected with the United States Geological Survey estimate that only 6,500,000,000 barrels of oil are yet underground in the United States, a

reserve that Director Manning of the Bureau of Mines has predicted will be exhausted in less than twenty years at the present rate of consumption or much sooner than that if the demand for gasoline and other oil products continues to increase as it has during the last few years. From 70,000,000 barrels of oil in 1901, the consumption in the United States grew to 421,000,000 barrels during the last year of the war and to 433,500,000 barrels—or approximately 40 per cent of the available supply—in 1919.

Meanwhile all the oil fields discovered since 1901 continue to decline rapidly. The Spindletop, in the "salt dome" section of the Gulf Coast of Texas, originally a 50,000,000 barrel pool, is now down to about 1000 barrels a day. The Cushing pool in Oklahoma, which produced 71,000,000 barrels in 1915, dropped to 41,000,000 in 1916, 24,000,000 in 1917, 17,000,000 in 1918 and 13,500,000 in 1919. Together with Kansas, Oklahoma reported a falling off of 33,000,000 barrels, or 22 per cent, in last year's production, according to preliminary figures issued by the United States Geological Survey. All of which means that if Central and North Texas had not developed high-pressure wells recently there would have been a decrease in the country's production in 1919 instead of an increase which just covered the year's consumption. Production from the Ranger field, the Stephens County pools, the Desdemona pool and the Burkburnett field in Texas jumped 7,000,000 barrels in 1918 and 50,000,000 barrels more in 1919, thus covering the falling off in Oklahoma. However, they, too, are failing fast. From 260,000 barrels a day in August, 1919, they came down recently to only 164,000 barrels a day. The same thing holds true of the Homer field in Louisiana,

© World's Work

the Big Sinking field in Kentucky, and were it not for California oil, the general falling off would be to probably one-third of our present production.

The oil land leasing bill, however, which was passed by Congress in February, should result in an early increase in production from California and from the Salt Creek field in Wyoming, but not enough to take care of

the possible demand for 850,000,000 barrels of crude oil that will be made in 1925. To meet this increasing demand, oil prospectors are already exploring foreign fields, in Venezuela and Colombia, as well as in Mexico, altho some of the present Mexican fields have already gone the way of our own fields by beginning to spout not crude oil, but salt water.

## The Best Woman in Our Town

By Mrs. James R. Pomeroy

The definition of best which applies to the woman of whom I write is "utmost endeavor." During the whole of her life of nearly eighty years, she has put forth her utmost endeavor to make this earth the clean and beautiful place God intended it to be.

Why do I consider her the best woman in our town? For many reasons. A town is not houses and lots, streets, parks, office buildings! These do not make a town. What does? Is it not the people who live in its houses and who go to and fro upon its streets? This best woman never misses a chance—indeed goes out of her way to make a chance—to meet and welcome all strangers who enter our town, be their stay long or short. No inquiry is first made as to their wealth, social standing or prospective business—just one thought uppermost—to make them feel welcome. Now if every man and woman in this town should so greatly desire to make it pleasant for newcomers there would be at least one spot on earth where loneliness and home sickness would be merely words in the dictionary.

Our best woman is a born teacher. Will you understand me when I say that she teaches because she cannot help it—solely for the love of it. How many young men and young women in our town have her to thank for hours of her valuable time when in their younger days she carefully and patiently made plain to them knotty problems in arithmetic, algebra, grammar.

Our best woman knows that "the pen is mightier than the sword" when used to defeat evil in its various forms. And this is perhaps her strongest and most far-reaching weapon of warfare against wrong. In her work as correspondent for our leading papers she ever takes her pen in support of the right. No subject is too unpopular or too "delicate" for her to pass it by. Her ideals are the highest and purest.

During the earlier years of her life she was known in many states as a W. C. T. U. lecturer. In this work she has engaged heart and soul the greater part of her life. No other cause is nearest to her heart unless it be her

Mrs. C. S. Haney, one of the very best women in the South

love for the mountaineers of our southern states.

In a certain county of Kentucky there is a school established by this good woman of our town. It came about something in this wise: While traveling some years ago she found on the seat beside her in the train a leaflet entitled "Soul Winner's Mission." She did not read it then, but took it

home. As mission work had always appealed to her, she became so interested in this particular branch of it that she corresponded with those in charge of the work. The result has been the establishment of a school which has now one hundred and forty pupils, a good faculty and the prospect of soon becoming one of the leading mission schools of the state. Now these few hundred dollars which put this work under way did not come from a well filled purse. The giving called for real sacrifice. Since the establishment of the school her benevolences have centered mostly there, for she sees in this work great possibilities for service to young people.

On learning that one young girl of sixteen would have to drop out of school and earn her living as best she could, our best woman decided that by a little more work and sacrifice on her part she could send the sixty dollars a year which was necessary to keep the girl in school a few more years. This was done and her protégée gives promise of repaying her benefactress, as she has developed into a noble young woman who will go among her people as a teacher.

For some years our best woman was district superintendent of the East Coast for the Children's Home Society of this state. At least once a year a large box of clothing, food and toys is sent from our town to the Home, all the soliciting and packing being done by our same best woman. She often even does needed repairing on the garments that they may be in good shape when they reach their destination.

Much that I have told of her has been of work done in other places; it is the only way in which I can give you an insight into her real character. However, there is no good cause in our own little town in which she does not put her shoulder to the wheel and merit the definition of "best" which I feel truly belongs to her—the "utmost endeavor."

## Big Water-Wheels

The dam across the Mississippi at Keokuk, Iowa, contains some of the largest water-wheels ever built. Each turbine furnishes 10,000 horsepower, and weighs about one million pounds. Many of the "runners," or water-wheels for the turbines, were cast in one piece. They each weigh about 140,000 pounds. The largest runners previously cast in one piece, either in this country or abroad, weighed about 35,000 pounds.

## Are You a Blonde?

If so, Dr. Blackford will tell you what your mental and emotional qualities are likely to be. The same if you are a brunet.

When you really know the difference between the blondes and brunets, the difference in their characters, temperaments, abilities, and peculiar traits, you will save yourself many a mistake.

To be a good judge of other people you must know these things.

You persuade a blonde in one way—a brunet in another. Blondes enjoy one phase of life—brunets another.

Blondes make good in one kind of a job—brunets in another.

You manage blondes best, as employees, with one policy—brunets with an entirely different policy.

The history of nations—of civilization—is woven through and through with these fundamental differences. To know these differences scientifically is the first step in judging men and women, in getting on well with them, in mastering their minds, in making them like you, in winning their respect, admiration, love, friendship.

Dr. K. M. H. Blackford, the famous character analyst and employment expert, has put the secret into a wonderful little book entitled "Blondes and Brunets." Only 48 pages but packed full of valuable information for you.

Dr. Blackford has specialized on this subject for 20 years and is retained by many large corporations.

The book is fascinating. In a half hour you will get from its pages the most valuable secrets that ever came into your possession. 30 CENTS (in stamps) brings it to you by return mail. Send for it today.

INDEPENDENT CORPORATION, 311 Sixth Avenue, New York

## You Can Lead a Donkey to Water But the Jackass Won't Drink

(Continued from page 68)

of Ohio. But no one of them was an Administration candidate. There was no such animal. Mr. Wilson evidently chose to abdicate his leadership when the platform had been completed. So the problem had to be solved by the delegates themselves. A long job they made of it. Forty-four times the roll of states was called. It was not until the thirty-ninth time that the outcome began to be foreshadowed. Until then the changes from ballot to ballot had been inconsiderable. They had shown no falling away from any of the three principal candidates. Merely a shifting here and there among the independent group of delegates who were committed to none of the three. This group began with 400 votes and dwindled to 100 before the final slide began. The balloting began Friday night and lasted all thru Saturday and Monday and it was nearly 10 o'clock on Monday evening before any sign of a break in the deadlock came. Then the manager of Palmer's campaign came to the platform and formally released the Palmer delegates. When they had found their allegiances Cox had passed McAdoo and in five ballots it was all over. The "wets" candidate had won.

Cox had been an able Governor of Ohio for three terms. I believe that he has stood for progressive legislation there. He is a supporter of the President's view of the Peace Treaty and the League of Nations. I got a Democratic view of him on a street car going downtown after his nomination. The two men were evidently from Ohio. "Harding will be glad to hear this news—not," said one. "Jimmy Cox will send him on his head on the stump," said the other, and then finished it off by concluding with, "The Republicans would have paid all the expenses of this convention not to have had Jimmy nominated."

I believe that Cox is a good man just as Harding is. I see nothing to prevent the regulars in either party from supporting the party candidate with enthusiasm. But what the poor independent voter is to do I have no idea. There is only one consolation that I can see on either ticket, a fine, virile, progressive young man as candidate for the Vice-Presidency. If you are interested in coincidences you may like to recall that in nineteen hundred a Roosevelt from New York who had been Assistant Secretary of the Navy was nominated for the Vice-Presidency on the ticket with a Presidential candidate from Ohio. As I said in writing of the corresponding subject in relation to the Republican convention, "absit omen," but perhaps there is a grain of hope in the nomination of Franklin Roosevelt at San Francisco as there was in the nomination of Calvin Coolidge at Chicago. It's the only hope in sight.

## All the World Likes a Roosevelt

(Continued from page 72)

Franklin Roosevelt is impulsive. Usually his impulses have been right, tho there are some he has regretted. His friends in Washington did not believe he would accept the nomination, but he had an impulse to do so and he did. He took the next of the footsteps left by his "distant relative."

Roosevelt's nomination added to the journalistic flavor of the campaign in which the heads of both tickets are newspaper owners. Back in his college days Roosevelt was a member of the staff and later president of the *Crimson*, the Harvard daily. It was obedience to an impulse that made him a member of the *Crimson* staff.

A heated political campaign was in progress and there was great interest among the student body and the townspeople as to how a certain professor would vote. No one had been able to find out. The learned doctor seemed to be enjoying the mystery.

Young Roosevelt called upon him one night and in the midst of the conversation an impulse registered itself and received immediate attention.

"Doctor, how are you going to vote?"

"Why, er . . . ah," the professor hesitated. "Damn it, I'm going to vote for So-and-so."

Roosevelt wrote the story. With it the *Crimson* "scooped" the local dailies and on the basis of the "scoop" Roosevelt was made a member of the staff.

Roosevelt has the reputation in the Navy Department of being a "yes and no" man. Any subordinate with a question requiring an immediate decision by the head of the department tries to hold it until Secretary Daniels leaves town to make a speech, so that it may come before Franklin Roosevelt, as the acting secretary. Secretary Daniels is not a "yes and no" man.

In his impatience over Secretary Daniels' inability to make a quick decision, Roosevelt has sometimes yielded to the impulse to criticize the methods of his superior in other than private conversations. These are the impulses he regrets.

My first glimpse of the apparent conflict between the two officials came on the day the President signed the declaration of war. What I saw I then thought boded ill for American naval effort in the war.

I went to the office of Mr. Roosevelt and begged for an answer to the question, "Has the fleet been mobilized?"

"I can't tell you," he said, "but you have a right to know. Come along and we'll find out."

When we reached Secretary Daniels' office, Mr. Roosevelt said:

"Here is a newspaperman. He wants to know and all the rest want to know whether the fleet has been ordered mobilized."

"Tell the young man," said Daniels quietly, "that an announcement will be made in due course."

## The problem of housing workers

BUILDING WITH FORESIGHT

"THE American people are all agriculturists except one Benjamin Franklin," an 18th Century foreign diplomat informed Europe. Small craftshops with bounden apprentices satisfied that day. The waterpower factory of the following century, operated with help from the neighborhood, bears little resemblance to its descendant, the modern corporation, directing and housing armies of workers.

The thought of industrial housing of a generation ago summons a vision of tenements in dreary rows surrounding the mill—then considered adequate, though now shabby by comparison. Foresight—the business creed of today—coupled with higher living standards and a better knowledge of sanitation, extends to the building of inviting communities with pleasant homes, day nurseries, kindergartens, recreation centers and inns for single workers. Created environment has been enlisted in the cause of industry.

From earliest stages to latest advancement, we have been associated with the progress of Industrial Housing; counseling, planning, building, and managing. A special department is devoted to this service. The booklet "Industrial Housing" will be sent to executives on request.

## How We Improved Our Memory In One Evening

The Amazing Experience of  
**VICTOR JONES AND HIS WIFE**

This Booklet Is Free      Send For It  
THE INDEPENDENT  
311 Sixth Avenue      New York

When we had left the room:  
"You see . . ." said Roosevelt, " . . . It was the best I could do."

He did not on that occasion, except by the implication of his tone, criticize his superior. There were other occasions, however, when he was less tactful. The public has had more than a hint of impulsive opinions he has expressed, and the conclusion has been drawn that Secretary Daniels and Assistant Secretary Roosevelt did not get along at all. This opinion has been fostered by naval officers seeking dissension in the department.

Assistant Secretary Roosevelt is popular with naval officers. He knows the traditions of the navy and respects them. He is orthodox in his methods. Secretary Daniels is unorthodox. He insists on running the navy instead of letting the navy run itself. Consequently he is not as popular with the officers as some other secretaries have been.

The relationship of Secretary Daniels and Assistant Secretary Roosevelt has been not unlike that of a father to a son, the son intensely loyal and working for the same objects, but sometimes becoming impatient with the father's slower methods. What Secretary Daniels has thought of Roosevelt's occasional impetuous outbursts he has kept to himself. When Roosevelt was nominated for the Vice-Presidency he made a fulsome speech in his praise.

The only duty of the Vice-President of the United States while he remains Vice-President is to preside over the Senate, a dreary job at best and one for which the young and active Mr. Roosevelt is not particularly well fitted. Since the armistice there has been a great deal of talk in Washington of the desirability of reorganizing the executive departments of the Government and reforming the methods of Congress. Something of the kind is likely to be undertaken at the next session of Congress. Under each of the plans proposed new duties would be given to the Vice-President. One scheme would make him a sort of business manager for the Government. Such duties as are contemplated for the Vice-President under these plans would be far better suited to Mr. Roosevelt than the ones he will assume under the present system, if elected.

"The entire system or relationship which exists between Congress and the executive departments is fundamentally wrong," he wrote to Congressman Ireland, who sought his opinion as to how the Government establishment could be placed on a more modern and scientific basis.

By way of illustration he told of an offer he made to the Appropriations Committee to discharge 15 per cent of the employees of the Navy Department, if he could be given authority to take one-half of the salaries of those discharged and add this one-half to the salaries of the employees who remained.

"Of course, however, under the present system Congress would not think of giving executive discretion of this

kind," he said. "Congress, for various reasons, has so tied the hands of the executive officers of the Government that they have no discretion in the fundamental questions of employment. I do not believe, of course, that the civil service system should be wiped out or that we should return to the spoils system, but there is altogether too much assumption in this Government that executive officers will use their authority for political purposes. My own wonder is that, considering the existing circumstances, the employees of the Government are as efficient as they actually are."

To a question as to whether any consolidation of bureaus could be made in such a manner as to increase efficiency his answer was "yes."

"But," he added, "only if the whole question of the executive departments can be considered at the same time. For instance, there is a lot of work being done in other departments which ought properly to be under the Navy Department, and in the same way there is a lot of work being done by the Navy Department which could perfectly properly be transferred to other departments."

Three years in Albany and seven in Washington had forced him to the conclusion "that our governmental methods in this country are cumbersome and wasteful." He thought, however, that the first improvement must come from the source of governmental activities, the legislative branch.

He recommended that Congress:

"1—Create a true budget system, not the small beginning already attempted.

"2—Consolidate the appropriations in one general committee, with subcommittees to deal with the separate subjects.

"3—Put into law the general principles recommended by the Reclassification Committee's report, together with the authorization of adequate salaries to Government employees.

"4—Invite a conference with the executive branch of the Government, looking to a reclassification and redistribution of the work of the departments.

"5—Give by law greater authority to the heads of the executive departments in conducting their executive business, at the same time holding these heads more directly responsible for the successful administration of their work."

Franklin Roosevelt is frank—sometimes too impulsive in his frankness. He has no talent for dissembling. He is young and he is friendly. He is an excellent administrator, as his service in the Navy Department has proved, and is an energetic fighter for progressive principles. He will not make an ideal Vice-President. He is certain if elected to that office to get off the vice-presidential reservation, as at present restricted. If you, the people of the United States, decide to elect him, you should decide also to enlarge the Vice-Presidency, else you will make him a prisoner in office.

# Ask Leslie's

**Y**OU cannot appreciate the great scope of Leslie's information service until you put it to the test. Try it. Ask Leslie's—now.

Let us share the burden of some problem confronting you—something that affects your business. Glance over the typical questions listed here and see if they don't suggest something that *you* want to know. And then ask Leslie's.

We will go to authoritative sources for you and gather the sort of material—absolutely unprejudiced—that you need in order to crystallize your own ideas in securing the most intelligent decision. And we will forward this information to you free of charge.

Why? Because years of experience make it possible for us to secure at trifling cost the facts that might require a very considerable investment of time and money on your part to obtain independently—and because service to Leslie's readers is the cornerstone of the Leslie's edifice. Ask Leslie's.

This new service can save you many times over the seven dollars that enters your name on Leslie's subscription lists. You get your money's worth in the magazine—you get your money back in its service. Send us your name.

## Ten Typical Questions

What kind of a bonus system can I install to get greater efficiency from my truck drivers?

Will it pay to buy adding machines for use in my wholesale hardware business?

What are the different kind of sprinklers and how do they affect insurance rates?

Will a furnace regulator reduce my coal consumption this winter?

The masons are on strike here. How can I make a necessary addition to my factory?

Is the individual drive more economical than the larger power unit in a large machine shop?

In view of the high price of coal, should I install an oil burner under my boilers?

What is the best kind of roofing for my summer camp in Canada?

Can paint intended for interior work be used for porch floors?

Would it pay me to install my own water pump and electric lighting system at my home, located ten miles from the city?

**BON-OPTO**  
**SHARPENS VISION**

It's a system of treating the eyes at home; is practiced daily by hundreds of thousands of people with great satisfaction. The Bon-Opto system quickly relieves inflammation of the eyes and lids. It cleanses, soothes, and rests tired, dusty, work-strained eyes and is a help to better eyesight. Ask your druggist. He knows. He will refund your money without question, if you are dissatisfied. There is no other home eye treatment like Bon-Opto.

### DIVIDENDS

## AMERICAN TELEPHONE AND TELEGRAPH COMPANY

Thirty Year Four Per Cent. Collateral Trust Bonds, Due July 1, 1929

Coupons from these Bonds, payable by their terms on July 1, 1920, at the office of the Treasurer of the Company in New York, will be paid at the Bankers' Trust Company, 16 Wall Street.

G. D. MILNE, Treasurer.

## DIVIDEND NOTICE OF THE American Light & Traction Company

The Board of Directors of the above Company, at a meeting held July 6th, 1920, declared a CASH dividend of 1 1/4 per cent. on the Preferred Stock, a CASH dividend of 1 3/4 per cent. on the Common Stock, and a dividend at the rate of 1 3/4 shares of Common Stock on every One Hundred (100) shares of Common Stock outstanding, all payable August 24, 1920.

The transfer books will close at 3 o'clock P. M. on July 15th, 1920, and will reopen at 10 o'clock A. M. on July 29th, 1920.

C. N. JELLIFFE, Secretary.

### FEDERAL SUGAR REFINING CO.

July 6, 1920.

The regular quarterly dividends of One and Three-Quarters Per Cent. (1 3/4%) on the Common Shares and One and One-Half Per Cent. (1 1/2%) on the Preferred Shares, and an extra dividend of \$5.00 on the Common Shares of this Company will be paid August 2nd, 1920, to stockholders of record at the close of business July 10th, 1920. Transfer books will not close.

PIERRE J. SMITH, Treasurer.

### MIDVALE STEEL AND ORDNANCE CO.

Dividend No. 15.

At a meeting of the Board of Directors of Midvale Steel and Ordnance Company, held Wednesday, July 7th, 1920, a quarterly dividend of \$1.00 per share was declared, payable August 2nd, 1920, to stockholders of record at close of business July 17th, 1920.

Books will remain open.

WM. B. DICKSON, Treasurer.

## Can the Leitch Plan Fall Down?

(Continued from page 74)

the dollar runs amuck. We visited John Leitch. He had so many calls from employers that he could not listen to our query. He referred us to his book. He is not an institution. He cannot delegate his methods to a staff of subordinates. He must go in person.

For many years he went from job to job, on his own wages, seeking an answer to his question. He saw "employees come and go, live and die, without a thought on the part of employers as to their welfare." He saw "employees show an equal lack of interest in the employers, and demonstrated their disinterestedness by pointedly doing just as little as they possibly could for their wages." He could find "no relation between work and wages. The employer paid the lowest wage at which he could get men, and the worker gave the smallest return which he could possibly give and still get the highest wages." Inside each business concern he found "ruinous competition between labor and capital—the one to get more, the other to give less." "Out of that first-hand investigation," he goes on, "pursued without theories and without a knowledge of philosophy, came a gradual comprehension that there could be a better way. Seeking the why and the how led me into philosophy—into the causes behind what we call results—and step by step unfolded that which I now call Industrial Democracy."

At last he found his opportunity. He was superintendent of a small plant, without a labor union. He held mass meetings. They "talked over the management of the factory, better ways of doing work, etc."

It worked. His "fundamental ideas were right." "The men liked the meetings; they liked the chance to air their troubles, to have it out over anything that did not satisfy them; and gradually it dawned on me that this desire to talk and to have a say in things was the bubbling to the surface of the innate spirit of democracy—of the desire which is in almost every man to have a voice in his own destiny and a means for self-expression. Analyzing my personal work, I found that what I had really done was to capitalize fair play—to sell the management to the men, to convince them that their meetings were of importance and not merely opportunities to blow off steam."

The next quest was to find a method of industrial organization that would make these meetings a fixed part of the business. So far industrial democracy was only "a state of mind." It must have a body and a constitution. This was the final discovery. "The organization of any factory or other business institution into a little democratic state, with a representative government which shall have both its legislative and executive phases." There was but one such model—the constitution of the United States. So he seized

upon it. "I am taking as settled without argument," he exclaimed, "that American principles of democracy are right and then making application of these principles to the governing of a factory."

So it came about that industrial democracy has its Cabinet, the President and Chiefs of the Business; its Senate, the foremen and heads of departments; its House of Representatives, the workers elected by their fellow-workers on a basis of equal suffrage in each department or section of the shop.

Thus industrial democracy is the repetition of political democracy.

Madison, Wisconsin

## How You Can Help Italy

(Continued from page 69)

had been utilized. Up to 1918, in comparison with the territorial surface, Italy was third in the amount of hydraulic power utilized per square mile.

Very recently, I have been confidentially informed that from 1918 to the present year, nearly another million horsepower has been torn from nature; nearly 6000 kilometers of railway will be electrified, and in this way the reservoirs of water falls from the Alps in the north, thru the Appennines to the southern provinces of Calabria, will be utilized helping the solution of the most serious problem of Italy.

During the war Italy saw her imports of coal greatly reduced from 10,380,000 tons imported during 1913, to only 5,890,000 tons imported during 1918. We might say that in 1918 the imports of coal were nearly one-half of her imports in normal times. Italy was not discouraged during the war. She did not throw up her hands waiting for help from the outside. She had vast deposits of lignites in different districts which previous to the war had been absolutely unexploited, but partly utilized for a very small local consumption.

Between 1917 and 1918 more than 5,000,000 tons of lignites were extracted and due to the faulty process the utilization has not fully answered the expectations of first class industrial operations. There is every hope that very shortly with the collaboration of American concerns, the problem of the industrial exploitations and utilization of lignites will be a very important and determining factor in the industrial and economic rehabilitation of Italy.

Two very important factors in determining the balance of trade of Italy were the emigration and the tourist traffic, combined with the exports. From 1913 to 1918 Italy has seen her emigration greatly curtailed.

Tourist service has been shut off completely, while her population from 1914 to 1918 has increased nearly 3,000,000 inhabitants.

Prior to the war, our emigrants were directed mainly to the United States.

Notwithstanding the restrictions governing the immigration into the United States, and while the tide of Italian emigrants is now principally flowing toward South America, very shortly, Italian labor will be absolutely required also by the United States and thus this important factor which is now playing an important role in the economic resumption of Italy, will fully play its part in favor of that country.

The tourists' traffic, which on account of the conditions of war has been suspended and remained at a standstill, will necessarily improve from next year on.

The main sources of export, also for the products of southern Italy, I am sorry to remind, were, before the war, the Central Empires, Austria and Germany, but this source of revenue was completely shut off by the war. Relations will, no doubt, be resumed, and this other important factor will contribute also in establishing a satisfactory balance of trade.

During 1919 the monthly rate of imports was about 1,100,000,000 lire, or 8,800,000,000 during the first six months and 7,600,000,000 during the latter half of the year; this means a reduction of more than 13 per cent. Exports on the other hand, from January to December, were more than trebled and in the second part of the year there was an increase of more than 100 per cent.

Another very important item showing how courageous and strong Italy will successfully emerge from the conditions created by the war, is given by her shipping situation. Italy lost 62 per cent of her tonnage during the war, which loss left her with only 1,000,000 tons of shipping. According to the latest data given by the Lloyds Register, Italy has been given fourth place among the shipbuilding nations of the world.

It must be remembered by everybody in general, and in the United States in particular, that, while during the war Italian shipowners and Italian crews supporting the Government did their best in order to offer Italy rates of freight as economically as possible, other nations, where the tonnage was controlled by Government agencies, were asking excessive rates of freight. During the war Italian shipping transported coal to Italy from the United States at the rate of \$6 or \$7 per ton, while other agencies thought nothing of asking as much as \$26 per ton.

This great moral factor, if it gives an idea of the willingness of the Italian people to endure sacrifices, unknown to other nations, is also an indication of their ability to work hard for the reconstruction of their country. As an American friend, not pro-Italian, has said:

Of all the European nations that are on the way to reconstruction, Belgium has given solid proof of her progress since last year. Belgium will be first among all the nations to emerge from the state of war. The second place in the matter of reconstruction will be taken by Italy.

New York City

## "Safer than Cash"

## Guaranty Travelers Checks

**S**AFER THAN CASH, more convenient than a check book, and as readily accepted as money—everywhere—are GUARANTY TRAVELERS CHECKS. They are furnished in neat, compact wallets, and can be cashed in denominations of from \$10 to \$100, as your needs require.

Take GUARANTY TRAVELERS CHECKS on your vacation—on your motor tours—on your business trips—in the United States or abroad.

*Get them at your bank—cost only 50 cents per \$100*

We suggest that you take advantage of this and arrange to take some of these loans at the higher rate. Good loans are offering. Write for Loan List No. 719

Perkins & Co., Lawrence, Kansas

### AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 37 would provide an annual income of \$623.60 absolutely beyond question of doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

## We never know what price fresh meat will bring

Swift & Company prepares for the people of America an average of seven millions pounds of fresh meat foods every working day without knowing definitely what a single pound of it will bring when sold.

We constantly ship carloads, even trainloads, of fresh beef, with no positive knowledge as to what we can sell it for. We cannot place a price on it when we ship it; we cannot even instruct the branch house manager how much he must get for it. Local conditions of demand and supply at the time it is sold settle that.

Yet fresh meat must be sold within a few days for what it will bring, or it results in loss. Our average profit, including the returns from by-products, is only a fraction of a cent a pound. Frequently we lose far more than that.

We have to ship fresh meat, whether or no; it cannot be held in reserve (except a very small amount that is frozen); it is perishable. We cannot stop manufacturing, as others often can. Live stock keeps coming to market and must be handled as fast as it comes, or the whole live stock industry would be demoralized. And our overhead also goes on.

All this in the second largest industry in America!

To conduct a successful business on so slight a margin under such handicaps requires the highest type of organized experience, of economical operation, of good management, individual capacity, eternal alertness, and the ability to finance operations through trying periods. A few days' bungling in unfamiliar or indifferent hands would wipe out the efforts of months.

## Swift & Company, U. S. A.

*Founded 1868*

A nation-wide organization owned by more than 30,000 shareholders

# The Independent

FOUNDED 1848

## The Cover

For several months the Public Library in New York has given its main hall to an exhibition of posters issued by the Paris-Lyon-Mediterranean Railway of France. In color and composition these posters set a new artistic standard, one notably above that of most commercial art in this country. We have obtained permission to publish on the cover of *The Independent* this week one of the more striking of these posters, and we hope perhaps to present two or three others during the year.

## New Plays

*The Night Boat* is just what one might expect of a musical comedy by that name. (Liberty Theater.)

George White's *Scandals of 1920*. A modern musical review of jazz scenery, scant costumes and assorted stunts. A pseudo-naughty frivol. (Globe Theater.)

*Cinderella on Broadway*. An extravaganza of lilting music, nimble dancing and catchy dialog. Presented by the Shuberts. Al Brendel improves over recent vaudeville capers and does some clever clowning. (Winter Garden Theater.)

*The Girl in the Spotlight*. Music by Victor Herbert. Book and lyrics by Richard Bruce. Staged by George W. Lederer. A tuneful musical comedy fully up to the title, or down to it, if one doesn't like musical shows. (Knickerbocker Theater.)

## Pebbles

He—My clutch is awful weak.  
She—So I've noticed.—*Cornell Widow*

Norah—I hit her and she hit me back.  
Her Mistress—You should say "my back." Norah!—*Octopus*.

We are living, we are dwelling  
In a grand and awful time.  
And the things we pay a dollar for,  
We used to pay a dime!

—*Blightly*.

"Is it true you are going to marry again?"

"Yes, dear."

"But you are still in mourning."

"I know, but then Harry's the black sheep of the family."—*Blightly*.

Down in dear old Greenwich village, where  
they're dancing after tea,  
There's a Yankee girl a-jazzing, and I  
know she thinks of me.

For the wind is off the Hudson, and the  
steamship syrens talk.

Saying: "Pack your grip and beat it, back  
to little old New York!"

From the Battery to the Bronx  
Where the automobile honks  
Come to God's own good Republic,  
Where they haven't got no konks!  
Come back to the Great White Way  
Where the shimmy skysigns play,  
And a roar goes up like thunder  
From the "L" and the Subway!

—*London Herald*.

## Remarkable Remarks

WILLIAM JENNINGS BRYAN—My heart is in the grave.

CARL SCHWIZ LOWDEN—Have you a little prejudice in your home?

REV. GEORGE CHALMERS RICHMOND—The Republican party hates Jesus.

MISS ELIZABETH MARBURY—I am as big as a whale, but I am as nice as a smelt.

WARREN G. STONE—Moral courage is required to run a train a mile a minute.

QUEEN MARIE OF RUMANIA—I don't own up when I know I don't know a thing.

BABE RUTH—Making a home run is about the finest sensation that I know of.

SENATOR PENROSE—The people are determined to restore the Republican party to power.

MRS. WARREN G. HARDING—I lived with my husband for twenty-six years and I know him.

MRS. CALVIN COOLIDGE—I have my ambitions and the dearest one of these is to own a Ford.

JOHN BURROUGHS—The best way to deal with a bee hive is by a bold and decisive manner.

FANNIE HURST—The women delegates were not selected by either Mr. Ziegfeld or Mr. Sennet.

DOLLY MADISON—I predict that Gloria Gould will follow in her sister Edith's footsteps, and elope.

MRS. VINCENT ASTOR—The dress I am wearing most frequently at present I bought ready-made.

FRANKLIN D. ROOSEVELT—All I ask in the coming political campaign is that there be no mud-slinging.

W. H. TAFT—The approaching Presidential election will result in the success of the Republican ticket.

CHRISTOPHER MORLEY—We have yet to learn whether either of the Presidential candidates wears pink elastic sleeve suspenders.

DEMOCRATIC NATIONAL CHAIRMAN HOMER S. CUMMINGS—The Republican meeting at Chicago was not a convention but an auction.

ROBERT W. CHAMBERS—With a charming little sound in her throat like a young bird, she snuggled closer, pressing her cheek against his.

LUKE McLUKE—Father hates to tell mother he has found a bed-bug. He knows that mother will wreck the house until she has found another one.

DEAN INGE—God is not the kind of a person to send some dire calamity for dining one of thirteen, or for walking under a ladder, or for getting married in May.

LAURENCE L. DRIGGS, president, American Flying Club—Avoid stunt-flying and fog-flying, and aeroplane fatalities, per machine, will actually show a lower percentage than automobile fatalities.

# GORHAM SILVERWARE

"At Home"—Upon the Lawn

TEA time! And her dearest friend to chat with. One cup, two cups, maybe three. What an afternoon! Warm sunshine, sweet fragrance of Nature's flowers, trees and shrubbery gently nodding their approval in the cooling breeze. And into this atmosphere of peace, good cheer and loveliness—how beautifully does her *silver* blend! Tea pot, sugar bowl, cream pitcher, sandwich tray, spoons—all of useful, enduring *silver*. Every piece prized as the treasured symbol of home and hospitality. Every piece helping to cast a refreshing spell of contentment over the approaching end of a perfect day.

## Europe's Crisis and America's Problem

By Frank A. Vanderlip

*A year ago when Mr. Vanderlip, then President of the National City Bank of New York, returned from a tour of the war-stricken countries he presented so serious a view of "What Happened in Europe" as to startle this country. But gradually financiers have come to realize that he did not exaggerate the crisis and that he had pointed the only way out of the difficulty. Mr. Vanderlip's survey of the present situation is given in the following article which is to form the introduction to a revised edition of his book shortly to be published by Macmillan*

A PEACE Treaty was signed a year ago which took into account pretty much everything except economic factors. As a matter of fact, European people themselves did not see clearly those economic fundamentals. The statesmen who were charged with the responsibility of writing the Treaty of Peace were almost as blind to the economic factors of the situation as was the general public. But economic factors have to be reckoned with. It is idle to take into account ethnological considerations or political differences, if the people within the new political boundaries are cold, unclad and hungry.

America a year ago suffered from an almost complete lack of appreciation of the nature of the economic structure of Europe. It has taken most of the year for the general opinion in this country to comprehend the existing economic data of the European situation and to grasp the principles necessarily involved in the recuperation of the industrial life of Europe.

With us, as with the Entente nations, there were fundamental misconceptions in regard to the economic principles involved in the payment of indemnities. Indeed, the statesmen who drew the Peace Treaty seemed least of all, for a time, to understand how indemnities may be paid by one nation to others. These misconceptions were increased rather than cleared up by superficial comparison with what was accomplished by France in the payment of indemnities following the Franco-Prussian war.

Time helped to a clearer view of the economic factors at work in the European situation. Today we have a fair understanding of the economic structure of Europe, of the complicated industrial and commercial organization which developed there in the last fifty years, of the special difficulties owing to the extent of the area of disorganization resulting from the Great War, of the obstacles hampering reconstruction, and of the nature of the indemnities.

We now comprehend more clearly what an involved, complicated and interdependent organization had been built up in Europe during the era of industrial development included in the period from the Franco-

Orr in Chicago Tribune

The Pied Piper

Prussian War to the development of the Great War. We better understand how that industrial development enabled a great and rapidly increasing mass of people in Europe more easily to command a livelihood by sending out into the world manufactured products to be exchanged for the cheaply produced food which the opening of the grain fields of the Mississippi Valley, the Argentine and Russia afforded. The improvement in transportation, bringing the grain from those distant and rich agricultural districts, made it possible for Central Europe to develop its great workshops and

feed its increasing population by exchanging manufactures for food.

Fifty years ago the population of Europe was beginning to press with a good deal of severity upon the productive powers of European fields. The cost of food production was high and would have rapidly become higher if there had been an attempt further to increase domestic productivity. It was discovered that by developing industrially and drawing food from distant and fertile fields conditions of life could be made much easier. So an increasing mass of the population of several countries of Europe began to devote its energies to manufacturing and to the commerce which resulted in the exchange of these manufactured products for food, raised in distant lands.

These easier conditions of life were followed, as easier conditions always have been followed, by a rapid increase in population. It has been estimated that, at the outbreak of the Great War, one hundred million people in Europe were gaining their food supply by manufacturing goods for export. Those goods paid for the food and raw materials which this increasing population needed, and which Europe could not produce directly.

L'Assommoir, 1919

The Ghost of a Soldier: "Can you tell me, please, where I shall find the independence, liberty and fraternity of the people?"

The Common Man: "They are unknown!"

The Ghost of a Soldier: "But it is for them that I gave up my life."

Something of the difficulties confronting manufacturers and traders in their effort to reconstruct the old industrial order was set forth in my observations published last year. I still believe that the statements then made were conservative, that they were an under-drawn and restrained description of those difficulties.

We have witnessed in the period which has elapsed since these observations were made a valiant effort on the part of European people to overcome the obstacles standing in the way of getting back to the old industrial order.

In some countries these efforts have been at least partially successful. In others the difficulties proved too great to be overcome and there has been steady disintegration.

England has made marked progress in the direction of recovery. Belgium, having in some ways fewer difficulties, particularly a comparatively small accumulation of war debt, has made more progress toward recovery than any other Continental nation. In Italy there has been recovery in some lines of industry, but prostration has continued in others. Italy was in some ways more severely hurt than any other Entente nation. The problem of balancing her international trade is extremely difficult. She is making a noble effort to put her house in order. Italy seems to me especially to merit our interest, sympathy and help. France has in some directions made considerable recovery. Her recovery is noteworthy in parts of the devastated district. But her international trade balance is distressingly unfavorable; her post-war domestic budget extremely high and unbalanced. Her taxes have been largely increased; but there is still a gap between Government income and expenditures that will test the genius of her financial administration.

The difficulties presented to the newly-formed nations, stretching all the way from the Baltic to the Mediterranean, have in part proved insurmountable. Industry is still paralyzed. Transportation has deteriorated. National credit has had to face unbalanced domestic budgets. Currency inflation has been used to help meet budget deficits. The standard of value has consequently depreciated. Taken altogether, the difficulties that these nations are facing seem greater today than they were a year ago.

Russia presents a story by itself. Under a communistic régime industrial production has been disappointing. Communism saw its way

clearly thru a division of existing property, but seems to have been woefully lacking in the genius for efficient production. The transportation system in Russia has continued to deteriorate and is today perhaps the chief obstacle in the way of normal economic national life. With a grain crop in Southern Russia the best in seventeen years there has been wholesale starvation in some of the cities. Transportation was inadequate to move the products. The almost unlimited inflation of the currency so depreciated its value that peasants would not willingly part with their produce in exchange for worthless money which would not buy the manufactured products which they needed. The embargo on Russia has prevented the exchange of her produce, could it have been moved to the ports, for the manufactures that she needed. There has been a development of primitive manufacture, but of course that could not replace the supplies which modern industrial methods formerly produced.

The developments in the labor field in Europe offer interesting grounds for survey. The disturbances in the labor situation in England which threatened the political order in February, 1919, have been in part composed. Higher wages were granted to miners, to men engaged in transportation, and pretty generally thruout the industrial organization. This has for the time, at least, averted violent outbreaks. The aspirations of the Labor party for the nationalization of the coal mines have crystallized into definite political demand. That has been clearly refused by the existing government and a compromise measure is now being debated in Parliament. The outcome of the divergent views on the subject of the nationalization of coal will be one of the main features of future political struggles. Organized labor is well united in its demand for nationalization. Opposition has crystallized, and the general body of opinion outside of organized labor seems opposed to such a step. The demand for the nationalization of the railroads is less insistent and the opposition is probably more general.

England has shown masterly ability in dealing with its foreign trade policy. As a result various industrial lines, and particularly its textile manufacturing, have been urged to an activity which results in production on a great scale. The British demand for imported raw material, food, and in a less important measure, manu-

factured products has, however, far exceeded her ability to make counter-balancing exports. For the calendar year 1919, British imports exceeded exports by £669,000,000. These imports were in part paid for by "invisible exports" in the form of ocean freight, insurance, and income, on foreign investments still owned by the British investors. The gap between imports and exports is still so [Continued on page 128]

The real victors—Hunger, Despair, Bolshevism

# Forced Labor in Russia

By Edwin E. Slosson

THE act of Lenin and Trotzky in converting the workingmen of Russia into an industrial army under military discipline confirms what the critics of Socialism have always contended, that the Socialistic state was impossible without a considerable restriction of the individual liberty which the masses in modern times have secured. All the labor that supports civilization is fundamentally forced labor, for few of us would work hard enough to accomplish much if we did not have to. But the compulsion under capitalism is less in amount and less obnoxious in proportion to the compensation than under any other system. The modern workingman gets more for what he does and has greater freedom and variety in the choice of his work than the slave and the serf or the peasant proprietor of the primitive period or the independent craftsman of the succeeding era. There is good prospect of vast improvement in the same direction since man has only begun to substitute the forces of nature for human muscle and the system of distribution of this increased wealth could be made more equitable.

BUT the Socialists have held up before us beautiful pictures of a new order where competition should be eliminated, prizes abolished, inequalities obliterated, dictation unnecessary and compulsion unknown; where a few hours devoted to some light and congenial employment would suffice to provide for all the ease and freedom hitherto enjoyed by a few. Such a land as William Morris's "Nowhere" is as faultless as the author can make it, tho not always so enticing as the author believes. A utopia cannot be attacked—because it does not exist. It is only when it is brought down from the clouds to the solid—and sordid—earth that it can be directly compared with the systems it proposes to supplant.

Those of us who were skeptical of such visions averred that Socialism would fail on those points where capitalism is strongest, that is in efficient management and productivity. We questioned whether such deep-seated traits of human nature as laziness and the disposition to do what one likes best rather than what is most useful to the community could be eradicated and whether such incentives as emulation and self-interest could be dispensed with without serious loss in efficiency. But our Socialist friends accused us of taking too mean a view of human nature and assured us that everybody would work harder and waste less when they were their own masters and when what they produced was all their own. So tho we remained unconvinced we could not prove them wrong for their plan had never been tried.

Now fortunately for us it is being tried on a larger scale than the United States and it apparently is not working well even according to its own reports. Judging from the Bolshevik papers the Soviet system is in danger of shipwreck because of the insufficiency of the necessities of life due primarily to the impossibility of keeping work going continuously and effectively except by sternest compulsion. The first step was taken last January when Lenin, instead of demobilizing the Third Red Army which had defeated Kolchak, converted it into the First Revolutionary Labor Army with Trotzky as commander-in-chief. This was followed by the organization of a Labor Militia by enrolling for service wherever needed all the able-bodied workingmen and making the trade unions into military

machines. Finally it was found necessary to apply forcible means to the peasantry. To show what this means we may best quote from Trotzky's report on the militarization of labor made at the Ninth Congress of the Russian Communist Party, as published in the Moscow *Izvestia*, March 21, 1920:

At the present time the militarization of labor is all the more needed in that we have now come to the mobilization of peasants as the means of solving the problems requiring mass action. We are mobilizing the peasants and forming them into labor detachments which very closely resemble military detachments. Some of our comrades say, however, that even tho in the case of the working power of mobilized peasantry it is necessary to apply militarization, a military apparatus need not be created when the question involves skilled labor and industry because there we have professional unions performing the function of organizing labor. This opinion, however, is erroneous.

At present it is true that professional unions distribute labor power at the demand of social-economic organizations, but what means and methods do they possess for insuring that the workman who is sent to a given factory actually reports at that factory for work?

We have in the most important branches of our industry more than a million workmen on the lists, but not more than eight hundred thousand of them are actually working, and where are the remainder? They have gone to the villages, or to other divisions of industry or into speculation. Among soldiers this is called desertion and in one form or another the measures used to compel soldiers to do their duty should be applied in the field of labor.

Under a unified system of economy the masses of workmen should be moved about, ordered and sent from place to place in exactly the same manner as soldiers. This is the foundation of the militarization of labor and without this we are unable to speak seriously of any organization of industry on a new basis in the conditions of starvation and disorganization existing today. . . .

In the period of transition in the organization of labor, compulsion plays a very important part. The statement that free labor, namely, freely employed labor produces more than labor under compulsion, is correct only when applied to feudalistic and bourgeois orders of society.

IF Trotzky's concluding paragraph is justified and he finds that compulsory labor is more productive than freely employed labor it will indeed be a surprising reversal of all previous experience. What becomes of "the divine right to strike" under this régime may be seen from this item in the *Krasvaya Gazeta* (Red Gazette) of April 18, 1920:

#### THEY HAVE REPENTED

Of the workmen employees who were sentenced for striking in the main wagon shops of the Moscow-Kursk Railway, sentenced to deprivation of freedom for various terms, forty-four have sent in petitions asking to be freed. These railway men write: "We will try to raise the productivity of labor as much as we can, and not to practice sabotage and not to carry on agitation against the Soviet authority." By order of the highest authority, these have been liberated.

The rest of the strikers will doubtless have to suffer "deprivation of freedom" until they, too, promise to be good and work as hard as possible and support the administration. They were lucky to get off so lightly for the death penalty may be imposed for slackers in the labor ranks as for deserters from the army.

But there are evidently some even of the laboring men who cling to the old fashioned idea of freedom. They then must be declared heretics and ruled out of the narrowing circle of orthodox communism. How it

must hurt the feelings of a lifelong Socialist to be officially found guilty of being a bourgeois. But that is how they are characterized by no less an authority than Karl Radek, former Bolshevik envoy to Germany, in the Moscow *Pravda* of April 4, 1920:

#### THE COLLAPSE OF THE LAST BOURGEOIS ILLUSION

The decisions of the Congress of the Russian Communist Party on economic questions represent in final analysis a plan for the organization of labor. They destroy the last bourgeois illusion, the illusion of freedom of labor. And it is precisely because this is the last illusion that these decisions will arouse opposition on the part of all that is bourgeois in the workmen's world and will arouse bitter shouts from those elements who are interested in the existence of bourgeois illusions among the working class. But from the point of view of the working class, the organized overthrow of this last bourgeois illusion represents the most important step taken by Communist Russia since the overthrow of capitalism. . . .

The progressive section of the proletariat, personified in the Communist Party, has handled this last bourgeois illusion, exposing it with the same passion as it struggled with arms in hand against Yudenich and Kolchak. It will put the working masses on their feet to perform this heroic work, just as it led them to the heroism of war. Soviet Russia has lit up for the working masses of all Europe the road of civil war, as the condition of victory over capital. It will now point out to them the organization of labor as the road to the victory of Communism.

The British Labor party, which from the point of view of Mr. Gompers is dangerously revolutionary, is from the point of view of Radek decidedly bourgeois. Ben Turner, chairman of the British Labor delegation which returned from a visit of investigation to Russia in June, says on this point:

They are giving an inducement of extra food, and so on, to sections of the workpeople to increase their output, and they are limiting the Government ration to those who do not give their best production considering their physical condition and general efficiency. There are no strikes, because the Government won't have them. There is not the freedom on the industrial side that we have in this country. Indeed, some of their proposals regarding production and the abolition of the strike would gladden the heart of some employers of labor here, but they do not suit me or some of my colleagues.

Not only has it been found necessary to apply compulsion upon the low-

er level of the industrial scale, but it has likewise been found necessary to apply incentives at the upper level in the way of rewards and the stimulation of desire to surpass others, altho competitive spirit was one of the moral evils from which the Socialists promised to free us in the future. For instance, Shaw, who holds to absolute equality in the distribution of wealth, would be shocked at the Bolsheviks for regulating pay by piece-work, establishing bonuses, and giving high salaries to managers and experts. But the Central Executive Committee of the Russian Communist Party in March laid down the following as one of their principles for the economic reconstruction of Soviet Russia:

4. *Labor Competition.* Every social régime, whether one of serfdom, slavery or capital, had its own methods of labor coercion and labor education in the interests of the exploiting upper class. The Soviet régime is confronted by the task of developing its own methods of procedure for the purpose of raising the intensity of labor on the basis of social economy and in the interests of the toiling masses. Together with the influence of propaganda and moral influence on the toiling masses, together with repressions applied to idlers, parasites and disorganizers, competition is a powerful means of raising the intensity of labor. In a capitalist society competition led to the exploitation of one human being by another. In a society where the means of production are nationalized, competition in work will not destroy solidarity but will only raise the total output of labor. Competition between factories, districts, unions, workshops and individual workmen must form the subject of attentive investigation and careful organization by trade unions and economic organizations. The system of rewards must be one of the most powerful means of creating competition and in accordance with it must be established a system of food supply. While the Soviet republic is short of food, the conscientious and diligent workers must be better provided for than the idlers.

All this means merely that the leaders of Soviet Russia are not such blind and uncompromizing fanatics as they have been accused of being. On the contrary they are rather to be classed as opportunists, for they have shown themselves very adroit at changing their practice to suit the circumstances and then adapting their principles to their practice.

They have run their heads up against a stone wall—which was foolish  
[Continued on page 127]

## Provincetown

By Marie Louise Hersey

All summer in the close-locked streets the crowd  
Elbows its way past glittering shops to strains  
Of noisy rag-time, men and girls, dark skinned,—  
From warmer foreign waters they have come  
To our New England. Purring like sleek cats  
The cushioned motors of the rich crawl thru  
While black-haired babies scurry to the curb:  
Pedro, Maria, little Gabriel  
Whose red bandana mothers selling fruit  
Have this in common with the fresh white caps  
Of those first immigrants—courage to leave  
Familiar hearths and build new memories.

Blood of their blood who shaped these sloping roofs  
And low arched doorways, laid the cobble stones  
Not meant for motors,—you and I rejoice  
When roof and spire sink deep into the night  
And all the little streets reach out their arms  
To be received into the salt-drenched dark.  
Then Provincetown comes to her own again,  
Draws round her like a cloak that shelters her  
From too swift changes of the passing years  
The dunes, the sea, the silent hilltop grounds  
Where solemn groups of leaning headstones hold  
Perpetual reunion of her dead.

At dusk we feel our way along the wharf  
That juts into the harbor: anchored ships  
With lifting prow and slowly rocking mast  
Ink out their profiles; fishing dories scull  
With muffled lamps that glimmer thru the spray;  
We hear the water plash among the piers  
Rotted with moss, long after sunset stay  
To watch the dim sky-changes ripple down  
The length of quiet ocean to our feet  
Till on the sea rim rising like a world  
Bigger than ours, and laying bare the ships  
In shadowy stillness, swells the yellow moon.

Between this blue intensity of sea  
And rolling dunes of white-hot sand that burn  
All day across a clean salt wilderness  
On shores grown sacred as a place of prayer,  
Shine bright invisible footsteps of a band  
Of firm-lipped men and women who endured  
Partings from kindred, hardship, famine, death,  
And won for us three hundred years ago  
A reverent proud freedom of the soul.

# Open the Door to China

A Message from the Japanese Government to the American People

By Baron K. Takahashi

Japanese Minister of Finance

CHINA is one of the great treasure-houses of the world. She is blessed with a vast area of soil populated with 450,000,000 people, and containing inexhaustible natural resources, but has been very slow in introducing modern civilization. Among other drawbacks, the miserable condition of the industrial and transportation systems and the serious political controversies often resulting in the shifting of the reins of government, have considerably hampered her economic development and almost all kinds of industry still remain in a very primitive state. With her rich soil and great natural resources neither developed nor utilized, most of the inhabitants are still satisfied with a low standard of living and the Government suffers from chronic financial distress. Such being the case, it is clearly the duty of more advanced nations to develop her latent resources under the modern system of industry, offering their surplus capital for this purpose. The criticism one so often hears that the Chinese people are constitutionally incapable of operating modern industry is based upon a superficial view taken by those who have no knowledge of Chinese history. In the ages gone by China was the center of a civilization which flowed all over the world. Later on, however, the conservative tendency which she shows in politics as well as in education made her gradually fall back in the race of civilization and prosperity. But China of today is not the China of yesterday. It is worthy of note that China too has felt the wash of the waves of world civilization, and is now awakening in her political as well as her social life, while at the same time her industry stands on the eve of a fundamental reformation. Availing himself of the appointment of the "Committee on Post-War Finances," President Hsu-Shihchang lately called the attention of his fellow citizens to the fact that every great Power is using its best endeavors to meet the economic competition after the war, and declared that were her natural resources duly investigated, developed and utilized, China would certainly be able to play an important rôle among the great Powers. In other words, the only means by which the welfare of China can be promoted is the development of the unexploited treasures of her land. Does not this give a pointer as to what China will be tomorrow? We can already see how this great nation has begun to awaken to a consciousness of its own power and the opportunity seems now ripe to improve her industrial organization, but China, short as she is at present of capital and technical skill, must have adequate assistance from other countries in order to achieve this happy end.

With regard to the national finance of China, the revenue year after year fails to keep pace with the

Baron Takahashi

expenditure, the deficits always being barely covered by foreign borrowings. The necessity of a fundamental readjustment of her financial system has been widely recognized, but up to the present time no actual step has been taken.

The principal measures to be adopted for this purpose may be, among others, reformation of taxation and the monetary system, establishment of Government monopolies and extension of Government undertakings. As the realization of these schemes naturally demands an immense sum of money, the bulk of the funds will have to be obtained from abroad.

In view of the vital necessity of China getting foreign financial assistance for the development of her industry and the consolidation of her national finance, those who desire the welfare of the Chinese people and the improvement of the economic life of the world at large should not hesitate to spare a part of their capital for the benefit of this great land of treasure.

When the great Powers first began the work of rendering financial and economic assistance to China, each of them acted individually and sharp contests between them were frequent. International competition in investment of capital in a country like China where the financial situation is so difficult to gauge and the center of political power can be so easily shifted, is productive of various evils and might even bring about the ultimate financial collapse of the country, and international competition has gradually given way to international coöperation, for which, in July, 1909, a financial group of British, French and German interests was formed. In the following year the United States entered this group, but neither Japan nor Russia, in spite of their specially close relation to China, had an opportunity to participate in it. In autumn, 1911, the revolution was launched at Wuchang which was followed by the fall of Ching dynasty, and with the inauguration of the new republic their urgent financial needs necessitated large foreign loans. In these circumstances both Japan and Russia found it inadvisable to act independently, and with a view to preserving the integrity of China as well as the peace of the Orient, they at last accepted an invitation to enter the four Power group. Thus a six, and not a four, Power group was organized. In 1913, however, with Mr. Wilson's inauguration as President, the United States withdrew from the group on account of a change in her policy toward China.

Altho an international combine had thus been formed for investment in China, it was only for loans of political nature, and those for economic purposes were still left to free competition among [Continued on page 125]

Before the war a good-sized town occupied Vaugouis Hill, hereshown, but early in 1915 the town and the top of the hill were blown off leaving this huge crater. To blind the enemy on the next ridge, one hundred feet away, to the fact that an American attack was impending, divisions of the Second French Army occupied trenches in front of the barbed wire entanglements here shown until September 26, 1918, when Colonel Harry S. Howland's regiment, the 138th Infantry, 35th Division, in the general Meuse-Argonne attack, captured this position

# Covered with Mud and Glory

The First Complete Story of Our Combat Operations

By Captain Joseph Mills Hanson

**T**HE brilliant operation of the First American Army resulting in the suppression of the St. Mihiel salient was, as has already been pointed out, merely preliminary, in a strategic sense, to a greater and far more important attack which was planned against the German front northwest of St. Mihiel, between the Meuse River and the Argonne Plateau. This attack was designed by Marshal Foch, ably seconded by General Pershing, partly to free the fortress of Verdun from the state of semi-investment in which it had lain ever since the first battle of the Marne, in 1914; partly to threaten the important Briey coal fields northwest of Metz but, more important than all else, to cut the great trunk railway line extending from the Rhine at Strasbourg northwest thru Metz, Sedan and Mezieres to Valenciennes. This railway line was the one by which the enemy supplied all of his armies between Metz and Cambrai and it was absolutely essential for his larger troop movements. No trunk lines traverse the mountainous, wooded region of the Ardennes, lying northward of Sedan and Mezieres, and the northern part of the German front, from Cambrai to the English Channel, depended upon east-and-west lines thru Liege, in the narrow neck between the Ardennes and the frontier of Holland.

Marshal Hindenburg and General Ludendorff were, therefore, well aware that the security of their western front depended absolutely upon the uninterrupted use of the Metz-Valenciennes railway and they had spared no pains to make it impregnable to attack, particularly in the

region between Metz and Sedan because, if it should be broken there, their armies along the entire 250 kilometers of front reaching over to Cambrai would be exposed to overwhelming disaster. This region was, in fact, the hinge of the German western front and tremendous but unsuccessful efforts had been made in 1916 to increase its security by the reduction of Verdun. In the section between the Argonne Plateau and Ornes, twelve kilometers northeast of Verdun, all the fortified withdrawal lines, or stellungs, laboriously erected during several years, came together like gigantic cables in what amounted to one continuous fortified zone which was, near the Meuse River, about 18 kilometers deep. Further west these defensive lines spread apart, fan-wise, there being near the English Channel as much as 65 kilometers interval between the front line and the last withdrawal position. Consequently an army attacking between the Meuse and the Argonne would be obliged to plough its way without respite thru the whole succession of defenses which other troops, operating further west, would be able to attack one at a time.

The artificial strength of the Meuse-Argonne front

was based upon a topography lending itself peculiarly to a tenacious defense with the long-range weapons of modern warfare. The forested recesses of the Argonne Plateau, on the west, and of the Heights of the Meuse, on the east, constituted what may be termed gigantic bastions from which masses of artillery could cross their fire over all [Continued on page 121]

This is the fifth of ten articles in which Captain Hanson tells the complete story of what the American troops did on the battle line in France—a series written from a thoro study of the official records and with the background of actual experience overseas. "Up the Line from Cantigny" was published in The Independent of March 27, "Those Desperate Days at Chateau-Thierry" in the April 24 number, "Zero Hour Along the Marne" May 29, and "One Day's Work at St. Mihiel" June 19-26. The others will follow in the fourth issue of every month.

# Why I Like the English

By Preston Slosson

The average Englishman's three favorite characters in history are George Washington, William Wallace and Joan of Arc—victorious enemies! And it requires an almost superhuman virtue to forgive a triumphant foe

THERE is a perfervid sort of patriot who dares not confess to admiring any foreign nation lest he be suspected of unfaithfulness to his own; Columbia being in his view a jealous bride who will not permit a compliment to the golden tresses of Britannia or the saucy locks of French Marianne. Perhaps this feeling is keener with regard to England than to any other country, for we were once a British colony—or, more accurately, a set of British colonies—and any attempt to revive the attitude of colonialism is rightly frowned upon. So let me say by preface that I am not what is called an Anglomaniac, that I never speak of the "mother country" or make remarks about the relative thickness of blood and water, and that I have never set eyes on the Prince of Wales and regard him in any case like Burgess' Purple Cow: "I'd rather see than be one!"

In fact I do not care for the English things on which the Anglomaniac sets special store: cricket, the London fashions, hunting, manor houses, respectful peasants, dignified squires, the House of Lords, the Church of England, Oxford University, and the curious English habit of giving everything a wrong name. I mean the habit which calls the expensive private schools "the public schools," insists that England is a monarchy when every student of political science knows it is really a republic, and refers to the British Empire when what is meant is the Alliance of British Commonwealths. I simply admire England as an American might admire Ireland, Norway, Czechoslovakia or Siam; an admiration that has nothing to do with ties of blood, history or tradition.

It is liberal England that I admire; an England of which few Americans seem to have heard, for even those Americans, such as the Astors, who enter British life do so too frequently from the Tory angle. There is, indeed, not a little to admire about the English aristocracy, but the best thing about it is the vein of liberalism which runs even thru the most conservative classes. The kings and nobles of continental Europe were deliberately haughty in manner, oppressive in policy and class-conscious at all times; refusing to permit social relations with the bourgeoisie or to recruit their numbers from lower social strata. But, in recent years at least, the British kings and nobles have courted public favor by being what is called "democratic," that is to say being as little like kings and nobles as possible. It has become "bad form" to "snub" and thus even snobbishness has become useful by engaging in suicide. Where the Prussian and Austrian aristocracies remained rigid to democratic pressure they were broken like dry wood; but the British aristocracy bent like a live twig before

the forces of the age and has (unfortunately) saved itself.

The real England, however, is not the admirable but perhaps over-lauded squiredom of the conventional English novel; it is the England of the Puritans, of the Bill of Rights, of the Chartist movement, of the *Manchester Guardian*, of the Labor Party, of John Stuart Mill, of Darwin, of Faraday, of H. G. Wells, of Dickens, of woman suffrage, of coöperative stores, of municipal tramways, of the "nonconformist conscience." It is the England which has always been in revolt and yet always moderate and constructive in the midst of revolution. It is the England which has given support to every liberal movement in Europe, Asia and America. It is the England which abolished slavery in her colonies a century ago and sent her warships around Africa to put down the slave trade of others. It is the England which spoke for the revolting American colonies thru the mouth of Chatham and which patiently endured starvation in Lancashire because the workmen had heard the great message of Lincoln. It is the England which was sought by political refugees from every other European country as the only haven of the exile. It is the England which saved Europe from Philip of Spain, from Louis Fourteenth and Napoleon of France, and from Wilhelm of Germany. It is the England which defied Metternich and supported the United States in demanding the freedom of Spanish America. It is the England which welcomed the revolutions of 1848, and which Gladstone forced, by sheer appeal to the national conscience, to break away from the immoral entente with Turkey. It is the England which gave enthusiastic support to the principles of President Wilson and which devoted much constructive thought to the up-building of the League of Nations.

There can be no question of the strength of the liberal current in English life. Let anyone who doubts make a list for himself of the things which are characteristic of England, but less characteristic of continental Europe; for example: free speech, free trade, laissez faire economics, private (as opposed to public) education, the dissenter, the "conscientious objector," local option, colonial home rule, habeas corpus and trial by jury, volunteer (as opposed to compulsory) military service, the Aborigines Protection Association and so forth. Surely this is sufficiently miscellaneous! And yet there is a common thread which unites all these diversities. That which is good in them is the spirit of individual freedom, of good nature, of live and let live. That which we may dislike in any of them is the fault of the same merit; laxity, weakness, indulgence.

The finest [Continued on page 132

"The Virginian rebel who took from the British Empire its most valuable colonies"—But British magnanimity regards George Washington not as an enemy but as a hero

# Ja-di Talks for Publication

Parents and Philologists Especially Invited

By Clement Wood

Author of "Jehovah," "The Earth Turns South" and "Mountain"

Here is Ja-di in her *to*—a frock made by her great grandmother for her great aunt—which she would have you understand is a very different garment from the *shweh*—the dress—of every day

English	Janet	English	Janet	English	Janet
bath }		cup		pin	
bear }	ba	cooky		pillow	
		cushion }	cuh	pig	
book }		curl }		piggy	
bug }	buh			picture }	pi

Two-syllabled words, it will be noticed, often have the fate of one-syllable ones. In the following list, the vowels are nasalized *a la Paris*:

English	Janet	English	Janet	English	Janet
aunt }		man	ma	lamp	la
ankle }	a	hand			
bank }	ba	handkerchief }	ha	one	wuh

More often, there is no trace of the nasal, as in these words:

English	Janet	English	Janet	English	Janet
candy	ca-di	beans	bce	phone	who, fo
pants	pa	pin	pi	pound	pow
pain	pa	nine	ni	moon	moo
cent	sheh				

So much for the general rule. Is this open-syllable method unique with Janet, or do other children—and, indeed, races—share it with her?

Endlicher, in his "Chinesische Grammatik," says "It is, for instance, one of the most characteristic features of the literary Chinese, the dialect of Nankin, or the idiom of the Mandarins, that every syllable ends in a vowel, either pure or nasal." Aha! On a trail at last! Perhaps Janet had a remote ancestor who was Chinese, or at least interested in china. But the rule is largely true of surrounding peoples; until the open-syllable speech reaches its climax in the classic sentence of Annam, *Ba ba ba ba*, each syllable accented differently; which means, on the authority of Muller, "Three ladies gave a box on the ear to the favorite of the prince."

To turn to other races, Hale's "Polynesian Grammar" says of the Pacific Islanders, "In all the Polynesian dialects every syllable must terminate in a vowel . . . . The longest syllables have only three letters, a consonant and a diphthong, and many syllables consist of a single vowel." Bleek, Appleyard, and Hahn, three of the great authorities on South African dialects, say that all the members of the Ba-ntu family, which includes the Kaffir, and of the great Hottentot family, originally ended all syllables on a vowel.

We should be justified in placing Janet's linguistic stage with the ancient youthfulness of China, the lan-

**F**EW sports are as fascinating as the cross-country word-hunting prosaically known as philology. Digging for buried treasure palls beside digging for buried word-roots; and the amazing etymological treasures brought to light outshine the wealth of Ormus and of Ind—ianapolis, even according to the 1920 census. No tongue, from pre-Sanskrit Aryan to the modern dialects of Yonkers, Kalamazoo, and the ouija-board, has been overlooked. Yet, despite this activity, much remains unsolved. And there is a speech near at hand which the word-hounds have largely overlooked, and which offers material aid in these perplexities. That speech is the speech of children.

"When I was a child, I spake as a child," a great teacher wrote his pupils at Corinth. Our question is, how did the child speak? Some scientists find that the stages of growth of the human embryo embody a recapitulation of the growth of the race. Just so the stages of growth in a child's speech throw light on the wanderings of human words; and present, in tabloid form, much of the history of human language.

With this in view, it occurred to the parent of Janet, the voluble subject of this study, to list her changing vocabulary at intervals, as a contribution to the ponderous science of philology. Let us begin by stating that this child is no prodigy. In fact, she was backward in speech, if we are to believe the mothers of her playmates. Why, at fourteen months Gwendolyn Elaine could talk—and at twelve months little Phyllis spoke easily—and, to cap it all, a young cousin, at eight months—(we have her mother's word for it)—articulated distinctly, "I want my dinner, mother dear, if you please." You have heard it all; and so did we. Not so with Janet. Her three vocabularies, here discussed, were listed when she was twenty-two, twenty-eight, and thirty months young. The first one contained forty words; the second, a hundred and twenty-five; and the third, which is not complete, contains more than three hundred and fifty. The accepted psychological test places the vocabulary of a "superior adult" at 13,500 words and of a child of eight at 3,600 words. Perhaps her brother would have been more restrained; but Janet belongs to the speaker sex.

The first general rule in her imitative word-building is that each syllable ends with a vowel. In rare cases, this is nasalized, as in French. Below are typical words, the vowels remaining unchanged:

English	Janet	English	Janet	English	Janet
bed	beh	apple	a	nice	
				night	
bib	bi	cow }	cow	nighty	
		couch }		nine }	ni

During her second summer Ja-di found a *tosh*—squash—growing on a *tosh*-vine. Six months later she called it a *shosh* and eight months later a *whosh*. What will she call it when she is three?

# The Republican Platform

## A Debate by Norman Hapgood and Talcott Williams

### Cowardice and Reaction

By Norman Hapgood

IN putting cowardice first I do not mean to deny that the Republican platform is as reactionary as it is cowardly. I put the cowardice first because it is more obvious. Some attempt has been made to disguise the reaction with words and with planks that deal with matters not in controversy.

Mind you, I do not complain of the platform. If the party chooses to be led by Lodge and Penrose it is as well to have a platform in harmony with those statesmen. If the party chooses to nominate Harding it is better to have a platform that resembles Harding's mind. Platforms are written less to stand on than to get in on.

Take the League of Nations plank. It has been jeered at by independent papers from one end of the country to the other. But why is it not a perfectly good plank, because representative? True, it is meaningless, but so is the policy which it follows. Senator Harding said on September 11 of last year: "I could no more support mild reservations than I could sanction mild Americanism." In the same speech he said: "I welcome the moment when we can go to the people of the United States on the issue as to who is responsible therefor." If Mr. Harding will act like a man and welcome the moment, now that it has come, by sticking to those words, we shall know what the treaty plank means. Penrose is with him. His lofty contempt for the treaty equals his scorn for any other idealism. Idealism is for amateurs. But what about Lodge? Shall we interpret this plank to correspond with the Lodge who said: "The repudiation of the President in such a matter as this is to my mind the humiliation of the United States in the eyes of civilized mankind, and brands us as a people incapable of great affairs, or of taking rank where we belong, as one of the greatest of the great nations." That was at the end of a Republican war, but during the world war it was the same until Wilson seemed likely to get the credit if a League was formed. It was in 1915 that he said: "The great nations must be so united as to be able to say to any single country, 'You must not go to war,' and they can only say that effectively when the country desiring war knows that the force which the united nations places behind peace is irresistible." In 1918 he said: "We cannot make peace except in company with our allies. It would brand us with everlasting dishonor and bring ruin to us all also if we undertook to make a separate peace." Now that all the important nations of the earth who

are eligible, except China, have agreed on the peace and the League, Lodge becomes one of the sponsors for this plank that is the masterpiece among all the planks of cowardice. Is it possible to discuss that plank seriously? Has not the country agreed to call it a straddle, a vacuum, on the most pressing of all subjects? Is the party not guilty of cowardice in the face of the effort to get together to prevent any nation from doing hereafter what Germany did in 1914.

Closely connected with the mean cowardice of the plank about the League is the greedy cowardice of the plank about Mexico. Mr. Hearst seems to be out for a war with Mexico in order to inflict on her the blessings of our civilization, even as Germany in 1914 undertook to inflict her civilization, her kultur, on the rest of the world. The Germans were genuinely grieved that the world could not appreciate the contemplated gift. Senator Fall, Mr. Hearst, and the slightly more prudent people who drew the platform are also grieved and astonished that some of us do not exult over the idea of having a Fall and Penrose civilization forced on Mexico by American boys dying to stain the American name for the benefit of a handful of oil investors. As far as I know, the opinions of Lincoln and Grant on the former war with Mexico are not much quoted by the party which can boast of the membership of those great men.

One more plank will be enough to illustrate the high leadership of the Republican convention as far as our foreign relations are concerned. The speeches of some of the men in the Senate, especially the bitter-enders, almost made me sick with their fulsome noise about the superiority of Americans to the unhappy denizens of all other lands. Well, here is one way the Chicago aggregation undertook to show that superiority: "We recommend that all ships in coastwise trade and all vessels of the American merchant marine shall pass thru the Panama Canal without premium or tolls." Mr. Root is not the most squeamish man in the cosmos, but he said that this attempt to lie and steal our way into a little extra prosperity would make the nation "like

unto a man known to be false to his agreements, false to his pledged words, astute and cunning in his own behalf." It is too disheartening to discuss.

Most of the difficult domestic questions are either ignored or treated in a foggy manner, with a squint toward reaction. The strike clause is not as clear as it might be, but we know that Senator Harding favored

#### An Open Debate on the Issues of the Campaign

The Independent's leading feature for the coming campaign will be a serial discussion of the candidates and the platforms by its editors and readers. As announced in a previous issue, we have enlarged our editorial staff by the addition of Mr. Talcott Williams as advocate of the Republicans and Mr. Norman Hapgood as advocate of the Democrats. In order that our readers may have both sides of pending questions presented not merely in the same periodical but in the same number, the discussion will be carried on as a regular debate for four weeks beginning July 24. Mr. Hapgood will open with an attack on the Republican platform and his article will be given to Mr. Williams in order that the latter may reply to the arguments and finally Mr. Hapgood will be given a short space for a rejoinder. On the following week Mr. Williams will take the offensive and Mr. Hapgood the counter-offensive.

After the issue of August 21 the questions will be thrown open to the floor and all of our readers are invited to join in the debate by sending in brief letters telling frankly what they think of platforms and candidates and how they propose to vote and why. We will publish a large number of such letters and as an inducement we will give a year's subscription to The Independent for every one we print whole or in part. Since the reward is uniform the shorter the letter, the higher the compensation and the more probable that it will be printed. Communications of over 150 words are likely to be cut down or left out. Make one point and make it pointedly. We suggest that our readers keep together the four issues containing the Williams-Hapgood debate so as to get the run of the argument, then after rereading the debate as a whole send in their comments promptly. Manuscripts will not be returned.

# Which Shall It Be?

Cox and Roosevelt  
or  
Harding and Coolidge

© Underwood & Underwood  
James Middleton Cox, the Democratic nominee for President, is now leader of the Democratic party, following a conference held with President Woodrow Wilson on the south portico of the White House a few days ago. Governor Cox wants a frank campaign and a progressive but not radical government

Underwood & Underwood

No porch campaigns for the Democratic candidates! They may not visit every town and crossroads but, according to Mr. Roosevelt, they intend to "know the nation"

Underwood & Underwood

Warren G. Harding, the Republican nominee for President, held a conference recently with two of his most important advisers, Chairman Will Hayes of the Republican National Committee and Governor Calvin Coolidge, Republican nominee for the Vice-Presidency

© Underwood & Underwood

Both Governor Cox and Senator Harding own papers. Governor Cox's are the *Dayton News* and the *Springfield News*, Senator Harding's, the *Marion Star*. All three papers, once pretty good-for-nothing, now play an important part in forming public opinion in Ohio. These newsies are waiting for the noon edition of *The Star*

the anti-strike clause of the Cummins bill without any compensating protection for the employees. Both the platform and the candidate want to reopen the tariff controversy in favor of the artificial trusts and put it back where it was in the days before one of Wilson's greatest reforms took it out of politics. The platform is impossibly long and on safe issues it expresses some sane ideas. It forgot, however, to say anything against either the mosquito or the man-eating shark. The two domestic planks I have just mentioned, plus Mexico and Panama tolls, are enough to show that the platform's heart is true to money. That faith is as secure as its faith to our allies and the world is shaky and low.

## The Real Issue

By Talcott Williams

COWARDICE is an easy charge to make at the opening of any campaign, but it is unwise and ineffective. All parties have their reserves. This is the term I prefer in speaking of the acts of the representatives of half my fellow citizens. The Democratic party is silent on lynching, the civil oppression of the negro, the deprivation of his constitutional vote, the shameless neglect of his education. This is the price Northern Democrats pay for Southern votes.

On the League of Nations the Republican plank is a frank and open compromise. Any "agreement" between nations as to all the various ends and objects for which the Republican platform asks the mutual action of the United States with other nations (as to a permanent court, its decisions, their support and the preservation of peace) is in the nature of a constitution. All constitutions are a compromise.

The Declaration of Independence was not a compromise. Neither was the Great War. One destroyed royal despotism on this continent. The other destroyed royal despotism in Germany and the world. Both jobs were done once for all.

From 1787 to 1789 the same men who wrote the Declaration of Independence and made it good on the battlefield, without concession or compromise, came together to draw a Federal Constitution. The call was a compromise. The Federal Constitutional Convention was a compromise from start to finish. When the Constitution was drawn with the august signature of George Washington, President of the Convention, first on the roll, a compromise was proposed in the shape of a Bill of Rights, accepted under a "gentlemen's agreement" and passed after ratification.

Woodrow Wilson insists on having for the constitution he drew for the League of Nations what was not even asked by George Washington for the constitution "to form a more perfect union" of thirteen free independent states which fought and won the war of independence. Wilson demands that his constitution shall be ratified without any vital change. No constitution should be passed in this fashion. No man is wise enough to draw a constitution to be adopted without any change, save of explanation. What Washington did not ask for his constitution should not be granted to his successor, Wilson, the first of all of the successors of the first President to require a great treaty to be accepted by the Senate without amendment.

The issue before the country is not one of a League of Nations or no League. The issue is whether the most important form for the government alike of nations and of men ever drawn shall be accepted without amendment or change as it comes from its maker, or shall go thru the revision, change and compromise which has marked the constitutional progress of the English-speaking folk for 700 years from Magna Charta to this hour, when one man demands that his wit, will and wisdom shall decide the ringing grooves of change down which a new world shall spin for ages to come.

The League as it was drawn by one man and forced by

him on his party, full of dumb protest against it, or a League revised as have been all our great instruments of rule, by the joint compromise of both parties: this is the issue of the hour. It is a fair issue, so fair that the only way to meet it is to use this quotation and that from Harding and from Lodge. When I remember what fool things I heard said in the raucous debates of months at Washington, I am amazed that so little is found to fling in quotations which in controversy are like brickbats in a fight. They may raise a disfiguring bruise. They neither win nor convince.

Harding, of course, is charged with being a "tool" of this boss and that. So Lincoln was charged with a corrupt bargain to make Simon Cameron Secretary of War, McKinley with being led about by Hanna, Roosevelt by Tom Platt. History does not believe this, nor will it of Harding. He voted to ratify the treaty with the Lodge reservations. As President, he will want still more a treaty which adds to a President's powers.

Why should not the United States do in Mexico what it did in Cuba? But the Republicans ask only for the protection of American rights. Does any one ask for less, except perhaps Woodrow Wilson? Could anything be worse than his Mexican policy? Why did not the Democrats "point with pride" to that? Mexico cannot continue, worse as it is than Cuba under Spanish rule, indefinitely.

The clause on the Canal is a blunder, but it points to a sure end, a free Canal. Current tolls, if abolished, would cost us little if free tolls were offered to the ships of every nation which gave our ships free tolls on their ship canals.

The strike clause called for moral courage. The same courage which drew and passed the railroad bill. The Republican party from its beginning has stood for liberty thru law. It does now thruout its platform, and most of all in its courageous utterance on labor. No fair-minded man will feel that Harding can be called weak when he voted for a bill which did not do enough for labor, did not give compensating protection for employees. When the Ohio Senator cast this vote, he was certain to be a candidate for re-election. Weak men truckle to labor. Labor was out for blood, and still proposes to defeat every man who failed to obey its demands. Neither branch of a Republican Congress hesitated to enforce law and justice. Nor did Senator Harding. The issue here is clear between the two parties. See on the tariff. England and other Ally countries are taking up tariff revision to provide against Germany, which must produce cheaply to provide funds for reparation payments. Can the United States do less than meet this new peril?

## That Wondrous Platform

By Norman Hapgood

THE more one reflects on the Chicago platform the more one feels that detailed analysis of it really belongs not so much to grave publicists as to such talents as, for example, Mr. Dooley's. The Independent's correspondent, Mr. Aiken, however, did pretty well in the issues of July 10, when he reduced it to five words: "Damn Wilson; Dodge the Issues."

It has its points, nevertheless. The elephant is a slow and heavy animal, principally of use in circuses. One of his most familiar circus tricks is standing on wooden objects to which he is not by nature suited. He is careful and can often be seen using his trunk in meticulous investigation to make sure that he is not going to step onto some spot that will let him thru and break either his leg or his neck. In Chicago a platform was constructed on which the most intellectually timid Senator that ever originated in Ohio can walk about safely with absolutely no danger of treading upon an idea. The only good chance of breaking Harding's neck is to scare him off the platform and tumble him down to earth.

When I was a boy I had the usual trouble with Cicero's

*evasit, excessit, erupit.* It all came back to me as I tried to lay my hand on the Republican platform. It was completely evasive. It eluded the most determined search. It seemed to be nothing but a vacuum. Whenever I did find anything I could understand it was on some topic where there is no dispute. "Good old-fashioned folks are they, they say an undisputed thing in such a solemn way." Or it was a subdivision of the "damn Wilson" heading that was as unworthy a misrepresentation as the pretense that Wilson is opposed to the budget system. I am afraid of the structure. If I dealt with it seriously I should be in dread of breaking my intellectual backbone.

The newspapers have been carrying announcements (that look like advertisements) scolding the Democrats for quoting Senator Lodge's statement that a separate peace would be a national disgrace. It is pointed out that Senator Lodge said this away back in 1918, ever so long ago, while we were still fighting, before the Republicans came out fearlessly for victory without peace. Well, Senator Lodge has said so many things about the peace treaty and the League of Nations that we can give up this one, altho Herbert Hoover is one of those who have recently quoted it.

Let us remind ourselves of a few of Mr. Hoover's observations, made as a Republican: "The treaty is now in effect and cannot be scrapped, as so many have urged. . . . The League of Nations Covenant is an essential part of the treaty. . . . All talk of making a new treaty is bunk. . . . A separate peace involves a series of negotiations from a disadvantageous position, not only with the enemy but with all the new states that have been created, and with each of the Allies and the neutrals who have joined the League. . . . The Treaty of Versailles is the web that holds Europe together today. . . . Statesmanship looking to separate peace is plain foolishness—and worse." The Democrats ought to turn this whole statement by Mr. Hoover into a pamphlet and circulate it broadcast, printing with it the League of Nations' planks from the two platforms and Governor Cox's cry that when our boys went to France they did not go with reservations. Senator Lodge claims for the Republican plank that "it has the value of keeping in the party the irreconcilables." Yes, bless its heart, it has that merit and not another. The plank on Mexico is cowardly also, to keep it in general harmony with the whole platform, but its bearing is distinct enough to suit the oil interests and the jingoes. Either we are for Wilson's patience, tolerance and freedom both from money influences and from insolent bully's pride, or we are for greed and aggression under fancy names, preferably the flag, law and order, and American rights. Hence this issue is clear and our voters should realize next November that their decision will have a strong bearing on whether or not we wish to kill a few of our boys, a larger number of Mexicans, and still further to kill the spirit of mutual confidence between nations, particularly the confidence that South America has begun to have in us.

The Republican plank calls the President's policy "wordy." The party wants not words, but deeds. Words are the vehicle by which ideas are exprest and spread. Words are what distinguish man from the beast. Incidentally words, the words of Woodrow Wilson, are what defeated Germany. The President's policy of words instead of guns to Mexico "has earned for us the sneers and jeers of Mexican bandits, and added insult upon insult against our national honor and dignity." So you know what to expect from the Republicans. Does it not make you wish you had never heard of national honor and dignity? If the Republicans come in and start an oil war against Mexico, for our national honor and dignity, will it not tend to make you turn next time in despair to the Socialists? Senator Fall is the leading Republican authority on Mexico. Referring to the Mexican constitution, his report to the Senate says: "None

of the provisions of Article 27 with reference to limitations of rights of property heretofore acquired by Americans, or which may hereafter be acquired, shall apply to Americans except where the limitation is written in the deed, lease or other instrument of title." As it is expressed by the League of Free Nations Association: "No American oil company could have expected even its paid attorney to ask for more."

## Wherefore Art Thou Romeo?

THE Republican Party is officially committed by its platform to "an agreement among the nations to preserve the peace of the world," which it further defines as "an international association." The platform of the new Farmer-Labor Party advocates "a league of free peoples." But neither will have anything to do with "the League of Nations." Words are still despots over meanings.

## "Farmer-Labor" Reactionaries

By John Spargo

THE recent foregathering of various independent, liberal and radical groups in Chicago can hardly be regarded as encouraging in its results by those who believe that the time has arrived for the formation of a new political party. I confess myself one of that not inconsiderable body of American citizens. Except upon the issue of the ratification of the Peace Treaty and the League of Nations, both the major parties seem to me to be about equally unprogressive and lacking in idealism and constructive statesmanship. With the single exception noted, the framers of both the Republican and Democratic platforms seem to have been wholly influenced in their political and economic thinking by the revolutionary changes consequent upon the World War. On the other hand, the Socialist Party, far from being uninfluenced by those revolutionary changes, has been swept by them into a dangerous state of political insanity.

There are probably several millions of voters in this country who believe that the best interests of America and of mankind would be served by the creation of a new party—a party of enlightened constructive radicalism, of political and economic democracy. Truly American in spirit and purpose, such a party could gather up and coördinate and direct much of the social idealism that is now wasted. For one, I do not believe that it is inevitable that every voter who rejects the idea of voting for one or other of the two great historic parties, whose candidates are so like purveyors of last year's almanacs, must accept, as the sole alternative, the necessity of futilely voting for a branch of the Third International directed from Moscow.

To decry and ridicule the attempt to form a "Third Party" there has been much waste of paper and printers' ink during the past two or three weeks. Because certain American citizens calling themselves "The Committee of Forty-Eight"—among them men and women of undoubted integrity of character and high intellectual ability—sought by conference with labor unionists and farmers to bring about the union of the scattered liberal and radical forces upon a common platform, their efforts have been the target for cheap and puerile witticisms. Yet anybody reading the accounts of the several separate but affiliated conventions in Chicago with intelligence and discernment might well wish that there had been in the Senate during the last year a tithe of the moral sincerity and the genuine patriotism that were displayed by many of those who participated in those conventions.

So much ought to be said in justice to men whose praiseworthy but unsuccessful efforts have been subjected to much unmerited derision and scorn. I say "unsuccessful efforts," because there can be no substantial doubt that the attempt of the Committee of Forty-Eight to bring

# The American Cup Races

Two victories for the challenger and one for the defender was the score when The Independent went to press, with a fourth race scheduled for the following day off Sandy Hook and a possible fifth race for the day after

Paul Thompson

Sir Thomas Lipton is a good loser. After the third race, which was won by the defender "Resolute," Sir Thomas gave three rousing cheers for the American crew. He is here shown talking to some of them

Paul Thompson

Grand stand seats for the cup races were on planes, blimps and liners. Disaster, however, overtook the sight-seers on "C-10," a naval blimp dirigible, which fell 3000 feet into the bay

Keystone View.

Both the first and second races were won by "Shamrock IV," Sir Thomas Lipton's green scow. The "Resolute," America's white defender, might have won the first race, in which she was ahead, if her halyard and mainsail had not broken

about the union of all the independent liberal and radical forces in a single party was about as complete a failure as their worst enemies could have predicted or desired. The so-called Farmer-Labor Party is a poor little runt of a mouse to come from so big a mountain. A "Farmer Party" from which the great farmers' organizations, including the Non-Partizan League, hold aloof can only be a joke to the politicians of the old parties; and a "Labor Party" from which the American Federation of Labor holds aloof, and which is actively opposed by most of the officers of that organization and the greater part of its rank and file, can be no more than a companion joke to the other. Even two jokes don't make a political party.

When one reads the platform of this aborted Farmer-Labor Party it is easy to understand why so many of the delegates to the convention from which the document emanated wanted to name Mr. Debs as the party's candidate for the presidency. Except for verbal changes, apparently laboriously contrived, the platform is essentially the same as that of the Socialist Party. This is not surprising in view of the fact that many of the leading spirits among the "Labor" wing of the Farmer-Labor Party are ex-members of the Socialist Party. Even more striking than the identity of the two platforms is the parallelism of the resolutions adopted by the two parties further defining their respective positions upon questions not dealt with in their platforms. In the circumstances, one is compelled to wonder whether the leaders of the new party can possibly seriously expect to accomplish much more than to split the Debs vote. So far as can be judged from its formal declarations of purpose and policy, the Farmer-Labor Party must be regarded as another Socialist faction. Votes honestly and intelligently approving that purpose and policy ought to be cast for Mr. Debs, in common decency and fairness. He is not only entitled to them by reason of his priority, but also because he has suffered, and is still suffering, for his advocacy of that purpose and policy. It will not be at all surprising if such men as Duncan Macdonald and Max Hayes—both old Socialist Party members—reconsider their position and decide that the logical and consistent course for them is to support Debs.

In the platform of the Farmer-Labor Party, and the resolutions—so far as the text of these has been published in the daily press—there is apparent the same irresponsible demagoguery, the same tendency to exalt bombastic words above sober realities, and the same lack of sequential and consistent thinking as contributed so largely to the degradation of the Socialist Party. It has been the habit of Socialist parties here and abroad to declare that "the people are kept in poverty" for so long that it has become a tradition. Never was this so little true, as a generalization, as in the United States today, but the tradition weighs heavily upon the new party. Tho it is nowhere so stated in forthright and unequivocal language, by implication the platform demands rejection and nullification of the Peace Treaty and the League of Nations. Of course, this party—like the Republican standpatters in the Senate—is in favor of another kind of league. Its platform, as published in *The Times*, declares:

We stand committed to a league of free peoples, organized and pledged to the destruction of autocracy, militarism and economic imperialism thruout the world, and to bring about a worldwide disarmament and open diplomacy, to the end that there shall be no more kings and no more wars.

Precisely what this means in an American political platform is left to conjecture. It would seem to mean that the Farmer-Laborites (or should it be "Farmerites-Laborites"?) pledge themselves, and their elected representatives, should there be any, to oppose the entrance of the United States into any league unless all its members are "pledged to the destruction of autocracy" and to bring about worldwide disarmament and open diplomacy "to the

end that there shall be no more kings and no more wars." If the people of Belgium, Italy or Great Britain, for example, should decide in their own way that they prefer to keep their limited monarchical government, rather than to adopt the republican form of government, we must say to them, if we are to accept this declaration: "You cannot enter our league, because you are not pledged to the abolition of kings." It is quite clear that the new Farmer-Labor Party is opposed to the only League of Nations now within the sphere of practical possibility. In this it stands with the militarists and monarchists of Europe and our own reactionaries in both the major political parties.

There is much that is admirable in the platform of the Farmer-Labor Party, much that is thoroly consistent with the best traditions of American democracy. But this does not and cannot hide the fact that upon the greatest issue now confronting the American people, the issue that will perforce dominate the campaign, the new party has taken a position that is reactionary and subversive of the best interests of all who toil, whether in industry or agriculture.

## Curiosity

We wonder what Senator Harding is now thinking about Governor Clement of Vermont.

## A Case for Arbitration

As in the case of the Republicans, so in that of the Democrats, we must interpret their platform declarations in respect to the League in the light of what their representatives in authority did when the League was dealt with. A two-thirds majority of Republican Senators voted for the League with the Lodge reservations. We have every reason to expect, therefore, that they will do so again if opportunity offers, and that one of this two-thirds, if he be elected President, will give them that opportunity.

WILLIAM HOWARD TAFT.

Both Republicans and Democrats in their platforms have indulged in the usual political verbosity, but nevertheless these platforms, in direct opposition to each other, sharply define and clearly present the question for decision in the November election. . . . Both parties reject the pleas for the adoption of the League with reservations, the Democrats because they were for the League as presented, and the Republicans because no reservations devised by the human mind could anticipate the contingencies which might arise in the future from an instrument of such potential possibilities for harm.

HIRAM JOHNSON.

**E**ITHER a former President of the United States or a distinguished Republican Senator will cast his vote this November under a serious misapprehension as to the party policy and the meaning of the Chicago platform. Ex-President Taft declares that the Treaty plank means "the League with the Lodge reservations"; Senator Johnson declares that by this same plank the Republicans "reject the pleas for the adoption of the League with reservations." Only one man alive can decide this controversy and make plain the real meaning of the Republican platform. Senator Harding, it is your move!

## A Hint to Cartoonists

**I**N our political zoo we have the Republican elephant, the Democratic donkey, the Tammany tiger, the somewhat shop-worn Prohibition camel and the skeleton of the extinct Bull Moose. But if every little party is going to be accommodated with a totem the menagerie must be enlarged. The militancy and gregariousness of the Socialists might be symbolized by the bee, which lives in hives and which stings you and which buzzes a lot. The Socialist Labor Party buzzes and stings too, but it is much smaller; perhaps the mosquito would be appropriate. The Communist and Communist Labor parties seem indistinguishable to the outside world, but they hate each other so much that different emblems must be found for them; perhaps a Russian bear and a Russian wolf would indicate their

Bolshevist affiliations, and they could draw lots to see which would be which. The Farmer-Labor party might well be typified by a centaur: the blend between the laboring man and the agricultural horse. For the Single Tax party we suggest the crane or any other bird that makes a habit of relying on one leg to sustain its weight. The Committee of Forty-Eight might be represented by a centipede with one leg for each committeeman and each leg starting off in a different direction. We do not insist on any of these proposals, but we do insist that the opponents of the League of Nations be typified as the ostrich, which hides its head in the sand to shut out the rest of the world from its vision in the fond belief that thereby it becomes invisible to the rest of the world.

### Cox vs. Knox

Campaign poets regret that the Republicans did not nominate Knox.

## If We Were Ireland

By Thomas Steele

**F**EBRUARY 28, 1920—The United Kingdom of Great Britain and America is in a terrible state. Lord Lieutenant Geddes at Washington Castle has notified the Secretary for American Affairs at London that the Independent America Party will send no representatives to Parliament, but will hold a Congress of its own. It has chosen a "President," a former Princeton professor named Woodry O'Wilson, who is now in Japan raising funds to finance the revolution.

March 17—Columbia University trustees voted today to drop English from the curriculum and to revive the native American language. There is some dispute as to whether some one of the aboriginal Indian tongues should be recognized, or the more modern Hoosier dialect of Indianshire. A third faction believes that in the immortal works of O'Henry, the essays of Mr. Dooley and the delicate fairy tales of George Ade the true linguistic genius of the race is to be found.

April 1—The County Council of Illinois proclaims allegiance to President O'Wilson, whose latest address is rumored to be either Bangkok, Siam, or Teheran, Persia, and to the Independent Congress which is now in session in Sonora, Mexico. All patriots are required to dress in red, white and blue and to carry sprigs of the national golden rod under penalty of arrest.

April 2—Viscount Lodge of MacHachusetts, on behalf of the Royal, Loyal, True Blue, Strictly Protestant Order of the Orangemen of New England, issued today a proclamation denouncing the action of the Illinois County Council and asserting that the real purpose of the rebels is to establish the Spanish Inquisition and to massacre all Protestants. He concluded with the following loyal sentiment:

If Great Britain does not protect America from the Americans we will shoot every policeman that stands between us and the rebel foe! We cling loyally to the crown of England even if we have to beat down that crown about the ears of the indifferent monarch and the venal ministry who have abandoned us to our fate!

The aggressive "loyalty" of the Orangemen of the industrial provinces of northeast America is almost as embarrassing to the British as the open rebellion of the south and west. If "Home Rule" is so much as whispered the loyalists trumpet open defiance to the British Government.

May 15—As General Pershing was out fishing on Lake Michigan ("Michigan mavourneen," "By Chicago's rocks and rills"—every reader of American literature will recognize the environment) he was kidnapped by the rebels. An order has been issued to all loyal generals not to leave their homes after nightfall.

June 30—The elections will be lively this fall. The Independent America Party has put up for President County Councilman Shamas M. Ceoughghaich (pronounced Cox) of O'Hio. Its platform denounces the Nationalist Party as "the catspaw of the British lion." The Nationalist Party has nominated Mike MacHarding, member of Parliament from Marion Borough, and has designated the Independent America Party as "offscourings from the iron heel of British tyranny." Neither party seems to have kissed the blarney stone very earnestly of late.

July 4—A grand patriotic demonstration in honor of the famous "rebellion of 1776" took place today. Many Englishmen have come to wish that it had succeeded! The celebration was an orderly one compared with last year's. Several hundred people were killed with the fireworks and nearly as many by the instruments used in the brass bands, but neither the Orangemen nor the Nationalists used tanks or airplanes.

The Fourth of July oration by Lord Mayor Hylan of New Cork created great enthusiasm. It ran in part:

Remember the death of Nathan Hale! Remember the Boston tea party! Remember the egg of Columbus! Remember in general everything that happened more than a century ago! Think of the cruel laws of 1660 and the atrocious persecutions endured in 1740! Never mind the petty details of today but cast your patriotic eyes back to the days of the remotest past when Pocahontas saved Captain John Smith and the Viking keel first grated on the sands of the New World. Turn backward, turn backward, O time in your flight; Revive the Middle Ages just for tonight!

This was felt to be in the very spirit of the modern revolutionary movement.

July 15—Search for firearms reported complete in Saint Louis.

July 16—Thirty policemen shot in Saint Louis.

July 20—Japan refuses to join the League of Nations. About a hundred million Americans having emigrated to the Far East in consequence of the potato famine of 1848 the American-Japanese vote must be reckoned with by Oriental politicians.

August 1—The Independent America party splits. The followers of Ceoughghaich (Cox) insist that the Rattlesnake flag of the rebellion of 1776 is the only true national emblem, whereas the MacAdoo faction hold that the Pine Tree banner of the same rebellion is really the more ancient. Both agree that the Stars and Stripes is too modern. The Orangemen propose the British flag with a union showing an orange boot trampling on the Papal tiara.

August 4—The American question referred to Parliament.

August 5—The American question referred to a special Convention.

August 6—The American question referred to the League of Nations.

August 7—The American question referred to a ban-shee, as the only individual in this world or the next likely to understand it.

## The War in the East

**W**HEN the Poles were invading Russia we watched the war with somewhat divided sympathies. It was democracy going up against the reactionary oligarchy known as Bolshevism, but it was an imperialistic democracy intent on removing its neighbor's landmark. But now that Poland fights with her back to the wall we can once more give our moral support to the Republic on the Vistula. Poland may not be good enough to interfere in the destinies of Russia, but Russia has never been good enough to rule the Poles. And who is going to speak a word on behalf of the innocent bystander, the Lithuanian and the Ukrainian, whose fields are being trampled by the rival Russian and Polish armies?

# The Story of the Week

## Too Many Cooks at Chicago

THE attempt to organize a third party at Chicago in the convention called for July 10 served to prove the truth of the old adage that "too many cooks spoil the broth." First of all there was the Committee of Forty-Eight, an organization of liberals desiring a simple platform calling for the abolition of economic privilege and the restoration of civil liberties. Secondly, there was the Labor Party, a group of trades unionists hostile to the leadership of Mr. Gompers and anxious to fight the election on a "class-conscious" basis. Thirdly, there was the Non-Partizan League, not directly represented as a national organization but closely in touch with the other groups and ready to affiliate if its own desires were adequately met. Fourthly, the Single-Tax group, wedded to its rigid formula, but pleased to find something resembling it in the plank denouncing speculation in land in the platform of the Committee of Forty-Eight. Two military organizations of a radical slant, the World War Veterans and the Private Soldiers' and Sailors' League, were represented; also the American Party of Texas and the American Constitutional Party. There were also outside forces viewing the events in Chicago with sympathetic interest. Senator La Follette and his group of radical and pacifist Republicans from Wisconsin and the Dakotas were expected to join the movement for a third party. The Hearst newspapers gave encouragement. The Irish-Americans, disappointed by the inadequate Irish plank in the Democratic platform, were hopeful. Many Socialists, discontented with the policies of the Socialist Party, were pleased with the prospect of a radical labor party. The relics of the old Populist and Progressive movements and many radical Republicans and Democrats and independent "intellectuals" thought that American liberalism was inadequately represented by Harding and by Cox. Perhaps it was an impossible task to blend these many elements into a common organization.

The Single Tax group was the first to secede. Afraid of the possible nomination of Senator La Follette and disheartened at the adoption of a platform containing many "paternalistic" planks, they withdrew and nominated a ticket of their own, with Robert C. MacAuley, a Philadelphia journalist, for President and R. G. Barnum of Cleveland for Vice-President.

The Labor men put thru their own platform in spite of

### A political catastrophe

protests from the more conservative members of the Committee of Forty-Eight. The platform adopted was almost as elaborate as that of the Republicans and Democrats and almost as radical as that of the Socialists. It demanded the restoration of free speech, election of federal judges by the people, equal suffrage, direct legislation and the recall, withdrawal of the United States from the Treaty of Versailles, recognition of the Irish Republic and of the Soviet Government in Russia, relinquishment of the Philippines and other American colonies and dependencies, "a league of free peoples" in place of the League of Nations, democratic control of industry, public ownership of "all public utilities and natural resources," increase of the Federal income tax, payment of a bonus to veterans of the war, collective bargaining and the right to strike, the eight hour day, old age pensions and workmen's compensation against industrial disability. The Labor group also secured the adoption of a class name, the "Farmer-Labor Party," in spite of the desire of the Committee of Forty-Eight for some more general designation which would make an equal appeal to radicals of all classes. As the Non-Partizan League has not yet officially endorsed the new party it is practically the Labor Party under a new name and the "Farmer" stands for hope rather than realization.

Senator La Follette refused to run on the platform adopted and the nomination was given on the second ballot to Parley P. Christensen, a lawyer of Salt Lake City. The labor leader, Max S. Hayes of Cleveland, was nominated for Vice-President. Some members of the Committee of Forty-Eight decided to stay with the new Farmer-Labor

## COW AND COOLIDGE

How is that for an alliterative ticket? The cow occupies the foreground but the modest Governor is making her give down with the same steadfast efficiency that marked his political career

Party, but others, including such well-known radical leaders as Amos Pinchot, Allen McCurdy and George L. Record, bolted the convention. In addition to the five old parties, the Republican, the Democratic, the Socialist, the Socialist Labor and, probably, the Prohibition Party, there will be at least four new parties in the field this fall, the Communist and Communist Labor factions, the Farmer-Labor Party, the Single Tax Party, and possibly several more if the secessionists from the Chicago convention decide to nominate rival tickets.

## Clement the Inclement

IN spite of a direct personal appeal from the Republican nominee Governor Clement of Vermont has definitely refused to permit the legislature of his state to vote on the nineteenth amendment in a special session. He was of the opinion that "a Legislature should not pass upon a question which has arisen since their election, and upon which their constituents have had no opportunity to express themselves." He admitted that the recent decision of the Supreme Court in the case of Ohio made it perfectly legal to call the Vermont legislature into special session to consider the nineteenth amendment, irrespective of the constitutional law of Vermont, but he objected to the decision of the Supreme Court on grounds of public policy as an invasion of the sovereignty of the individual states. He even permitted himself the startling statement that "As it stands and is interpreted by the Supreme Court today, the Federal Constitution threatens the foundation of free popular government."

Senator Harding was much disappointed over the failure of his efforts to secure ratification of the equal suffrage amendment by the vote of a Republican state, tho he declared that the important thing was for the amend-

ment to be enacted before November even if the honor of completing ratification fell to a Democratic legislature. He pointed out that twenty-nine of the thirty-five states which have taken favorable action were Republican and that only one Republican legislature, that of Delaware, had voted against it. But apparently the only remaining chances are Democratic. Vermont and Connecticut, Republican, cannot ratify this year because of the hostile attitude of the state Governors. Tennessee, North Carolina and Florida, all Democratic, have still a chance to act. The suffragists are hopeful of getting either Tennessee or North Carolina as the necessary thirty-sixth state. That is certainly the only essential step, as the attempts of anti-suffragists to set aside the action of the legislatures in Ohio, West Virginia, Missouri and other states, on various technical grounds, have been defeated in every instance by the courts.

## Japanese in California

THE Japanese question in California has reached an acute stage thru the issue of a lengthy report by the State Board of Control, reviewing the increase in population of Chinese, Japanese and Hindus since 1910, and the amount of land now under their control thru ownership and lease. In view of the representations of this report Governor Stephens has appealed to Secretary of State Colby for Federal action to meet the situation. Without the figures of the last census, the increases in population of Orientals are determined from annual reports of arrivals and departures thru the port of San Francisco and the record of births and deaths. These indicate a decrease of 8.2 per cent in the Chinese population on the basis of

© Kadel &amp; Herbert

## SKIING THE SKIES

This airplane is equipped for crossing the snow-clad Alps. Instead of the usual wheels underneath it has skis so that it can rise easily from the ground if it happens to land in a snowbank or on a glacier

the census figures of 1910, an increase of 33½ per cent in the Hindu population and of 111 per cent in the Japanese. There are two sources of inaccuracy in these results. Many of the Chinese and Japanese resident in California in 1910 and later immigrants have moved out of the state. The census figures of 1910 were considerably below the population at that time acknowledged by the Japanese in their own reports. The surprising increase in the number of Japanese results from a large birth rate, as well as from a considerable net addition of immigrants. The excess of arrivals over departures for the ten-year period is 25,592. Japanese laborers returning after a visit to Japan numbered 18,217. It is noteworthy that of the total immigration since 1910, about 60,000, 28,000 came from Hawaii, and 27,000 returned to Japan. The transfer of such a large number from the island territory of the United States to the mainland brings an added burden to California, but is not the fault of Japan. It is probable that most of the departures of Japanese were to Japan

rather than back to Hawaii, so the net increase directly from Japan is relatively small. It is not fair to charge that Japan has been lax in observing the "gentleman's agreement" when half of the arrivals and probably very few of the departures have been Japanese residents in Hawaii.

Figures given by the State Board of Control show 87,279 Japanese in California. The Japanese Association of California published in 1918 the results of a special census made by their organization, showing nearly 70,000. With the increase by immigration and births since then there would probably be an admitted population of 80,000. The difference between this and the figures of the State Board is doubtless due to removals from California to Southern Idaho and Utah, where there has been a very large increase of Japanese population since 1910.

The land question is quite as serious a problem as the increase in numbers. Chinese hold under lease or contract, 85,181 acres in California, Hindus 86,340, Japanese 383,287. The amount owned by Orientals is 88,944 acres, and 1593 city lots, of which the Japanese have 74,769 acres and 1036 city lots. The total acreage occupied in the state is 3,839,500, making that occupied by Orientals, either owned, leased or farmed by contract, 16 1/3 per cent.

## The Unpacific Ocean

THE panic in California over the growing Japanese immigration and the leasing of land by Japanese residents of the country has brought about a disagreeable state of tension which is worrying the sober minds and infuriating the unsound minds in both the United States and Japan. Legislation is pending in California which would prevent the purchase or even the leasing of land by a subject of the Mikado. The Governor of California has requested the Federal Department of State for better protection against Oriental immigration than is afforded by the present "gentleman's agreement" between the two countries. On the other hand, it is understood that the Japanese Government has made informal protest against the proposed California land laws.

The British-Japanese alliance has been temporarily renewed in order to permit negotiations for its revision. The British Dominions strongly desire the insertion of safeguards against Japanese immigration, and the British Government will consult Dominion representatives on this and other points before extending the alliance over any considerable term of years. The Chinese Government also has raised objection to certain clauses of the Anglo-Japanese treaty.

Japan is also absorbed by the negotiations with China over the Shantung rights claimed under the German treaty, by fights with Korean bandits along the northern frontier of Korea, and by the unsettled condition of eastern Siberia. It is reported that the Japanese have agreed to evacuate the Trans-Baikal region of Siberia; but will remain in occupation of northern Saghalien and Nikolaievsk. In view of the many problems pressing on the Japanese Government, the budget for new warships this year will come to more than \$22,000,000.

## Railwaymen's Pay Goes Up

IN June President Wilson appealed to the Railroad Labor Board for quicker action on the new wage schedules. The Brotherhoods were getting restive and making plans for a strike if the decision were indefinitely delayed or unsatisfactory when issued. They felt that in disavowing the "outlaw strike" after the railroads were returned to private control, and in waiting for many months the final decision of the Labor Board, they had at last earned a verdict and favorable one. At length July 20 was fixed as the date of the award.

The decision of the Labor Board grants about three-fifths

of the increase asked for by the unions. Increases averaging 21 per cent over present rates of pay and amounting in the aggregate to about \$600,000,000 were conceded. As practically all classes of the two million railway workers in the United States benefit considerably from the increases, this is equivalent to saying that the average railway worker is to get about \$300 a year over his existing rate of pay. The largest proportionate increases go to the more poorly paid ranks of labor. The decision is retroactive to May 1, 1920.

Some of the railway corporations fear that they will not be able to meet the new salaries without retrenchment. The Pennsylvania Railroad Company announces that it intends to dismiss 12,000 men in its eastern region. Clerks, shopmen and maintenance of way men make up the bulk of those affected. Many of these men were taken on temporarily during the war to meet emergency needs and their services are no longer necessary to the present business of the company.

## The Spa Settlement

A CRISIS in western Europe has once more passed—or been postponed. Germany and the Allies have reached a basis of compromise with respect to Germany's payment of indemnity in coal. Germany agrees to furnish 2,000,000 tons of coal a month for the six months beginning August 1, 1920. The food and living conditions of the German coal miners are to be improved. An agreement is to be made for the distribution of the coal mined in Upper Silesia, disputed by Germany and Poland. Germany will get a loan, valued at about \$100,000,000 based on the value of her coal deliveries. Hugo Stinnes, the German coal magnate, denounced the Allied terms as wholly unacceptable and prophesied that they could never be enforced. However, the Allies have still a card to play. They reserve the right to occupy German territory if there is any attempt at evasion of the Spa agreements on disarmament and coal indemnities.

Reparations, other than the coal indemnity, are still largely undetermined. Further conferences between the Allies and Germany will be necessary to reach a settlement on many points. The Allied Premiers agreed that reparations paid by Germany should be distributed among the belligerent nations in the following proportion: France, 52 per cent; Great Britain, 22 per cent; Italy, 10 per cent; Belgium, 8 per cent; the balance divided among Serbia, Rumania, Poland, Japan and Portugal. The payment to Belgium is additional to her priority right to the payment of her war loans from the Allies. Premier Lloyd George expressed deep regret that the United States was not officially represented at the Spa Conference.

It would have been easy for the Allies to have imposed

Underwood & Underwood

A ROYAL SUICIDE

Prince Joachim, the youngest son of the former German Kaiser, brooded too much on the tragic destiny of the House of Hohenzollern

severer terms at Spa by the same method used to force German compliance with the compromise terms actually agreed on—the threat of military force. But Germany's very weakness has become her ally, and the Allies are unwilling to push the nation to desperation. With Poland already collapsing under Bolshevik pressure, another revolution in Germany might bring Bolshevism at one leap from the Dnieper to the Rhine, and the hope of any indemnity whatever would be gone until order was once more restored throughout Germany. There is the equal and opposite danger of spurring German national spirit into a royalist reaction. Such straws in the wind as the proposal to reimburse the Hohenzollerns for their loss of property, the truculent behavior of Hugo Stinnes at Spa, and sundry alleged insults to allied officials in Germany, show that there is a tendency toward reaction with which the infant republic must reckon. Republican institutions are insecurely bolstered up by the pressure of Prussianism to the right, almost exactly counterbalancing the pressure of socialism on the left, and at any moment the balance may turn one way or the other.

## The Spoils of the Turk

**W**ILL Turkey sign the peace and if she does will the Treaty be more than a scrap of paper? Damad Ferid Pasha, Turkish Grand Vizier, favors signature of the Treaty, but two members of his cabinet have resigned rather than consent. The extreme nationalist party, organized under Mustapha Kemal Pasha, is openly at war with the Greeks, the Armenians and the Allies and openly in rebellion against the existing Turkish Government. The Bolsheviks are reported to be cooperating with the Turks in the campaign against Armenia. The Nationalists threaten the Turkish peace commissioners with death if they sign the Treaty.

To force compliance with the Treaty, the Allies have delivered a severe ultimatum to the Turkish peace commissioners:

If the Turkish Government refuses to sign the peace—still more if it finds itself unable to reestablish its authority in Anatolia or give effect to the Treaty—the Allies may be driven to reconsider this arrangement by ejecting the Turks from Europe, once and for all.

In other words, not only the Turkish Government but the rebel Nationalists are warned that the principal clause of the Treaty in their favor, the retention of Constantinople as part of the Turkish Empire, may be annulled by further resistance to the conditions imposed on them.

Unfortunately, as the Turks well know, the brave words of the Allies conceal important divergences of policy. The Greeks and Italians are again at odds over their respective spheres of influence in Anatolia. The French and Arabs actually came to blows over the occupation of Syria. Under pressure of a French invasion Feisal, the Arab King in Syria, consented to acknowledge a French mandate in Syria, but protested against a French military occupation.

### A TAME TURK

Damid Ferid Pasha, the gentleman in the Turkish headgear, agreed to the severe terms of peace imposed by the Allies. The extreme Turkish Nationalists have threatened him with death on his return to Turkey for not resisting the peace treaty

Morris for the George Matthew Adams Service.

### But can they make him drink?

The British are seriously embarrassed by their occupation of Mesopotamia. The French are putting forth renewed claims to the oil bearing region of Mosul, and the Government has been attacked by political opponents for sacrificing French interests to British friendship in this matter. The Turkish Nationalists and the Bolsheviks threaten invasion and there are stirrings of discontent among the Arab population. The London Times estimates that the British are maintaining an army of 88,500 British and Indian troops in Mesopotamia and Persia. This is a high price to pay, even for oil wells.

## Civil War in China

**A**T the very time when China most needs a single, stable government for negotiation with Japan and other Great Powers and to protect her frontier against the menace of Russian Bolshevism, she is caught in the network of a civil conflict between rival generals. The chief antagonists are General Tuan Chi-jui, former Premier, head of the An-fu faction, and General Wu Pei-fu, chief of the Chi-li faction. Between these contending forces, and the ambitious efforts of many other generals who take sides with one party or the other, or fight for their own hands, President Hsu Shih-Chang maintains with difficulty a nominal authority over the vast expanses of the republic and fails altogether to make that nominal authority equivalent to real power. Japan and the other Great Powers are officially neutral in the Chinese civil war, but they have endeavored to prevent the capture of Peking by any of the rival factions in order to safeguard the lives of foreign residents.

## Mexico Rounds Up Rebels

**T**HE shade of Carranza will watch with a certain complacent self-satisfaction the difficulties of his successors in pacifying Mexico. New rebellions crop out every week or so, just as they did under all the former Mexican régimes. It is due to the Government to say it is meeting these outbreaks with firmness and a considerable measure of success. Villa

offered to abandon his insurrection and adhere to the existing Government on condition that he retain the rank of general and the command of 500 soldiers in Chihuahua. The Government refused his terms and demanded unconditional surrender. Civil war was renewed, an initial success near Parral falling to the Federal armies.

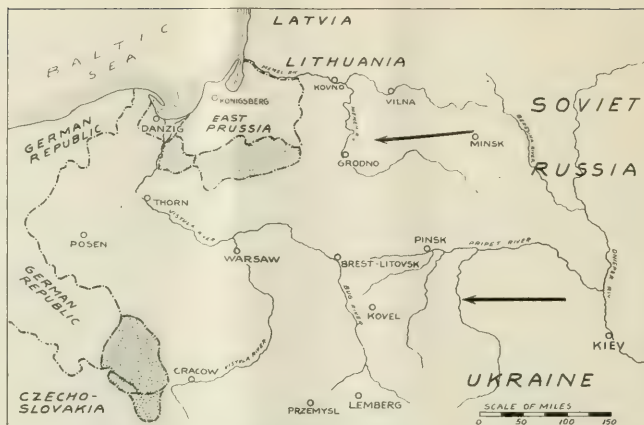

General Pablo Gonzales, who had made common cause with General Obregon against President Carranza, attempted to stir up a new rebellion in the state of Nuevo Leon in north-eastern Mexico. He was captured near Monterey and placed on trial for treason before a military court. This insurrection was stamped out before it got fairly under way, but Gonzales was set free after conviction by a special pardon from the Government.

Passing from military to civil politics, the Obregon-De la Huerta Government is opposed by a newly organized political party known as the National Republican. Its platform is the restoration of the old constitution of 1857 in place of the reformed constitution put into effect by the partizans of Carranza. Behind the new party are the conservative elements who were powerful under Porfirio Diaz and who dislike the radical ideas embodied in the new constitution and the whole atmosphere of revolutionary rule; the Catholic clergy, who wish to abolish the anti-clerical laws enacted under Carranza, and some of the oil interests, who oppose the constitutional provisions restricting the property rights of foreigners in Mexico. General Dominguez is favored by the new party as its candidate for President. Whether the National Republicans will remain content to vote under conditions fixed by the Government or will appeal to the sword, as other opposition factions have done, remains to be seen.

## The Bolivian Revolution

**Y**ET another Latin-American republic has been visited by revolution. President Gutierrez Guerra of Bolivia and his cabinet have been overthrown by an insurrection headed by Bautista Saavedra, a former Minister of Public Instruction. The army supported the revolutionists and little serious resistance seems to have been offered to the coup d'état. The new Government deported ex-President Guerra and his chief adherents.

As a mere incident of the internal history of Bolivia the revolution would be of little importance, for Bolivia is not one of the Latin-American countries which has attained political stability. But the real significance of the Bolivian revolution is its entanglement with the more serious issues of international politics. For many months there has been an acute diplomatic controversy, involving Chile, Peru and Bolivia, over the possession of the northern provinces of Chile. Bolivia, a land-locked state, covets a seaboard on the Pacific. The Guerra Government desired to obtain an outlet at Arica, now held by Chile but claimed by Peru. In March of this year feeling between Peru and Bolivia ran so high that there were popular outbreaks in both countries and the war clouds hung dark over the Andes. The new Government has brought into office with it an alternative

BELEAGUERED POLAND

This map shows the war zone in the Russo-Polish conflict. The western frontiers of Poland are well defined, save for the shaded areas which are disputed with Germany or with Czechoslovakia. In the east the Poles claim a protectorate over Lithuania, White Russia and Ukraine. Now the tide of battle sweeps westward over the disputed lands and Poland is threatened with an invasion from the northeast, in the region of Minsk and Vilna, and from the southeast in the region from Kiev to Lemberg

to see that the frontier is properly guarded.

## Reds Take Vilna

**T**HE fortunes of war remain adverse to Poland. The Bolsheviki continue their advance in the north thru Lithuania and in the south thru White Russia and the Ukraine. In substance the Bolsheviki have rejected the offer of mediation advanced by the Allies. They refuse to negotiate at all with General Wrangel's army in southern Russia, consider that they have already reached an agreement with the Baltic States, and announce that they prefer to negotiate directly with Poland. It is reported that France has made an alliance of "economic defense" with Hungary against the Bolsheviki.

Two important cities have fallen to the invader, Minsk and Vilna. The Bolsheviki occupied Minsk on July 11 after a stubborn battle. Vilna was captured on July 14. Elaborate preparations had been made to defend the city, even to the arming of the Polish women, but the Bolsheviki met with little resistance. A few days later the invader occupied Lida, about a hundred miles south of Vilna. The Russians have made an agreement with the Lithuanians to turn over the occupied districts and also to pay a sum of 3,000,000 rubles to the Lithuanian Government in return for the right to march armies thru Lithuanian territory for the invasion of Poland.

## The Quandary of Persia

**W**HEN the Bolsheviki took Baku the Denikin and British vessels on the Caspian Sea escaped to the Persian port of Enzeli. Here they were pursued and caught by the Bolsheviki who occupied the port of Enzeli and the adjacent inland city of Reslet. The small British garrison withdrew to Teheran, the Persian capital.

Persia appealed to the League of Nations for protection against the Bolsheviki and the question was considered at the London meeting of the Council on June 16. The French were opposed to intervention by the League because it would necessarily involve official recognition of the Soviet Government as one of the parties to the dispute. The British had no troops to spare for the purpose and the League had no forces of its own. So in this, "the first test case of the value of the League idea," as Lord Curzon, chairman of the Council, called it, the Council could do nothing more than commend Persia for bringing the matter to the attention of the League.

# A Little of Everything

## The Oldest Law Code

The discovery and translation in 1903 of the Code of Hammurabi added a new chapter to the history of jurisprudence at its very beginning for it showed that at least as early as 2250 B. C. the Babylonians had a carefully compiled system of several hundred laws and precedents. This was almost a thousand years before the time of Moses and the body of so-called Mosaic legislation was not formulated till long after his death. Dr. William Hayes Ward, then editor of *The Independent*, took Assyriology as his avocation and he was the first to make this unparalleled historical document accessible to American readers by translating it from the German of Abbe Scheil and running it entire as a serial in this magazine. Dr. Ward pointed out at that time that the Code of King Hammurabi gave evidence of being the outgrowth of judicial practice stretching thousands of years farther back into antiquity.

This surmise is confirmed by the translation by Dr. Scheil of two earlier clay tablets from collection in the Museum of the University of Pennsylvania. These contain fragments of a Sumerian Code dating back to about 3000 B. C., before the era of Sargon the Elder. The later Babylonian Code of Hammurabi is in part based upon them and some of its provisions are the same. The tablets translated were apparently used as textbooks in the law school of the University of Nippur and therefore give us a first-hand and contemporary picture of society as it existed in the earliest seat of civil-

ization five thousand years ago. On account of their unique interest we print them complete as they are published in the *Museum Journal* of the University of Pennsylvania:

Should the owner have granted a fallow land to a gardener to be planted as an orchard, if the latter has not entirely completed his work when they share, the fallow part shall fall to the gardener's lot.

Should a man enter another man's orchard and abide in the plantation, he shall pay 10 silver shekels.

Should a man cut down a tree in another man's orchard, he shall pay a half silver mine.

A house owner has a right to extend over a neighboring waste ground provided he has given notice to the owner of the waste ground and they agree as to the terms of the rent, and he insures him against any damages done.

Should the owner of a house not knowing how to manage it, let another man undertake it, the latter shall during three years profit by his industry, the owner not being empowered to turn him out.

Should a man shelter a fugitive slave during a month, he shall give slave for slave, and in case he should not be able to do it, he shall pay 25 silver shekels.

Should a slave contest the rights of his master concerning his bondage he shall be convicted anew and sold.

Should a mercenary driven by fear have neglected to face a danger threatening his master's property, he is not guilty and shall stand before the court that suits him.

If he was notoriously powerless, he is not guilty, nor is there any ground for a law suit.

Should a man marry a second wife who bears him children, this woman's dowry belongs to her children, but the children of

the first and of the second wife share equally the goods of their father.

Should there be living children of the wife, the children of the servant shall not share with them the house of the father, but the servant and her children shall be released from slavery.

Should the wife die and the husband marry the servant who bore him children, their condition is changed and they do increase the family.

If the wife has borne no children and the husband has some children from his relations with another woman, he shall provide for her food and clothing, and the children of the other woman shall be heir to their father, but their mother shall not abide by the husband, so long as the wife is alive.

Should the wife be unfaithful, she shall live in a state of seclusion at home, and a second wife may eventually take her place and rank as first.

## Portraits on the Typewriter

The accompanying impressionist sketch of the late President Roosevelt, reproduced from *Remington Notes*, was the work of Mr. Joseph Levy of Scranton. He is the creator of a new art, typewriter portraiture. Not a single line drawn by pen or pencil appears in the sketch and no photography underlies it. Mr. Levy simply placed a sheet of paper in his Remington typewriter and struck the keys of his machine, striking heavily and repeatedly where dark shadows were needed and with a faint touch where lighter shading was requisite. A close study of the lighter shadings the picture will show with what care different keys of the typewriter were selected for the best effect. Can you make your typewriter draw pictures? Why not try and see? Every artist delights to try his hand in a new medium and the more difficulties he encounters the greater his pleasure if he produces a passable result.

John D. Rockefeller in donating the home for young women opened this week by the Y. W. C. A. of New York City.

### In the Tree Tops

The New York man who discovered that the quietest part of New York after business hours is the financial district and has now filed plans for a \$15,000 private dwelling on the top of a big business building near the harbor, does not act without precedent. Dust and roaring traffic, and lack of sunlight have already sent a number of imaginative New Yorkers to the high roofs of the city. Two hundred and fifteen feet above the street, on the top of a big office building near the edge of the shopping district, a New York architect has his studio and bachelor quarters. They comprise a spacious garden court in addition to working and living rooms. From this garden is visible the green privet hedges that are on three sides of another roof haven. The house here has seven rooms, including a spacious living room. A broad green awning provides a good-sized veranda on one side, comfortably equipped with hammocks and deck chairs, and at the rear, off the dining-room, is an open air court. In the garden are flourishing nasturtium beds.

Farther north, on a very high office building overlooking the Grand Central Terminal, one of the most prominent of New York architects has his city home. Farther west on the top of a twenty-story building a goldfish pool, fed by a little stone fountain, is the feature of the garden in which is set another of these charming refuges from the dust and confusion of the streets below. Geraniums, blue periwinkles, and trailing vines grow within the garden limits. The house itself provides ample living quarters, and has on one side of it a large handball court. In the same neighborhood, a popular actress has a roof home on the top of a private dwelling. But as it is situated in a neighborhood where tall houses are the exception, it has all the advantages of sunshine and fresh air afforded in more closely built sections only at fifteen or twenty stories above

the street. John Barrymore, the actor, has planted apple trees in the garden of his roof-top residence which is built on the roof of a five-story building in Greenwich Village, a quarter in the older part of New York frequented, as is the Latin quarter in Paris, by artists and writers.

### Stone Saws

The Indians of Central California made saws before Columbus ever visited America. Mr. James A. Barr has made a hobby of collecting prehistoric implements and he has made a collection of 158 Indian saws. Three of these, possibly used to skin game or fish, were fragile implements of soapstone; all of the rest were of hard, black obsidian. The Indians not only had no metal of which to make their saws, but they had no metal tools with which to make them. Each saw had to be slowly chipped or ground or polished with other bits of stone until it was shaped for use. Some were ser-

rated on the outer edge, some on the inner and some on both; most of them were also notched near one end as for a handle. Considering the difficult conditions under which they were made they show remarkable craftsmanship and skill in manufacture. In a single tomb were found thirty-one of these saws distributed in a semi-circle around the feet of an Indian who may in life have been either a wealthy chief or a professional saw maker. In the same tomb were found many pieces of obsidian ready for shaping. The accompanying illustration will give some idea of the specimen's in Mr. Barr's collection.

### Those Welsh Lads Are Clever!

The Central Welsh Board gave the following uniform examination in geography to school children from thirteen to nineteen years of age, corresponding to our high school grades. Geography teachers in this country may be interested to compare the questions with those which they give in their own classes:

I. Imagine an island 740 miles from north to south and 500 from east to west, with varied relief, rising to 3,000 feet near its center which is situated at 178 degrees east longitude and 5 degrees north latitude. Draw a sketch map, adding numbered latitude and longitude signs at one degree intervals and indicate the leading facts with regard to probable drainage and climate.

II. Draw a full-page map of your school town, indicating parks and open spaces and marking carefully the relation of the chief public buildings to the chief lines of communications. *What improvements could you suggest?*

III. Select three different types of forest regions. Give their exact situation and climate and describe the human activities in each.

IV. Compare by means of scale diagrams the area and density of population of Australia, South America, Africa and Asia.

V. Give the exact course of any one political boundary which has been changed in course of time and any one which has been fairly permanent. Suggest reasons for position and alterations.

We wonder if Premier Lloyd George could have passed this examination when he was a schoolboy in Wales?

The "Candle Ceremony" of the Intercollegiate Cosmopolitan Club in New York City, consists of one each of the forty-four nationalities represented arranging themselves, with an unlighted candle in their right hands and with the blank side of their placards showing. The person at the left end of the line then lights his candle, saying as he does so, "I represent Syria," at the same time turning over his card so that the name of his country appears. He then lights the candle of his neighbor, who says, "I represent Canada," turns over his card and lights the candle of Australia. In this way the light is passed the entire length of the line until "Uncle Sam," at the right end, has received it.

## Covered with Mud and Glory

(Continued from page 104)

the country between, forming the curtain of this natural bastioned front, while the edges of the hill slopes themselves furnished excellent machine gun positions for the immediate defense of the heights. Almost in the center of the lower ground between the two latter, the high, isolated hill of Montfaucon afforded to the enemy unobstructed observation over the entire battle-front, while northward the rolling hills piled up in higher and higher ridges, each commanding the one below it, until they reached a summit in the heights of Barricourt, nearly 25 kilometers north of the front lines.

It was the general strength of the Meuse-Argonne sector, briefly indicated above, rather than the strength of any particular feature or segment of it, which made it the most formidable 30 kilometers on the whole western front and led Marshal Foch to believe that it could be broken thru, if at all, by but one of the armies under his command—namely, the American Army, young, vigorous and far less sapped by the weariness of long warfare than any other body of troops of like numerical strength which could be used for the purpose.

It was not the Marshal's intention, however, that the American army should attack alone, while the enemy in other quarters should be left free to concentrate his reserve divisions for the defense of the Meuse-Argonne sector. From the first, his conception had been of a grand general offensive to be launched along the entire western front by the French, British and Belgian armies, as well as the American, so soon as the forces should be in hand to justify such an enterprise. Owing to the great influx of American troops, the time had now arrived for thus compelling the enemy, decidedly outnumbered in the whole theater of war, to defend himself at all points at once and, hence, at all points to fight with inferior numbers. By pressing such a general attack with unremitting vigor it was the hope of the Allied high command to drive the enemy from his fortified lines and possibly to compel him to sue for peace before the advent of winter weather should bring active operations to a close for the year.

The reduction of the St. Mihiel salient had been virtually a great and most instructive maneuver for the First American Army, seasoning the participating troops for more stubborn fighting. That attack had jumped off on September 12; the attack in the Meuse-Argonne was scheduled to begin just fourteen days later, on September 26. The period of preparation for the new attack was thus extremely limited, but a considerable amount of work was done even before the St. Mihiel battle while, so soon as the new front began to stabilize in that sector, General Pershing was already withdrawing from there most of his corps and army troops and getting them, together with divisions drawn from the

## It Will Level That Peak

EVERY business has certain days when figure-work piles up by leaps and bounds. In your case, it may or may not be payrolls. But whatever the cause, the Monroe will level your figure-work peak because it

### Makes All Figuring as Easy as Turning a Crank

Does your payroll require totalling the hours? Simply turn the Monroe crank forward and it adds them for you. Does it require deductions for insurance or stock payments, time out, etc.? Simply turn the crank backward and it subtracts *all* deductions for you.

Does it require the multiplication of numbers of hours by rates per hour? Turn the crank forward and the Monroe multiplies them. And if there's division work—pro-rating labor to departments, for example—turn the crank backward and the Monroe divides for you.

Simple, isn't it? No complements or reciprocals necessary. No trained operators necessary. The Monroe speeds up the figuring of your payrolls, in-

voices, estimates, chain discounts, interest, percentages, etc. It makes your employees more efficient the whole week through by eliminating the mental strains of figure-work. Compare the Monroe with any other method of figuring—for *speed*—for *accuracy*—for *all-round usefulness* on all kinds of work.

Mail coupon today for Monroe representative to call, or for full information contained in Monroe "Book of Facts."

#### "2 Hours Instead of 16"

"Originally it took sixteen hours to calculate the data on form 714 from form 1976 (payroll distribution forms). With the Monroe Calculating Machine it takes two hours."

same region, from quiet sectors or from training areas, into positions immediately behind the Meuse-Argonne front. Here, in order to blind the enemy until the last moment to the fact that an American attack was impending, the forward trenches were still being held by divisions of the Second French Army, while the staff organization of the latter was also placed at General Pershing's disposal to assist him in his preparations.

Field headquarters of the First American Army were established at Souilly, southwest of Verdun, on September 22, and General Pershing took over active command of the sector extending from Fresnes-en-Woevre to the western edge of the Argonne, which, added to the St. Mihiel sector, reaching from Fresnes to a point beyond the Moselle, gave to the American army a total front of approximately 120 kilometers. The portion of this front lying east of the Meuse was held in part by General Dickman's 4th Corps and in part by the French 17th Corps and 2nd Colonial Corps, which were under American army command. None of these troops were at first to participate in the approaching offensive. For the opening of the latter, General Pershing brought together three corps staffs; the 3rd from the Aisne front and the 1st and 5th from the St. Mihiel salient, and concentrated fifteen American divisions, of which nine were to be used in the first line, leaving three for corps reserves and three for army reserve. He had, besides, a large number of corps and army troops, 821 airplanes of which 604 were operated by Americans and 381 tanks of which 239 were French and 142 American. More than 2700 pieces of artillery were available for the preliminary bombardment and barrage, an average of about one piece for each ten meters of front.

The movement into position of all these troops and this material, at night and under all weather conditions, on roads limited in number and constantly subject to the harassing fire of the enemy, was a task which seemed almost insuperable. The First American Army, concentrating upon this field, was a stupendous organization, containing almost twice as many men as Napoleon provided in his Grand Army for the invasion of Russia in 1814. According to the daily reports of the Assistant Chief of Staff G-4 (Supply Section) of the First Army, supplies were provided on September 26 for 777,809 men and 129,900 animals; by the 1st of October the number of men had risen to 878,694 and the peak was reached on the 6th of that month, when 896,000 men were supplied. In addition to the traffic involved in bringing in this host and providing it with food, ammunition and other necessities, another complication was presented by the necessary relief, before the attack, of the eleven French and Italian divisions of the Second French Army which had been occupying the sector.

But all difficulties were eventually

overcome and at 2:30 o'clock on the morning of September 25, when the three-hour artillery preparation began, the attacking troops were all in position. From right to left the line was held by the 3rd Corps under General Robert Lee Bullard, extending from the Meuse River to Malancourt; the 5th Corps under General George H. Cameron, occupying the center, from Malancourt to Vauquois; and the 1st Corps under General Hunter Liggett, from Vauquois to La Harazee, on the western edge of the Argonne. Each corps had three divisions in line and one in reserve, the line divisions being, from right to left: General George Bell's 33rd Division, General Adelbert Cronkhite's 80th Division and General Mark A. Hersey's 4th Division, of General Bullard's corps; the 79th Division, General Joseph E. Kuhn, the 37th Division, General C. S. Farnsworth, and the 91st Division, General William H. Johnston, of General Cameron's corps; and, finally, General Peter E. Traub's 35th Division, General Charles H. Muir's 28th Division and General Robert Alexander's 77th Division, of General Liggett's corps.

The enemy, who was apparently looking for a continuation of the American advance from the old St. Mihiel salient in the direction either of Metz or Briey, had a group of eleven divisions in reserve or rest near the former place but, at the moment of the attack, only five divisions in line between the Meuse and the Argonne, belonging to the Fifth Army under General von der Marwitz, of the Army Group of General von Gallwitz. These holding troops do not appear to have gotten wind of the impending blow until just before it fell, when they hastily retired from the forward trenches into their support positions. Nevertheless, the bombardment of the American artillery was so violent and accurate that it demolished most of the support positions as well as the forward ones and put a large proportion of the enemy's artillery out of action. When the attack went over at 5:30 o'clock in the morning, the troops everywhere pushed unchecked across the terribly devastated "No Man's Land" of four years' standing and overran several kilometers of enemy territory without serious opposition. Then they began to encounter positions which the Germans were prepared to defend fiercely and progress became slower. But by the evening of the first day the American front had fought its way forward to an average depth of seven kilometers, going as far as Danneveux, the Bois Septsarges, Cuisy, Very, Cheppy and Varennes, capturing 5000 prisoners and everywhere penetrating the German second lines.

Progress had been most marked on the extreme right, where General Bell's men had cleared up the west bank of the Meuse nearly to the bend above Briculles and had then faced east toward the enemy's great bastion, the Heights of the Meuse, across the river. On the opposite flank General Alexander's New Yorkers had gained only

about two kilometers thru the mazes of the Argonne Forest but, in view of the difficulties of the terrain, it was an excellent achievement, for the general plan of operations contemplated that the forest should be outflanked by the advance of the American army on the east and of General Gouraud's Fourth French Army on the west, rather than by direct attack. In the center, before General Cameron's corps, the enemy made a very stubborn defense of the large woodlands of Malancourt and Montfaucon and when, after finally pushing thru them, the men of General Kuhn's division came up before the eminence of Montfaucon on the evening of the 26th, they failed to carry it in their first assault.

It was necessary that Montfaucon should be taken before further progress could be made on other parts of the front. The plans of the American command contemplated that the center corps should constantly keep slightly ahead of the flank corps and the axis of its attack was a line thru Montfaucon, Romagne and Buzancy, thus inclining to the northwest in conformity with the direction of both the Meuse River and the Argonne Plateau. The result of pushing ahead on this line would be that when the front should have passed the Bois de Bourgogne, which marks the detached northern extremity of the Argonne Plateau, the left flank of the American army would come closely in contact with the right flank of General Gouraud's army, which had attacked on the Champagne front at the same moment in which General Pershing's forces had attacked on the Meuse-Argonne front and, inclining slightly to the eastward in its progress toward the Aisne River, was gaining ground with equal rapidity. The enemy remaining in any portion of the Argonne would then, of course, be flanked and would be obliged either to retire or be captured.

Montfaucon was assaulted again by the 79th Division shortly before noon on the 27th and after a stubborn conflict it was captured. The attack was covered only by the long-range guns still in place south of the old Allied front, as it had proved impossible to get any field batteries across the utterly devastated waste of No Man's Land in time to support the advance. In fact, during the first several days of the battle the American army was in greater danger of having its efforts paralyzed by the failure of its communications than by the resistance of the enemy. In this sector only four roads existed across No Man's Land and these had been practically destroyed by the artillery fire of four years, while the wet, spongy soil and the mazes of trenches and wire made it impossible to move guns or vehicles for any distance off the roads. But the splendid work of the American engineers and pioneer infantry and the French territorial battalions soon placed the roads in such condition that the most essential supplies could be forwarded and troops and field artill-

lery could move. As but one of the countless instances of such work, the 4th Engineers, of General Hersey's division, by the second day of the battle had completely repaired the destroyed road from Esnes thru No Man's Land to Malancourt, using 40,000 sandbags in accomplishing the task.

Supported at last by their batteries, the Americans drove ahead thruout the 27th, 28th and 29th of September. The troops of General Cronkhite and General Hersey conquered the woodlands of the Cote Lemont, in the bend of the Meuse south of Briulles, some men of the 80th Division capturing in one immense dump near the edge of the river various sorts of construction and war material worth about \$10,000,000. Beyond Montfaucon the 79th Division progressed yard by yard thru Nantillois and the Bois de Beuge against violent counter-attacks, but neither the help of tanks or artillery could carry the attacking waves up to the deadly strong point of Madeleine Farm. The 37th Division took Ivoiry and approached Cierges. Epinonville fell to General Johnston's men and the 35th Division, altho swept by artillery and machine gun crossfire from the edges of the Argonne, in very severe fighting gained Charpentry and Baulny and reached a line across the uplands south of Exermont. Struggling down the valley of the Aire River, with its left flank entangled in the woods and precipitous hills of the edge of the Argonne, General Muir's division found progress very difficult, but, after conquering Montblainville, a flank attack overcame some of the outstanding spurs and carried the front of the division on south to the edge of the little plateau at Apremont. General Alexander's troops, ever persevering in their follow-up attack, each day gained a little ground thru the Argonne.

On the evening of the 29th of September, which ended the fourth day of the battle, all of the attacking troops but particularly the divisions of the Fifth Corps, in the center, had suffered severely. At that time the 79th Division was relieved by General Beumont B. Buck's 3rd Division and the 37th was relieved by the 32nd, under General William G. Hahn, while in General Liggett's corps the 35th Division, having already sustained losses of nearly 7500 men in the fighting south of Exermont—greater losses were sustained by only two other divisions thruout the battle of nearly seven weeks—was replaced by General Charles P. Summerall's 1st Division on September 30.

But if the strain of the battle was proving severe to the American army, it was becoming almost insupportable to the enemy. Already on the 29th he had lost 9000 men and over 100 guns captured and had been driven back over eleven kilometers of strongly entrenched territory. So alarmed were the German commanders by the steady progress of the attack that by the evening of the 29th they had thrown six fresh divisions into the struggle

## One third of America underfed —say high authorities

Rich and poor alike suffer from malnutrition without knowing it

**W**HY do we hear on all sides complaints of "that tired feeling"? Why do nervous break downs and rest cures multiply?

"It's a great life if you don't weaken," says the man on the streets; and the speed of events seems to quicken all the time.

The truth is our ability to keep pace with events is not what it should be. Our vital reserves too often go below par.

### Astonishing facts

Impossible as it seems, America, the world's greatest food producing nation, is suffering from wide-spread malnutrition.

In spite of increasing food bills the chances are one in three that you or your family are suffering, not from lack of enough food, but from lack of the right kind.

These conclusions are inevitably drawn from statistics of the army draft and from Dr. Wm. Emerson's work among children of all classes.

What we call "lack of vitality," "run down," "not thriving" is now definitely traceable in most cases to an insufficient supply of certain food elements.

Whole wheat grain enlarged

### The sixteen vital elements of nutrition

Oxygen	Chlorin	Calcium	Sodium
Nitrogen	Fluorin	Potassium	Sulphur
Hydrogen	Iron	Magnesium	Silicon
Carbon	Phosphorus	Manganese	Iodine

### The 16 vital elements

Sixteen natural food elements (listed above) are needed to keep the normal human being strong and well, and filled with that abundant vitality which provides for growth and the energy demands of modern life.

In the wheat grain Nature provides these sixteen vital elements in more nearly the proper proportion than in any other food, save possibly milk.

But several of the most important of these are lost in modern methods of wheat preparation, through removal of the six outer layers of the wheat grain, commonly called the bran. Only in the whole wheat grain can all the needed elements be secured.

### From Nature's larder

In Nature's larder health and energy are not separated from delightful tastes and flavors.

And thousands now draw from this larder these sixteen vital elements in Pettijohn's, a whole wheat breakfast food of rich, gratifying taste.

Its steaming fragrance awakens sluggish appetites in young and old. With cream and sugar it makes a vital energy ration of luscious flavor.

If you have been feeling below your normal in energy and vim—try Pettijohn's.

If you have a child below the average weight for his age (see tables)—try Pettijohn's. The little folks love it.

If you suffer from congestion of the intestinal tract give this food with its natural bran laxative a chance to set you right as nature has provided.

Your grocer has Pettijohn's—or will gladly get it for you. Make tomorrow's breakfast of this sixteen vital elements food.

Are your children under the weight shown by this table? If so they need more of the 16 vital elements food

## SCHOOLS AND COLLEGES

# New England CONSERVATORY OF MUSIC

George W. Chadwick  
Director

Year Opens  
Sept. 16, 1920

BOSTON, MASS.

## Located in the Music Center of America

It affords pupils the environment and atmosphere so necessary to a musical education. Its complete organization, and splendid equipment, offer exceptional facilities for students.

## Complete Curriculum

Courses in every branch of Music, applied and theoretical.

## Owing to the Practical Training

In our Normal Department, graduates are much in demand as teachers.

## The Free Privileges

Of lectures, concerts and recitals, the opportunities of ensemble practice and appearing before audiences, and the daily associations are invaluable advantages to the music student.

## A Complete Orchestra

Offers advanced pupils in piano-forte, voice, organ and violin experience in rehearsal and public appearance with orchestral accompaniment.

## Dramatic Department

Practical training in acting.

Address RALPH L. FLANDERS, General Manager

# THE STONE SCHOOL

Cornwall-on-Hudson, Box 5, New York  
FIFTY-FOURTH YEAR

A School in the Heart of the Open Country. Lower School for Boys 9 to 12.

LOCATION: 50 miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. Healthful, invigorating, unusually adapted to a sane and simple out-of-door life.

WORK: Preparation for College or Business Life: recent graduates in 12 leading colleges. Each boy studied physically and mentally to increase individual efficiency. Small classes: A teacher for every seven boys.

ATHLETICS: Two fields with excellent facilities for all sports, under supervision; hiking, woods life, swimming pool.

You are invited to come and see for yourself. Catalog sent on application.

ALVAN E. DUERR, Headmaster

# Training for Authorship

How to write, what to write, and where to sell.

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein, for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. Real teaching.

Dr. Esenwein

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes; descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 20 cents, annual subscription \$2.00. Besides our teaching service, we offer a manuscript criticism service.

between the Meuse and the Argonne and were delivering numerous and determined counter-attacks in their efforts to check the Americans.

Had the Germans been in a position to feed more troops into this sector, it is possible that they might have been able to halt the American advance. But in accordance with the plans for the general offensive, the enemy was being engaged all along the front at the same time. The armies of General Pershing and General Gouraud had struck on September 26; next day the First and Third British armies attacked the Hindenburg line between St. Quentin and Cambrai and on the 28th this attack was extended southward to La Fere by the Fourth British army and the First French army. On the same date the Belgian army and the Second British army advanced in Flanders between Dixmude and Ypres. The enemy was thus forced to meet the attacks everywhere with a fast diminishing supply of reserves.

But the country to which he had now been driven back by the American army was admirably suited to the kind of defense to which he was necessarily committed. The powerfully entrenched Kriemhilde Stellung lay across the rolling hills behind the advanced positions, its flanks resting securely on the bastions of the Argonne and the Heights of the Meuse, whose crossfire on the battle line and rear areas of the Americans became more and more deadly the further the attack of the latter was pushed. Constantly harassed by this fire in rear and physically worn down by burrowing in fox holes in the cold, rainy weather, the American attack divisions lost much of their driving power after September 29 and General Pershing decided that in order to register decided progress again, a fresh general attack should be prepared. Accordingly he gave instructions that a line of resistance be organized thru Dannevoix-Nantillois-Charpentry-Montblainville-Apremont, and that this line be held while additional supplies, especially of artillery ammunition, were being accumulated from the rear in preparation for the renewed advance which was set for the morning of October 4. This advance inaugurated the second and by far the most stubborn phase of the battle which ended only with the clean break-thru of November 1 that forced the German army into precipitate retreat. It will be described in the next article of this series.

Washington, D. C.

Angry Purchaser—Didn't you tell me that you had got as many as twelve eggs in one day from those eight hens you sold me?

Poultry Raiser—Yes, ma'am.

Angry Purchaser—Then why is it that I'm never able to get more than two eggs from them and sometimes not so many in one day?

Poultry Raiser—I don't know, ma'am, unless it's because you look for eggs too often. Now, if you look for them only once a week I feel quite positive that you will get just as many eggs in one day as I did.  
—Chicago News.

## Open the Door to China

(Continued from page 103)

the Powers concerned. Hence their true activities had to be looked for outside the scope of the consortium.

When one looks back upon the pre-war conditions of investment in China, one sees that Great Britain, France, Germany and the United States were in sharp contest regarding investments in railways, canals, mining, etc., each entrenched in its respective economic sphere. As a result of this, even fraudulent methods sometimes obtained in the negotiation for various loans and the development of China has been considerably retarded. But during the great war, these western nations, being compelled to devote all their energies to the prosecution of the conflict, could not pay due attention to eastern problems. Upon cessation of the hostilities the belligerent Powers had to provide huge sums for their own work of reconstruction and most of them, except England and America, will be unable to render notable financial assistance to China for a number of years to come. It follows then that Japan, America and England are the only Powers which can supply the necessary funds for the development of China.

The genesis of the friendly relation between China and Japan dates back to a very remote antiquity and the fact that both countries, geographically and economically so closely connected, are bound to stand and fall together is fully recognized by the intelligent classes of both nations. Moreover the furtherance of the welfare and the development of the industry of China are what Japan has openly advocated for many years. Now that China is in most urgent need of foreign money for her national finance Japan naturally cannot refuse to satisfy a part of her demand. On the other hand, the United States, true to its national ideals and principles, has, over a period of years, contributed remarkably to the enlightenment of the Chinese in the fields of religion, education, charity, etc. The principles of the "open door" and "equal opportunity" were first proposed by the United States, and consequently her business interests gradually began to attach great weight to the work of investment in China. Vastly enriched by the war, with a huge stock of materials, and her industries keyed up to the highest pitch, the great Republic of the West is in a position to supply China with ample aid. Thus Japan and America not only will play an important rôle within the new consortium now in process of formation, but they have the possibility of coöperation to a large extent in Chinese business outside the group as well. Consequently the destiny of China hangs largely upon the policies to be adopted by both countries toward her and any inconsistency between them will be unfortunate not only for China but for America and Japan. The economic development of China, then, necessitates the

## For You, Also Teeth that glisten—safer teeth

*All statements approved by high dental authorities*

You see glistening teeth wherever you look today. Perhaps you wonder how the owners get them.

Ask and they will tell you. Millions are now using a new method of teeth cleaning. This is to urge you to try it—without cost—and see what it does for your teeth.

### Why teeth discolor

Your teeth are coated by a viscous film. You can feel it with your tongue. It dims the teeth, and modern science traces most tooth troubles to it.

Film clings to teeth, enters crevices and stays. The ordinary tooth paste does not dissolve it, so the tooth brush fails to end it. As a result, few people have escaped tooth troubles, despite the daily brushing.

It is the film-coat that discolors—not the teeth. Film is the basis of tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. So all these troubles have been constantly increasing.

### Now they remove it

Dental science, after years of searching, has found a film combatant. Able authorities have amply proved its efficiency. Millions of people have watched its results.

The method is embodied in a dentifrice called Pepsodent. And this tooth paste is made to in every way meet modern dental requirements.

### Active pepsin now applied

The film is albuminous matter. So Pepsodent is based on pepsin, the digestant of albumin. The object is to dissolve the film, then to day by day combat it.

This method long seemed impossible. Pepsin must be activated, and the usual agent is an acid harmful to the teeth. But science has found a harmless activating method. Now active pepsin can be daily applied, and forced wherever the film goes.

Two other new-day methods are combined with this. Thus Pepsodent in three ways shows unique efficiency.

Watch the results for yourself. Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how the teeth whiten as the film-coat disappears.

This test will be a revelation. It will bring to you and yours, we think, a new teeth cleaning era. Cut out the coupon so you won't forget.

**Pepsodent**

coöperation of America and Japan, and  
with it will come a concert between the  
three Powers bordering the Pacific  
Ocean, and the preservation of China's  
territorial integrity and the progress  
of her civilization.

In the circumstances above men-  
tioned we approve of the proposal pre-  
sented by America for organizing the  
new consortium in China, and earn-  
estly desire that the group in question  
may soon come into existence and act  
satisfactorily as an international or-  
gan for investment in China. We are,  
however, sorry to hear that there are  
some who are inclined to misunder-  
stand the special position of Japan in  
China. The relations of the various  
Powers with China are by no means  
identical whether we view them from  
the geographical, political, financial or  
historical point of view. It is therefore  
no easy task to bring the financial re-  
lations of these Powers with China un-  
der the same rule and to keep them all  
in harmony. For instance, some parts  
of Manchuria and Mongolia which are  
adjacent to our country have the most  
important relation with us in view of  
the requirements of our national de-  
fense and economic existence, so that  
our position in those districts is en-  
tirely different in its origin and char-  
acter from that of other Powers in  
any other parts of China. But while we  
demand from other interested Powers  
recognition of the fact that Japan has  
thus special position in Manchuria  
and Mongolia, we must not be under-  
stood to lay exclusive claim to those  
districts and shut out others from the  
work of developing their natural re-  
sources. We approve in principle of  
the maintenance of "equal opportuni-  
ty" and the "open door" policy in  
China, but when it is a question of  
economic enterprises which may have  
a serious effect upon our national se-  
curity and economic existence, we feel  
that our legitimate claims should be  
listened to, for they are based upon  
the idea of self-preservation without  
any taint of territorial or political am-  
bition or any intention of extending  
our sphere of influence. Many of the  
Chinese problems, when viewed from  
the standpoint of Europe and America,  
may be regarded as mere questions of  
sentiment or financial interests. For  
us, they have often a direct bearing on  
our national welfare and existence.  
This is what we are anxious should be  
satisfactorily understood by others.

Should America and Japan really de-  
sire to act in concert for the future  
with regard to the various undertak-  
ings in China, it would first of all be  
necessary that the capitalists, business  
men and others in both countries  
should have the opportunity of meet-  
ing and coming to a clear understand-  
ing of the mutual position in China by  
frank expression of their opinion,  
which would surely lead to friendly  
coöperative relations. The collision of  
sentiments such as we have feared  
might occur between the two nations,  
has been due in the main to temporary  
misunderstanding or the intrigues of  
those whose object it is to estrange one

## "Say it with Flowers"

from the other. But if the people of these two countries come in contact with each other and arrive at full understanding of the mutual situation and the advantages of their coöperation, such fear of friction will surely be swept away at once. In this regard we heartily welcome Americans who visit the Far East and give us an opportunity of exchanging views on various problems. Some time ago, Mr. Abbott of the Continental & Commercial Bank of Chicago and, a little later, Mr. Lamont of J. P. Morgan & Co., came to our country as the representatives of the American financial group, while the American Silk Mission, headed by Mr. Cheney and another party headed by Mr. Vanderlip have just paid us a visit. Now Mr. Strong, president of the New York Federal Reserve Bank, is also staying here. All of these American gentlemen have met officials and business men here and both sides exchanged their views quite frankly. We believe their visits over here have had a great effect upon the future concert of the American and Japanese capitalists, and who can deny that if the coöperation of the two Powers which face each other across the Pacific Ocean, and claim to stand for the territorial integrity and the "open door" policy in China, be firmly cemented, it will promote the welfare of the Chinese nation of 450,000,000 inhabitants by the development of her natural resources and greatly contribute to the maintenance of peace in the Orient, thereby helping to bring about a real joint life among the nations of the world?

of them—but having once bumped their heads they recognize that there is a stone wall and they are doing their best to surmount it—which is sensible of them. It is an interesting experiment to watch—from a safe distance. If they succeed and show us a fairer land beyond then we shall all rejoice and consider whether we should follow their example. If they fail the rest of the world will be relieved of the temptation to take that road toward Utopia. They are to be condemned not for their desire to try new paths to happiness, but for taking advantage of the confusion of their country to seize dictatorial power and force a hundred and fifty million to follow their chimerical ideas. Whatever may be the outcome their recklessness and ruthlessness have brought ruin upon the greatest country of Europe and Asia.

Andy, a negro porter at a Broadway theater, belongs to a lodge. The other night the lodge met to vote on the question of changing rooms, but Andy didn't get there. We met him on Broadway and he said the organization was to have new quarters.

"Did you vote for a change?" we asked. "I wasn't at de meetin'," replied Andy, "but I voted by peroxide."—*New York Globe.*

Living, moving Alpine glaciers, glistening like giant pearls, grind their world-old way in Glacier National Park. Modern hotels and rustic Swiss chalets afford genuine comfort. Tours via motor, saddle-horse and launch, arranged by day, week or month. Or, why not walk through?

"Glacier" is your only national park on the main line of a transcontinental railroad.

## Europe's Crisis and America's Problem

(Continued from page 100)

large, however, that the problem of financing the excess of imports continues to be among the main British problems.

A similar problem is faced by the other Entente nations. The imports of France in 1919, calculating the franc at par, exceeded the exports by \$4,100,000,000. The imports of Italy were \$2,500,000,000 greater than her exports. These nations have needed far more than normal imports. They were bare of raw material and food. They required machinery, fuel, forest products. Their industries were prostrate and they had little to export. Their income from foreign investments, tourist travel, remittances from emigrants, either entirely disappeared or was sharply cut down. The deterioration in the value of their currency caused by inflation was naturally followed by extremely disastrous consequences for foreign exchange, so that everything they bought cost them, measured in their own currency, two or four times a normal price. Their total imports reckoned in their own currency values were swelled into huge totals measured in money price, altho the increase in physical amount might not be large.

In most of the countries there has developed a political safety valve in the form of a considerable representation in the parliaments of labor or Socialistic votes. The Labor party in England now forms the chief opposition party. The French election, however, returned a surprisingly conservative Chamber. In Italy the Socialists hold enough seats in the present Parliament so that their participation in the government has acted against a repression of radical sentiment until it explodes.

There should not be a Bolshevik development in Italy. If the people can only be given work and food, there will probably be no serious political disturbance there. Italy must have food, raw material and coal, or the economic pressure will become desperate. To obtain those necessities she will need for a year or two, at least, much foreign credit to pay for the deficit in her foreign trade balance. It is important to note that the tide of Italian emigration has turned. Since December the outward flow exceeds the number returning. Emigration promises to become very large and will be increasingly helpful in settling Italy's foreign trade deficit.

At the moment the greatest danger spot lies in Germany. Weighted by an indefinite indemnity, the minimum being larger than it seems likely the Germans could possibly pay, facing extreme difficulty in effecting foreign credits with which to buy food and raw material desperately needed, deteriorated in morale, with a government unable to cope with most perplexing difficulties, a transportation system badly demoralized, and an insufficient food supply, there should be no surprise at the revolution which the Ebert Gov-

ernment is facing. Concessions have been made to the Radicals which, even tho the present Government stands, will make new and dangerous situations.

The greatest immediate danger in Europe, it seems to me, lies in the possibility that the radical forces in Germany will gain control, resulting in the adoption of some modified form of Soviet Bolshevism. If that happened, the most natural succeeding step would be some sort of coalition with Russia. Economically the two nations supplement one another in a way that makes some sort of economic union between Russia and Germany seem unavoidable. Russia's endless agricultural possibilities, with a huge peasant population, offer to Germany a prospect for obtaining food in exchange for manufactured goods from Germany's highly organized industrial plants. Germany's genius for organization may find broad opportunities for its display in the disorganized field of transportation, industry, and government in Russia.

In Russia there is a Red Army of three million men. A seriously large fraction, perhaps over ten per cent, of that army is well trained. Trotzky has developed into a military organizing genius. A coalition of the military power of Russia with that of Germany, Russian military leadership being supplemented by German experience, would offer to the Entente a most difficult problem. If that coalition were ever found to include Japan, the whole world would be affected by the result.

A serious difficulty that a German-Russian coalition would encounter would be the demoralized transportation system in Russia, which would make the moving of food and an army a formidable task. The chaotic currency situation in Russia would also add to the difficulties. The printing of money has gone on at the rate of millions of rubles a day. Incidentally, a thing hinted at ten months ago—the counterfeiting of the currency of other countries in the Russian press—has become a grave reality. I have recently talked with a returned traveler from Russia who showed me a counterfeit Bank of England note and counterfeit British currency notes which would easily pass current even under the eyes of experienced handlers of money. This gentleman reported to me that he personally saw £20,000,000 of Bank of England notes which were captured from the Reds when they were driven from Odessa, destroyed by Deniken's men.

While these forces have been operating in Europe, we in America have played a role since the armistice of which we can hardly be proud. It is true that we have granted considerable credits. Our Government has run up a total loan to the Allies of practically \$10,000,000,000. Since the armistice there has been supplied from this source credit to the amount of \$2,750,-

000,000. No interest on our Government loans to the Allies has been paid and it is not now expected that any will be paid for the present.

In one way and another we managed to finance our excess of exports in 1919. Our exports for that calendar year reached the huge total of \$8,000,000,000 against \$4,000,000,000 of imports. It hardly seems probable that we can continue to finance favorable trade balances of such extent. We are likely to see our imports rise and our exports decline.

While all Europe has been affected by the inflation of bank credits and currency we have experienced the same phenomena in America in only a less degree. During the war period we added to our purchasing medium in the shape of bank credits and currency more than \$15,000,000,000. We doubled our purchasing medium, altho we added little to the things to buy. Our physical production in 1919 was only 6 per cent larger than in 1914.

In the period since the armistice we have used in domestic expansion much that might have been used in saving Europe from progressing toward the present danger point in industrial disorganization. We have been extravagant in our consumption of goods and in our domestic use of credit. The main reason for the great rise in prices, carrying the general level to two and one-half times what it was at the beginning of 1914, has been the increase in our bank credits and currency. That increase went on after the armistice more rapidly than it did during the period in which we were actively at war. We have lacked information and leadership. Our Government has given us little authoritative information and less leadership. Our bankers have been engrossed with their domestic concerns and have given only secondary consideration to the foreign situation. World leadership was laid at our feet, but we have not assumed its responsibilities and we may lose some of the opportunities that might have been ours.

We need to understand that there are two sides to foreign trade—that it means something more than selling goods abroad—and if in the future we are to have large favorable trade balances we must cooperate in financing the credit to pay for them.

We are in a position in which it is easily possible for us to lose a large amount of gold even in the face of a favorable trade balance. The loss of gold from our bank reserves means taking away the foundation from under a part of our high credit structure. We have twenty-five times as much bank credit as we have gold base, and the loss of gold means that the credit structure we built on the gold must be otherwise cared for or liquidated.

The crisis in Europe is at hand. We may not know what way it will turn until food is available from the next harvest. If the people who are most hard pressed for food can go thru to the next harvest without the pressure driving them into political revolution, Europe may start back toward recuperation. If the revolution in Ger-

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$623.60 absolutely beyond question of doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

## The United States Life Insurance Company

in the City of New York

Organized 1850. Non-Participating Policies only. Over Forty-Five Million Dollars Paid to Policyholders.

many extends, if the want and despair in other countries lead to other revolutions, if work has to be found for the Russian army, there may be opened a new chapter in the world tragedy. The economic principles which have been the great moving forces, and which I have tried briefly to outline, are, I believe, almost as inexorable as natural laws. These forces are divergent and complicated. No one can predict with certainty what the resultant will be. To me it is not an evidence of pessimism, however, if one tries to examine these forces and to make such estimate as he can of the general direction in which they are working.

America has probably lost a great opportunity. If we had had a clear world vision, if we had acted in accordance with our duty, the result would also have been in our best interest. There seems little that we are likely to do which will now change the course of events between today and the next harvest. The forces that are shaping Europe will operate without much interference from us. Our first task now is to put our own house in order. We should stop further inflation. We should halt national extravagance. We should attempt to balance our national budget and wake up to the fact that governmental expenditures have been exceeding governmental income, in spite of high income taxes, by a hundred millions a month. We must do these things before we are

in a position effectively to discuss how we can best help Europe.

In Europe events may travel rapidly, with the German revolution as the center of interest; or perhaps there may be only a miserable dragging on until the next harvest, and then some new life and some substantial steps toward recuperation in Central Europe. If we were to stretch out a helping hand to Italy, I believe we could make certain that Italy would not be included in the Bolshevik area. If Italy finds it impossible to obtain the credit needed to buy food, coal and raw material, which must be obtained from outside her boundaries, there might be disturbance there.

It is heartbreaking to think of the misery that must be endured by the people of many nations thru no fault of the individuals. Their hurt comes from the inexorable action of economic law. The result of such action can only be influenced in a large way by international coöperation. More than ever in our history there is a call for sound economic leadership. It makes one see the need in a democracy of an educated public opinion which will recognize economic principles. Only thru the comprehension of those principles, it seems to me, can there be hope for efficient international coöperation to save Europe from many more long and weary months of distressing economic struggle.

New York City

## Ja-di Talks for Publication

(Continued from page 106)

guid liquidity of Hawaiian, and the clicking staccato of Zulu and Kaffir, but for one thing: from the beginning, she has had at least one terminal consonant, *sh*; and she is already outgrowing this limitation. This appears thus:

English	Janet
squash	tosh, shosh, whosh
ice	ish
horse	hawsh, hoish
Hicks	Shish

When we come to her initial consonants, quite a number are used without alteration. Allowing for her tendency to shorten all long vowels in the following words, they are otherwise unchanged: *toe, day, pea, bee, cow, go*. Initial *z* too is unchanged; an occasional *s* is heard, and her speech is tending toward *f* and *r*. Compound opening consonants also appear—many of them unknown to English. "Jack fell down and broke his crown" ended first in *ptow*, all letters sounded, and now in *hwow*.

A study of the lists indicates that at twenty-two months she was partial to *t*, at twenty-eight to *sh* and *shw*, at thirty to *wh*. There are some generous features to Janet's language. Thus her *w* may stand for *w, v, y, r, dr*, or *gr*; *sh, ch, h, s, sq*, and *th* all masquerade as *sh*; and *wh* has no less than fifteen uses—for soft *c, cr, f, fl, fr, gr, q, sl, sq, str, sw, th, thr, tr*, and *wh*.

*S* is a study. *Sauce* and *saucer* are *shaw*; only in *sish* for *six*, *seh* for *seven*, and *see* is the *sh* unheard. We'll

shay sho, despite the eighteenth amendment!

Do other languages furnish parallels to these changes? Indeed, yes! Among the Pacific Islanders, New Zealanders turn both *f* and *v* to *w*, Hawaiian shifts *f* to *h*, and Paumotuian, *v* to *h*, Hale tells us. He continues, "two consonants are never heard without a vowel between them,"—a rule which Appleyard finds true of the Kaffirs.

*Br, cl, cr* and the rest follows many primitive models—and, indeed, later ones. The same force is at work in the following:

Latin	English	Early French	French
schola	school	eschole	école
studium	study	estude	étude
status	state	estat	état
spada	(cf. spade)	espée	épée

And shall her shortening process be scoffed at by a race which has made the following changes?

Anglo-Saxon English	Latin	English
heafod	head	scutarius squire
weorold	world	Egyptianus gipsy
hlaefdige	lady	dominicella damsel
Eofor-wic	York	sacristanus sexton

Why, her speech is rich, compared to many others. Among American Indians, the Mohawks and the rest of the six nations have no *p, b, m, f, v*, or *w*. The universality of *pa* and *ma* does not extend to these languages. Society Islanders use no gutturals; they re-baptized Captain Cook into *Tute*. Janet uses fifteen consonants, ignoring com-

pounds; and while Hindustani boasts 48 and Sanskrit 39, English stumbles along with 20, Greek with 14, and some Australian dialects with only 8!

You remember the Chinese and Kaf-fir trick of envoweling English words, to end syllables on vowels? This produced:

Christ	Ki-lis-se-tu
baptize	ba-pi-ti-ze-sha
gold	i-go-li-de

In many of the following, Janet has repeated this process; and this list shows her formation of dissyllables:

Wood	wuh-di	chicken	chi-ki
good	guh-di	dolly	doh-bi
pudding	puh-di	elbow	ch bi
bird	buh-di	hicough	huh-kuh
cheek	chee-ki	potato	puh-tuh
Janet	Ja-di	automobile	aw-bee
basket	ba-ki	handkerchief	ha-ni
sidewalk	shi-waw	kiddie-car	ki-kah

*Na-na*, for *banana*, ignores the first syllable. There are as yet no trisyllables.

English lacks an initial *ng*. But the lands where the Ngala, the Ngambue, and the Ngola roamed, where the Ngangu and the Ngoko roll, and the Ngwa Hill lifts to the African sky; where Ngan-hui and Ngan-king feel the Chinese sun; and where the islands of Ngau and Ngatik receive Pacific waves—these know it. So with Janet.

milk	ngoh
monk	nguh
snow	ngow
no	nguh

"Do you want any more milk, Janet?" "Ja-di nguh ngoh!"

Beyond this her vocabulary does not go. But do not lightly judge her words or her reasoning too limited for study. Man's primitive speech material is scanty. Edgren reduced Sanskrit to 587 roots; Muller boiled these down to 121 fundamental concepts; Dr. Murray, a weighty name in English philology, gravely decided that our language could be derived from the nine roots *ag*, *bag*, *cuag*, *dwag*, *lag*, *mag*, *nag*, *rag*, and *swag*; while Dr. Schmidt traced the whole Greek dictionary back to the root *e*, and the whole Latin lexicon to the root *hi*.

A word about her sentence structure. A one-syllabled language like Chinese regards each word today as a root, and not as noun, verb, adjective. Thus *ta*, great, may be joined with *fu*, man, as *ta fu*, "a great man," or *fu ta*, "the man is great." Janet is usually as callous. *Dee waw* means a drink of water; but "Janet wants a drink of water" is indiscriminately *Ja-di dee waw* or *dee waw Ja-di*. *Puh doh* is pretty doll; but the information that *Gee-gee*, her name for her baby brother (who practiced daily on this sound for six months) has the doll is given in an alarmed tone *Gee-gee puh doh* or *puh doh Gee-gee*. "Dolly sees mamma read the book" may be *Doh-bi see ma-ma ree buh*, *ma-ma ree buh see doh-bi*, or *ree buh ma-ma doh-bi see*; while her youthful conjecture, on seeing her mother, attired in a straw hat, coat, and brown shoes, step into a car for a trip downtown, was *Huaw ha ko bow shu aiw-bee ma-ma chu-chu*.

## DIVIDENDS

**AMERICAN TELEPHONE AND TELEGRAPH COMPANY**

Five Year Six Per Cent. Gold Notes  
Due February 1, 1924

Coupons from these Notes, payable by their terms on August 1, 1920, at the office or agency of the Company in New York or in Boston, will be paid in New York at the Bankers Trust Company, 16 Wall Street.

G. D. MILNE, Treasurer.

**AMERICAN TELEPHONE AND TELEGRAPH COMPANY**

Seven Year Six Per Cent. Convertible Gold Bonds  
Due August 1, 1925

Coupons from these Bonds, payable by their terms on August 1, 1920, at the office or agency of the Company in New York or in Boston, will be paid in New York at the Bankers Trust Company, 16 Wall Street.

G. D. MILNE, Treasurer.

**WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY.**

A dividend of two per cent. (\$1.00 per share) on the COMMON Stock of this Company, for the quarter ending June 30, 1920, will be paid July 31, 1920, to stockholders of record as of June 30, 1920.

H. F. BAETZ, Treasurer.

New York, June 16, 1920.

**THE ELECTRIC STORAGE BATTERY COMPANY.**

Allegheny Avenue and 19th Street,  
Philadelphia, July 9, 1920.

The Directors have declared a quarterly dividend of Three Dollars (\$3.00) per share from the net earnings of the company on both Common and Preferred Stocks, payable October 1, 1921, to stockholders of record at the close of business on September 13. Checks will be mailed.

WALTER G. HENDERSON, Treasurer.

**PACIFIC GAS AND ELECTRIC CO.**

FIRST PREFERRED DIVIDEND NO. 24  
ORIGINAL PREFERRED DIVIDEND NO. 58

The regular quarterly dividend of \$1.50 per share upon the full-paid First Preferred and Original Preferred Capital Stock of the Company will be paid on August 16, 1920, to shareholders of record at close of business July 31, 1920. The transfer books will not be closed and checks will be mailed from the office of the company in time to reach stockholders on the date they are payable.

## Why I Like the English

(Continued from page 105)

flower of the British virtue of liberalism is magnanimity. Like other Great Powers the British Empire has wrought much evil under the sun. But unlike others the British have always been ready to repent and to make reparation. The age-long oppression of Ireland corresponds in many respects to the oppression of Poland. But where do we find a Prussian Gladstone with a Home Rule Bill for Posen and Upper Silesia? The conquest of the Boer Republics was an experiment in imperialism which was deplored by many Englishmen, including the man who is now Prime Minister. But where else in history can we find two enemy generals, defeated utterly in spite of a brave struggle, within ten years ruling not only their own countries but also the neighboring colonies of the victorious Power, and within twenty years the representatives of the same Power in the greatest of Peace Conferences? Such is the unprecedented history of General Smuts and the late General Botha.

In fact England has taught the world the secret of obtaining loyalty by not demanding it. All sorts of languages, customs, laws, religions and social institutions flourish in every corner of the British Empire while the Lion, instead of lifting his paw to strike, winks indulgently and drops to sleep again. One-fourth of the human race would never submit to being governed by England; if the British tried to "rule" in the usual meaning of the word the so-called Empire would have been long ago shattered to fragments like Austria-Hungary (the only equally composite Empire).

It is of no use to counter this by instancing cases of oppression and intolerance; in an Empire covering a fourth of the planet these must, on the law of averages, be numerous enough. But that the general character of British rule is mild can be proved by three conclusive tests. One is to ask anyone who was at the Peace Conference whom the peoples of the Near East desired to hold their "mandates." The first answer is nearly always "the United States." Ask as to the second choice and the answer will usually be "Great Britain." Ask a like question as to what troops the peoples of the areas subject to plebiscite wished to safeguard the purity of the ballot and to administer affairs during the period of transition. The first answer is once more "American," and the second "British." They are trusted to do the "square thing."

Another test is to read the literature of the last thirty years on colonial administration. We find foreign critics, especially the Germans, either praising the British for their comparative kindness to the native peoples or blaming them for sentimental indulgence. We find British critics either advocating still greater solicitude for native welfare or else urging the Government to copy the sterner methods of the Ger-

mans and the Dutch. This cannot be altogether coincidence.

A third test, the one which converted me to being "pro-British," is to read the official correspondence—the "Blue Books"—of the British Foreign and Colonial Offices. A real interest in the welfare of all the peoples of the earth, a genuine hatred of tyranny wherever appearing, a sort of cosmic benevolence is everywhere apparent; especially during the last twenty years. Most impressive of all is the grave concern manifested whenever a local British administrator acts the tyrant. Immediately his official superiors begin to clamor for his head on a charger. Why? Because the British public may hear about the matter and will care. It may even affect votes at election.

Another manifestation of national magnanimity is the readiness of the British to make heroes of their enemies; supposing those enemies to have any touch of chivalry themselves. (I don't suppose that Hindenburg and Von Tirpitz will ever figure in British literature save as villains.) After much reading of English books I have come to the conclusion that the three favorite characters in history of the average Englishman are George Washington, William Wallace and Joan of Arc. Now the remarkable thing is not that all three were enemies of the British, for any generous spirit can forgive a vanquished enemy. But they were victorious enemies, and it requires an almost superhuman virtue to forgive a triumphant foe. The Virginian rebel who took from the British Empire its most valuable colonies; the fierce Scotch borderer who made possible Scottish independence and inflicted most humiliating defeats on the proud armies of King Edward; the French peasant girl who frustrated the whole purpose of a hundred years of war and made forever vain the dream of an empire on the continent of Europe—such are the heroes of British fiction and British verse.

I cannot find that other nations have shown a similar appreciation of those who triumphed over them, no matter how noble their characters might be. In Vienna they do not sing ballads in praise of Garibaldi. The Louvre does not contain many paintings of Andreas Hofer, the Tyrolean hero who fought Napoleon. Kosciusko has had some kind words from Russians and Germans, but he does not rank as highly with them as with the Poles. The Spaniards are resigned to the independence of Holland, but they are not quite so enthusiastic about William of Orange as the Dutch. The Germans do not sing the "Marseillaise" (save for Socialist purposes), or the French "The Watch on the Rhine," but an Englishman will always join in "Scots Wha Hae" or "The Wearing of the Green."

We must admit, I believe, that there are good points about the British. If that be treason, make the most of it.

## Welcome Home, Mary!

"Doug" Fairbanks and his wife, Mary Pickford, returned to the United States in the bridal suite of the "Olympic" from their honeymoon abroad. In England, where they stayed nine days, they were "a nine days' wonder"—could not go anywhere without blocking the traffic and eventually escaped to the country from the Ritz by way of the kitchen.

This is how two English journals took their visit:

Thomas in London Opinion

John Bull (engaged with "the World's Sweetheart"): "Can't you see I'm busy?"

## She Is Here!

The world is full of grief and pain,  
The croaker wears his gloomiest frown;  
He tries to frighten us in vain,  
For Mary Pickford's come to town.

What does it matter that the rain  
Each day, and all day long comes down?  
The world will soon be bright again,  
For Mary Pickford's come to town.

Our income is upon the wane,  
It's hard to borrow half-a-crown;  
But there's a turning in the lane,  
For Mary Pickford's come to town.

The warring factions, quite insane,  
In Ireland all cry, "Derry-down!"  
Why should we care about Sinn Fein?  
For Mary Pickford's come to town.

The castles that we built in Spain  
Have all completely tumbled down;  
Well, Well!—we'll build them up again—  
For Mary Pickford's come to town.

My wife, in language clear and plain,  
Demands a new and costly gown,  
Seeing each verse with this refrain:  
"For Mary Pickford's come to town!"

—London Mail.

## Remarkable Remarks

JOHN BURROUGHS—Will a caged canary lay eggs?

DR. PEASE—You don't see animals wearing corsets.

MARY PICKFORD FAIRBANKS—Doug's awfully extravagant.

MARGUERITE M. MARSHALL—The fountain of youth is in the milk bottle.

GENERAL OBREGON—All of us are thieves more or less down here in Mexico.

LINA CAVALIERI—The girl who wears a red veil habitually has few freckles.

KING ALFONSO—I am acting as a link in the union between labor and capital.

ELEANOR GUNN—An objection has been made to silk underwear in pastel shades.

WOODROW WILSON—It gives me the cold shivers to read my extemporaneous style.

COLONEL GEORGE HARVEY—Women are a good deal smarter than some people think.

FRANCES McDONALD—Jack Barrymore is by far the best looking man on the screen.

REV. D. S. KENNEDY—The interchurch world movement is saturated with world imperialism.

EDUCATIONAL DIRECTOR FLORA TAYLOR YOUNG—Thin georgette blouses are not businesslike.

NORMA TALMADGE—No girl can be unhappy very long if she dons a pretty red or sapphire blue or orange smock.

E. W. HOWE—Every candid man is compelled to confess that he has declined a good many proposals of marriage.

M. L. BLUMANTHAL—The probabilities are that you are wasting money if any of yours goes to the support of a prophet.

HERBERT HOOVER—No Californian could live three months in the London climate and become a British citizen if he knew it.

EX-PRESIDENT ELIOT—The young women of our community evidently do not object to meeting the students when they are woozy.

FRANKLIN P. ADAMS—The best fitting trousers in the country are worn by the nation's most popular person, Mr. Douglas Fairbanks.

NEAL R. O'HARA—The Paris bathing suit architects, following their recent one piece conference, have decided on open coverings openly arrived at.

THEDA BARA—It's not particularly pleasant to have people believe that you are going to take their husbands from them when you meet them.

UNCLE JOE CANNON—When the Prodigal Son returned to his father's house the fatted calf was killed, but he was not put in charge of the family purse.

FANNIE HURST—The most sacred human relationship wears off like a piece of high sheen damask and in a few months becomes as a breakfast cloth stale with soft boiled egg stains.

## Uncle Sam Chooses His Chauffeur

By Elizabeth A. Everett

The Junker boys caused a dreadful accident  
by hogging the road

Illustrations by William C. Morris Uncle Sam always refused the car  
William Jennings picked out

NOW that Uncle Sam must get a new chauffeur, of course all the family are having a good deal to say about it. Some of his nephews think one way and some think another about it, so there is considerable discussion going on. Uncle has had his chauffeur for eight years now. Some of the boys say he is too bossy and heady and that he doesn't ask advice about which way he shall go, or how he shall drive. But some of those who feel that way are the ones who did not want Uncle to hire him in the first place, and they have been saying, "I told you so," right along.

Now that there is to be a new one they say they are going to insist upon his taking one that is more docile and will do the way he is told. They say that the chauffeur should not have so much to say about where to go; it's his business to do the driving. And when they say, "Home, James," they think he ought to head for home without any argument. You know Woodrow, the present chauffeur, wouldn't always do that.

When Uncle Sam's neighbors planned to get together and decide on some traffic rules so there wouldn't be any more accidents, after that last frightful collision in which so many of Uncle Sam's boys were killed, Woodrow thought he had some ideas about traffic rules that would make the roads safe for everybody. So he asked Uncle Sam to let him go and help. Now Uncle had never let the family car be taken away from home on a long trip like that and he felt uneasy about it. But he was really the one who had made the suggestion about the meet-

ing and it seemed important, so he let Woodrow do it.

There was a terrible ruction over his taking the car away. You should have seen some of the boys; how they did cut up about it. I've always thought, and I always shall think that if we hadn't said so much here at home and said it so loud the business would have come out better than it did. Here we were at home howling our heads off, that Woodrow just went for a joy ride, that Uncle Sam didn't want him to go, that he wasn't doing the things Uncle wanted him to do, and that we weren't going to stand for the rules he made whatever they were.

Even Uncle Sam got fussed up as to what he wanted, and of course the neighbors thought it was a very queer affair. They had started out with a great deal of respect for Uncle Sam's opinion—he is a person you do respect, you know—but when they heard all this squabbling at home they seemed to think it was all a grab, and that the square deal Uncle talks about was merely talk.

You see the neighbors over there haven't been used to giving half the road, and if anyone met with a mishap nobody thought of stopping to help him, so the little cars stood no show at all. You see that terrible collision occurred because old Heinrich's step-sons, the Junker boys, insisted upon taking the whole road; they ran right over Cousin Albert's car and almost wrecked Cousin Jacques'. Well that's what Uncle Sam sent Woodrow over to see about. He wanted them all to agree to give half the road, to stop and help anybody that was in

These last few years the old bus has had a terribly hard trip. Sometimes it turned corners so swiftly that there were only two wheels on the ground. But somehow the machine kept its course tho it threatened to skid a good many times

Uncle Sam is whistling thru his teeth as tho he is thinking, which shall it be?

trouble and never to carry off anyone's load if it happened to get spilled—they wouldn't be proud to own it, but that is what they had sometimes done.

And most of all, Uncle wanted them to agree that if anybody wasn't treated fairly, instead of having a fight or a lawsuit over it, they would all get together and decide what was fair in the case, and everybody was to agree to be bound by the decision.

Well it all seemed fair enough, and a very desirable arrangement, but the boys here at home wouldn't have it so. They said the neighbors were always getting into trouble, anyway, and we might just as well let them get out the best way they could as to get mixed up with it ourselves. They said we didn't have to travel those roads much, anyway, and we'd better stay at home and mind our own business. They said all Uncle's former drivers had said it was dangerous to drive on those roads and he had better not do it. They forgot that it was different when Uncle kept a coach.

All this doesn't seem to have much to do with Uncle's choice of a chauffeur, but it has. Well, the matter didn't turn out so very well after all. The boys at home got Uncle so fussed that he wouldn't sign any agreement, tho the other neighbors did.

Well that is the way it has gone all the time. They seemed to be afraid to all agree on anything for fear somebody would get some credit that he didn't deserve. Of course the old bus has had a terribly hard trip. It has gone over some rough roads and it has had to keep up a terrific speed. Sometimes it turned corners so swiftly there were only two wheels on the ground, and it looked as if it was going to smash with everybody in it. But somehow the machine kept its course, tho it threatened to skid a good many times. I do say that a chauffeur who can steer a car safely under such conditions is entitled to some credit.

During that wild ride when everybody was having difficulty in hanging on, they all tried to do their part and keep the thing balanced. Perhaps that's the reason we came thru safely. But when the road got smoother and you could see things were getting better some of the boys began to grumble. They blamed the chauffeur for the wear and tear on the engine, and because he had used up so many tires and so much gasoline, and because he had laid in so many spares, and for fifty other things, some of which he was to blame for and some

The choice is between James and Warren, who live next door to each other and can watch each other and see that neither gets the inside track with Uncle unfairly

of which weren't his fault.

And things went on that way; whenever the car struck a rut or a bump they complained about the chauffeur. It really seemed sometimes as tho they dropped broken bottles along the road themselves, they acted so pleased whenever he had a blow-out. Perhaps they really were afraid that Uncle would hire him again, or at least let him pick out the next chauffeur, and some of them wanted the job themselves or for their friends.

A lot of the boys wanted to choose Herbert, but some of them thought he had been away from home so much that he wouldn't know the roads around home, and that he would always be going off with the car. Herbert had had a good deal of business with John Bull and visited over there, so some of them said he was too friendly and would always give him right of way. We are funny, you know; John Bull is our nearest neighbor and really a blood relation, and yet we criticize his faults and have more to say about him than any of the other neighbors, and he does the same about us.

Then some of them said that most of Herbert's experience had been with motor trucks and he wouldn't know much about cars. But some of us thought that anybody that could run a food car over such roads as Herbert had and keep it top-side up could run Uncle Sam's car. Aunt Samantha liked Herbert pretty well; it seemed he had taken quite an interest in her house-keeping, and he was always kind to the children.

There were really a lot of people that wanted Herbert, but they were mostly the people that were going about their business and didn't take time to stop and talk about it, so you didn't hear as much about him as about some of the others. Herbert can do things, but when it comes to telling about what he can do, or even what he has done, Herbert isn't there.

A good many of those who didn't want Herbert wanted Hiram. And then there was Leonard, too. Leonard and Hiram had both learned to drive from Theodore, who had been one of Uncle's best and speediest chauffeurs. They didn't like the way Woodrow had done things so they said they would do everything different and they would never [Continued on page 160]

Sixth article in The Independent's Industrial Series on the big plants that are finding a successful answer to the problems of labor unrest

# Why Mary Smith Wants to Work at Filene's

By Professor John R. Commons of the University of Wisconsin

In collaboration with A. P. Haake, O. F. Carpenter, Malcom Sharp, Jennie McMullin Turner, Ethel B. Dietrich, Jean Davis, John A. Commons

**T**HE Filene store in Boston has always been recognized as a great experiment station in industrial government. The machinery here is of an amazing variety. Long before industrial democracy became a fetish, Filene's had all the forms which fertile brains have been thinking out in the last year or two under that name. The representative lawmaking body of employees, the paid executive "business agent" elected by the employees, the board of arbitration, even the employee members of the board of directors—Filene's have them all and more. They had worked it all out gradually before most places had thought about starting.

Mary Smith thinks that she would like to work at Filene's. She has heard that it is a mighty good place. Inexperienced girls start to work there for a minimum wage of \$9 a week, but with the commissions they say that beginners—sales girls—seldom make less than \$16 or \$18. Experienced sales people are paid a minimum of \$15 to start—in addition to commissions. The girls who start at \$9 (and they are very few nowadays, as most of them begin at \$10 or \$12) are assured of an automatic increase up to \$15 within two years.

Then they say that they are always treated well at Filene's. You can't be imposed on by a customer or somebody above you. If a customer accuses you of short changing and you know you didn't, you can take your case to the Board of Arbitration and you are sure of a fair hearing, and sure to get justice. The department heads are pretty decent. They have to be or you will complain to the Board of Arbitration. The board is elected *solely by the employees* and is very likely, if it has had a lot of trouble from the department headed by any particular person, to tell the company they had better remove that person and put in someone else whom the girls will stand for.

These are only a few of the reasons why Mary Smith—and there are thousands of Mary Smiths in Greater Boston—wants to work at Filene's. The girls say they

have awfully good times there. They have parties and plays and picnics and concerts. The three thousand employees run their own cafeteria at cost, and they have their own club rooms. If you are ambitious there is a good chance, too. The employees' own organization—The Filene Coöperative Association (F. C. A. for short)—maintains a lot of classes—courses for general culture and courses for improvement in business ability. According to the plan of the F. C. A., you are supposed to go with your group and listen to lectures from members of the store force who know all about different branches of the business. On Monday morning, or Tuesday morning, or some time when the store is not very busy, one of the teachers whom the store employs comes into your department and talks over with the whole sales force the problems that bother you and the best methods of building up sales, increasing the business or selecting goods.

If you like politics, they say you can get all you want here. Great is the excitement when the campaign is on for election of the president and council of the F. C. A. and for the Board of Arbitration. You come down early before opening time and stay after closing time. The candidates and their lieutenants hold executive meetings around the store. The speakers are eloquent. So are the candy and cigars bought from a generous campaign fund.

Mary Smith does not care particularly about politics, but the whole thing sounds pretty good—the fun, and everybody good natured—and all. So she applies to the employment office and gets a job.

Now she has become a part of the employees' organization—the F. C. A.—the "company union" as critics might call it.

Just how much of a union is it? What does it amount to anyway? Well, that depends on Mary Smith—and all the other Mary Smiths in the store. There are a great many of them—girls to whom Filene's looks good. There are almost too many of them, in fact, for the effective working of this same machinery of free-

The girls say they have awfully good times at Filene's. They have parties and plays and picnics and concerts. The three thousand employees run their own cafeteria at cost and have their own club rooms

dom from autocratic control and supervision. For after one Mary Smith and all the other Mary Smiths get in, there is just as much democracy at Filene's as they themselves make—just as much freedom from autocratic control as they are willing and able to assert.

No, that is not true. We must not forget the Board of Managers whose democracy has invited that of the employees. Otherwise there would be no F. C. A., no legislative body, no Board of Arbitration, no employee members of the Board of Directors. These do not exist because Mary Smith and her friends asked for them, but because the Filenes had an idea that Mary Smith and Jane Sullivan and Bill Johnson and all the others ought to want them and would be democratic if they only knew what fun it was.

How about it? What good are they getting from their machinery of "democracy"?

Take the organization—the Filene Coöperative Association. To begin with, they manage all their own "welfare work," a savings bank with a loan department; a health and accident insurance plan; a coöperative store thru which they can buy food, meat, and other articles; a lunch room of their own which serves three meals a day and caters for their parties and dances; a clinic; a choral club; a musical comedy once each year; a department of athletics, and a newspaper. Everything but the clinic is supposed to be self-supporting. If anything fails to be, they go into the pockets of the company.

These activities are supervised by committees of the council and administered by the executive secretary of the F. C. A., who is paid by the store, but appointed by the president of the F. C. A. and confirmed by five-sixths of the council. Making the company foot the bill seems to be a favorite pastime of the F. C. A. They even went so far one time as to employ an expert to go over the books of the company to check up certain facts which they wanted in connection with a profit sharing plan, and presented the bill to the company.

The legislative body for the employees is the council, which consists of twenty-four members, one member elected from each of the twelve sections of the store; the presidents of the Men's, Women's and Girls' clubs, members ex-officio, and the president, vice-president, secretary and treasurer.

Thru the council, the F. C. A. exerts its power to make the rules that affect the discipline or working conditions of the employees of the store. Thru the council the employees make wage agreements with the company, and carry on, by means of committees, their social and other activities of the employees.

The Board of Arbitration is the strangest thing in the whole category of strange things at Filene's. A board of twelve members consisting entirely of employees, elected one from each section of the store, with a chairman appointed from the council by the president of the F. C. A., it passes on all appeals affecting differences between the firm or the management and the employees—questions of dismissal, wages, position in the store, missing sales, short change, lost packages

and damages to goods. *The decision of the board is final.*

The firm can hire Mary Smith, but if it keeps her two weeks it cannot fire her without a possible "come back." She has a right of appeal to the Board of Arbitration and if the majority of these twelve employees say that the firm has shown no good reason for firing her, she cannot be dismissed. On the other hand, the board may carry its decision further than simply declaring that Mary Smith is to be retained. It may decide that the trouble was not due to the fault of Mary Smith, but to someone higher up. It may even go so far as to recommend that the firm dismiss the department head. This sometimes happens when a lot of complaints from various persons in the same department leads to the suspicion that the trouble is not with Mary Smith.

It is the Arbitration Board, in fact, which is the real efficiency committee for the firm. It is the body which discovers the weak spots and the sore spots in the store. It is the body which is the closest to the employees, the most cherished by them and the most popular for aspiring candidates at election time. Election to this board is considered a great honor. The fortunate ones who are elected take their work very seriously. They realize that they are making decisions momentous to the persons involved and to be followed as precedents for the future.

If the Board of Arbitration is unique, yet, in one other venture Filene's takes first prize. So far as we are able to find out, it was the first firm in the United States to admit non-stockholding employees, elected by the employees, to membership in the Board of Directors; and one of only three firms in the country at this writing. Four out of the eleven members are thus chosen, and two more employee members are chosen by the firm.

Filene's is a gold mine for A, who wants arguments in favor of this plan, so much debated today, provided for in the law of Massachusetts, and proposed by at least one

other state legislature. It is just as much of a "find" for B, who wants arguments against the system of employee representation on the Board of Directors.

B, for example, studies the present employee membership of the Board of Directors and tells you that it is very evident that the employees take little interest in it. Not a single employee representative is a real salesman on the floor. They are all taken from the "higher-ups;" two merchandize managers, a division manager and the paid executive secretary of the F. C. A. "You see," says B, "give them a chance and they don't make the most of it. They don't trust each other and they have to turn, after all, to the high executives when it comes to managing the business."

"Why," says A, "what's the matter with you? Here you have the best argument in the world in favor of allowing the employees to select some of the members. This simply shows their good judgment. The point is that the people whom they do [Continued on page 163

### Next Month—Where the Workers Own the Stock

The Filene Coöperative Association has a Board of Arbitration elected solely by the employees, which sees that girls are treated well at Filene's. Mrs. Brennan, the girls' counsellor, standing at the left, and Mr. Harlow, standing the second from the right, see to that

# To Get Enough to Eat

A Message from the British Nation to the American People

By The Rt. Hon. C. A. McCurdy, K. C., M. P.

Food Controller of Great Britain

**T**HE British Food Ministry was created in 1917, when the submarine peril was assuming very serious dimensions, in order to fight the high prices and short supplies occasioned by the war. The submarines are now almost forgotten, and after eighteen months of peace it must be recorded that in some respects supplies are shorter and in some respects food prices are higher than during the worst period of the war. I believe the experience of other countries is not widely different from our own.

This is a remarkable and quite unforeseen development. When the armistice was signed no one here imagined that war prices would be maintained for more than a few months at most. I do not know any section of opinion which foresaw the actual and sustained rise in prices which marked the latter part of 1919 and the first six months of 1920. No one realized the extent to which production of food supplies had been interfered with by the war, nor the time that would be necessary to fully restore supplies. On the contrary, the popular impression was that the world was overstocked, and that only the restoration of shipping was necessary in order to pour a golden river of supplies into this country. Some people even believed that the warehouses of Germany and Austria were full of manufactured articles made during the war in preparation for a fierce assault upon the markets of the world.

These views stimulated a demand which urgently arose alike in agricultural and in commercial circles for the speedy removal of all forms of control which had interfered with the business activities of traders during the war. To a certain extent these views themselves operated to raise prices and diminish supplies. In the last two years of the war the British people had made remarkable efforts to increase production in this country. Tillage area in the United Kingdom was increased in the two years 1916 to 1918 by close on three million acres. There was an increase of 740,000 acres in wheat, of 344,000 acres of potatoes. Women, boys, disabled soldiers, German prisoners, had all been mobilized in the tremendous effort to develop the latent resources of British land. Before the war the number of women employed part or whole time on the land was estimated to have been about 90,000; at the date of the armistice it had risen to at least 300,000. Thousands of tractors, manufactured in America by the Ford Company, were being used for ploughing, and the Food Production Department was lending American machinery to the farmers for harvesting the largely increased acreage under corn crops. Public schoolboys spent their holidays in

Darling in Collier's

There's nothing like fifty per cent loafing to hasten the fifty cent loaf

the harvest field, and the army of land women added a new charm to the landscape. Men over the age of forty-five were enrolled as war agricultural volunteers, but when all that voluntary effort could do had been accomplished, thousands of soldiers had to be borrowed from the army to be trained as ploughmen or tractor drivers or to assist in gathering the harvest.

A remarkable fact, not peculiar to this country, was the rapidity with which all this great superstructure of abnormal production, brought about by the enthusiasm of the people at war, melted and disappeared at the touch of peace. The potato crop of 1918, increased by the efforts of allotment growers, was the largest in our history. We were for some time doubtful whether we should ever be able to eat or sell the potatoes which we had grown. In 1919 the crop of potatoes was one of the lowest on record.

In the early part of 1919 we were mainly engaged in attempts to decontrol foodstuffs, in response to insistent popular demands for the removal of war-time restrictions; a demand which was reinforced by the temporary fall in prices which marked the first six months of that year. In May the Prime Minister predicted that the continuing fall in food prices ought presently to result in a reduction of the expenses of the ordinary household by something like four shillings a week; that prediction was in fact verified almost to the letter, but in August of that year the fall of prices ceased, and prices have been rising steadily ever since.

Some of our early efforts at decontrol were discouraging. I remember last summer we thought the time had come when we could safely remove control from home-killed veal, which was then selling at one shilling a pound. Within a week we were receiving urgent communications from representatives of agriculture, complaining that decontrol had led to such a slaughter of calves as would gravely endanger our future milk supply if it was not stopped. In some of the industrial districts veal was being sold at four shillings and five shillings a pound to the new rich, miners and others in receipt of the higher standard of wages which the war has brought.

Today we have shed the early optimism of 1919. We realize that the wastage of war, the injury done to the world's productive capacity, cannot be made good in a few months of peace. And there is no longer the general belief that prices must necessarily return to anything like their pre-war level. On the contrary, the British people appear to be settling down with their accustomed placidity of tem- [Continued on page 161]

# What We Owe the Farmer

A Message from the United States Government to the American People

By Victor Murdock

Chairman of the Federal Trade Commission

**A**LL men are taking more thought of the farm problem. The basic industry is agriculture. Bread and butter is the foundation of material thrift, and it has also to do with the spirit.

Six startling features of the farm problem have risen to inconvenience those with ready remedies.

*First*—Tenantry, which is not best for agricultural thrift, is increasing by leaps and bounds.

*Second*—In the richer regions, farms are increasing in average size.

*Third*—Great areas of tillable land, in tillable sections, are not tilled.

*Fourth*—There is a measurable exhaustion of cheap available land in new states.

*Fifth*—The cities are gaining heavily in population at the expense of the country.

*Sixth*—The annual food reserves of the nation are gradually diminishing despite increased machine production.

One of the aids offered in the solution of the problem will not solve it. This is the essay written by the city-dweller urging the delights and advantages of the farm on his fellow citizens.

Another aid that will not solve it, is the easy preachment of the city economist to the farmer that the farmer has the best of it.

Still another aid that will prove equally impotent is the city theory of a multiplication of creature comforts and social delectations in rural districts.

The nation is not coming to a solution of the problem in any such easy fashion. The nation will not come to any solution until it radically reforms its con-

soil. There is another essential ingredient—working capital. For farming is not only a profession; it is also a business.

*Third*—Farms do not show profits by adding together at the end of the season the sales realizations of their products. There are material and labor

Harding in Brooklyn Daily Eagle

The long and short of it

costs, interest, insurance, taxes, hazard and depreciation in the profit computation. For farming is not only a profession and a business: it is also the most intricate accountancy.

Having given these factors thought, it might be well to take a few close views of the farmer.

The farmer unites in himself both capitalist and laborer. Economically he is a unit, an individual unit with no factional advantage.

The farmer is operating for the most part on competitive principles in a community where other

labor and other capital are highly organized.

The farmer, by nature, comes to know the value of things and of services. He is in everlasting opposition to a value which is fictitious in things and in everlasting opposition to charges for services not performed.

That is to say, the farmer, in his profession, business and accountancy, farming, is a capitalist who works, takes the profits and losses of supply and demand, but objects to artificial interferences with supply and demand. He still has the old-fashioned virtue of frugality. He still holds to the belief that the command to earn bread by sweat was a blessing, not a condemnation. He still rejoices in the spiritual exaltation which comes alike with the rigors of tillage and with resistance to the seductions of the superficial pleasures of the physical senses. To this view the whole population must subscribe more and more if it values its happiness.

The major part of the farmer's problem he will largely solve himself. First of all he is going to acquire the advantages of organization [Continued on page 163]

Thomas in Detroit News

"City folks get themselves into the durnedest messes"

cept of the farm and the farmer.

Here are some things which the nation, as a whole, could helpfully ponder:

*First*—Farms are not merely fenced fields which respond to cultivation. Farming is a profession which must be learned.

*Second*—Farms do not yield thru the device of applying labor cheerfully to fertile

Looking for a track

Devastated by the war, Europe today needs the pioneer, the strong man who can endure physical hardship and also retain the mental boldness to face unafraid the whirlwinds of revolution

## A Change of Frontiers

"Go East, Young Man!" is the slogan for present day pioneers. America has become comparatively conservative; it is in Europe that the great and dangerous experiments in democracy are being tried

By Preston Slosson

THE Frontier has crost the Atlantic. The United States is today the land of prosperous cities and well-kept countrysides; of widespread comfort, wealth and free expenditure; of art and the leisure to enjoy it undisturbed by social cataclysms. The United States is the banker and creditor of the planet, the land of stable currency and sound security. The American Constitution alone withstands the insurgent radicalism of the day; the war which wrecked kings and empires in the Old World proved impotent even to alter party lines in the New. The uprooted aristocrat who values personal safety, the timid European millionaire who fears measures of confiscation and repudiation at home, the distinguished author or painter who desire a wide hearing, all turn their eyes to the quiet and conservative continent so wisely discovered by Columbus for their eventual benefit.

But how different is the picture of the Old World, so long the home of wealth and culture and the Mecca of the American tourist! The vast countrysides devastated by the war resemble the Bad Lands of the Far West before the days of irrigation. The fine French roads which were so long an object of our just envy are torn to mud ruts. Railroad transportation has fallen back a generation as if some Rip Van Winkle had slept us into the past. Imperial treasures of art are being liquidated to pay the grocers' bills of royalty. The aristocracy of every belligerent has been drained of the wealth which made possible its life of cultured leisure. Revolution has followed revolution until the European conservative has come to regard the American constitution as something almost too good to be true. Even Marxian Socialism no longer terrifies those who have looked over the edge of the bottomless pit which is Russia and seen more frightful shapes looming dimly from the lurid depths.

The American who would picture Europe of today must call memory to his aid. If he can reconstruct the old Frontier of Jackson and Daniel Boone he can comprehend the poverty and hardship, the lack of housing, roads and railroads, the stripping down of life to the problem of bare existence which is the reality of modern Europe. If he can recall the inflated paper currency of Civil War days and the heavy burden of debt which

later drove the western farmer to Populism he can sympathize with the financial plight of Britain, France and Italy. But if he would understand the financial condition of the nations of the Danube and the Baltic he must send his memory south to the collapse of the Confederacy when Confederate paper money could buy wood only at the rate of "cord for cord." Conditions in some parts of Europe recall the "starving time" of the first settlers of Plymouth and Virginia when emigration to America was more dangerous than going into battle.

No doubt this picture is somewhat too generalized. There are gradations in Europe's poverty, and little islands of prosperity exist, such as Switzerland and Denmark. But no country in the Old World awakes of a morning with that complacent sense of security with which America seeks its breakfast coffee. For the Bolshevism that once flooded Finland may at any time lap over into Sweden, and the political earthquakes that shake Germany reverberate in Holland. Here and there a king remains seated on his throne, but his eyes are anxiously turned to the unstable earth on which the throne rests. Here and there a class of war profiteers are buying jewelry, but they buy in feverish haste as those who are spending fairy gold which may vanish into nothingness at any moment.

EUROPE is certainly no place today for the very old or the very young, for the quiet citizen who enjoys the routine security of civilization or the spoiled darling of a sheltered environment. Europe needs the pioneer, the strong man who can endure physical hardship and also retain the mental boldness to face unafraid the whirlwinds of revolution. But Europe's pioneers have for generations sought America. It is just because our country has graduated—and very recently—from the wilderness that we can now give moral and material aid to Europe, which in the past gave us the luxuries and refinements of a civilization that has passed away.

Can Europe give us anything in return? Yes, Europe can give us what the frontier gives the settled city: the benefit of an experiment. It is now Europe rather than America which is the great laboratory of political democracy. Masaryk and Petliura [Continued on page 159]

# The Democratic Platform

A Debate by Talcott Williams and Norman Hapgood

## Nullifying the Constitution

By Talcott Williams

THE Democratic platform proposes an impossible task. It demands, as did President Wilson a year ago, that his Covenant for a League of Nations shall be ratified as he negotiated it, without reference to the powers of the Senate or to great changes since April, 1919, in affairs and in opinion, at home and abroad.

The powers of the Senate cannot be changed by an election. The Democratic platform refuses any amendments except "reservations making clearer or more specific the obligations of the United States to the League of Associates." All these obligations in the Covenant are to be left unchanged, Article X included. These obligations failed of a two-thirds vote in a Senate of 96 by 26 votes. For ratification, 64 votes were needed in a full Senate. Only 38 were cast for the treaty. Only one-third of the Senate is reelected next November. Neither party can secure a two-thirds majority. A bare majority is all either can expect. Neither party has had a two-thirds majority for fifty years. Compromise is inevitable, if the treaty comes again before the Senate, even if there is a Democratic majority. If no compromise is made, the treaty will fail again. Not even the election of a Democratic President can change the constitutional powers conferred on the Senate in treaty making.

The Democratic platform, therefore, asks of the Senate—two-thirds of whom remain after the next election—that it shall lay aside its powers for the Covenant and the treaty of which it is a part, both stronger when laid before the Senate, July 10, 1919, than since or now. The treaty has grown weaker abroad as well as here. Its reparation clauses are being made over. In the Senate the Covenant grew weaker until its rejection. It grew weaker with the country, thru all the long discussion. Democratic opposition increased.

PRESIDENT Wilson flatly refused compromise when the Democratic and Republican Senators would have reached one and the powers abroad were willing to accept the Lodge reservations. The plain common sense of the people felt that concessions should be made on both sides. The Democratic platform refuses compromise again. Europe has changed, world affairs have altered, public opinion has developed, and the Democratic party goes to the country on the declaration that a Covenant finished in April, 1919, shall be voted for unaltered by the American people in November, 1920, and go unchanged to the Senate if a new Democratic Administration comes into power, March 4, 1921.

The Republican platform favors an agreement to all that is proposed in the Covenant—a court, the support of its decisions, the protection of small nations, joint action under an agreement to diminish war—but leaves the future to decide the best form. If it was not possible to secure prompt ratification last July by the Senate when the whole subject shared the enthusiasm awakened by a great triumph in war, what chance is there of a majority at the polls with the war receding and responsibility for external affairs diminishing? Those who favored prompt ratification last June, because the world needed immediate action—this was my own vehement opinion then, and I was in this but one of many supporters of the League—feel now, after months of

discussion, that compromise, adjustment, change after consideration, is wise on the great issue as on all great constitutional changes.

No one man, however great, however useful, however successful in arousing the world's deeper conscience and consciousness to international justice, can claim that his way and his way alone must be adopted without change. Doubtless the Republican senators were not all unselfish, unambitious, non-partizan. Will any one say that Woodrow Wilson is unselfish, unambitious, non-partizan?

WHICH is better, that the American people should discuss this great issue, be informed, educated and trained in it, and then accept without change Wilson's Covenant, made eighteen months before the election next November, or instead shall give to the Republican party, committed in its platform to substantially the same agreement, the task of adjusting the Covenant to the conditions of next winter and next spring? A year ago the world was ready to accept the Covenant of Versailles. The man is blind who does not see that the authority of the Allies is weaker. Nations, once ready to obey, today claim their own action and decision.

For the country, the cause and the world, it is better that a decision should be reached by full discussion and a national vote than by a President or Senate, however wise each may be. Meanwhile, Senator Harding and Governor Cox, as candidates, have a grave and decisive responsibility in announcing their own personal course and policy. For Governor Cox, President Wilson's political estate may prove a liability and not an asset. For Senator Harding, anxiety to placate the "irreconcilables" may estrange the larger body of Republicans who feel an international agreement to prevent war and protect small states is indispensable, and who will say less than Hiram Johnson but silently do more.

Presidential campaigns all turn on one issue, and the country and the world are the better for a campaign on this great world question. Other peoples have decided without discussion, but not the American people.

Inflation, the national finances, profiteering, and a policy under which the Treasury bought all it needed at high war prices except credit, which it bought low by invoking patriotism, plainly gave the Democratic platform makers much worry. The Democratic party has long been for inflated credits and currency, particularly in the South. Reduction in the national debt, on which the platform dwells, has been gained by anticipating income, a year ahead. The Federal Reserve Bank Act, the Farmers' Loan Act, Treasury aid to loans for purchases of Liberty and Victory bonds, great advances to railroads and shipbuilding, with \$9,000,000,000 loaned to foreign countries and carried as a "security," when it is debt undisguised—these policies have built up a vast mass of uncertain credits which a national presidential campaign will be almost certain to shake to its center.

The Democratic platform puts a bold face on all this, but between the lines is apparent a deserved apprehension of the effect when these extended and manifold credits are tested by the revelation, the discussion, challenge and apprehension of a hot political contest.

## What Does Dr. Williams Mean?

By Norman Hapgood

**D**R. WILLIAMS makes a number of serious charges against the Democratic plank on the League of Nations, and then throws in a few financial charges at the end, for which I shall have to wait for further specifications, devoting this article to making such answers as I can to such parts of the attack on the League plank as I am able to comprehend.

Firstly, in the title "nullifying the Constitution," and here and there thruout the article, I judge that thru the way in which the Democrats expressed themselves at San Francisco that venerable and formidable instrument under which we breathe and have our being is once more in danger. There has never been an election, I think, since I was a boy, when it has not been endangered, even if it was only an election for coroner. Usually our liberties, our ancient traditions, and the wisdom of the fathers are thrown in for good measure. Happily, however, out of every election, municipal, county or national, our old friend the Constitution emerges unscathed, with more or less the same familiar appearance, and only alters its look when some regular process is gone thru and my Bronx cocktails are taken away from me by due process of law or women stand on the brink of getting the vote by amendment instead of state by state. If the Democrats at San Francisco actually did start out after the scalp of the Constitution, or the nullification of it, they have no more chance than the Seal Harbor baseball nine would have against the Cincinnati Reds, or than the horse that I see meandering in front of my window would have against Man-o'-War. They might as well go out of business.

But does the plank actually indicate so momentous and futile an effort? The platform indicates the line of conduct promised by one political party. The Democrats hereby state their belief that the Senate at its next session, looking at the results of the election, ought to be willing to join President Wilson in making the United States a member of a group, now containing twenty-eight nations, committed to the task of preventing any nation in the future from launching us on a war like the last. They do, I concede, state their belief that no nation should be "permitted" to do this, to use the word that Senator Lodge himself used before he got into a personal fight with President Wilson, and this "permitted" means Article X. I concede, moreover, not only that this League of twenty-eight nations exists, but that it is actually functioning and doing more to help Europe get out of its tragic state of economic chaos than any other force, while we stand off and bark about the danger to our poor little country, the menace to our tender liberties, the insult to our sensitive Senate. Article X can be changed any time by action from within the League. Article V, also, can be changed, making amendment easier. Neither these nor any other article can be changed by the United States Senate, however. All the Senate can do is to say: "You do it. The war was trouble enough for us. Don't commit us to responsibility such as falls on Switzerland, Belgium and Brazil. We are for you and we meant all our newspaper talk about making war impossible, but we never stopped to think it might conceivably mean committing ourselves to something that Holland and Denmark can face but that ought not to be asked of us. No, on second thoughts, you do it."

I wonder if the Republican plank is constitutional. Senator Johnson says it means no treaty at all, so I suppose it is constitutional. But the Senator does not say how we are ever going to be at peace with Germany, or how our agreements, if we have any, about European matters are to be made with England, France, Italy and the rest, they acting as a unit through the League. Dr. Williams interprets the Republican plank differently from Senator Johnson and

therefore even that plank may not be constitutional. I have read the Constitution and I have read the Republican plank. The first I understand to some extent, but the second not at all, and am therefore full of the dread that the unconstitutionality lurking in the Democratic plank may curl like an adder in some knot-hole of the Republican plank. If it is unconstitutional for the Democrats to keep on fighting to induce a Senate, instructed by the election, to accept the League as it actually exists, may it not be equally unconstitutional for Dr. Williams's branch of the Republican happy family to commit the nation to what Dr. Williams calls "substantially the same agreement"? Even if it is unconstitutional for the Democrats to express the hope of entering the existing League, and constitutional for the Republicans to stand for "substantially the same agreement," is not the practical outlook a little sad? All of Dr. Williams's figuring, which is very impressive, is based on the assumption that, no matter if the country went overwhelmingly Democratic, the Republican senators would die in their tracks rather than yield. Let us, then, suppose it goes Republican, and see if the picture that confronts us is more reassuring.

The happy band of ninety-six statesmen comes together in Washington once more. Senator Lodge is again the honored chieftain. Gronna he has lost, for that gentleman has already been eliminated by the embattled farmers of North Dakota. Newberry he may have lost by that time, thanks to the heartlessness of a Supreme Court opposed to corruption in elections. These two changes alone would wipe out the Republican majority, but we will suppose that Brandegee, Cummins and enough other tested thinkers are reelected to give Senator Lodge's party a majority—say of five, or ten, if you prefer. It needs two-thirds. Lodge begins to count his majority. The first one he counts is Hiram Johnson, of California. Count ahead, Cabot, much joy may it bring you. He then counts Borah. We are getting on. Knox might come in next, with his no League and separate peace. Medill McCormick answers to his name, and so does Brandegee. The rest of the battalion of death answer present, and by counting every one of these easy assets H. Cabot finds that he can come within a dozen or twenty of a two-thirds majority. The prospect is fine. The outlook for agreeing on anything is exactly the same as it was at Chicago, when the famous plank emerged as an indication of what the Republicans could do when they flock all alone and harmoniously by themselves, with no Democrats to mix them up, and no terrible Wilson to seize the credit for any great ideas that might emerge.

**L**ET us pass on to this Wilson specter. I forbear to quote what Lodge said about standing by McKinley in the treaty he made after the Spanish war. It would sound ill-tempered and I wish to view the present Republican ratiocination with Olympian poise. Dr. Williams says that Wilson "flatly refused compromise." This must be modified a trifle. When the President came back from Paris in February, 1919, he committed himself to nothing, but on the contrary called to the White House the Committee on Foreign Affairs of the Senate and the Committee on Foreign Affairs of the House, took their suggestions, and had the suggestions carried out when he went back to Paris. In August, after his return, the President said to the Committee on Foreign Relations of the Senate that there could be "no reasonable objection to interpretations accompanying the act of ratification, provided they do not form part of the formal ratification itself." In February of this year Senator Hitchcock reported to the President an agreement with reservations that he understood would be satisfactory to Senator Lodge, and the President said: "I am glad to say that I can accept them as they stand." They included a reservation on Article X, and the

President accepted that also, altho he described it as "unfortunate." Lodge thereupon changed his position, either bullied by the bitter-enders or determined on his own account to humiliate and defeat the President at any cost, and substituted something he knew the President would not accept.

There is another point that I think Dr. Williams might modify a little. He says: "No one man, however great, however useful, however successful in arousing the world's deeper conscience and consciousness to international justice, can claim that his way and his way alone must be adopted without change." And again, a little later, he refers to "Wilson's Covenant." This charge that Wilson created the Treaty and the League all by himself is not easy to understand. Did Wilson have his way alone at Paris? Did Foch? Did Clemenceau? Lloyd George? Sonnino? When the British Parliament ratified, did one man have his way, and, if so, what man? How about the French Parliament? When Italy ratified, what one man's will was represented? Did one man not only work out the plan thru the weary months but bring the twenty-eight nations into the league and the thirty-four nations into general acceptance of the treaty? Did one man dictate to Governor Cox when, long before he was nominated, he put into less than eighty words two reservations entirely consistent with the President's position but also entirely sufficient to quiet those patriots and heroes who are actually and sincerely afraid our little country may be picked upon by San Marino and Siam. The Democratic platform allows for such reservations as will make clear to the sceptred villains of Europe that we have not forgotten our constitution in our haste to ratify. More important, perhaps, than such superfluous declarations is the fact that the Council of the League, which is the important body, can do absolutely nothing without our assent if we are a member, altho it can do whatever it likes if we are not.

All this being so, is it a joke, or is it rather a nightmare, to ask the twenty-eight or the thirty-four nations to wait a year or so until maybe Lodge and Johnson can offer them something choice that will please everybody, like the Chicago platform?

## The Issue Involved

By Talcott Williams

IN this year, as in 1896, the acceptances of the two candidates are to be the real platforms. The Democratic platform, like the Republican, has ceased to interest me. "Labor" is still interested in the two platforms, because on the basis of the Chicago and San Francisco declarations, the trade unions propose a class support of the Democratic labor creed (as in the platform) and a class opposition to the Republican labor creed, as per platform. What Governor Cox will do, no one yet knows. Senator Harding, with unusual courage for a candidate, has gone farther than the party platform and unflinchingly declared the supremacy of the law and the right of any individual to seek work, whatever organization bars the way. Many there must be who will deem this issue and the decision of "labor" to wage "class" warfare more important than any that can be raised by either platform. "Some day," many voters will say, "this issue must be settled. Why not now?"

Both platforms in their utterances on the League have to be considered in the light of the action of both candidates. Governor Cox is better aware than Mr. Hapgood that neither party can carry the treaty merely by winning a majority of the Senate and the new resolutions on the League Governor Cox proposes, without defining, apparently look to a compromise so as to secure two-thirds in a Senate where twenty-one Democrats voted for ratification with the Lodge amendments. Doubtless President Wilson was ready

to compromise last February. Last November, two days before the final vote, President Wilson rejected a compromise closely similar. In February, it was too late. Come more, was the fable of the Sibylline books repeated. How easily and readily could compromise have been secured last year, in July, by President Wilson? But an albumenized temper does not incline men to compromise.

The Republican leadership also moves away from compromise. The Republican candidate in his letter of acceptance proposes to scrap the League, to make peace by a Knox resolution and later to organize a new agreement based on a court of arbitration, instead of the Council now in existence.

Mr. Hapgood lays stress on the "existence" of the League. This "League in being," while three "great powers" act over its head in every day's despatches, has not inclined the American people to accept the new instrument to guide our foreign policy, until its action has been safeguarded. Unlike the European powers, we are familiar with Constitutions, expect to obey them and are schooled to the action of coördinate powers. We look to the people for a final decision, not to a single chamber of a Parliament as in Europe.

"If" we had a constitution like England's, President Wilson would have gone out of power when in November, 1918, a Congress, with a majority against him, was elected, as would the Premiers of England, France or Italy. This may be a good government plan. It is not ours. Under ours, a great issue like this has to be fought out before the people. While I should have liked an early decision because of my international sympathies and because so many of those I know have been in peril or lost life by the delay, still, I know nothing is more important than that permanent, far-reaching international agreements should be passed upon by the people rather than by Presidents and Premiers, however great and wise they may be. I am inclined to think that even Mr. Hapgood would be of this opinion on any issue but the League which a very general assent and consent abroad and at home calls "Wilson's League." Certainly the eminent men named by Mr. Hapgood have not "wished it" on themselves in any vocal and vociferous manner.

The present situation is that neither candidate will leave this issue as the platforms put it. Senator Harding by scrapping the League goes farther than the platform to satisfy Hiram Johnson. He forces every Republican who believes in a League in order to prevent war and not merely in an agreement to settle international differences, to consider, however unwillingly, whether he can possibly support a candidate who will not even stand by his position and record in the Senate, where Senator Harding voted to ratify the League with the Lodge reservations. If he was right then, he is wrong now. If he is right now, he was wrong then.

Senator Harding leaves the Republican party platform at his own risk. A bolt by Senator Johnson has its dangers. The slow, steady seep of voters from the Republican party is less public, but more perilous. Take New York, New Jersey and Connecticut, States needed and "narrow" on a party majority. The Republican supporters of the League will not make as much noise as Senator Johnson; but they have more votes affecting doubtful States, needed for success. California and Idaho have 17 votes. These three Eastern States have 66. Ohio has 24, and Senator Harding has reason to remember his State is variable. The League Republican voters are clergymen who represent all religious interests. The world of colleges, universities, teachers and young graduates is for the League. So are women, by tens of thousands. The independent vote is a League vote. Every politician knows there are enough of these classes of voters to defeat the Republican party in these four States. What will it profit the Republican party if it gains a whole world of Hiram Johnsons, of the Irish, of Germans and of the

anti-war vote generally and loses the very soul of its independent, intelligent advancing vote, devoted to the wide interest in humanity represented by missions and by the broad international philanthropical movements like the Red Cross, the Armenian, Serbian and other relief, including the thousands of voters from the new republics of Europe to whom the League is a question of life and death.

Senator Harding gains Hiram Johnson, Borah and Penrose. He loses all the others. Their voice will not be heard, but their line of votes is spread thru all the States. They will not haste, neither will they grow weary. They will wait until Governor Cox has spoken. If his letter of acceptance stands for the covenant reasonably adjusted and the Republican candidate stood for his position in the Senate, as the platform was believed to do, the full Republican vote would be behind him. Leaving his own party platform and leaving too the party policy he supported in the Senate, he must not be surprised if Republican voters who stood for the League when even President Wilson was not for it, shall, some publicly, some individually, decide to support the League as the one instrument at hand to begin the great work of ending war. Abandon the League now and a war-sick world goes back, as Senator Harding proposes to agree—ments to arbitrate which did not prevent war in 1914.

### By the Way

Are you still wearing the overalls you bought this Spring?

### Cute But Yellow

THIS is the caption which a San Francisco paper put over a picture of a Japanese child, in whom two members of a Congressional investigating committee were showing a natural human interest. The phrase could not itself be called cute but it is certainly yellow.

### Ohio and Good Night

"OHIO" is "good-morning" in Japanese, and Ohio it will be whichever candidate is victor. But for either New York or Massachusetts the election of a Vice-President will mean "good-night!"

### The Perennial

BRYAN has once more been nominated for President; tho on this occasion by a third party and against his will. As between Debs and Bryan the score for nominations received now stands only five to four.

### The Spa Balance Sheet

GERMANY gained an extension of time for disarmament, a reduction in coal shipments, the hope of a foreign loan, and reentry into the councils of European diplomacy. The Allies gained a settlement of the coal question and the right to compel disarmament and reparations by further occupation of Germany in case of necessity. The world gained a breathing space until the next crisis. The United States gained the commiseration of Premier Lloyd George for not being represented.

### Our Debt to Lipton

IT is something when a man is able to fill the first page of the daily papers with pleasant reading. Murders and accidents are depressing to everyone; politics to many; prohibition to some. But a yacht is always beautiful and good sportsmanship is always engaging.

### The Prohibition Convention

LADY watering a garden during a heavy rain is a strange sight. So is a party trying to dry up a desert. The United States is already under complete prohibition and yet the Prohibition Party continues to exist. Enforce-

ment may be still an issue, but how can those enforce the law who, on their own showing, cannot hope to be elected? A third party may agitate effectively for a reform; it cannot administer the reform when achieved.

## Count Them Up

By Thomas Steelé

EVERY day some newspaper prints the bitter taunt: "There are (—) wars going on at present and the League of Nations does nothing to stop them!" This blank is filled up with any number from eight to eighty that strikes the writer's fancy. We wonder how many could name the wars which they number so confidently, especially since the number is rarely twice the same.

A lawyer might say that there was no war existing at the present time, except our own technical "war" with Germany, since no recognized Government is formally at war with another Power. But that would be a quibble, as there are two instances of conflict on a sufficiently extensive scale to count as a "foreign war": the struggles of Bolshevik Russia with Poland and of the Turkish Nationalists with the Greeks and Armenians. The fact that neither the Russian Bolsheviks nor the Turkish rebels are recognized as legitimate "Governments" outside their own boundaries does not alter the fact that many people are being killed in international fighting.

But there is a difference between two and, say, forty-two. How do the paragraphers bring in the other forty? Well, first of all they count in civil wars, such as those in China, Mexico and Ireland. It is doubtless very deplorable that there should be rebellions and insurrections within a country, but it is not the concern of the League of Nations, which has the duty of preventing, so far as is humanly possible, all international conflicts, but which has no authority over the domestic politics of a sovereign state. The very people who complain most loudly that the League does not compose the differences between Obregon and Villa or between Lenin and Wrangel would complain still more loudly if anything of the sort were attempted.

Then, to swell the list, every little riot and border "incident" is described as a war. If an Italian sailor shoots up the Slavic quarter of a Dalmatian town, or a Czech hits a Pole over the head in Teschen, or a race riot breaks out in the Banat it is reckoned another war. That such instances are a sign of disturbed conditions and bad feeling is true enough, and if often repeated or long continued they may lead to war in good earnest. But in themselves they are not much more destructive than a "labor war" in a West Virginia or Colorado mine. With eastern and central Europe shaken to pieces by more than four years of war there are certain to be hundreds of local "scraps" until the frontiers are all stably adjusted. It is the duty of the League to see that the Governments discourage such incidents and remain at peace even if some excitable super-patriot tries to force the hand of the authorities by starting trouble.

When civil wars and rebellions have been added to every frontier incident that arises the critic of the League still feels that he has not a sufficiently impressive total. So he counts in wars or semi-wars that did exist at some time since the armistice with Germany and reckons them as still existing; for example, the invasion of Bolshevik Hungary by Rumania, the invasion of Finland, Esthonia and Latvia by Bolshevik Russia, the Lemberg campaign between Poland and the Ruthenians, and so forth. These disturbances may once have counted as serious wars, but for the most part they have since been patched up by treaty and armistice or else have dwindled into mere smouldering disorder.

No fair test of the efficiency of the League of Nations can come until it includes the greatest of the Great Powers—the United States of America—and until its authority is

On July 26 they defeated Jim Barnes, American professional champion, and Walter Hagen, American open champion, in a best ball match of thirty-six holes. The match was all even up to the last hole, when Vardon sunk a putt of nearly thirty feet and Hagen's ball, eight feet away, just failed to roll in

no longer subordinated to the Supreme Council of the Allies. The latter will come about automatically with the completion of the peace treaties and the settlement of some outstanding controversies between the Allies and Germany. The first condition it rests with us to meet. Then it will be fair enough to ask the League to stop the aggressions of Russia and Turkey, as well as the forty or so other wars which do not exist, or which are the concern of local police rather than of armies.

## May We Not Inquire

**I**F a party platform is to explain the party policy, and a speech of acceptance is to explain the party platform, who shall explain the speech of acceptance?

## Camouflage

By Franklin H. Giddings

**T**HE political reactions to Mr. Harding's ample speech of acceptance may have disappointed him. They have been few and feeble. He should find compensation, however, and stimulation in the academic reactions to his production as an intellectual mutation. These have been many, dynamic, and positive.

Note, for example, the letter that the Reverend Doctor Henry A. Stimson sent to *The Times*. The country, he says, "has not been treated with 'simple things said in such a solemn way' in Presidential utterance, since the days of President Buchanan." Here we have exact description and frank acknowledgment that Mr. Harding succeeded in doing what he undertook to do. The only fault that can be found with Mr. Stimson's way of wording his tribute is that understatement to heighten effect is morally questionable when indulged in by a minister of the gospel whose yea should be yea, and whose nay should be nay.

The truth is that Mr. Harding has done a remarkable thing. It is by no means certain that he will be elected to the Presidency of the United States, and it is highly improbable that if he is elected he will play a sensational rôle. It may happen, therefore, that he will be remembered chiefly as the author of his speech of acceptance. This is a sufficient reason for approaching the study of it without prejudice, and with a sincere desire to discover, if possible, in what its undeniable originality consists.

Without presuming to speak with authority I venture the suggestion that Mr. Harding has attained intellectual leadership by the boldness with which he has exploited possibilities that have fascinated the American mind, but which no American mind heretofore has had the courage to experiment with in a thoroging way.

We all understand that we are Americans, better and more beautiful, more upright and more down-

right, more self-luminous and more pleasing to Almighty God than any other people in the world; but not all of us have seen with equal perspicacity just how and why. Mr. Harding has seen why and how with a clarity of vision altogether surpassing. To concede so much as this, altho no more could be said, would be to accord high distinction; and there is more to be said.

Mr. Harding not only sees, he also comprehends, and comprehending his mind moves directly to implications and corollaries. Grasping the outstandingness of America, he does not shrink from the obligations that the big fact imposes upon us. It is not merely right, it is imperative that we should be a law unto ourselves, in things economic, moral, and political. Senator Lodge now and then has seen glimmerings of this truth. Senator Borah and Senator Johnson have caught flashes of it. The Republican convention almost beheld it. To Mr. Harding it is refulgent; and like Saint Paul blinded by the glory of heaven while gazing upon it, Mr. Harding knows in his heart that he must manifest it to the heathen.

At this point, if my analysis is correct, Mr. Harding's supreme greatness is revealed. Manifesting America to the heathen is in part a literary enterprise. In the nature of things it must be so. Now Mr. Harding not only sees things, he has also a fine sense of propriety, and he has discerned, what Mr. Lodge has failed to perceive, how incongruous it is, in what bad taste it is, to set forth Americanism in the heathen locations of Shakespeare and Milton, in the grammar of Cambridge and Oxford. A candidate for the Presidency of the United States should make his own English language. Mr. Harding has made his. He has written as he has thought.

It would be absurd now to predict what the judgment of posterity upon Mr. Harding's creation (for a creation surely it is) will be. It is too near us to be seen in its true proportions. We scrutinize the platitudes of which it is built up, and like the geologist scrutinizing strata, fail to see the mountain top. Perhaps posterity will certainly know what we only suspect, that platitudes are the only material flat and homogeneous enough to support and compose the pinnacle of Hardingese Americanism; but what heathen nation, gazing upon that peak for the promise of dawn, or watching it throw the evening blaze afar, will care?

## The Main Tent and the Side Shows

**I**N the majority of states Governors and legislatures are to be elected this November; in all states, members of Congress. Do not let your interest in the most spectacular event of the political year, the race for President, divert your attention wholly from getting a strong Congress and an able state administration.

### "Remarkable" Remarks From Senator Harding's Speech of Acceptance

America will go on!  
Alaska is rich in resources.  
I believe in law enforcement.  
The human element comes first.  
I am thinking of the railroads.  
We call on all America for steadiness.  
I believe in the protective tariff policy.  
I believe in our eminence in trade abroad.  
America must stand foremost for the right.  
Ours is the temple of liberty under the law.  
We must stabilize and strive for normality.  
Peace closes the gaping wound of world war.  
It is idle to think we have attained perfection.  
It is folly to close our eyes to outstanding facts.  
We hold the majesty of righteous government.  
Let us call to all the people for thrift and economy.  
A people's will still remains the supreme authority.  
Toil alone makes for accomplishment and advancement.  
The Government's obligations are alike to all the people.  
In conflict is disaster, in understanding there is triumph.  
Agriculture is essentially the foundation of our very existence.  
More than all else the present-day world needs understanding.  
Parties are formed by those who reach a consensus of opinion.  
In all sincerity we promise the prevention of unreasonable profits.  
We are contemplating peoples in the concord of humanity's advancement.  
I believe there is an easy and open path to righteous relationship with Mexico.  
We promise that relief which will attend the halting of waste and extravagance.  
With a hymn of service in my heart, I pledge fidelity to our country and to God.  
Congress enacts the laws, and the executive branch of government is charged with enforcement.  
In a citizenship of more than a hundred millions it is impossible to reach agreement upon all questions.  
The womanhood of America, always its glory, its inspiration and the potent, unlifting force in its social and spiritual development, is about to be enfranchised.

# The Story of the Week

## Senator Harding Accepts

ON July 23 Senator Harding was formally notified of his nomination as candidate for the Presidency by a Republican delegation headed by his colleague, Senator Lodge. Nearly 50,000 visitors poured into the town of Marion for the great occasion. In the main, Senator Harding's speech of acceptance, which we discuss more fully in the editorial columns, followed the Republican platform and on many issues paraphrased it directly. No new campaign issues were raised, and the points left obscure in the platform were not more definitely elucidated in the address.

The clearest statement on the foreign policy which Senator Harding would pursue as President was the following:

I promise you formal and effective peace so quick as a Republican Congress can pass its declaration for a Republican executive to sign. Then we may turn to our readjustment at home and proceed deliberately and reflectively to that hoped-for world relationship which shall satisfy both conscience and aspirations and still hold us free from menacing involvements.

Altho this interpretation is not certain, Senator Harding's statement seems to point to the policy of the Knox resolution, a declaration of peace outside the Treaty, after which the question of the League of Nations and the necessary reservations or amendments thereto would be taken up for more deliberate consideration.

The outstanding points made on domestic questions were: emphasis on party government and responsibility, as opposed to exaggerated personal power of the President; opposition to government ownership of the railroads; economical administration and gradual deflation of the currency as the remedies for the high cost of living; approval of woman suffrage, and emphasis on law enforcement, with a reference to the eighteenth amendment as a case in point.

## Governor Coolidge Accepts Too

AT Northampton, Massachusetts, on July 27, a Republican delegation headed by Governor Morrow of Kentucky "broke the news" to the Vice-Presidential nominee.

Page in Louisville Courier-Journal

Can he keep it up till November?

Governor Coolidge accepted the nomination in a brief but pointed speech. On the League of Nations issue he was somewhat more specific than Senator Harding had been, declaring definitely for the League with the Senate reservations to the Treaty:

The Senate received a concrete proposition, utterly unacceptable without modifications, which the Republican Senators effected by reservations, and, so modified, twice voted for ratification, which the Democratic Administration twice defeated. The platform approves this action of the Senators. The Republicans insisted on reservations which limit. The Democratic platform and record permit only of reservations unessential and explanatory.

On domestic issues the Governor emphasized the importance of orderly, constitutional government; increased production as the cure for the high cost of living; the revision of "that great breeder of public and private extravagance, the excess profit tax"; the necessity of equal suffrage and of justice to the negro.

## The Democratic Campaign

GOVERNOR Cox delivers his speech of acceptance on August 7. After this formality is over he will enter on a "whirlwind campaign" which may be carried into every doubtful state of the Union. The campaign manager and the new chairman of the National Committee, in succession to Mr. Cummings, is George H. White of Marietta, Ohio. Mr. White is a popular and wealthy Ohio business man with political experience in the state legislature and in Congress. He is classed as a "dry" and his appointment will reassure many

### GENERAL GORGAS'S FUNERAL

A funeral procession in honor of Major General Gorgas wound its solemn way thru London's streets toward St. Paul's, where impressive services were conducted by Dean Inge

prohibitionist Democrats who viewed with some misgivings the nomination of Governor Cox.

The most important development which has thus far taken place in the Democratic campaign was the conference between Governor Cox and President Wilson. The interview was altogether private, but at the close of it the Governor stated:

We are agreed as to the meaning and sufficiency of the Democratic platform and the duty of the party in the face of threatened bad faith to the world in the name of America.

The President added:

He and I were absolutely at one with regard to the great issue of the League of Nations and he is ready to be the champion in every respect of the honor of the nation and the secure peace of the world.

This puts an end to various industriously circulated rumors that the Democratic nominee would "put the soft pedal on the League of Nations issue" and fight the campaign on other lines.

## The Camels Are Coming

THE Prohibition Party has put forth a ticket in spite of the fact that prohibition is already an accomplished fact thruout the United States. The failure of both the Republican and Democratic platforms and candidates to promise to sustain the Volstead Enforcement Act against amendment or repeal is the cause of the continued existence of the oldest of all the surviving minor parties. Nobody supposes that the eighteenth amendment is in any immediate danger, but many strict prohibitionists fear that under Cox or, less probably, under Harding, it would given a "liberal" interpretation.

The convention met in Lincoln, Nebraska, and nominated William Jennings Bryan, thrice Democratic nominee for President, to head the Prohibition ticket. Mr. Bryan had given them no encouragement, but his well-known views on the temperance question and his open disappointment when Governor Cox, supposed to be a "wet," was nominated at San Francisco, caused the delegates to hope that once tendered the nomination he would not decline. He replied, however, that he could not make a campaign upon a single issue and that he was unwilling to sever his connection with the Democratic Party "which has so signally honored me in years past." He refused to state whether or not he would vote the Democratic national ticket in November, "but whatever I may feel it my duty to do in this campaign, I expect to continue as a member of the Democratic Party." Bryan can now sympathize with La Follette.

After Mr. Bryan's refusal, the convention nominated Mr. Aaron S. Watkins of Germantown, Ohio, for President, and Mr. D. Leigh Colvin of New York for Vice-President. The platform attacked the Republican and Democratic parties for their ambiguous attitude toward prohibition, favored the League of Nations with only interpretative reservations, advocated woman suffrage and approved the entire program of welfare legislation proposed by the National League of Woman Voters.

Keystone View

George H. White, of Marietta, Ohio, has been chosen to succeed Homer S. Cummings as chairman of the Democratic National Committee

## The Higher Cost of Travel

IN order to cover the \$600,000,000 increase in wages recently awarded to the railway workers of the nation, the railways will probably be forced to increase rates. Not all of the increase, however, will be added to freight rates; the passenger also will have to pay some of the bill. Railroad experts suggest a four cent per mile rate in western states and three and one-half cents in other parts of the country. An increased fare for Pullman accommodations, higher commutation rates, increased baggage and express charges are also predicted.

The necessity for higher charges even under present conditions, without taking into account the increase in the payroll, is evident from the recently published report of the Interstate Commerce Commission dealing with the larger ("class one") railroads for the month of April, 1920. That one month showed a deficit of more than \$25,000,000 in operating revenue for the country as a whole. As the Government's guarantee to the railroads, continuing to September, amounts to about \$75,000,000 a month, the deficit brought the total loss to the Government during April to more than \$100,000,000.

Most of the labor unions have decided to accept the award of the Railway Labor Board, altho they were disappointed at not getting their full demands. The Order of Railway Telegraphers decided to submit the question of a strike to a vote of its membership. The railway shopmen will also hold a referendum, but with the recommendation that the award be accepted. The "outlaw" unions which took part in the sporadic strikes of this spring oppose the award and may again venture on local strikes. But it seems probable that the rank and

file of the larger unions will acquiesce in the new wage scales for the time being. Mr. Gompers criticized the award as inadequate and said that the railwaymen were "disappointed and they have a right to be." He expressed the opinion that by more efficient management the railroads could pay the new wage rates without raising freight rates to the public.

### Fifth Race—Resolute Wins

Resolute	5:28:35
Shamrock	5:48:20

Resolute won by 19 minutes 45 seconds corrected time.

## Greeks Take Adrianople

Underwood & Underwood

Parley Parker Christensen was nominated for President on a third ticket, that of the Farmer-Labor party, which followed the Republican plan of holding its convention in Chicago

power than the Sultan and seem better to represent the sentiments of the Turkish people. In form, the Greeks are but taking police measures, but in reality they are waging war against Turkey. Indeed, the Greeks are probably doing more fighting just now than at any time during the Great War, in which Greece played a comparatively small part. With the aid of the Greek fleet, troops were landed at Rodosto and other ports in European Turkey to attack the Turkish forces encamped along a front from Adrianople thru Kirk Kilise to Lule Burgas.

Jafar Tayar, the Turkish leader in Thrace, was defeated and taken prisoner at Adrianople.

The Turkish Crown Council, presided over by the Sultan, voted to approve the signing of the Turkish Treaty. The Turkish peace commissioners, thus authorized, will sign the Treaty as soon as they can return to France. Whether the

THE Greeks are continuing their occupation of Thrace as well as of western Asia Minor under the sanction of the Allies for the coercion not of the Turkish Government but of the rebel Turkish Nationalists, who have far more real

Turkish Chamber of Deputies will consent to ratify the Treaty after it is signed is another matter, and at present a very doubtful one. The real problem of the Allies, however, is treaty enforcement. Altho thus far wholly successful in Thrace, the Greeks have still great obstacles to face in Asia Minor, where the Mohammedan population is much greater, the war zone on a vaster scale, and the international situation more complex. The alliance between the Turkish Nationalists and the Bolsheviks, foreboding annihilation to what is left of Armenia and threatening the British position in Mesopotamia, Persia and even India, presents to the Allies a political and military problem of great difficulty, which is made none the easier by the quarrel between the French and the Arabs in Syria and the rivalry of the Greeks, Italians and French in southern Asia Minor.

## The End of Villa?

THE report comes from Mexico that the arch-bandit and super-rebel Francisco Villa has at last surrendered. Several weeks ago Villa offered to surrender on terms which would have left him with a small "body guard" at his command, but the Mexican Government wisely refused this offer since it would have enabled him to take the field whenever he was displeased with political conditions at Mexico City. Even now that Villa has surrendered unconditionally, and has gone so far as meekly to repair a railway line which he had previously destroyed, President De la Huerta announces that he will not relax precautions until the rebels are entirely disarmed. It will indeed be a feather in the cap of the present Mexican Administration if it has brought to final defeat the man who led the war against Huerta, turned against Carranza and invaded the United States and remained uncaptured.

## Poland Seeks Peace

WITH the Ukraine and nearly all of Lithuania in Bolshevik hands, the Polish Government asked for an armistice. The Polish Government was reorganized for the negotiation of peace. Wicenty Witos, leader of the

### HEAP BIG INJUNS

At Albuquerque, New Mexico, Governor Alfred E. Smith and a party of New York Democrats stopped off for a Hopi Indian celebration. Big Chiefs Charles F. Murphy and Governor Smith may be seen at the left in the rear, with James A. Foley and Miss Emilie Smith (seated) at Mr. Smith's left

Peasant Party, became Premier and Ignace Daszynski, a Socialist, was appointed Vice-President of the Cabinet. The new "peace ministry" was, however, prepared to continue the war if the Bolsheviks rejected the proposal for an armistice or asked impossible terms of peace. In view of the possibility of a renewed conflict, with all the odds against her, Poland appealed to the aid of allied and friendly nations, asking for munitions from England and France and at least for "moral support" from the United States.

It was hardly necessary to warn western Europe of the gravity of the situation with Bolshevik armies in Lithuania almost within sight of the Prussian frontier. The nightmare of a German alliance with Soviet Russia, crushing Poland between them, has not for a moment ceased to worry the statesmen of

England, France and Italy since the Bolsheviks first assumed power. It was in the hope of averting such an alliance, rather than from hatred of Bolshevism or the desire to recover Russian loans, that the western Allies sent futile aid and encouragement to each successive foe of Bolshevism from the first ventures of Kolchak to the fiasco of the Polish invasion. The one hopeful element in the situation is that even should the Bolsheviks reach a common frontier with Germany the Germans would be more frightened than the Allies. The German Government, Socialist tho it is, fears Bolshevism quite as much as it hates the French, and would almost rather continue to endure the peace treaty than turn communist in an effort—a probably unsuccessful effort—to win freedom from the severity of its terms. Hungary is already offering to join a defensive alliance with her late foes against the westward advance of Bolshevism, and Germany may at some time follow the Hungarian example.

The Bolsheviks, in spite of their military success, did not altogether lose their sense of perspective. They knew that France and England were prepared to send supplies and, if necessary, even troops to prevent the annihilation of Poland, the bulwark of the Allies in eastern Europe. They knew that Germany was at best a suspicious neutral, glad to witness the reverses of Poland but not at all glad to see the red deluge creep toward her own frontier. They knew that the Poles, altho they had humbled themselves to beg for peace, could still do a good deal of fighting and might even hold out on the defensive until aid reached them from the west. So the Soviet authorities promptly accepted the Polish offer for an armistice and announced that they were ready to discuss terms of peace. By this acceptance they added a moral victory to a material one; they could claim the prestige of having "won the war" against Poland and,

General Alvaro Obregon and his youngest son at Nogales on the international line between the United States and Mexico, where the Mexican revolutionary leader and Governor Thomas C. Campbell, of Arizona, held a conference

by appearing as the negotiators of a victorious peace, perhaps gain formal diplomatic recognition from foreign powers.

## The Irish Civil War

IRELAND is in the strange and unhappy position of having two Governments, neither of which will admit that the other exists either in right or in fact. One is the Parliament of the United Kingdom of Great Britain and Ireland with its agencies of enforcement, the police and the British army. The other is the Dail Eireann, the Sinn Fein Parliament, and its agencies. From the British point of view the Dail Eireann is not a political body but a mere chance gathering of outlaws. From the Sinn Fein point of view the regularly constituted authorities are not representative officials but merely the agents of a "foreign power" unlawfully domiciled on Irish soil. Yet it is unsafe for a resident of the country to disregard the mandates of either Government. The Dail Eireann, eluding the vigilance of the British authorities, met in session in Dublin at the end of June to transact public business. A "National Land Commission" was established and protection promised to those who occupied land under its authority. A vote of confidence was sent to President De Valera and it was announced that the \$10,000,000 "international loan" was already oversubscribed.

Alarmist rumors of a "massacre" to be perpetrated by the British on July 12 circulated widely in the Irish press, but the day passed off very quietly. In Belfast there was the customary parade in honor of the Battle of the Boyne in 1690; for the Orangeman shares with his enemy the Irish Nationalist a deep attachment to the memories of the distant past. Sir Edward Carson made a fiery and uncompromising speech, denouncing the British Government for its weakness in failing to repress Irish municipal and county authorities who had given their allegiance to Sinn Fein, and threatening to mobilize the Ulster Volunteers to supplement the inadequate protection afforded by the British army to the loyalists in Ireland.

A few days later a band of Sinn Feiners raided the Dublin post-office and seized several mail sacks of official correspondence. The next outbreak took place in Cork on the night of July 18. Colonel Smythe, the police commis-

## THE LOST BULWARK OF VILNA

Before the Bolsheviks captured the city of Vilna from the Poles the defenders mobilized a force of a thousand women to aid the men in holding the city. Here are two of them. The Russians also mobilized women in the famous "Battalion of Death" which made the last stand against Germany in 1917. Apparently the Slavs have never sung "I didn't raise my girl to be a soldier"

sioner, was assassinated and a general riot ensued in which more than a hundred persons were wounded. On July 20 the town of Tuam in County Galway was raided by the military and the town hall wrecked. The outbreak was in retaliation for the murder of two police constables from ambush a few hours earlier. The police raided the town of Kilmallock, near Limerick, a few days later and destroyed several houses. These two incidents show that the infectious spirit of disorder has spread even to those who are supposed to be the guardians of the peace.

But the most serious of all the recent Irish riots took place on July 23 in the suburbs of Belfast. This was not so much a conflict between the police and the mob, tho the police suffered heavily in the attempt to restore order, as a fight between rival mobs of Orangemen and Sinn Feiners. At least half of the blame seems to belong to the Orangemen who attempted to drive the Sinn Feiners out of the city by mass attacks on their homes. The Sinn Feiners responded by sniping at the Orangemen and the police from the housetops. When comparative order had at last been restored four days later seventeen persons had been killed and over two hundred wounded. The police and the soldiers seem to have acted with impartiality.

## Rival Programs for Ireland

**W**HAT, after all, will be done about Irish home rule? Premier Lloyd-George is himself a convinced home ruler. Not only has he made a bill for home rule a part of his legislative program but personally he would willingly agree to a very much more generous grant of Irish self-government than his present proposals embody. Moreover, he is of all living statesmen the least wedded to the details of a program and the readiest to drop a project and take up a new one if it should seem expedient. It is therefore possible to say what the present government program is, but it is impossible to say what it may be tomorrow, except that Lloyd-George will certainly not go so far as to concede Irish independence.

The Labor Party, which contains some of the ablest British statesmen, and a large section of moderate opinion

in Ireland represented by Sir Horace Plunkett, favor the "Dominion plan" which would give Ireland practically the same position within the British Empire now enjoyed by Canada or Australia. Many British Liberals would rally to this plan, perhaps with some "reservations" as to guarantees to Ulster and as to international tariffs.

The Unionist Party, which derives its very name from the desire to maintain the existing union between Great Britain and Ireland, has been converted by Lloyd-George to a moderate measure of home rule. But the party would oppose any plan which gave full self-government to Ireland, under the Dominion plan or any other, unless Ulster were left free to stand outside its scope. Unfortunately for Premier Lloyd-George his parliamentary majority consists largely of the Unionist Party and he cannot go much beyond his present rather limited proposals without alienating his Unionist supporters.

The Sinn Fein position is that Irish self-government is not a thing to be granted but to be acknowledged as already existing. They ask nothing of the British except to evacuate the country. President De Valera has offered one concession; that once the independence of Ireland is conceded a treaty may be made with Great Britain, along the lines of the "Platt amendment" in the Cuban constitution, which would secure Great Britain against the danger that Ireland might ally herself with the foes of Britain or permit foreign powers to establish naval bases at Irish ports.

Still another program, adopted by no party but favored

© Kendal &amp; Herbert

The members of this Sinn Fein court sitting in Cork claim that the justice they dispense is quicker, sharper and more just than that of other courts

by many individuals, is for "home rule all round"; the transformation of the United Kingdom into a federal state in which not only Ireland but Scotland, England and Wales would have their own local legislatures in addition to representation in a common Parliament. Under this plan Ireland would have the same degree of home rule as an American state government. Most Irishmen, however, seem to regard a merely local legislature an inadequate concession to the national sentiment of the country.

## Chinese Militarism

**T**HE decisive defeat of the An-fu faction and its military chief Tuan Chi-jui brings China a step nearer to internal peace. General Tuan Chi-jui resigned his military office and agreed to terms amounting to complete surrender to the Government. All of the rebel forces are to be demobilized, and General Hsu Shu-cheng, the former Resident Commissioner of Inner Mongolia, will be punished for military insubordination if he is captured. It is reported that Tuan Chi-jui attempted to commit suicide after his defeat but was prevented from doing so. Communication between Peking and Tientsin has been restored, and those who have friends in the Chinese capital breathe more easily now that the city has been saved from the danger of an attack.

It is still too early to state with certainty whether the overthrow of the ambitious rebel Tuan Chi-jui will mean a

restoration in China of a stable central government or only a temporary lull in the civil war which under changing forms has afflicted the young republic from its birth. For the moment President Hsu Shih-chang holds the central authority of the nation, but at any time one of his own supporters may stake the strength of a local army in the hope of winning the grand prize of political power.

Perhaps the closest parallel to the political condition of China is afforded by Mexico. If in place of the strange-sounding Chinese names of persons and places we substitute "Villa," "Carranza," "Obregon," "Vera Cruz," "Sonora," it may be easier to picture the internal difficulties of the far eastern republic. In both cases there is a nominally republican and democratic constitution but a population accustomed to tyranny and unused to civic duties. There is the contrast between great undeveloped natural resources, exciting the cupidity of the foreigner, and extreme poverty among the masses of the people. Both republics are too weak to resist conquest but have been saved from complete partition by the attitude of the United States: the Monroe Doctrine having saved Mexico and the Hay Doctrine China. Both countries are victims of a special type of militarism. Militarism in Germany made the nation formidable, for it was organized under a single control and with a single purpose. But the type of militarism which afflicts China and several of the Latin American republics is a source of weakness, since it leads not to the formation of a powerful national army but to rival armies led by ambitious military chieftains against each other. The loyalty of the soldier is given not to the ruler of the nation, as in Germany, or to a political party or program, as in Soviet Russia, or to a religious creed, as in Turkey, but to an individual leader or a provincial faction. Originally, no doubt, there were idealistic elements in the civil wars of both countries; in the republican movement which overthrew the Manchu dynasty in China and the reform movement which overthrew the Diaz dictatorship in Mexico. But in both countries the war of ideas has largely given place to the war of ambitions and rivalries.

## Rebuilding Zion

SIR Herbert Samuel, British High Commissioner for Palestine, has established himself at Jerusalem in the palace built several years ago by the German Kaiser. Great Britain has accepted the mandate for Palestine as protector of the peoples native to the country as well as the Jewish immigrants who plan to rebuild a national state on their ancient soil. On July 12 a Zionist mass meeting in London adopted a resolution of thanks to the British Government and a pledge "to spare no effort of sacrifice for the rebuilding of Palestine as a Jewish national home, in collaboration with the inhabitants of the country." Lord Rothschild presided over the meeting, which was addressed by Mr. Balfour, who championed the Zionist program when Foreign Secretary, and by Mr. Wedgwood, one of the leaders of the Labor Party in Parliament. Max Nordau, the well-known essayist, responded to the expressions of good

will of the British statesmen that "we will watch the Suez Canal for you and be a useful ally if necessary."

The Zionist Conference has held several heated debates over the land question. A resolution was adopted for the gradual acquisition of land on behalf of the Palestine State. A large Socialist minority insisted on complete nationalization from the first with prohibition of private ownership and speculation, but this was defeated by 125 votes to 74. The Socialists later secured the adoption of an amendment requiring all settlers in Palestine, with or without capital, to cultivate the land themselves.

The chief obstacle to the Zionist program is that Palestine has at present only a small minority of Jewish settlers. Nearly all the Jewish element will have to come from immigration. The bulk of the inhabitants are Arabs in speech and Mohammedan in religion and there are also many Christian Syrians and other Christians in various parts of the country. How the present residents of the country will receive the wholesale immigration of Zionists is a problem, and it was largely to prevent friction between the Arabs and the Jews that Great Britain assumed the responsibility of a mandate over Palestine instead of leaving the country entirely independent.

Syria is under French control, and the French are industriously pushing their influence eastward over the Arabs of the interior. General Gouraud has occupied Damascus, formerly the capital of Emir Feisal the Arab King of Syria.

The French allege that Feisal broke the terms of truce agreed on between the French and Arab military forces and thus justified them in attacking Damascus. It is reported that the French will depose Feisal and make Emir Said King of Syria in his stead. Feisal was friendly to the British but hostile to the French; the new King will be virtually subject to a French protectorate.

The French have imposed a fine on the city of Damascus for its share in Emir Feisal's "rebellion."

## Instead of Pile-Drivers

**T**HE wooden pile is all very well, as far as it goes; but it does not go far enough. This statement may be taken literally as indicating that the wooden pile is not sufficiently long-lived, and it can also be interpreted as casting aspersions upon the service which it gives while it lasts. In the first case, it is a very expensive business to protect the wooden stick from the attack of the teredo and other marine animals which destroy it; while that section which is alternately wet and dry, owing to tidal ebb and flow, simply cannot be kept from rotting. In the second case, the strength of the wooden pile, aside from the deterioration which it thus suffers, is not what we would like to have it if we could have our way.

The obvious answer to these objections, in this age of steel and stone, is a pile of reinforced concrete. But this, too, has its drawbacks. It is strong enough for the most exacting requirements, once we get it safely in place; but the driving of it is a delicate undertaking. It does not possess the longitudinal fibrous structure of the wooden pile, which enables the latter to submit to the terrific pounding of the pile-driver without any damage other than mushrooming of its top—which of course is a matter of indifference. The concrete pile, when it yields at all to this punishing series of blows, either crumbles rapidly away into dust at the point of impact, or—even worse—splits lengthwise for a whole or a part of its length. This, of course, is something that must be overcome before the concrete pile can hope to replace its wooden predecessor.

One very interesting means of achieving safe driving of the concrete pile has just been developed out in the middle western states. It consists in making the pile drive itself, with the aid of jets of water. To understand how this is done, it is necessary first to realize that by far the greater portion of the resistance to the pile's progress downward thru the soft bottom is due, not to the unwillingness of the mud to submit to the direct penetration of the point of the pile, but rather to the clinging action of the material in contact with the pile's sides. In other words, the friction to be overcome is more skin friction than it is head friction—just as is the case with a boat passing thru the water. The pile is given separate means of subduing the two kinds of resistance which it thus meets.

For the head resistance, there is a two-inch pipe leading right thru the center of the pile, from top to point.

## NICE MONSTER

Tame now that he is turned to stone is this prehistoric reptile in the Crystal Palace grounds in London, but who would have liked to meet him in an alley on a dark night before he became fossilized?

The World's Work

Do you know that the average high school teacher in the United States earns a yearly salary of only \$1031? The highest average in salaries is paid by the District of Columbia, \$1750 annually, the lowest by Maine, \$652 a year. The chart above was based on the salaries for 1917-18 of 26,721 high school teachers in sixteen states and the District of Columbia. Practically no salaries have been raised since then

The pile is put in position and water is pumped thru this pipe. The sand and mud are washed out from immediately beneath the point of the pile, and the pile sinks into the vacant space thus left. So far as the overcoming of the head resistance is concerned, this action goes on until the pile reaches the desired depth and the water is turned off.

The more formidable skin friction against the sides of the pile is again overcome by hydraulic action. Outside the two-inch pipe there is a four-inch one, which, however, does not go clear to the bottom of the pile. Its outlet is

thru a large number of small jets that lead out thru the pile on all sides to its surfaces, where their mouths turn slightly upward. The water pumped thru the outer pipe thus passes out these side jets and forms a sort of lubricating film along the surface of the pile, freeing it from the pinch of the material thru which it is being sunk. At the same time these side jets aid in passing to the top of the hole such material as is displaced by the sinking pile. The latter, it must be emphasized, goes down solely by its own weight, the water jets relieving it of the pressure from below and from the sides which would otherwise prevent this from happening.

## A New Way to Vote

The northwestern quarter of the United States is a sort of sociological laboratory for the nation. The Northwestern States have been the first to experiment with direct legislation—that is, legislation initiated by the people themselves by means of petitions and endorsed or rejected by popular vote—direct nomination of candidates for political office, recall of public officials before their terms expire by popular vote, woman suffrage, state industrial accident insurance, etc. Thus the propaganda in the state of Oregon of a group calling itself the "People's Power League" for an amendment to the state's constitution providing that the legislature be based upon occupational instead of geographical representation, doesn't surprise the people of the Eastern and Middle States. They would not be greatly surprised if the measure became law—

tho that seems highly improbable—but would watch the experiment with more amusement than curiosity, ready to say, "We told you so!" if it failed.

The amendment seeks to place representation in the legislature upon an occupational basis by assigning for each one-hundredth of the whole number of legal voters in the state, who are registered as engaged in a particular occupation, one representative. It would abolish the Senate and have one house of one hundred members. The Governor and all executive and administrative officers would be elected by this house, be responsible to it, and recalled when the house thinks necessary. The Governor would be shorn of his veto power and thus deprived of any legislative function. The Governor may order the dissolution of the legislature, or 30,000 voters may, upon pe-

tition, order a vote to dissolve the legislature, and if carried by a majority of the voters a new election is held.

It is estimated that, based upon the census of 1910, the representation under this plan would place the following in the legislature:

Fourteen farmers, fourteen farm housewives, five farm laborers, four tenant workers, three merchants, two manufacturers, seven railroad and other transportation workers, three male clerks and salesmen, five loggers and sawmill workers, three professional men, twenty town dwelling housewives, two women factory workers, three women clerks, saleswomen, stenographers and school teachers, one for cooks and waiters, one for fishermen, one for actors and other theatrical employees, one for domestic and personal service.

## Give the Hogs a Fish Course

The common domestic pig will never be able to write a book on table manners, but he knows how to order a meal as well as any one. He is in a fair way to demand a fish course to supplement his salad and vegetable diet. He will take his fish in the form of fish meal, the refined by-product made from sound, wholesome raw material at the sardine, tuna, and salmon canneries, or from the menhaden.

The fish meal is not to be confused with "fish scrap," a coarser by-product much used for fertilizer; the meal is made from clean, sound material and is intended to be used as food for cattle and hogs. Formerly, the cannery waste was all made into "scrap" for fertilizer purposes, but the Bureau of Chemistry, United States Department of Agriculture, knowing the extremely high protein content of the scrap, has been active in converting this material into a high grade protein feed. The cleaned, selected portion is ground to a fine,

palatable meal which may be used to replace tankage in hog, poultry, or dairy rations.

Fish meal has been recommended as a supplementary ration before now, but popular prejudice against a badly prepared product has discouraged its use. The Department of Agriculture has proved by feeding experiments that fish meal equals the high-priced tankage as a ration ingredient, and better methods of selecting and milling have removed the causes of prejudice.

The oil content of the meal adds materially to its feeding value. So far the experiments have shown that the meal does not taint the animal product, whether it be pork, butter, eggs, or milk. Moreover, by diverting the fish meals to his animals instead of supplying it directly to his land as fertilizer, the farmer loses but a trifle of its fertilizing value and gains its entire feeding value—thus making the material yield two profits in the place of one.

## Is Your Town Safer Than St. Louis?

St. Louis lays formal claim to the honor of being the safest big city in the United States. Coroner Vitt proudly produces figures to show that in 1919 with a population of 922,000 and with 48,000 automobiles on the city streets there were fewer accidents than in 1901 with only 604,000 inhabitants and not a single automobile. Most of the improvement was made during the last two years as the result of an active safety first campaign by the St. Louis local of the National Safety Council. During the two years from 1917 to 1919 the number of deaths from railway accidents decreased from fifty to twenty-three, street car accidents from thirty-two to twenty-seven, industrial accidents from 110 to forty-two.

On the other hand the number killed by automobiles increased from seventy-nine to ninety-seven, tho this is scarcely to be wondered at in view of the fact that the number of automobile licenses granted in the city increased by 50 per cent during the same period.

In ten other cities the National Safety Council is now conducting an intensive safety first campaign. Cleveland, Cincinnati, New York, Buffalo, Rochester, Pittsburgh, Kansas City, Minneapolis, Wilmington and Portland, Oregon, hope thus to overtake the St. Louis record and "show the Missourians" where to get off. But some of them have a long handicap to overcome. The report of the Chief Medical Examiner of New York City, for example, shows 4173 deaths from accidents in the city during the fiscal year of 1918-19; 1128 of these were highway accidents. The number of mortalities for which the automobile is responsible increased in New York from 335 in 1915 to 702 in 1919, which is more than doubling the score in four years.

There is more than jest in the anxious mother's warning: "Children you may play on the railroad tracks till tea time, but don't go on the street or the automobiles will get you!"

## Typing Is Hard Work

Not all users of typewriters realize how great is the quantity of energy that goes to waste in typewriting, in fact experiments prove that typing is harder work than coal-heaving.

If a typist is locked up in a calorimeter (an apparatus for measuring heat generated by the body) it will be found that at the expiration of two hours' continual work the consumption of heat generated is sufficient to bring twenty gallons of iced water to 212 degrees Fahrenheit, or the boiling point.

It is not the weight of the folios on which the typing is printed or the psychological effect produced by the typing that is involved, but the actual weight that must be brought to bear on the keys.

A better realization of this will be grasped when it is mentioned that to print a letter or figure even faintly requires a force of upward of twelve

Wide World

Come "over the hills and far away" to fields where cattle graze and the air is fragrant, beckons this signpost in Germany. But how about those ruined fields in France and Belgium on which he turns his back?

## Crane Service is as Broad as the Market

Specifying Crane equipment for a heating or plumbing installation insures high quality and serviceability not only in the visible fittings, but also in the hidden piping, where lack of reliability might soon jeopardize the whole system.

This standard of service is equally important whether the builder is interested in a home, hotel, apartment, office building, factory, hospital or other public institution. It is equally easy to obtain, too, for buildings of all sizes and types, because the Crane source of supply is as broad as the market.

In addition to providing, through the trade, proper fixtures for every requirement of heating, plumbing and sanitation, Crane Service gives ample choice of design to satisfy individual tastes.

We are manufacturers of about 20,000 articles, including valves, pipe fittings and steam specialties, made of brass, iron, ferrosteel, cast steel and forged steel, in all sizes, for all pressures and all purposes and are distributors of pipe, heating and plumbing materials.

That the demands of Industry are as fully met by Crane Service as those of the homebuilder is strikingly indicated by the accompanying photo of Crane steel elbows and manifolds. Compare their size with the figure of the worker.

\*\*\*

The Wisconsin College Laboratory has discovered a way of feeding hydrolyzed sawdust to cows, and they seem to thrive on it.

\*\*\*

It is estimated that strikes during 1919 cost the nation \$1,975,000,000; \$750,000,000 of this was lost in wages, the rest was direct and indirect injury to production.

\*\*\*

James B. Evans, elevator operator of the Washington Monument, has traveled more than 50,000 miles during the past thirty-two years. He claims to hold the world's record for distance traveled in a straight up and down direction.

## The Presidential Handicap

Are there "naturally" more Republicans or Democrats in the United States? In any given presidential election special causes may induce Democrats to support the Republican ticket, or *vice versa*. So we have added all the votes cast for presidential electors in the sixteen presidential elections from 1856 to 1916 inclusive with the following result:

Republican votes cast—81,797,035.

Democratic votes cast—75,998,370.

The Douglas and Breckenridge factions of 1860 are here included as being all Democrats and the Taft and Roosevelt supporters of 1912 as being

Republicans, but the vote of no other third party is counted in these totals. Apparently the American public in the long run is almost equally divided between the two parties with a slight advantage to the Republicans, which does not wholly disappear even if we deduct the Progressive vote of 1912. But the handicap is so slight that the donkey has almost as good a chance in any particular election as if he started with the elephant at scratch.

## The Underdone Paleface

Paul Kanamori, the Japanese evangelist, in preaching Christianity to his fellow-countrymen cracks a little joke at the expense of the white races, which may help us to see ourselves as others see us:

All human beings are of the same form, just as all the rice crackers cut out by the same cutter are the same, altho there may be a difference in color, according to the degree of baking. Some are baked too much and become black as Africans. Some are not quite done and are pale as the white race. While some are baked *just enough* and are colored like the yellow people!

## The Horsepower of a Horse

The horsepower is not the same thing as the power of a horse. It is an arbitrary mechanical unit of 33,000 foot-pounds per minute, which is equivalent to the work a horse would do if pulling 150 pounds on his traces while walking two and a half miles an hour. Professor Carter of the North Carolina State College of Agriculture points out that for a full day's work the average horse can pull only about three-fourths of one horsepower. For a few minutes at a time, however, as in starting a load or going over a bad spot of ground, a horse is capable of developing two or three horsepower.

This brings out very well the difference between mechanical power and living matter. A power-driven machine operates in a consistent, uniform fashion which is most convenient for industrial purposes. But it cannot surpass itself by a sudden burst of effort and tap hidden sources of strength when confronted by a particularly difficult task.

© Kadel & Herbert

FAITHFUL TO THE END

Wounded, gassed and sick, these horses are going back to the line, as did their masters, to stop a few more German bullets with their patient and suffering bodies. H. Hazeltine, the American sculptor, has caught the spirit of their sacrifice in his group in the Luxemburg Museum

## A Change of Frontiers

(Continued from page 141)

are to us what Jefferson and Jackson were to the Europe of a century ago. It is not to be denied that the experiment in parliamentary democracy which western and central Europe are making is a dangerous one. Our democracy operates thru an elaborate political mechanism in which a Senate elected in one manner checks a House chosen in another, a President elected in a third fashion balances both, and a judiciary enthroned on an almost unalterable written constitution oversees the whole. In comparison the present constitutions of Britain, France, Germany and the new republics of central and eastern Europe are almost as simple and informal as the Town Meeting of old New England or the Vigilance Committee rule in California of the fifties.

Property qualifications for the vote used to be general in European countries with a few recent exceptions, but today they exist in few places outside Russia, where by the strangest of political paradoxes it is the possession and not the absence of a substantial income which debars one from active citizenship. The sex qualification has disappeared thruout northern Europe, even in Germany, the most anti-feminist of the nations. Universal adult suffrage is supplemented pretty generally by proportional representation in the new constitutions. Kings, aristocracies, upper chambers have largely disappeared.

Europe is also experimenting in the economic field; a bankrupt society must. With our abundance of land we have no present need to imitate the radical agrarian legislation now dissolving the landlordism which before the war dominated European political and social life; but our industrial problems are sufficiently similar to those of Europe to make it worth our while to study the experiments in government ownership, tax reform and labor legislation now being made across the Atlantic.

If we should pick a hint or two from European political or economic experiment we need not fear that this commits us to the whole program of revolution or will involve us in the misery and unrest of the Old World. For the Old World is still weighed down by its legacy of religious and national hatreds and it combines the material hardships of a primitive community with the social problems of the most complex civilization. Unlike our own Frontier it is overpopulated for its resources. European democracy is growing in the midst of the ruins of European oligarchy, and the ruins still hamper the new growth. It is easier to build a modern city on the virgin prairie than amid the broken towers of Babylon. In the end, whatever aid we extend to Europe, the gain may rest with us. If Dives had taken more interest in Lazarus he might have gleaned some useful knowledge from the sorrowful experiences of the latter.

## A thousand separate joys

Each serving dish of Puffed Grains contains a thousand separate joys.

Each grain is a bubble, thin and flimsy, puffed to eight times normal size.

A hundred million steam explosions have occurred in each, blasting every food cell.

The airy globules are crisp and toasted. They taste like nut-meats puffed. The morsels seem like fairy foods, almost too good to eat.

Yet these are the utmost in scientific foods. Two are whole grains, with every food cell fitted to digest. They are the foods that children like best, and the best foods they can get.

Serve with cream and sugar. Mix with your berries. Float in every bowl of milk. Crisp and douse with melted butter for hungry children in the afternoon.

They are nothing but grain foods. The nutty flavor comes from toasting. The flimsy texture comes from steam explosions. The delights are all due to scientific methods.

Serve morning, noon and night in summer, between meals and at bedtime. The more children eat the better. What other food compares with whole grains puffed?

# Uncle Sam Chooses His Chauffeur

(Continued from page 136)

take the car away from home; oh, never! They both said they would drive just like Theodore, but each of them was a little uncertain about the other's driving. Hiram said Leonard was extravagant and would set a bad example, and Leonard didn't like Hiram's ways a bit.

So the boys that didn't like Woodrow's driving got together the ones that wanted Leonard, and the ones that wanted Hiram, and they told each other a lot of things about what they would do when they got the kind of chauffeur they wanted. They had a very good time; they carried around banners and they sang songs and they shouted for Hiram and for Leonard. And whenever they talked about Woodrow's driving they agreed perfectly, but after a while it began to appear that the thing they couldn't agree on was whether they should ask Uncle Sam to engage Hiram or Leonard for chauffeur.

So after they had discussed it a long time and found that they couldn't agree on either one, some one suggested that they take Warren. Then everybody said that was exactly the thing to do. Warren drove just as different from the way Woodrow did as either of the others.

Now, Warren had not learned to drive from Theodore. He said he learned to drive from William, who was one of Uncle's earlier chauffeurs. Warren said he could drive just like William, and he was sure that was what people wanted. But Warren forgot that William used to drive a two-cylinder car for Uncle. Hardly any of the family except Uncle expected to have anything to do with the car then, Aunt Samantha least of all. Just suppose that Warren does try to drive like William! Let us hope he won't.

While the boys were deciding on a chauffeur, they picked out a model for the new car. They always do that when they choose a new chauffeur, and usually there is argument over it.

Aunt Samantha is taking an interest this time. She didn't use to have much to say about the chauffeur; she generally looked after the children, but lately she has found that the way the chauffeur drives and the model of the car have a great deal to do with the safety of the children. So she has been asking Uncle Sam for quite a while to put a self-starter on the car so she can help drive it. He's agreed to do it now, and the boys have all approved of it. That is unusual. Generally, when one bunch likes a thing about a car, another doesn't—just on principle, you might say.

But this time they both said the self-starter was fine, and each of them pointed with pride to the part they had taken in urging Uncle to put one on the car.

After a while the boys who liked Woodrow's driving got together. They said they would like a chauffeur that drove like Woodrow and a 1920 Wilson model for the car. It was a nice car and every one was pleased, and things were

going nicely when William Jennings came in with some new accessories he wanted them to use.

William Jennings had never been a chauffeur, but lots of the boys had wanted him, and he had had so much to do with equipping Uncle's cars in times past that some people thought he ought to be made permanent purchasing agent. Uncle usually refused the car that he picked out, but quite often he put on the accessories that he had suggested, afterward.

This time he was chiefly interested in a contrivance that would prevent the water in the radiator from boiling. He said a great many of the accidents and the bad conditions that were making Uncle Sam so much trouble were due to the lack of cold water. The boys were not enthusiastic about attaching this contrivance to the car. They said Uncle Sam had posted a notice in the garage that water in the radiator must not be allowed to boil, and that was enough. It was the duty of the chauffeur to see that Uncle's rules were obeyed. So they turned down William Jennings' steam gage and all other accessories that he wanted them to use; they were sure it would spoil the car to use them.

Then Bourke came in with an accessory that he thought would help the car immensely. He said Uncle Sam had posted his order that the radiator must be kept cool, so of course that would be done. What Uncle Sam told them to do would be done, so they needn't think any more about that. But he said that every one knew, of course, that because of speed and other things a radiator couldn't always be kept from boiling, and the engine worked best when the radiator was hot, anyway.

Uncle Sam had said in the notice he posted in the garage that the chauffeurs who drove the small cars should collaborate with his chauffeur and always see that the radiators were kept cool. Bourke said that of course they could not collaborate, so what Uncle Sam meant was that every one should look after his own car and decide just how hot to let the radiator get. He said that was the only reasonable thing, so that must have been what Uncle meant. And while of course they were going to do exactly as Uncle said—he was the one to say, of course—still, when Uncle told them to do something they couldn't do, why, the only way to obey was to do just as they pleased. That was the way Uncle's other orders had always been obeyed, and of course they would always obey Uncle, but that was the only way they could do it. So he had a gage that would let the chauffeur let the radiator get as hot as he wanted it to, but it would always look just right. He thought it would save a great deal of trouble, so they had better put it on the car. But that didn't quite suit the other boys, so they decided to keep the car just as they had it, and not use any of these contrivances.

Some of them wanted an Irish spark

plug, but they decided against it. Carter and some of the others who were picking out the car had their hearts set on a smooth running car, for they thought that was what Uncle wanted; they weren't going to put on anything that would make it jump and bounce. They knew it was a great deal better than Warren's, and they wanted to convince Uncle of it.

So then they started in to pick out the chauffeur. There was Mitchell, who was especially strong on safety devices; he had been working pretty close to Uncle and ought to know about what he wanted. There was William Gibbs, who had been running Uncle's delivery trucks, and had kept Uncle's books for a while, too. Lots of the boys thought he would be fine. Warren's friends said the way he ran those trucks was a fright and that Uncle wouldn't think of having him for a chauffeur, but the boys who had worked for him said he was all right and that Uncle couldn't do better. Lots of the others said so, too. William Gibbs said he didn't want the job very much; the work was too hard, and Uncle didn't pay enough anyway. He said they had nearly killed Woodrow at it, and he didn't want to be killed, and scolded into the bargain.

Then there was James, too, who had been running a smaller car for quite a while, so he had had a good deal of practice, and they said the way he had run that one showed that he was a good chauffeur. Some of them still had their hearts set on that radiator gage of Bourke's; they said James had been using one and had got so he could run his all the time at boiling point, tho the rules said 80°. I do not know whether that is true or not.

Well, some liked one and some another, so they sang songs and carried banners, and talked back and forth for a long time. After a while Mitchell said he didn't want the job, anyway; he was too busy as it was. James' friends had said right along that he was the only man for the place, and they kept saying it, so pretty soon everybody agreed that he was the very man. For one thing, he lived next door to Warren, and they could watch each other and see that neither of them got the inside track with Uncle unfairly, and the rest of the boys could go home and look after their own business, which by this time needed them badly. So they chose Franklin for assistant to James. He had been helping James run Uncle's motor boat, so they thought the practice he had had would make him a good assistant.

Now everybody is waiting to see how the cat will jump. Uncle Sam has got his hands in his pockets and his hat on the back of his head, and he is whistling thru his teeth as tho he is thinking. Aunt Samantha is tending pretty closely to her knitting, but she's got her eye on the self-starter and not a soul knows what Aunt Samantha will do.

## To Get Enough to Eat

(Continued from page 139)

perament to accept with resignation higher prices for a long time to come.

As regards the home produce we are steadily moving toward complete freedom for the British farmer. Two factors operate strongly in favor of this policy. In the first place, there is a general feeling that restriction of prices is not the right way to encourage the increased production which we need, and in the second place, it is recognized that prices of home produce have got to stand at a much higher level in future if the farm laborer is to be paid the greatly increased wages which he now enjoys. The wages of farm laborers in some cases are three and a half times above their pre-war level.

As regards some of the principal foodstuffs for which we are dependent upon foreign countries, sugar at present is perhaps the most hopeless. The world's production of sugar is still over three million tons short. The consumption is increasing in the United States, and the restoration of the sugar beet industry in Central Europe, upon which we formerly relied for the bulk of our supplies, is not to be hoped for in the near future. The difficulties with which the German food controller has to contend may be illustrated by the fact that last year of four and a half million tons of sugar beet grown in Germany a million tons were left to rot upon the fields for want of labor. The restoration of agricultural production in Germany is rendered very uncertain by the break up of agricultural estates which has followed the war, and the impossibility of obtaining the Polish and Russian labor upon which Germany largely relied for cultivation.

As regards wheat, it is too early for us to estimate with any confidence what next year's supplies will be. While a cloud of uncertainty hangs over the position in a large part of Eastern and Central Europe, it is quite clear that political conditions in those areas are not, to put it mildly, such as to encourage hopes of an early resumption of normal supplies.

With regard to meat we are in one respect in a fortunate position. We have large stocks of colonial mutton, the delivery of which was first suspended and afterward delayed by shipping difficulties during and after the war. At the same time British people have unexpectedly failed to resume their normal consumption of meat. There was a time during the war when meat was very short in these islands—when, indeed, one modest joint on Sunday was about all the meat supply for the week which a family could obtain, when there were meatless days in the restaurants, and fish was the staple article of diet. During that period the meat eating habit of the British people seems to have been permanently lessened, and today we are still eating only about three pounds of meat for every four which we used to eat in the days before the war.

## Either way Ends every corn

Use Blue-jay as you like best. Apply liquid Blue-jay from a bottle, or use the Blue-jay plaster.

The effects on the corn are identical.

The pain stops. And the entire corn quickly loosens and comes out.

Blue-jay now is ending some two million corns a month.

It has so reduced corn troubles that most folks never have them.

It will end them all when all folks know about it.

The Blue-jay method is easy, gentle, sure.

It is scientific—the creation of a world-famed laboratory.

For your own sake, stop paring corns. Cease the old, harsh, inefficient methods.

Learn what millions know—that corns are folly, the pain is needless. Anybody can be kept forever free from corns with Blue-jay.

Prove this tonight. Buy Blue-jay from your druggist.

## Stop the Leaks That Keep You Poor

Saving money is hard work until you get the secret. No matter how large or how small your income you will never save as much as you should until you get the knack.

If the average business were operated on the haphazard basis on which our household finances are run, there would be fifty times as many bankrupts. The truth, whether we admit it or not, is that very few families know where their money goes. At the end of each year we find ourselves little better off, if any, than at the beginning. We have earned \$800 or \$1,500 or \$5,000, yet practically all has been spent—and the pitiful part of it is we have nothing to show for it!

New Method Makes Saving a Pleasure Instead of a Hardship

If you are interested, write for free booklet called "How We Stopped the Leaks That Kept Us Poor."

## Improve Your Memory In One Evening

**Thousands have improved their memory thru this big secret. You can, too.**

**I**'M going to let you "in" on the secret of a good memory. Here it is.

First of all a good memory is not a gift. Nor is a poor memory a matter of forgetting. You forget things easily because you don't get them right in the first place. Likewise, you remember things easily if they have made a vivid impression on your brain.

The easiest way for impressions to reach the brain is through the sense of sight. And pictures, whether actually seen—or seen only in the imagination—are most easily remembered. Just looking at names, faces or numbers is the hardest way to re-

member them. You don't create a vivid impression of them on your brain.

Let me prove to you how easy it is for you to improve your memory through thinking in pictures. Let me send you—on approval—the seven lesson Roth Memory Course. Let me prove to you that my method will enable you to remember names, faces, dates, telephone numbers, events, appointments, in fact everything you want to remember.

### Send No Money

Merely mail the coupon and the complete Roth Memory Course will be sent you by return mail. Examine the course for five days free. Then, if it isn't more than you expected—if it doesn't improve your memory the first evening, send it back and you won't owe a cent. Pay only \$7 if completely satisfied. Mail coupon at once.

### Independent Corporation

Dept. R, 319 Sixth Ave. New York

fond of telling me from time to time that the sure economic remedy for high prices and short supplies is to allow prices to rise so as to stimulate production, and by increasing supplies ultimately bring about a lower level of prices. There is no doubt that this is a perfectly sound economic doctrine, but there are one or two objections to its operation when you come to the people's food. While the high prices are stimulating production they may be starving the poorer citizen, and if they do not have that result they are at any rate certain to have another result which is by no means desirable. Every rise in the cost of living is sooner or later, and generally sooner, reflected in demands for fresh increases of wages in all the standard industries of this country. As regards some trade, for example the railwaymen, they are automatically entitled under their wage agreements, to a rise of wages when the cost of living rises. An increase of one penny per pound in the price of sugar means an increase of ten thousand pounds a week to the railway wages bill, and when the workers whose wages are fixed upon a sliding scale of this kind obtain an advance of wages it naturally does not stop there. The result is that a penny rise in the price of sugar may mean an increase to the total wages bill of the country of anything from thirteen million pounds a year.

Food prices are far and away the most important part of the cost of living to the working class family. A rise in the cost of food prices which may be purely temporary means a corresponding rise in wages which will either be permanent or will probably involve serious industrial disturbances when the time comes for taking it back. These constant rises in the wages bill of this country consequent upon the cost of living, have added at least five hundred million pounds to the wages bill of the country as it stood at the beginning of 1918. That increase of wages necessarily increases the cost of production of every commodity, and thereby brings about further increase of the cost of living, followed by further demands for higher wages. It is therefore a somewhat hazardous experiment to allow food prices to rise if they can in any way be checked in the hope that high prices will ultimately destroy themselves.

Since 1917, when the Ministry of Food was created, it may be said that the rise of food prices in the United Kingdom has proceeded at a less rapid rate than in almost any other country in the world. The rise in food prices today in this country may be put at 155 per cent compared with pre-war standards. The corresponding figures for the United States are 107 per cent, for France 220 per cent, for Italy (Milan) 345 per cent, for Norway 198 per cent, and for Sweden 194 per cent. Every ten points rise saved for the British consumer means a saving on our national food budget of ninety million pounds. The cost of the Ministry of Food has been continuously and sub-

stantially reduced in the last three years. In 1918 it was costing the country four and a half millions. Today its cost is little more than a million, which is equivalent to a charge of a halfpenny per week for every British household. I venture to think that the British consumer gets excellent value for that halfpenny.

London.

## What We Owe the Farmer

(Continued from page 140)

and coöperation. He is going to apply scientific principles to production, more and more. He is going to keep books on the farm and manage it for strictly accounted profits as a going business. These things he can and will do for himself. There are other things in which the whole nation must help. The nation must see that tillable land is not held out of use. Tenantry must be discouraged and ownership encouraged. Land in the new states must be made available, unavailable land must be reclaimed, and every effort made to stimulate agriculture. And values must be kept honest, markets must be public and unmanipulated, and the channels of trade kept free from charges for services not performed.

In brief this nation must come to the serious realization of the fact that the highest economic condition in the world is found in the occupying owner of a fair-sized farm.

A square deal to the farmer means a square deal to the Republic. The prosperity of the nation will not permanently rise above the level of the prosperity of the farmer. In that direction lie light, liberty and the perfect democracy.

select are responsible to them and must come back to them for reflection, and if the voters don't like their representatives they simply won't vote for them again. If the store force wants information and their representatives don't give it to them, it is up to them to put in representatives who will do what they want."

"But," says B, "look at the difference between the way they act about the director business and the eagerness with which they scramble for seats on the Board of Arbitration. There they have four salesgirls, one salesman, one merchandize man, one buyer, the head of the telephone girls, a girl member of the educational force of the store, a minor executive and a store detective. There is where their heart is—in the Board of Arbitration, not in the Board of Directors. The employees don't want to run the business."

"On the other hand," says A, "the firm considers this Board of Arbitration a real efficiency board. It is here that you get a lot of the skeletons in the closet—the secrets that the firm

## I Clean My Whole House With the ARCO WAND VACUUM CLEANER

The ARCO WAND has shut out the drudgery of housecleaning from my home, and I never worry about extra help. Easy stroking for a few minutes with the light ARCO WAND tools keeps my house dust-free, and preserves the color and fabric of carpets, rugs, hangings and upholstery. I use the ARCO WAND all over the house—for floors, mouldings, stairways, bookshelves, drawers and mattresses. It costs about a penny a day to operate.

The ARCO WAND is noiseless in operation, and the light hose and tools are easily connected to the openings on each floor—no heavy machine to drag around. No filthy dust-bag to empty, as all dirt is piped into the sealed dust bucket of the machine in the basement. It is

as durable as the building and does not weaken or run down after a few seasons' use. Easily installed in OLD or NEW Residences, Theatres, Churches, etc. Also made mounted on trucks for factories, hotels, and offices. Send for illustrated catalog showing its labor saving uses.

## THE INDEPENDENT

311 Sixth Avenue New York

and the Board of Directors can't get at. They have to depend on the Arbitration Board to give them information and advice about the weak spots in the store management, and after they've had a little taste of it, these board members who engaged in such a scramble for office, become pretty well sobered. They begin to feel a heavy weight on them and to move as cautiously as if they really were on the Board of Directors."

Let it go at that. Anyhow, Filene's have the two big things that are advocated these days for labor participation in management. They have the so-called Arbitration Board, which is misnamed, for there is no representative of the employers on the board and no provision for calling in a disinterested party to arbitrate. It is elected solely by the employees and is the final authority in the store on every question affecting any or all employees. It is more than collective bargaining, or collective government, it is a Supreme Court of Employees. And, in addition, employees have four of the nine members of the Board of Directors.

How are Filene's going to be rated when the roll of industrial government is called? Have we here simply a "company union" founded by enthusiastic employers and tolerated by indifferent employees? Is the whole thing a trick to get more and better work out of the employees, or does it flow from a real desire to hasten self-government in industry? Is there any real democracy here? If you should take away the two Filenes and the other managers, could the employees keep the business going as it ought to go?

That is asking a good deal. You must remember that this is a big specialty store. A large percentage of the employees are women—girls who are young and love to dance and play and look for husbands, and women who no longer dance and play and whose first and last thought is to keep the job, in order that they may care for those who are dependent on them; all of them women who long for the beautiful things which they pass daily across the counter to those who can afford to buy them. It is no easy or brief task to stir the ambition of these women to the point where they thrill at the thought of sharing in the management of a great business.

Anyhow, do they need democracy and self-government when they have such democratic management? Efficiency here is evidently a by-product of health and happiness. But even the democracy here started from above, is not the democratic attitude of management a reflection of the democracy of the whole store? Altho the Board of Arbitration has actually at times reinstated employees whose dismissal has been approved by the management, the management say now that the board was right, and it was a good thing for them, as individuals, to be overruled by the employees collectively. They had made a mistake, and they were protected in

the store against their own mistakes. Surely it would seem that almost any manager would cultivate and acquire a winning personality toward employees if they had a veto on him like that.

Further light, perhaps, may be thrown upon some of these questions by the attitude of some of the leaders in a matter which has received a great deal of attention of late, namely, the question of affiliation with national labor organizations. Several departments in the concern, including the factory, are already affiliated with national labor unions. The Filenes recognize these unions and make agreements with them. The company is apparently taking no stand on the question whether the F. C. A. shall join the Federation of Labor. It leaves the employees to settle it among themselves. Discussions are heated. The heat is not spent, however, upon the spirit and object of national unions, with which Filene employees seem to be in entire sympathy. The agreement against affiliation is entirely a local one; namely, that with their own F. C. A. they can obtain more than they can obtain thru any other union; that the F. C. A. is *really in advance of any union*. Affiliated with an outside union, they would be held down to its level, which is a lower level than the one which they have achieved. The problem as seen by the Filene employee is to wake up and use the power he has and not trade it off before he has discovered its value and learn to make the most of it.

If you study all the machinery of organization on paper, you may get the idea that here is Industrial Democracy personified. If you look only at the record of social activities, you may conclude that here is simply another "company union" made up of employees who are indifferent to their own real interests. You see a scattering of energy, a great deal of activity spent upon having a good time which you might think could be spent to greater advantage upon the vital problems of greater efficiency in sales and fairer distribution. But you see, also, if you make a fair analysis of the place, that in spite of distractions, there is here much greater attention given to these fundamental problems than in other places where the pursuit of happiness seems to be lacking. It seems logical that if they were a little less gay, they might accomplish more to their own interest. The only trouble with the idea is, that in other places where they are less gay, they do not seem to have accomplished as much! Whatever else one may say of the men and women at Filene's, they are a lively group and they at least have leaders who are far more alive to their own interests than are the average sales people. Of the employers it is pretty safe to say that while health and happiness of the employees is with them a great object, they are intensely interested in the development of self-government in the store.

Madison, Wisconsin.

# The Independent

## Just a Word

Even in the heat of a Presidential campaign year the man who plays the game of baseball gets more headline space and more applause than those who play the game of politics. But perhaps that is because there is no leader so preëminent in statesmanship as Babe Ruth is in the art of batting the ball. His forty-one home runs so far this year have furnished the fans with a record crops of thrills; millions worship his hitting powers, but comparatively few know much of the man himself. In an interview with the Home Run King, published in this issue of *The Independent*, Sidney Reid tells the story of Ruth's rise to fame and gives us a glimpse of the personality behind the bat.

## Pebbles

Patron (at theater)—Why are the prices lower for seats in the gallery?  
Ticket Seller—Because they're higher.—*Panther*.

She—Who taught you to do the two-step so well?

He—My two step-sisters.—*Williams Purple Cow*.

Pardon me, but haven't I seen you somewhere before?

Possibly. I've been there.—*The Wisconsin Octopus*.

Dyer—Is your new car a good hill climber?

Ryer—Yes, but it is better at running up a garage bill.—*Judge*.

Blue Sash—You don't mind my singing, do you?

Blue Jeans—Not at all; I work in a sawmill.—*Columbia Jester*.

Chaperon—Why did you tell him you had to go to the dressing room for some cold cream?

Co-ed—I had to do something to get the chap off my hands.—*Siren*.

IN 1955

Little Willie—Father, what does "high ball" mean?

Father—Er—I don't know, Willie. Better ask grandpa.—*Kreolite News*.

The husband sent home the valuable parrot, his wife cooked it for dinner. When the indignant husband said the parrot could talk five languages and was worth \$100, the wife replied: "Why didn't he say something?"—*New York American*.

"How are you getting on with your study in English?" inquired Li Hung Chang of the Chinese emperor. "Have you learned your A B Cs?"

"No," was the reply. "I haven't got that far along. I'm not out of I. O. Us yet, and I'm flabbergasted by the H. C. Ls."—*New York Globe*.

The man who had gone into a barber shop which had a sign "First Class Hair Cut, 25c" was righteously indignant when the barber charged him half a dollar.

"How do you explain that?" he asked, pointing to the sign.

"Ah, but you haven't first class hair!" said the Irish barber.—*American News Trade Journal*.

## Remarkable Remarks

LADY ASTOR—Love is the greatest thing in the world.

MEREDITH NICHOLSON—Are we really a happy nation?

MARY PICKFORD FAIRBANKS—I believe in reincarnation.

LORD FISHER—Some men grow great, others only swell.

FRANK CRANE—All men want to be fair. That is, nearly all.

JOHN BURROUGHS—Why does a bird's tail come out easily?

SIR THOMAS LIPTON—I have been beaten by a better boat.

SENATOR HARDING—My office has become a great listening post.

FANNIE HURST—This is a great life if you know how to dress for it.

REV GEORGE CHALMERS RICHMOND—Wall Street would crucify Jesus.

WINSTON CHURCHILL—A Bolshevik peace is only another form of war.

MRS. WARREN G. HARDING—My husband is the most wonderful man in the world.

FRANCES McDONALD—It would be a good thing if the men would stop proposing.

MARION GRAY—Brushing, massaging, ventilation, are the three needs of the hair.

MRS. CALVIN COOLIDGE—I like my Massachusetts friends so well I would hate to leave them.

ROY K. MOULTON—I care not who write the nation's songs so long as I don't have to listen to them.

GOVERNOR COOLIDGE—To a free people the most reactionary experience, short of revolution, is war.

SIR EDWARD CARSON—The honorable and gallant member may be sure that he is beneath contempt.

GENERAL LUDENDORFF—We must get used to regard propaganda as a combative resource of the first rank.

ALVIN JOHNSON—Think of Harding's appointees as a brilliant circle of stars, with Harding the blue void within.

DR. PEASE—Putrid tobacco smoke has entered the body of the human race and is causing us to bring weaklings into the world.

DOROTHY DIX—Men are still true to the ancient masculine theory that feminine brains are only palatable when they are scrambled.

KING ALFONSO—An ideal is difficult to attain by other nations but I ask myself, "Why should not Spain be the first nation to reach that ideal."

QUEEN MARIE OF RUMANIA—No matter how great the strain when talking or listening to a bore, make him think you think the conversation is vital.

MRS. VINCENT ASTOR—If there ever were women who spent all their time in an endless round of social obligations, I do not know any of them in this generation.

## For This Have We Congress

By Susan Brown Bristol

*If a man carried on his business the way Uncle Sam makes our laws he'd be—but read the facts, and draw your own conclusions*

**W**E Americans know little about our Congress. We read the newspapers and a few magazines; we note that certain bills are passed and others rejected; we think we will remember which is which; we forget most of both; and by the close of the session find ourselves with no adequate idea as to what Congress has done or what it has neglected to do.

To be sure, we have pretty clearly in mind certain facts concerning the Sixty-sixth Congress; we know the history of the Treaty of Versailles and of the Esch-Cummins railroad bill; we know that scores of investigations have been ordered by Congress; and that there has not existed the closest coöperation between the Legislative and Executive Departments of the Government. But, with the exception of eleven days—November 19 to December 1 of last year—Congress has been in continuous session from the day it assembled, May 19, 1919, to June 5, 1920. It must have done something other than kill the Treaty, pass the railroad bill, or even issue orders for eighty and more investigations.

What? What has the Sixty-sixth Congress, confronted by unprecedented economic and industrial problems of reconstruction—reduced production, shortage of labor, inadequate transportation, profiteering and continued war taxation, all resulting in a prohibitive cost of living and general unrest and unreason—what has this Congress actually done? How has it solved the grave problems laid at its door? Is its record as bare in real accomplishment as it is reputed to be? Thousands

of bills must have been introduced—at least this is true of former Congresses. What are they? Are they measures intended to promote the public welfare; or are they private or local—political? Incidentally, what has re-

Morris for George Matthew Adams Service  
Eclipsed!

sulted from the scores of investigations made? Several months ago I set about to answer for myself these questions. I wanted facts. Obviously, so it seemed, Washington was the place to seek them.

I went to Washington. I spent there the last months of the session. For weeks I camped in both Houses of Congress. I interviewed various Government

officials—Senators, Congressmen, heads of departments, department clerks. I heard—and saw—Congress vote itself adjourned until the sixth of next December, to reconvene only in case of “grave emergency.” I collected such records and reports as I could obtain. Much of the information sought I am still seeking: the problem I had allotted myself was one not so easy of solution as might on the surface appear.

Certain data, however, I did secure. The belief that others unable to visit the nation's capitol may be interested in some of the facts which I succeeded in wresting from a few “original sources” is responsible for the following paragraphs of “findings.”

That I might have the proper background, it seemed to me that the first ray of light to come to me must be shed by Congress itself.

In Congress, as elsewhere, one finds all sorts of men. In the words of the legislative expert who sat at my right the day of my first visit—a man who for the last ten years has been a daily visitor of Congress:

“See that big, fat fellow over there with his cheeks meeting his neck, the one with the cigar in his mouth, resting his feet on top of the seat in front of him? Well, that fellow is known as the ‘cannon souvenir’ man—one of the cheapest of the lot.

“The man in gray, three seats in front of the fat fellow, is one of the best fighters in Congress. Since the day he entered he's fought ‘big business’ tooth and nail, and, ten chances to one, ‘big business’ will ‘get’ him on election day.

“You find all sorts here, as you see. A few men are

Thomas in Detroit News

Father should get acquainted with his sons

carrying a tremendous burden. As to some of the others—use your eyes and ears."

Properly interested in at least two members of Congress, I set out to obtain certain facts regarding the achievements of these and the 529 other members. Interviews with some of these and with other Government officials, together with various reports published by the Government, are the source of such information as I was able to gather.

I had the impression that thousands of bills had been introduced in Congress and that only the merest fraction had been enacted into laws. But how could this be? One would assume—a layman, at least—that if bills are introduced before a great national body representing the people they are bills worthy of that body and are introduced to be passed. Otherwise, why are they ever introduced? In any case, I wanted facts and figures.

I found that during the Sixty-sixth Congress—372

Brooklyn Daily Eagle

They can't even remove the victim!

calendar days and 290 "actual" days—measures were introduced in both Houses and enacted as follows:

Total bills and joint resolutions introduced....	19,561
Total concurrent resolutions introduced.....	91
Total simple resolutions introduced.....	976

Total bills and resolutions introduced.....	20,628
Total bills and joint resolutions (19,561) enacted into law .....	413
Percentage of total bills and joint resolutions enacted into law .....	2.11

This percentage makes no allowance for the fact that in so-called "omnibus" pension bills and certain other private bills, individual bills lose their identity, many being merged in one bill and enacted under one number. The large majority of measures submitted were insignificant—"private or local," as distinguished from "public." Scores of bills, presented as election bait, provide for the donation of captured German cannon as souvenirs to towns in districts of superpatriotic Congressmen; one member, on August 2, 1919, introduced no less than ninety-nine such bills.

On account of the large number of bills presented, it was impossible, in the time at my disposal, to obtain a classification or evaluation of the total number. However, I arranged with a Washington agency to furnish me data covering bills intro-

duced during one week.

The week chosen was the one of May 17 to May 22, 1920, inclusive. During this period 165 bills and joint resolutions were introduced as follows:

Pension bills .....	56
Claims .....	19
Local improvements....	22
Other private or local matters .....	24
Total private or local measures .....	121
Total public measures	44
Per cent of public measures .....	26.6

Of the whole number presented "probably less than twenty-five (except pension bills) have any valid claim to public interest. One may safely say that twenty-five are good bills, i. e., not vicious. Perhaps ten of these have merit and should be considered as expressing a real public purpose. Most of the whole number are perfunctory.

Among such measures as were passed by Congress (listed without reference to the President's signature) are the woman suffrage amendment; the bill for the enforcement of national prohibition; the railroad transportation bill returning railroads to private owners; the water power bill (signed by the President after adjournment of Congress), and the oil and coal land leasing bill, both providing for the opening up of public resources for private development under Government control; the merchant marine shipping bill, providing for the ultimate sale of the Government-owned merchant fleet; the budget bill (which the President vetoed and the Senate failed to pass after the House had amended it to meet the President's objection); the civil service retirement bill; the bill for the rehabilitation of those disabled in industry; the bill for the creation of a Woman's Bureau in the Department of Labor; the bill for the extension and enlargement of the Lever act, with a view to preventing hoarding and profiteering, and with additional penalties for the violation of the statute; legislation with liberal provisions and generous appropriations for vocational training and rehabilitation of wounded soldiers and sailors; the resolution providing for the resumption of a state of peace; the resolution repealing war-time

legislation, with the exception of the Lever food control act and the trading-with-the-enemy act (received "pocket veto" by the President, he explaining that the measure had reached him too late for proper consideration); the Johnson bill, providing for the deportation and exclusion of aliens who are members of anarchistic organizations; the postal pay increase bill; the army reorganization bill, providing for a peace-time army of 297,000 officers and men, a National Guard and a reserve force; and the Edge bill, designed to promote foreign commerce thru the aid of national banks.

Many measures of the greatest im- [Continued on page 190]

This last Congress will be known in history as a reveler in investigations. Over eighty were ordered by the House and Senate—one in every four working days

*Government is to the rich only a convenience;  
it is a necessity to the poor*

# If We Had Anarchy Tomorrow

By Preston Slosson

IT is a pity to see the "Reds" wasting their ammunition. One shot that certainly goes astray is the charge that government is constituted among men to protect the property of the capitalist class from the hunger and anger of the poor. As a matter of fact the abolition of government, even such government as we have today, would mark not the end but the beginning of capitalism. The restraints of the law lie heavier on the rich than on the poor, because in a "state of nature" the rich and powerful can devour Naboth's vineyards without risk. A really workable anarchy would be in practice an industrial feudalism just as the anarchy of the Dark Ages soon simmered down into an agricultural feudalism.

The trouble with the anarchists is that their vision extends only to the Day of the Great Revolution; they have never figured to themselves the aspect of things on the "morning after the night before." If the American Government were suddenly and violently abolished there would, no doubt, be a period of disorder and mob-law during which the anarchists could sack a few houses and blow up a few unpopular plutocrats. But unless they took advantage of their brief opportunity to abandon anarchy and establish a proletarian state on the Russian model, or a democratic state on the orthodox Socialist model, they would find capitalism soon entrenched as it never could be under our existing American constitution.

THE functions which now fall to the public authorities would, under an anarchist régime, fall to private individuals. This is wholly possible. Those who would dismiss anarchy as a mere absurdity or contradiction in terms forget that on the frontier self-help has always been the rule. Daniel Boone or Buffalo Bill would not feel lost or helpless without the police and the post office. Nearly everything that is now done by the Government has been at other times and in other places done by private enterprise; just as, on the other hand, many activities now left to private choice, such as religion, used to be matters for public regulation. But in our complex industrial civilization of today unrestricted private enterprise means unqualified capitalism.

The most universal of all governmental activities is that of the police power. Whatever else a nation may do or decline to do it must keep the peace. In the absence of government or where the public powers are weak and inefficient men arm and band together for mutual protection. Under the anarchist régime it requires little foresight to prophesy that owners of mines and factories would protect themselves by employing private detectives and armed strikebreakers. They would have to do so on a much greater scale than at present, because there would be no public police on whom to call in case of need. Each industrial center would become a sort of Baronial castle with bands of armed retainers, equipt with tanks and machine guns as well as with sticks and rifles. Who could prevent this

with no law to which to appeal? If the Reds should form an army of their own and conquer the industrial fortresses of capitalism they would thereby reestablish a public army; in other words they would have abandoned the anarchist principle and returned to the coercive state.

The rich could buy arms and enlist retainers; but what would the poor do? They could not afford to employ police and police would no longer, as at present, be freely at their disposal. In remote country districts the bolder farmers would buy a watch-dog and a revolver and take any risks that remained on themselves. But the masses of the poor in the towns would doubtless seek employment in the armed industrial establishments and grant a term of labor in return for protection. That is exactly what happened in the tenth century when independent peasants, raided by invading Vikings and plundered by casual robbers, voluntarily became serfs on the estate of any neighbor who was rich enough to afford a stout castle and a good suit of armor. Security is the first need of mankind and despotic governments usually arise by selling that security at the price of the labor and the liberty of the weak.

Another function of government is the minting of coins and the issuing of paper money and other credit instruments based on it. This monopoly is even more jealously guarded than that of the police; for the law will let you buy a revolver or hire a night watchman, but it will not permit you to coin a single penny. With the abolition of government paper money would become worthless (it is almost worthless today in many parts of Europe), but coin would long retain some value as a medium of exchange, partly from force of habit and partly because

precious metal has some value in the trades. To save themselves from utter ruin by debasers of the coinage, now that counterfeiting would no longer be punishable, the banks would doubtless step into the place of the government and mint coins of a guaranteed value. People would distrust coins without that guarantee. Emboldened by success, they would put forth credit notes and paper money, just as private stores now put forth trading stamps, redeemable in coin. It would not be long before our present money system was reestablished with the only difference that the value of the money would rest upon the reputation of a few great banking houses instead of the word of a government.

A third function of government is the construction of public works, such as roads, and the maintenance of public facilities, such as the post office. We would return under anarchy to the old fashioned private road, redeeming its outlay by the toll-gate, and the post office would be taken over by private capital and run as are the express services. Neither change would much inconvenience the rich, but they would penalize the poor by putting charges for public services on a profit basis.

A fourth duty of govern- [Continued on page 195]

# Meet the American Idol!

## An Interview with Babe Ruth

By Sidney Reid

© Underwood & Underwood

He stands alone at the plate grasping his bat—and knocks the ball over the fence

nevertheless all men and women are entitled to form and hold their own opinions and the baseballists commonly known as fans are very numerous. There are millions of them and they include many who are eminent in all the higher walks of life, great industrial chiefs, ministers of the gospel, lawyers, judges, physicians, bankers, authors, editors. Elsewhere these men are super-respectable, grave, sane, just-minded, conservative and of reserved demeanor. But at the ball grounds on a hot day they take off their coats, devour peanuts, exalt themselves by drinking sarsaparilla, lemonade and other liquid mysteries and when the home team is in a tight place jump to their feet, wave their arms, yell, and carry on as if possessed. They are madly partizan and the things they want done to the umpires and opposing teams—especially opposing pitchers—are not countenanced by the Constitution of the United States, the laws of the state of New York or of any other state.

They are worshippers—worshippers of the American national game and it is by reason of his standing among the exponents of the game that Babe is now their idol. In several departments of the game he is above mediocrity, in one he is supreme.

As a slugger of balls he is the greatest. He can hit a ball and knock it further than any other player who ever appeared since first the game began. Therefore he makes more home runs than any other player. Therefore he is the greatest man in the world according to the fans.

And why not? Why is not this as good a claim to greatness as many another that the world has acknowledged? Babe Ruth's claim is at least founded on something tangible—actual performance. He stands alone at the plate grasping his bat, facing the opposing pitcher, watched by scores of thousands—often by scores of thousands of fellow beings who are intensely willing him to fail—and by his own unaided efforts he knocks the ball over the fence and not only scores a home run himself but often drives in from one to three of his teammates who were on the bases. He does not

do this by any accident or by reason alone of some special gift of nature. He does it very largely by art, the result of long and careful study and practice.

Moreover, it may also be said that the throbs and thrills and excitements he gives to the faithful who witness his deeds are good for them psychologically. They lift the faithful out of commonplace ruts and clear away mental cobwebs. For two hours at least they enforce deep breathing in comparatively pure air and send the faithful home in a calm and happy frame of mind, ready to form the League of Nations and love all men—even the opposing team. It is to the purpose, also, that they send them home with good appetites.

And now who is this Mr. Babe Ruth, how came he to be Home Run King, how solid is his throne in these troublous times for monarchs and what sort of person is he when not strictly engaged in reigning.

Well in the first place he is about as self-made as any man can be. There was no gold spoon for his infant mouth. His parents were very poor and at seven years of age he was sent to take his chances with several hundred other boys in St. Mary's Industrial School of Baltimore. Every boy learns a trade there and Ruth became a capable tailor. He also showed himself fairly bright in studies and rather good in dramatics. But in athletics he shone, early displaying promise of greatness. He was good in track athletics, but in baseball—he was a star.

In view of what his future was to be Babe could hardly have had a more favorable environment. St. Mary's began as a home for orphans, but afterward boys were committed to it from the local courts of Baltimore for reformation. It is under the supervision of the Catholic brothers and among these there is a good deal of sympathy with boy psychology and athletics. Some of the brothers are no mean athletes themselves and they are keen coaches and connoisseurs of athletic material.

Brother Paul is general superintendent of St. Mary's and he knows all about Babe, whom he calls George. In fact Brother Paul had a whole lot to do with the making of the Home Run King. He had come to St. Mary's with some fear that he would find the place disagreeable. He had been a college teacher and his experiences with students had been pleasant, but directing the studies of hundreds of boys, many of whom had been sent to the place from courts, seemed rather a fearsome task. But within a week of arrival he was glad he had come. He found the boys easier to manage than

© Underwood & Underwood

Babe Ruth can hit a ball and knock it further than any other player

his former students, possessed of more initiative and more grateful. St. Mary's was an exceedingly interesting place, full of life and hope and good material for teachers to work upon. Athletically it was humming. At one time it possessed no less than forty-three baseball teams in addition to the regular school team. There were baseball tournaments going on all the time, dormitory against dormitory, trade against trade. The smallest boys were organized as the Brownies and they were infant wonders whose fame spread far beyond the limits of Baltimore. No matter what else they knew or failed to know St. Mary's boys knew baseball. Everyone capable of receiving it got a full and complete education in the American national game.

Ruth had twelve years of this intensive training, rising from class to class till he reached the highest and then protruding as a star. Brother Paul had an eye on him all the time. Brother Paul did not watch his playing boys thru a window; he was out among them a good deal of the time. The boys needed management and the brothers knew that this was the best way to give it.

Umpiring for the contests between rival school teams was an arduous and unthankful job. The boys were as hard on umpires as are their seniors who attend the League matches. If they carried out their theories ten or twelve umpires would be killed in every game. Consequently no one wanted to act as umpire. The brother in charge of baseball gave the athletes a little lecture on the subject of the harmless, necessary umpire and the righteousness and expediency of electing such officials fairly, paying them for their services and then treating them with respect. It was a beautiful and inspiring little lecture and aroused the better natures of the boys, who resolved on reform. They cheerfully elected an umpire and contributed a fund to pay him. Boys who were temporarily wealthy gave a nickel or a dime, while others who had been experiencing reverses subscribed two or three pennies. The brother in charge of baseball kept a careful account.

The first game after this great reform was inaugurated proved to be a hot one. The umpire was one of the larger boys, full of baseball lore and dignity, but respect for him and his office did not long survive when the bitter disputes began. The boys against whom he decided called him all those names which have been applied to umpires since baseball began. They said he didn't know the first thing about baseball. He was blind as a bat, a lunatic and a robber and much more, all emphatically uncomplimentary. The boys yelled at each other and disputed with enough energy to win several games. The brother in charge of baseball walked around with his hands behind his back, patiently waiting for the tumult to subside, but it grew worse. So he quietly approached the noisiest of the rebels and called him by name. "———," he said, "I see by this list that you subscribed three cents to pay the umpire. Now don't you think you've done three cents' worth of kicking?" That settled it. There was one big laugh at the chief kicker and then the game proceeded peacefully.

Good, plain, hearty food, kindly guidance and teaching and tip top athletic training—that's what Ruth got

during the twelve years he went to St. Mary's.

Brother Paul taking his time, watching the youngster's development, concluded five years ago that Ruth would make a professional baseball player, probably pitcher, catcher or shortstop—he played all those positions but usually shortstop. So five years ago last winter Brother Paul notified Jack Dunn, manager of the Baltimores, and Dunn came to the school and watched Ruth play ball. He was catcher on the school's first team then. Dunn took Ruth immediately and soon sent very favorable reports to Brother Paul, who was the boy's guardian. Said Dunn: "Ruth can hit harder than anyone I ever saw and he is so strong that there are no two men in the club who can put him on his back in wrestling."

The boy was only nineteen years of age then. He has grown since. He is not only phenomenally strong, he's also phenomenally tough—speaking athletically. He distinguished himself at St. Mary's by his indifference to cold. He objected to wearing underclothes.

On one bitter winter day Brother Paul found him sitting on a little wall in the yard reading a book. His shirt was open and he had nothing under it. Brother Paul admonished him of the danger of taking cold, but he replied with placid assurance, "Oh no. I'm too tough to take cold."

Coming from the sheltered life at St. Mary's there were a lot of things about the great world that Ruth did not know. His comrades say that a hotel elevator nearly killed him. But he got even by what he did to the hotel's food.

He had a most impressive appetite.

Ruth distinguished himself on the Baltimores when they were at the head of the minor leaguers, but the invasion of the Federal League put the Baltimores out of business and Dunn sold Ruth and two of his teammates to the Boston Red Sox for \$25,000. Now the boy was in fast company.

The Red Sox used him as a pitcher. He didn't know who was who. Reputations good all over the baseball world meant nothing at all to [Continued on page 192]

Babe Ruth was a half orphan, in an orphan school, himself once—that's why he plays favorites to all motherless children. Mrs. Babe Ruth (right) plays favorites, too

# A Hundred Million Horsepower Waiting to Be Used

A Message from the United States Government to the American People

By O. C. Merrill

Executive Secretary of the Federal Power Commission

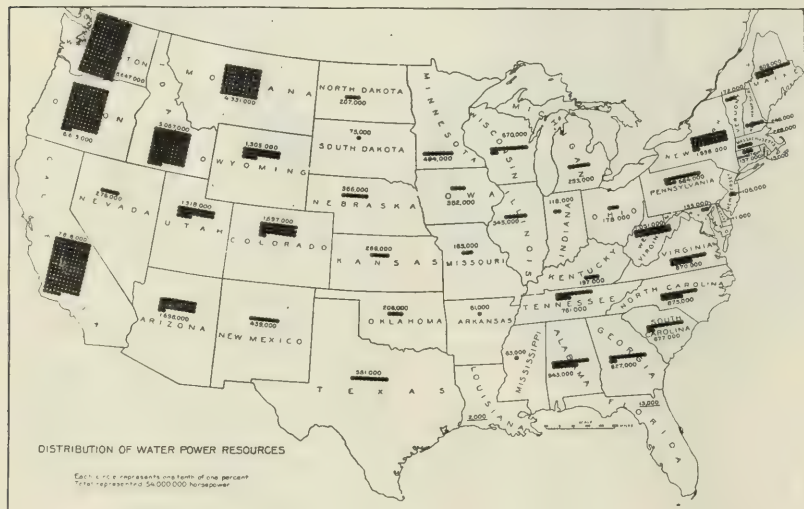

**T**HE existing financial situation, making it difficult to secure capital for new enterprises requiring large investment, is the principal bar to immediate and extensive development of the water power resources of the United States. Most of the other obstacles are disappearing or have already disap-

are in the West. Thousands of miles separate them, and no practical method of transmitting electric power across a continent has yet been devised.

The most of our power developments up to this time, with a few notable exceptions, have been local undertakings to serve immediate needs in restricted localities. Industries and public utilities in districts where supplies of coal and fuel oil have been readily available have favored steam power development because of its smaller initial cost and the comparative simplicity of its installation, even in districts where the use of water power would have been justified by ultimate economies.

Eighty-five per cent of the power used in the home, in industry and by public utilities in the United States today is produced from coal and fuel oil. The railroads use one-fourth of our total output of coal, and one-seventh of our petroleum—a total of some 150,000,000 tons of fuel a year. Of this amount 50,000,000 tons and one-third of the freight equipment of the railroads is used in transporting coal for other than railroad uses. One-third of our output of coal and a tenth of our fuel oil is used by street railways and for general industrial purposes.

Cheap and abundant coal made it inevitable that our industries should be built up on a basis of steam power. The use of hydro-electric power is of comparatively recent origin. The rising cost of coal, with recurrent fuel shortages and the choking of our transportation systems, is rapidly convincing [Continued on page 195]

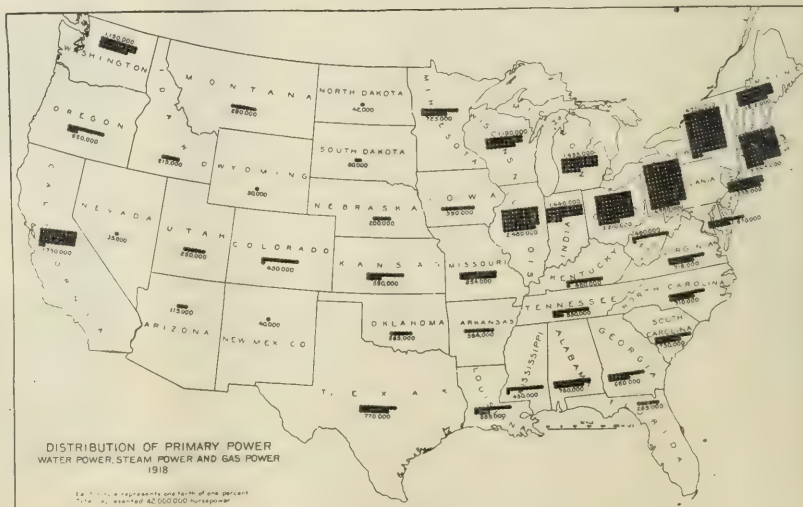

The huge water power resources under Government control are now thrown open to development by the new Federal water power act recently passed by Congress and signed by the President

peared. The one that bulked largest among them—the lack of adequate Federal legislation—was removed when the Congress passed and the President signed the new Federal water power act, throwing open to development the tremendous water power resources under Government control.

What is the extent of the resources awaiting development? They are greater than those of any other industrial nation. That much we know, but no one can estimate the full amount of power that can be developed from our streams, rivers and lakes with any degree of accuracy. The minimum estimate is 50,000,000 horsepower and the maximum 200,000,000 horsepower. Even the maximum estimate is believed to be conservative, if the possibilities of water storage are to be taken into consideration. Probably not to exceed 8,000,000 horsepower have yet been developed.

To attribute our failure to make greater progress in the development of our water powers wholly to the lack of adequate legislation would be a mistake. There have been many other contributing causes. Chief among them is the fact that our large users of power, the industries, are located in the East, whereas our greatest sources of water power supply

The largest users of power, the industries, are in the East; the greatest source of water power, in the West. Will the industries follow the example of the pioneers and change their address or will some method be devised whereby electric power can be transmitted across the continent?

# The Public in Industrial Warfare

By John Spargo

IT is one of the commonplaces of contemporary discussion that in all the great battles between employers and employed three group interests are involved, namely, those of Capital, Labor and "the Public," and that of these three the importance of the last named is frequently so great as to overshadow the others. Upon this theory all legislative proposals for regulating strikes and lockouts and minimizing both their number and their evil consequences are based. Such legislation as that proposed by the President's second Industrial Conference, the more drastic legislation enacted in Kansas and the compulsory arbitration laws of New Zealand rest upon the assumption that there is a public interest different from and superior to the special interests of Capital on the one hand and Labor upon the other.

This theory has always been assailed by many Socialist propagandists, who have insisted upon dividing society sharply into two classes, the "capitalist class" and the "working class." They have contended, in the face of abundant evidence to the contrary, that all members of the body social belong to one or other of two classes and that by our material interests we are all of us inexorably united either to the "capitalist class" or the "working class." That this Marxism of the soap-box finds no sanction in the teaching of Marx is a matter of small and purely academic importance, perhaps. It is, however, a matter of very great importance that it should be adopted, in its crudest form, by the responsible heads of a great organization like the American Federation of Labor.

President Gompers, Vice-President Woll, and other leaders of the A. F. of L. have recently insisted with much emphasis that the "Public," as distinguished from "Capital" and "Labor," is a fiction of the imagination. Their argument runs as follows: If we take the entire population and analyze it, we shall discover that practically all its adult members are either employers or employees; that there is no considerable class of persons not comprehended in one or the other of these categories, and that, ergo, there cannot be a third class, "the Public."

The fallaciousness of this reasoning is obvious. The recognition of the intellectual honesty of Mr. Gompers and the other leaders of the American Federation of Labor only serves to make more pathetic their exhibition of mental poverty. They assume, wholly without warrant of fact, that the arbitrary division of society into these two classes implies the constant identity of interests of all persons embraced in either class. In common with the crudest Socialist soap-boxers, they assume that in every strike or lockout all members of the employing class have identical interests and that all members of the wage-earning class likewise have identical interests. As a matter of fact, the arbitrary division of society into two classes is of very little practical value, while the assumption that all wage-earners on the one hand and all capitalists on the other are united by an absolute identity of interests with respect to each particular industrial conflict is wholly untenable and in contradiction to the most easily observable facts.

Let us take, by way of illustration, a conflict arising in such a basic industry as coal-mining. The miners, thru

their unions, make demands which are generally regarded as both reasonable and just, and they have the moral support of all other workers. The employers, however, decide to resist the demand and the result is a stoppage of coal production at a time when there is already great scarcity of coal. Inevitably many factories are compelled to close. Large numbers of employers are thus subjected to loss of profits and, if the strike long continues, to financial ruin. Does anybody in his right senses believe that the manufacturer in Rome, New York, who sees himself thus confronted by bankruptcy and ruin because of the obstinacy of the coal mine-owners and their resistance to reasonable demands, has, with respect to this particular strike, an identity of interests with the coal mine-owners? Is it not quite plain, on the contrary, that in this struggle his interests are much more nearly identical with those of the striking miners? At any rate, he wants coal. He is as anxious to have the mining of coal resumed as the striking miners themselves.

Certainly there is, with respect to this conflict, essentially identity of interest between the Rome manufacturer and his employees. They have a common interest in securing coal to keep the factory going. Manufacturer and wage-earners alike constitute a part of that great Public, which, while in no wise responsible for the strike, is vitally interested in bringing it to an end and securing the resumption of that regular supply of fuel upon which industry depends.

Let us suppose, by way of further illustration, a very different sort of strike: the workers employed in one of the major "key industries"—railroad transportation, for example—make demands for increased wages which cannot be met without such large additions to the cost of transportation as must inevitably add materially to the cost of commodities. Thousands, and perhaps millions, of farmers and wage-earners whose earnings are already lower than those of the dissatisfied railway workers, must, if the latter's demands are granted, suffer a loss in "real wages" and see their relative inferiority of economic condition, as compared to that of the railway workers, increased. At the same time, numerous small manufacturers and shopkeepers are affected in precisely the same way. Is it not quite clear that, in such circumstances, there is a community of economic interest uniting these adversely affected groups—farmers, wage-earners, manufacturers and shopkeepers—against the railway workers, and that it is foolish to contend that all wage-earners have a common interest with the striking railway workers as against the remainder of the population? To state the proposition is to expose its absurdity.

Of course, both our illustrations are hypothetical cases, but they are not less valid as illustrations on that account. Mr. Gompers and his friends cannot successfully plead that it is a short-sighted view for the adversely affected wage-earners to join with other social groups in resisting

the exorbitant demands of the railway workers, that their proper course should be a united effort to raise themselves to the level of the railway workers. This may serve very well as an argumentative retort, but it lacks the essential

In the two previous issues of *The Independent* we have given over our editorial columns to a debate between Talcott Williams and Norman Hapgood on the respective merits of the Republican and Democratic platforms. The debate will continue for two weeks more with a discussion of the candidates of each of the two leading parties, but we are postponing it for one issue in order to give both Mr. Cox and Senator Harding the equal advantages of having made their formal acceptance speeches and established their positions on the important questions of the campaign. After Mr. Williams and Mr. Hapgood have finished their debate the readers of *The Independent* are invited to express their views in open forum.

merits of candor and conformity to fact. It is quite obvious that there are certain basic industries of cardinal importance, the interruption of which, even for a very short time, would involve such disastrous results, that, so long as we rely upon conflict for making industrial adjustments, the workers employed in them must hold enormous strategic advantages and superiority of power as compared with workers in other industries. In Europe we have seen attempts made by relatively small numbers of workers possessing these strategic advantages, not only to elevate themselves at the expense of practically all other wage-workers, but to set their authority over that of organized society as a whole. This is the fundamental evil of Syndicalism in its variant forms: it is industrial oligarchy as opposed to industrial democracy.

The fundamental defect in the theory that there is no "Public" with a distinct interest of its own, as distinguished from both Capital and Labor, is easily discernible. It lies in the wholly fallacious and unwarranted assumption that with respect to each individual strike the interests of the employing class as a whole are identical with those of the employers involved in the particular strike, and those of the wage-working class as a whole likewise identical with those of the striking workers. As a matter of fact, in a very large and apparently increasing percentage of strikes no such alignment is possible. He must be blind to the most obvious realities who does not see that, in numerous instances, strikes and lockouts so adversely affect non-participating employers and wage-earners, in equal measure, as to make it their common interest to protect themselves by legislation against the constant recurrence of losses consequent upon struggles in which they have no part, and for which they are not responsible.

Instead of thinking of all strikes as a single whole, upon which all capitalists and employers are united by their interests on one side, and all workers upon the other, we must think of the individual strike and its effect upon industry and the life of the nation. We shall then see clearly enough that while the strike is a struggle between Capital and Labor in the sense that there are capitalistic and capitalist interests on one side, and workers and workers' interests upon the other, outside and beyond the struggle, but seriously inconvenienced and even menaced by it, is a great non-combatant Public, which includes both capitalists and wage-earners.

Once these very elementary facts are fairly faced there can be no hesitation in deciding, Mr. Gompers and his friends notwithstanding, that there is a Public to be protected; that some means of adjusting labor disputes and lessening the number of strikes and the injury arising from strikes must be found; that in any system of industrial arbitration and adjustment to be adopted specific provision must be made for the representation of the Public.

### A Reactionary Mood

EVERYBODY hates to be called a reactionary. And yet everybody is saying, "Let us *get back* to a peace-time basis," "Let us *return* to the constitution," "Let us *withdraw* from foreign entanglements." If this is not "reaction" against something what is it?

### The Moral of Amritsar

THOSE who say that "all these European nations are equally bad" are asked to study the recent Parliamentary debate on the Amritsar incident. The British Ministry and the House of Commons condemned by voice and vote the action of General Dyer, who repressed a rebellion, and perhaps prevented another Indian Mutiny, because he used too great severity. We cannot recall an occasion when the German Reichstag (except for a tiny minority wing of the Socialist) demanded the punishment of a victorious general because of the ruthlessness of his methods.

## Women, Clothes and Race Salvation

By Franklin H. Giddings

IN sinless Eden Adam and Eve were naked and happy. They didn't have to work for their living nor wear stockings on the beach nor dress for dinner. But after Eve had been beguiled, and, scared to death about keeping the secret from Adam, had eased her conscience by beguiling him, her lively mind got busy about a lot of things. She knew all right that she and the poor male "it" that she was running around with were in real trouble. They had been driven from their nice little paradise and sentenced to hard labor and worse. Something had to be done and Eve went to it.

The theologians, always a stupid lot, have given us to understand that the great discovery which Eve made in her distressful circumstances was an eternal causal association of nudity with wickedness, and that, overwhelmed with consternation she and Adam went into the clothing industry. Nothing of the sort! Eve was no theologian, but she did make a discovery. It was not the nature and cause of unrighteousness that worried her. That chapter had been read and was closed. She and her man were in a scrape and the matter in hand was to find a way out. She found it. She discovered the original, perennial, universal, altogether adequate means of salvation for herself and the race of her descendants. She discovered clothes—an occupation for mind and hand that never could fail to allay unrest, assuage grief, and purge from sin. By this achievement she cleared her record; and the masculine habit, in particular the theological habit of going back to her indiscretion as the premise for a philosophy of history, is not only a low down, unchivalrous behavior, it is a manifestation of monstrous and unmitigated ignorance.

And how man does love to come back to the subject and to strut about dispensing moral advice, warnings and anathemas. Sartor Resartus! The thing will not down. Metaphysics or theology, manners or morals, fashion or negligence, economic interpretation of history or supernatural, everything is the same thing. And that same thing is clothes. Clothes proclaiming, like a prison garb, the fall of man, or clothes functioning as the only dependable protection against wickedness no less than against weather, this one object of interest in its alternative historical aspects, this is the one all comprehensive subject of education, the one symbol of religion, the one end and aim of human striving.

And how tiresomely repetitious are the ways in which our mentors come back to it! They are coming back once more in a drove. The Kaiser and the Bolshevik, having upset the whole world and broken down countless inhibitions and habits, have thrown us into moral and economic turbulence. But it would never do to admit that we are such helpless creatures of circumstance that we must go on being indiscreet and more or less wicked now that the war is more or less over just because we have had an upset. Somehow we must account for the fact that we are going to the bad by reference to a cause that antedated the war, that manifests itself thruout those parts of creation that were not directly touched by the war and that continues to work. Obviously, that cause must be found in something as primitive as man himself and contemporaneous with original sin. Therefore, beyond dispute, the cause is nudity, and therefore, of course, our really great theologians are bound to discover an explanation of all the new modes of miserable wrongdoing and its products, including I. W. W.-ism and Bolshevism, in the wickedness of mothers who send their daughters to the ballrooms and the bathing beaches in scant attire. So we have discourses, soberly setting forth that as soon as our overseas men began to come home these irresponsible mothers, whose daughters had been deprived of male at-

John Fitzpatrick, a blacksmith, organized the strike of a quarter of a million steel workers last fall. His contention that the strike was made necessary by the refusal of the Steel Corporation to negotiate with the men and to permit them reasonable working conditions is upheld by the report of the commission of inquiry under the Interchurch World Movement. The commission finds that the strikers had just grievances of "excessive hours, the boss system, and no right to organize or to representation"

## "Strongly Favoring the Laboring Man"

The Interchurch World Movement's investigation of the steel strike last fall makes in its report "a serious indictment of the United States Steel Corporation"

© Keystone

The foremost personality in the steel strike was William Z. Foster, whose radical theories, previously published in a book on syndicalism, were made the basis of the Steel Corporation's attack on the strike as unpatriotic and tending toward Bolshevism. The Interchurch report says that the "charges of radicalism, Bolshevism, and the closed shop were not justified by the facts." At the left is one of the crucial points in the strike: the Pennsylvania state and local police arresting strikers at the Homestead plant

tention and matrimonial opportunities for two long years, immediately went about making them attractive by "undressing them" and sending them forth to prey upon unsophisticated youth so long sequestered and held under discipline in France!

These philosophers may be right, of course. I do not undertake to prove that they are wrong, but I strongly suspect that they are. I wish they would turn their attention to the alternative hypothesis that Eve invented clothing not to save the human race by concealing nudity, but by giving it something to be interested in, and that her daughters through all the generations have been better judges of the relation of clothing to virtue than her sons have been. Wouldn't it after all be rather decent and common sense to let the women continue to handle this affair according to their own ideas and in their own way? Isn't it after all a matter for us men-folk to get out of and to keep out of?

## The New Fashion of Having Souls

By Allen Campbell

**F**EW assaults on religion are made by direct frontal attack. This method of battle results in too many casualties, for if it be hard to prove the dogmas of Christianity it is by the same token harder yet to disprove them. It may be hard, for example, to demonstrate to the skeptic that a particular miracle happened, but one would have to be omniscient to prove that a miracle could not take place. But what can be done is to make a belief unfashionable, to ridicule it as out of date ("medieval" is the favorite word) and placidly take for granted that the advance of science has left it hopelessly behind in the gathering gloom of dead centuries.

This is good strategy but it is open to counter-attack from two directions. It may be pointed out that a doctrine may be true even if it is old. Or again it may be shown that instead of passing into a final senility the doctrine in question is still in its childhood. Such is the case of the Christian belief in immortality. Comparatively speaking, immortality is a recent discovery like the steam engine or the descent of man from the lower animals. Probably it is more widely believed today than in any century of the past.

Man has been abroad on the earth, working and thinking, for some hundreds of thousands of years. Indications of belief in immortality, such as care for the dead, can only be found in prehistoric relics of the most recent periods. Coming to historical times we find the Egyptians very much concerned with life after death; perhaps too much so from the amount of labor which they wasted on building vast tombs for royalty. But their conception of immortality was a material one; the resurrection of the body in its most literal sense. It was for this reason that they took such care in preparing mummies, fearing lest the wandering spirit would find no body to reanimate and thus be lost forever in the void.

The Egyptians apart, few peoples before the time of Christ had very clear ideas on the subject. To the races of Rome, Greece and western Asia the future life was a vague underworld in which half-conscious phantoms bewailed the loss of earthly sunshine. Only a few selected souls were chosen either for bliss or torment. Even the Jews, with all their religious genius, laid no stress on the future life until they had come into contact with Persian ideas during their long captivity. An examination of the Old Testament will show that only in half a dozen isolated passages is there any hint of human immortality and that nowhere is it

made a central dogma of religion. When Jesus was born the Jewish world was divided on the question of a future life and the Gentile world, on the whole, rejected the idea. Only a few enlightened philosophers like Plato had reasoned out a real belief in the immortality of the soul, as distinguished from popular legends of ghosts and poetic myths about the underworld. The *Phaedo* was centuries ahead of its time.

In the latter days of the Roman Empire we note a vast change, almost a theological revolution, in men's view of life hereafter. Not only was Christianity conquering province after province with its novel teachings of Heaven and Hell, but rivals and imitators—Neo-Platonism, Mithraism, Manicheism, Judaism—were preaching a similar doctrine of the life eternal whose nature was established by the character of life on earth. The pagans of northern Europe had their own myths of a future life, a dim ghostly existence in the underworld for the majority of mankind and a heaven of beer and butchery for a few heroes chosen from the mass as a reward for exceptional valor. But the Christian doctrine that every soul was immortal in its own right soon conquered the peoples of the north as it had the Mediterranean world. While the Christianizing of Europe was in progress a new religion arose in Arabia which copied the Christian emphasis on immortality. Mohammed's followers carried his teaching half around the world from Morocco to the East Indies. Sometimes they came into conflict with Christian communities, but in general they displaced nature religions with vague or crude concepts of life after death.

It was not until the beginning of modern times, some six or seven hundred years ago, that Christian and Moslem propaganda had finished their work of converting the primitive peoples of northern Europe and central Asia to a definite belief in personal immortality with personal responsibility for conduct. In eastern Asia the Buddhist notion of the absorption of the soul into the general consciousness of the universe still prevailed. The native peoples of Africa and America still remained content with a half-belief in the underworld; an immortality unrelated to character and on a far inferior level of reality to the life on earth. Christian missionaries in all three regions—eastern Asia, Africa and America—have since introduced their more rational and definite ideas of the future life, and even those peoples who have not become converts to Christianity have undoubtedly been influenced by Christian thought.

No general religious census has ever been taken, but today probably 60 per cent of the people of the world have a clear and strong belief that personal immortality, with reward and punishment based on personal deserts, is the destiny of every human being. Two thousand years ago it is doubtful if such a belief was held by 10 per cent of the people then living. We may fairly call the doctrine of the immortality of the soul a modern doctrine, an innovation in the religious history of the race. Of course the growing prevalence of an idea has nothing at all to do with its truth, but it is an answer to the taunt of being a mere survival of barbaric and primitive conceptions.

### Appropriate

**I**RELAND is living up to its name IRE-land, the country of wrath.

### Another Capitalistic Conspiracy

**W**E wonder how the Socialists and anti-religious radicals who have been calling the Interchurch World Movement a "capitalist conspiracy" because it accepted contributions from the wealthy will explain away the Report on the Steel Strike, in which the cause of the steel strikers is defended not only against the corporations but against most of the secular press. Probably they will for-

get this incident, like all others which their theory doesn't cover, as quickly as possible. As a matter of cold historical fact every radical movement since Christianity originated has been in great measure championed and led by Christian ministers, and yet every year of the Christian era has heard the complaint that the money-changers were running the Temple. But the man who suffers from the "capitalist conspiracy" delusion is impervious to fact.

## The Minister and Radicalism

By Shailer Mathews

**T**HE Civic Federation is anxious about the radical tendencies of certain clergymen. The Federation rather more than suspects them of being Bolsheviks. It also suspects that workers in the Y. M. C. A. are too friendly to Russia and greatly fears lest the Y. W. C. A. should cease to be a religious organization because of its utterances on industrial affairs.

Such anxiety is not without a measure of justification, but in reality the Federation is unduly concerned. There are, of course, clergymen who are economic and social radicals. It could hardly be otherwise. Despite their spiritual office clergymen live in the same world as does the Civic Federation. They have been educated to an interest in that world. Most of them are poor and know what it is to go without expensive luxuries—often without semi-comforts. They come in contact with the sorrows of the propertyless. By virtue of their calling they are idealists who seek to establish a reign of brotherhood, and the Civic Federation itself would not claim that the present industrial order is fully a brotherhood.

There is an element of justice in the Federation's criticism. How far should a clergyman use his position as a spokesman for God in his support of a political or economic program? How far is it justifiable for a man to commit his institutional connections to his private convictions as to matters outside the institution? These are fair questions, and to them may be added the practical consideration that sooner or later an institution will become the agency of its representatives and chief interests. If the Y. M. C. A. cares more about boarding houses, gymnasiums, and swimming pools than prayer meetings, boarding houses, gymnasiums, and swimming pools will gain its chief attention. If clergymen feel more interested in pushing the claims of economic reform than in developing the moral and religious spirit, the church (or what is left of it) will become the agency of some economic theory.

But the Civic Federation is over-anxious. The average minister is in less danger of being radical than of being indifferent to the moral elements in the industrial struggles. Denunciation of vulgar sins leads to little more than individual respectability and respectability is no moral leaven for a world that demands readjustment thru democratizing of economic privilege. Ministers have their choice between two policies. On the one hand, they can preach a theology that never touches life and a morality which never reaches the Sermon on the Mount; or, on the other hand, they can preach the religion of Jesus and a morality that is intelligently aware of sociology. The former will give a man the reputation of being "safe"; the latter will arouse the hostility of premillenarians and all reactionaries. Most old men, whatever their age, will choose the former course. Most young men will choose the second. And the future is in the hands of our young men.

But such religious teachers should bear in mind that they are not primarily economic experts. Their chief task

is to prepare men for better living and not to organize factories. Economic programs become elements of religion only when they are the sole embodiment of righteousness. Whatever their personal sympathy—and they have a right to such sympathy—ministers should recognize that a program is not practicable simply because it is logical. A movement is not necessarily wise because it aims to do good. Good people do not always have good sense. A minister should avoid extremes in theories as well as in clothes. Of all men he should realize that human nature is unescapable.

If his awakened interest sweeps him into the support of some impossible radicalism, it is unfortunate but not criminal. If the church is really to figure in social reconstruction, it will probably find that like Jesus it numbers among its apostles an occasional Simon the Zealot. But zealotism was no more the chief task of the Apostle than is revolution of a minister. Whoever would bring the spirit of Christ into the industrial forces of today must not forget his spiritual mission or permit his sympathy to be monopolized by any social reform which substitutes logic for folks. It is no more involved in a minister's calling that he should champion sovietism than that he should champion capitalism. As a man he has a right to his convictions, but as a minister he has no revelation to guide him in the heralding of economic programs. But he does have a revelation demanding he stand for God, for brotherhood, and for the giving of justice in a real world among real people. If such preaching brings social change it will not be by the way of revolution. A Christian morality, like nature, abhors a vacuum; but it also abhors violence, anarchy, and the leadership of inexperience.

### Breaking the News

**W**E wonder if a Presidential candidate when officially "notified" of his nomination begins his speech of acceptance: "Oh, chairman, this is so sudden!"

### The Obstinate Suicide

**T**HE refusal of Russia to rally to any of the hundred movements which have been started within and without the country to overthrow the Bolsheviks reminds one of the drowning foreigner who never could quite master his English auxiliary verbs and called for help in these terms: "I *will* drown, nobody *shall* help me."

### Covenants Real and Imaginary

**A**ESOP tells a fable of a dog who saw reflected in the river an image of the bone which he carried in his mouth. The image looked larger and more attractive than the bone itself; he leaped to get it, and in so doing lost what he had. Those who urge us to abandon the League of Nations which actually exists, and which four-fifths of the world has joined, in the hope of some future "association" or "world court" to be erected on some undetermined future date, think as did Aesop's dog. They forget that a League in the hand is worth two in the bush.

### Paradise Lost, Strayed or Stolen

**I**N their swift invasion of Poland the Bolsheviks have gained what is undoubtedly an important material success. But perhaps of more ultimate significance is the fact that the Bolsheviks have abandoned all that was really democratic or communistic in their program. This witness comes not from foes but from would-be friends. Bertrand Russell, a declared Communist, goes to Soviet Russia and comes back with the conviction that Lenin and his party are just inferior autocrats; the "dictatorship" has remained, but the "proletariat" are out of it. So testify also the delegates of the British Labor Party. So testifies Emma Goldman. What Poland faces is not a collectivist party but an imperialist Russian army; the old tyranny with new catchwords and a changed personnel.

# The Story of the Week

## The Russian Steam Roller

**A**RMISTICE negotiations have broken off and prospects of peace between Poland and Soviet Russia are still distant. In their advance the Bolsheviki reached the German frontier by the end of July. The much dreaded direct contact of Germany and Russia had at last taken place. The German Government, however, continued to preserve neutrality, and the Russians refrained from crossing the frontier.

Great Britain and France notified the Soviet Government that while they were willing that negotiations should be opened with Poland, they must insist that Russia refrain from imposing on Poland terms which would imperil the safety of Europe. The disarmament of Poland, any change in the internal government of Poland, the annexation of Polish territory and the use of Polish soil as a "bridge-head" between Germany and Russia were all ruled out of consideration, since they involved interests of the western Allies as well as of Poland.

Continuing the invasion the Russians captured Lomza, a Polish town seventy-five miles northeast of Warsaw. Brest-Litovsk, the famous city where Russia surrendered to Germany two years ago, fell into Bolshevik hands at about the same time. The Polish capital itself was endangered from both directions. Farther south Lemberg held out with difficulty against the Bolshevik advance in eastern Galicia.

Superficially, at least, everything goes well with the Bolsheviki. The Ukrainian Republic has been submerged completely under the red deluge. White Russia, which never attained real independence, but at one time cherished hope of being, if not completely independent, at least an autonomous state, is once more Russianized. Lithuania is in a slightly different but hardly more enviable position. The Soviet authorities have negotiated with Lithuania as an independent republic and have admitted their occupation of the country to be only temporary, but in point of fact they are acting like masters and have established a reign of terror in Vilna, the Lithuanian capital, against which the Lithuanian Government has in vain protested. In Poland itself there is a submerged Bolshevik faction and a real collapse of Polish strength would stir into life communist insurrections in Poland, Hungary and Germany.

General Ludendorff, perhaps with a purpose, paints the

RUSSIA TOUCHES GERMANY

Near Lomza the Russian Soviet army is in contact with the Prussian frontier. The heavy dotted line shows the position reached by the Bolsheviki at the beginning of August. The shaded areas are subject to plebiscite

situation in the blackest colors. He declared that "Poland's fall will entail the fall of Germany and Czechoslovakia. Their neighbors to the north and south will follow. Let no one believe it will come to a stand without enveloping Italy, France and England in its hideous coils. Not even the seven seas can stop it." He urged a crusade of all civilized nations to put an end to Bolshevism. But the Allies are inclined to "fear the Greeks even bearing gifts." They show no enthusiasm for the plan of mobilizing Germany against Russia, dreading lest a powerful German army should

Wide World

### ALL LOST SAVE HONOR

The Polish infantry, gallant but unfortunate. These troops are supplied with British uniforms, French helmets and American blankets

take an interest in the affairs of western as well as of eastern Europe. The Reichstag, acting in obedience to the Treaty, has recently passed a bill abolishing compulsory military service in Germany.

Rumania, Hungary, Czechoslovakia, Finland, Lithuania, Latvia and Esthonia are watching the Bolshevik invasion of Poland with growing uneasiness, and it is possible that if England and France decide to intervene actively against the Bolsheviki they may mobilize all of these little nations into an anti-Bolshevist alliance. The Hungarians are offering their services most eagerly, but the Allies feel that the Hungarians, like the Germans, may demand a revision of peace terms as the price of their aid, and that this price may be too high to pay. As a last resort civilization may count on the United States. Premier Witos of Poland has communicated to President Wilson "the Polish Government's sincere gratitude for America's generous help and continued sympathy extended to this country," applying not only to past favors but to the hope of future aid.

## Repression in Ireland

**I**N Ireland, as in so many parts of the world, bad conditions are growing worse. A long series of midnight outrages and murders from ambush culminated on July 30 in the assassination of Frank Brooke, deputy lieutenant of County Wicklow, chairman of the Dublin and Southeastern Railway, and a personal friend of Viscount French, Lord Lieutenant of Ireland. This incident, like the Phoenix Park murders of 1882, strengthened the determination of the British Government to adopt repressive measures. News-

papers estimate that there are already 60,000 or 80,000 British soldiers in Ireland; a very sizable "army of occupation" for a country hardly as populous as New York City.

The British Government has prepared and introduced into Parliament another of the innumerable "coercion bills" which have so frequently been resorted to in former periods of disturbance. This measure practically means the suspension of trial by jury when the authorities deem it necessary. However, Premier Lloyd George will also press his plan for a limited measure of home rule.

Two incidents have given a touch of comedy to what is in reality a very tragic situation. One is the escape of Brigadier General Lucas, who was kidnapped and held prisoner by Sinn Feiners in June. The kidnapping of a British general was not only a blow at British prestige but was from the rebel point of view a good joke on the Government, a way of saying "You send generals to Ireland to protect British rule, but can you protect your protectors?" At least the kidnappers seem to have acted in that spirit, for they permitted considerable freedom to their distinguished captive and even allowed him to write reassuring letters to his friends. General Lucas eventually tired of his ridiculous position and risked his life in a bold and successful dash for liberty.

The other incident concerns Archbishop Mannix, whose residence is Australia but whose patriotism seems to go out entirely toward Ireland rather than to the British Empire or the Australian Commonwealth. During the war he fought the compulsory military service law in Australia and had much to do with securing its defeat. After a tour of the United States he took ship for Ireland in spite of the announcement of the British Government that he would not be allowed to land. Thereupon the Government took occasion to close Queenstown as a port of call for the principal steamship lines, requiring cross-Atlantic steamships to proceed to Liverpool instead! The Government may have had other and more weighty reasons for diverting steamship traffic from the Irish to the English port, but it was popularly credited with altering the traveling plans of thousands of persons to prevent one individual from entering Ireland.

## The Amritsar Inquiry

ON April 10, 1919, a serious rebellion broke out in the city of Amritsar in northern India. For several days the British troops were unable to restore order, but on April 13 General Dyer dispersed a disorderly but unarmed crowd with repeated volleys, killing a large number of natives. He also established rigorous martial law and inflicted humiliating punishments. A year later, on the report of an investigating commission, General Dyer was discharged from the service in spite of his very good military record.

Wide World

UP WITH THE ORANGE!

A demonstration of Belfast Unionists against Sinn Fein. Ulster's man of iron, Sir Edward Carson (insert), has twice appeared in the limelight in recent weeks: in Belfast to urge the repression of Sinn Fein and in Parliament to defend the repression of rebels in India. He looks even more ruthless than he is

On July 8, 1920, a full debate took place in the House of Commons on British colonial policy in the light of the Amritsar inquiry. The militarist element in the House of Commons presented a motion rebuking the Government for retiring General Dyer without a formal trial. Sir Edward Carson, always the eager champion of imperialism and repressive measures, whether in Ireland or India, was the chief spokesman for the reinstatement of the accused officer. His argument was that

"the man on the spot" alone could judge the degree of severity necessary in crushing an insurrection. The Labor Party likewise criticized the Government, but from the opposite side; they thought that General Dyer's superiors shared the responsibility for his act and should also have been removed from office. The House of Commons sustained the action of the Government against both the Carsonites and the Labor members.

The debate was a great vindication of liberal principles in colonial administration. Mr. Montagu, Secretary of State for India, declared that General Dyer had acted on the "doctrine of terrorism." Mr. Churchill, Secretary of War, said that frightfulness as a remedy for disorder was repugnant to British principles. Mr. Asquith, leader of the anti-coalition Liberals, said that there had never been such a terrible incident "in the whole annals of Anglo-Indian history." Mr. Bonar Law, the Government leader in the House of Commons, said that General Dyer had endangered the moral position of Great Britain in India. The significance of all these drastic condemnations of repressive government was that they came from official leaders of conservative temperament. The radical Liberals and Laborites, of course, spoke even more severely. The debate and vote will do much to reconcile the more moderate section of Indian opinion to British rule.

## The League in Being

THE Council of the League of Nations has renewed its sessions. Geneva is the permanent headquarters of the League, under the provisions of the Covenant, and President Wilson has summoned a meeting of the Assembly of the League for November 15 at Geneva. But in the meantime, before headquarters have been established, the League is "visiting around." The present sessions are being held at San Sebastian in Spain. Spain was rather well treated by the Peace Conference of last year; altho a neutral Power thruout the Great War, Spain was not only invited to join the League of Nations but given a seat on its first Council, all the other members of the first Council being belligerents. It was felt by the diplomats at Paris that some neutral state should be represented in the League from the start, so that the Council would not be thought a mere military alliance, and Spain was selected, presumably because the largest neutral nation in Europe.

The Council voted to recommend to the Assembly the organization of an International Blockade Commission to oversee the administration of an international boycott, should such be decreed against an offending Power. Under the Covenant the member nations of the League can act on their own initiative to boycott a nation which has openly defied the League (Article 16 of the Covenant) and the decision of the Council therefore confers no new powers on the League, but simply facilitates common action in case of emergency. The Council also decided to create an International Health Office to cooperate with the Red Cross, with national authorities, and with the International Labor Office to protect the health of the world.

The report of the Committee of Advisory Jurists, on

Still burrowing

which Mr. Root has been active, was approved by the Council. The International Court of Justice will have eleven judges and four deputy judges, to serve nine years. The Court will be open to all nations whether members of the League or not; it will be competent in all cases put before it by agreement of both parties; it may give judgment by default, and its judgments will be final unless the discovery of new facts leads to a retrial.

The revised Japanese-British alliance will, when it has been arranged, be submitted to the League of Nations, as will also the defensive military alliance between France and Belgium. This is in accordance with Article 18 of the Covenant, which reads as follows:

Every treaty or international engagement entered into hereafter by any member of the League shall be forthwith registered with the Secretariat and shall as soon as possible be published by it. No such treaty or international engagement shall be binding until so registered.

This article embodies the pledge in the famous "fourteen points" for the destruction of secret diplomacy, and it is encouraging to be informed that the Powers are indeed taking it seriously.

## Millerand Wins Out

THE most important test of the Spa agreement was, naturally, its reception in France. Germany was compelled to agree; there was no alternative but acceptance of foreign military occupation. England and Italy had less at stake than France and would be less apt to upset a ministry out of resentment at the necessary compromises made. To ask the French, who were still awaiting indemnities from Germany, to advance a loan of 1,200,000,000 francs in six months, with French finances already in a chaotic state, would test the strongest ministry that ever held office in the republic. But Premier Millerand, in the face of an adverse report by the Commission on Finances, secured a favorable vote of 356 to 169 from the Chamber of Deputies on the question of the German loan. M. Millerand said in part:

If you refuse to pass this bill, then our obligation to make advances ceases, but at the same time there disappears the coal protocol for 2,000,000 tons monthly to the Allies, the control commission vanishes, and finally there vanishes the provision for occupation of the Ruhr if Germany does not deliver 6,000,000 tons at the date fixed. You take also from our Belgian and Italian friends the coal Germany promised to deliver.

He reminded the deputies that previous to the Spa agreement the Germans had been paying only 500,000 to 800,000 tons monthly. The French Senate concurred in the decision of the Chamber of Deputies and the Millerand ministry was saved.

## We Remonstrate with Japan

THE United States has sent a note of protest regarding the Japanese occupation of northern Saghalien and parts of eastern Siberia. The first public announcement of the fact came from Japan, where one of the Tokio newspapers stated that an inquiry as to Japanese intentions in Siberia had been received from "a certain country." Details of the note were kept secret.

Japan has a strong case for the occupation of northern Saghalien and the Nikolaievsk region. The disappearance of all stable government in Siberia in consequence of the Bolshevik civil wars threw the eastern parts of Siberia into a state of anarchy which affected Japan, as the nearest of the Powers, very much as the disorders in Mexico affected the United States. Southern Saghalien already belonged to Japan as a result of the Russo-Japanese war and was separated from the northern part of the island by no natural

barrier, but only by such an imaginary geographical line as divides California from Lower California. Finally, the massacre of several hundred Japanese at Nikolaievsk, on the Siberian mainland, gave Japan ample pretext for active intervention or even (following the precedents of England, France, Germany and Russia in acquiring ports from China) for permanent conquest. Japan has given assurances, however, that such occupation is but temporary until a stable government can be established in Russia, or at least in Siberia, which will indemnify Japan for the Nikolaievsk massacre.

But the action of Japan cannot be considered in isolation; it is intertwined with many other problems of interest to both Japan and the United States: the civil war in China, the Japanese penetration of Shantung and Manchuria, the possibility that a "buffer state" may be erected out of eastern Siberia which will be in reality a Japanese dependency, the recent expansion of Japan in the Pacific islands formerly belonging to Germany, the negotiations for a renewal or modification of the Anglo-Japanese alliance, the increased Japanese immigration into California and the Japanese protest against unfriendly land laws in California and other western states. It is because the whole "Pacific problem" between Japan and the United States has grown so complex and so fraught with peril to continued friendly relations that it was necessary for the American Government to make inquiry as to the significance of the latest development in Japanese policy. Fortunately, similar questions

Thomas in Detroit News

What next?

are being asked in Japan itself, and one of the Japanese newspapers has even had the courage to print the following:

The powers regard Japan as a country which doesn't mean what it says. The most important reasons for this will be found in the actions of the militarists. . . .

## Railroads Get Rate Increase

IN a decision rendered July 31 the Interstate Commerce Commission granted to the railroad companies of the nation almost the full amount of the rate increases which they had demanded. The basis of the new rates is to offset the additional expense to the railroads resulting from the recent increase of over \$600,000,000 in the pay of the railroad workers and in addition to make possible a six per cent profit on investment.

The following percentage increases on ordinary freight rates were granted:

	Per cent
Eastern group .....	40
Southern group .....	25
Western group .....	35
Mountain-Pacific group .....	25
Thru rates from points in one group to points in another .....	33 1/3

Passenger fares and charges, including commutation and excursion rates, may be increased by 20 per cent. Excess baggage rates and rates for carriage of milk and cream (which is not counted as freight revenue) may also be increased one-fifth. A special surcharge may be imposed for accommodation in sleeping and parlor cars amounting to one-half of the usual rate.

The Interstate Commerce Commission fully confirmed the contention of the railroad companies that it was becoming impossible for them to handle traffic adequately or to meet running expenses, even without taking into account the recent advances in wage scales. Carriers contend that the country imperatively requires the building of 100,000 freight cars, 3000 passenger cars and 2000 locomotives. As regards financial difficulties the railroads of the eastern states were the worst placed. For the period from 1912 to 1916 these carriers spent 71 cents out of every dollar of operating revenue received for operating expenses. This increased to 75.03 cents in 1917, to 85.82 cents in 1918; 88.51 cents in 1919, and to 97.68 cents during the first four months of 1920. In other words, increasing operating expenses have wiped out of existence the margin for tax accruals, uncollectable revenues, rents, interest on debt and dividends. The operating ratio for passenger trains was in general much more favorable than for freight traffic, which is the reason that a smaller advance was allowed to passenger fares than to freight rates. The passenger will, however, be confronted by a heavy supercharge on Pullman accommodations.

Even shippers admit

© Kadel & Herbert

Miss Sylvia Boyden soothes her nerves with a smoke after making a parachute drop of 1500 feet at an aerial exhibition held in England for King George

that the increased rates allowed the railroads were inevitable. Without such an increase, the transportation system of the nation could only have been kept alive by heavy subsidies, falling ultimately on the taxpayer. But the freight rate advances may be added to commodity prices paid by the consumer and thus give another boost to the high cost of living. The only hopeful element in the situation is that the new rates may permit the railroads to increase their equipment and thus eventually lower prices by making possible larger and speedier shipments of goods.

## The Church and the Steel Strike

THE Interchurch World Movement has at last made public its long awaited report on the steel strike. The full text of the report, a document of 94,000 words, will soon be published by the firm of Harcourt, Brace & Howe. The most noteworthy, or at least the most discussed, aspect of the report is the strong sympathy it shows with the cause of the strikers. In fact, it is prac-

### A TANK RACE

The military "tank" is designed for strength and tenacity rather than for speed or grace. But Paris has added a new sport, the tank race, to the conventional contests of horses and yachts. It is like a race between snails as large as elephants and as energetic as tigers—something no man has seen since the eighteenth amendment became law!

tically a complete justification of the strike on the ground that the steel trust has persistently refused to recognize or confer with organized labor and that, altho there is a "basic eight hour day" for the payment of wages, at least half the employees work twelve or more hours a day. The report denies that the steel strike was "Bolshevist" or connected with the I. W. W. and contends that it was fought along the lines of orthodox labor unionism.

The following recommendations to avert similar strikes in the future are contained in the report:

The adoption of the eight-hour shift on all continuous processes. Limiting of the day to not more than ten hours on duty, with not more than a six-day and a fifty-four hour week, with at least a minimum comfort wage.

Recognition of the right to join regular craft unions or any other freely chosen form of labor organization; recognition of

right to open conference, either thru shop committees or union representatives; recognition of right of collective bargaining.

A vast extension of house building—by the communities where possible.

That the President's industrial conference plan for standing tribunals of conciliation and publicity be given a fair trial.

## Coal Strike Called Off

PRESIDENT Wilson's personal intervention and appeal to the good will of the trades union leaders put an end to the coal strike in Illinois. He opened his letter to the United Mine Workers of America by reminding them that in striking they had violated their agreement to accept the award of the Bituminous Coal Commission. He warned them that any temporary gain obtained by the violation of existing contracts would in the long run work injury to the miners by depriving the union of its reputation for honest dealing, which was their most valuable

Wide World

### BEER AND WATER MIX

Picnickers in the suburbs of Berlin camp near the river so that the peddlers can pay a call on them with barges of bottled beer

asset in negotiation for better terms. Finally, he promised that if the miners returned to work, but not otherwise, a readjustment of wage schedules would be undertaken:

I must insist that the striking mine workers return to work, thereby demonstrating their good faith in keeping their contract. When I have learned that they have thus returned to work, I will invite the scale committees of the operators and miners to reconvene for the purpose of adjusting any such inequalities as they may mutually agree should be adjusted.

President Lewis of the United Mine Workers of America declared that President Wilson's appeal was fair and just and that he would immediately issue orders to the Illinois miners to resume work, pending the readjustment of wage rates. This he did by telegrams sent to the local unions. Frank Farrington, head of the state union in Illinois, the seat of most of the strikes, issued orders to the same effect. The strike ended at once. In the week ending July 24 the soft coal production of the United States showed a decrease of 329,000 tons as compared with the preceding week. This decline has been attributed to the Illinois strike.

## Rebellion in Lower California

NO sooner has a Mexican Government quelled one rebellion than it is face to face with the next. Governor Esteban Cantu of the Federal Territory of Lower California has placed himself in an attitude of defiance to the authorities in Mexico City. For many years past Lower California, separated from the main body of Mexico geographically, has acted almost as an independent commonwealth, proclaiming its "neutrality" in various successive civil wars. Governor Cantu does not like the prospect of exchanging his nominal subordination to the central Government for a real one. But President De la Huerta is determined that the quasi-independence of the Territory shall end. As his secretary put the matter, Mexico "does not want what happened to Texas to happen in Lower California." This remark is a very pointed one, since there has been much talk in both the United States and Mexico that Lower California might eventually be added to the United States, by purchase or otherwise, thus giving us control of the mouth of the Colorado River and a considerable extension of our Pacific coast line.

The insurrection of Villa now seems to be definitely at an end. He surrendered unconditionally, but was granted a pardon for his past insurgency and permitted to settle down as a civilian on a private ranch. His followers were paid off and allowed to return to "private life" unmolested. The Government even extended its generosity to making good personal loans for which Villa had given receipt. If Villa remains contented with quiet ranch life in Durango the Mexican frontier may look forward to a condition of peace such as it has not enjoyed for a decade. There are now no rebels in northern Mexico east of the Gulf of California.

So quiet was Mexico as a whole that the regular Congressional elections were held on August 1.

The principal contests were between the candidates of the Government and those of the newly organized Conservative Party.

## Prosecution of the Communists

WILLIAM Bross Lloyd, millionaire Communist, and nineteen associates were convicted on August 2 by a Chicago jury of a conspiracy to overthrow the Government of the United States. Various sentences were imposed on the prisoners; terms of from one to five years in prison and in some cases fines in addition. All of the convicted men were active organizers of the Communist Labor Party, one of the "left wing" offshoots of the Socialist Party. The trial lasted eighty-five days and counsel for the defense have moved for a new trial, which may prolong the case yet farther.

The prisoners were released on bail pending a possible new trial.

Mr. Lloyd himself was given the heaviest sentence. Against him was not only the general charge of being active in a seditious organization, but the specific accusation of making speeches inciting to violence. In one of his speeches he is alleged to have urged a Milwaukee crowd to "dynamite the doors of the banks to get the money to finance the revolution." Whether mere membership in the Communist Labor Party is a crime or not is questionable, in view of the recent decision of the Federal Department of Labor that an alien resident in the United States could not be deported unless there were other charges against him than membership in the party.

The Chicago prosecutions were under a state law against "criminal syndicalism," the meaning and constitutionality of which will doubtless be determined in the course of the prosecutions now being carried on under its authority.

# Here Are Books—And Books

## These Jolly Admirals

There is something about the sea which gives its guardians an unrestrained vigor of personality and freedom of speech which boils over the confines of military discipline. From the disobediences of Nelson to the indiscretions of Sims this trait of verbal insubordination has been noted in many of the greatest admirals. *The Memories and Records* of Lord Fisher goes, however, beyond the tradition of the "freedom of the seas." It is a rambling autobiography without form or plan, frank to the verge of indiscretion or beyond, crammed with the enthusiasm and energy of youth (he was born in 1851 but was of the tribe of Peter Pan), exuberant beyond the bounds of the English language, and altogether delightful and incredible. In it we can read, for instance, of how King Edward begged Fisher to "kindly leave off shaking your fist in my face!" how Admiral Jellicoe is a most excellent naval officer except that "he is totally wanting in the great gift of insubordination"; how when Fisher was "Pooh-Bah at the Admiralty; the First Lord was in a trance, and the Financial Secretary had locomotor ataxy," and how he acted in place of both, "I wasn't justified but I did it"; how England owes its present prosperity to George Washington, "the greatest Englishman who ever lived," and how the Germans ought to have shot their Dr. Diesel "like a dog" for inventing the oil engine while the British controlled the world's greatest tracts of oil lands!

*Fifty Years in the Royal Navy*, by Admiral Sir Percy Scott, is another autobiography by a rebel against naval routine whom time has vindicated. Altho more sober and restrained in style, Sir Percy Scott's book is quite as critical in substance as Lord Fisher's. With evident delight he cites his warning that the submarine had revolutionized warfare, published in June, 1914, and all the gravely severe press comments and "official statements" which appeared at the time to reprove the fantastic speculations of the rash naval officer! *Indiscretions of the Naval Censor*, by Rear Admiral Sir Douglas Brownrigg, is a very frank and lively account of how the British handled censorship and publicity work in connection with the naval service during the war.

*My Memoirs*, by Grand Admiral von Tirpitz, sometimes facetiously known as the "good, grey pirate," shows the same fearless criticism of the powers that be as is evident in the British naval memoirs, tho von Tirpitz is sour and sulky where Fisher is genial and Scott straightforward. He has much to say about politics, criticizes the blunders of the Kaiser and the feebleness of his ministers, and declares that the war was lost mainly because unrestricted submarine warfare was—in deference to American feelings—begun a year too late. He describes the

Underwood & Underwood

The late Lord Fisher was the victim of outrageous calumnies during his lifetime. He was supposed to be a Malay! The son of a Cingalese Princess—hence his wicked cunning and duplicity! He had formed a syndicate and bought all the land round Rosyth before the Government fixed on it as a naval base—hence his wealth! And so forth! And so forth! But King Edward, for one, always had faith in him and the blacker the attacks, the more he revelled in Lord Fisher's reputed wickedness. The reader will find these reminiscences at the very beginning of the first volume of Lord Fisher's autobiography—memories which he first intended for use at his death, then published—only to die shortly afterward

*Lusitania* as "an armed cruiser," is unable to see anything wrong in the torpedoing of unwarned ships and clings to the delusion that a firmer diplomatic tone would have scared the United States into remaining neutral.

*Memoirs and Records*, 2 vols., by Admiral Lord Fisher. *Doran. Fifty Years in the Royal Navy*, by Admiral Sir Percy Scott. *Doran. Indiscretions of the Naval Censor*, by Rear Admiral Sir Douglas Brownrigg. *Doran. My Memoirs*, 2 vols., by Grand Admiral von Tirpitz. *Dodd, Mead & Co.*

## Uncensored Fiction

War fiction has entered the "Now It Can Be Told" stage. No longer is the hero sent to France because his dilemma is too much for his author and the only resource is to kill him; no longer is he sent for a broadening and clarifying of his point of view, an opportunity to discover the real and fundamental things of life. The present idea is not to show how war makes men but how it unmakes them. That phase of war was, while the battle was on, kept pretty generally out of print but it was no secret to anybody who knew anybody in any army. Nevertheless it is well to have it recorded not only for future generations but for the clearer enlightenment and better understanding of our own.

*The Secret Battle* is the record of a high spirited young Englishman whose

nerve was broken by the long and terrible strain of infantry warfare. It is simply and vividly told. It reads not like fiction but like fact, which perhaps it is. It pictures not only the fighting in France but the terrible ordeal at Gallipoli of which we know much less. It brings home to an American what we are too apt to forget, the length of four years of war. Its chief fault is the deprecating attitude of its author, A. P. Herbert, who almost apologizes for telling you in detail how Penrose's tragedy came about.

Gilbert Frankau errs in the other direction. He is so interested in every detail of the story of *Peter Jameson* that it never occurs to him that you may not be equally enthusiastic, and as a matter of fact you usually are. The book is about equally divided between the tobacco business, in which Peter was a very successful merchant; the war on the western front, in which Peter was a lieutenant of artillery; and the cure of a case of shell shock, effected by Peter's wife. Personally we were more interested in the tobacco business than in the shell shock, which is the real cause of the book, but that may have been because we knew less about it beforehand. Anyway Peter is very well worth knowing, as are a number of the lesser lights.

*The Secret Battle*, by A. P. Herbert. *Alfred A. Knopf. Peter Jameson*, by Gilbert Frankau. *Alfred A. Knopf.*

## Poetry and Verse

Perhaps there is a psychological basis for the tendency nowadays to speak always of modern "verse." We have grown chary of the word poetry—so many crimes have been committed in that name. Then, too, to find your modern "poetry" you must first define it. Verse is a safer word for general use, and it savors pleasantly of informality.

The amount of good contemporary verse seems to increase every year. The publishers say that more people are reading it than ever before. The editors know that more people are writing it—especially in the spring. In his *Anthology of Magazine Verse for 1919* William Stanley Braithwaite has collected the best of American verse published during the past year, an array far removed from war themes and dominated to a considerable extent by a lyrical spirit of joy in living, the normal reaction, no doubt, from war shadows. Sara Teasdale's verse, "The Debtor," exemplifies this trend.

So long as my spirit still  
Is glad of breath  
And lifts its plumes of pride  
In the dark face of death;  
While I am curious still  
Of love and fame,  
Keeping my pride too high  
For the years to tame;  
How can I quarrel with fate  
Since I can see  
I am a debtor to life,  
Not life to me?

But in contrast are such poems as

"Ma," by Alter Brody, and Edwin Arlington Robinson's "The Valley of Shadow," which Mr. Braithwaite refers to as "a piece of surgery" by a poet who "knows the anatomy of human character and experience, and whose passion is to heal, strengthen and restore."

All in all the anthology is valuable not only as literature, but as a barometer of the spirit of the times.

*The Second Book of Modern Verse*, made by Jessie B. Rittenhouse out of American poetry of the last six years, is perhaps too good an anthology.

Like its predecessor, it is closely fabricated. Poem shades into poem. But when one is making an anthology read like a sonnet-sequence, there is a temptation to pick and choose for the sake of the pattern. Miss Rittenhouse is not always able to resist, and some poems hardly deserving a place on merit win one because they fit.

The pattern, moreover, has little room for the thing that is *sui generis*. There is a lack of the "unrelated" stuff of the imagists—pictures and rhapsodies and adventures in sheer fancy—in these well-ordered pages. And the pattern tends to dwarf the single figure. The book reads almost too smoothly: something of the vigor and beauty of individual poems is lost in the less distinguished fabric.

Conscience is the bane of an anthologist. Miss Rittenhouse regrets she has had to omit many poets; she might have done better to omit more. The one and two poem people, in many cases, might better have yielded room to the real leaders.

How much we still owe the Britishers! The pages on the war cry aloud for the strong clear notes which poets across the water have sounded for us.

The little book makes excellent reading, nevertheless, and fills admirably the need for an inviting, convenient and generally adequate presentation of current verse.

*Anthology of Magazine Verse for 1919*, by William Stanley Braithwaite. Small, Maynard & Co. *The Second Book of Modern Verse*, by Jessie B. Rittenhouse. Houghton, Mifflin Co.

## A Self-Conscious Pilgrimage

We submit that Dorothy Richardson's *Pilgrimage* books are pernicious. They make you morbidly self-conscious. You find yourself minutely examining the way in which you eat buttered toast, noting carefully how your sister smiles before breakfast, considering solemnly the exact shade and texture of your hair. You keep watching yourself think to see if you do it in the jerky phrases of Miriam Henderson. Your peace of mind is altogether destroyed.

The trouble is that the books are interesting. There is a terrible fascination about their incisive minutenesses. Nothing happens, but you keep on reading. They are very skilfully done.

May Sinclair's laudatory introduction is of the sort which makes you determine to dislike the books if pos-

sible, but it contains, nevertheless, some exceedingly enlightening comment:

By imposing very strict limitations on herself Miss Richardson has brought her art, her method, to a high pitch of perfection, so that her form seems to be newer than it perhaps is. . . . Obviously she must not interfere; she must not analyze or comment or explain. Rather less obviously, she must not tell a story, or handle a situation or set a scene; she must avoid drama as she avoids narration. And there are some things she must not be. She must not be the wise, all-knowing author. She must be Miriam Henderson. She must not know or divine anything that Miriam does not know or divine; she must not see anything that Miriam does not see. She has taken Miriam's nature upon her. She is not concerned, in the way other novelists are concerned, with character. Of the persons who move thru Miriam's world you know nothing but what Miriam knows.

This is a distinctly interesting and certainly a permissible method of writing but we cannot feel, as Miss Sinclair seems to, that it is the ultimate method. And, personally, we can't get up the least enthusiasm about Miriam. She is an astute person in her comments and observations but she has an appalling dislike of people, all kinds of people. Moreover, we cannot agree with her, and Miss Richardson, and Miss Sinclair, that washing your face in the morning is as vital and fascinating a process as, for instance, falling in love.

Of the four volumes of *Pilgrimage* which have so far been published the first and the last are the most interesting; *Pointed Roofs* for its charming picture of the German boarding-school and *The Tunnel* for its pictures of people. Surely the creation of an admirable and likeable dentist is a feat unique in fiction.

*Pilgrimage: I, Pointed Roofs. II, Backwater. III, Honeycomb. IV, The Tunnel*, by Dorothy Richardson. Alfred A. Knopf.

## There Are Chinks in the Plot

Samuel Merwin has written better novels than *Hills of Han*, but it offers agreeable entertainment for an uncritical hour. It is an exciting tale of missionaries and journalists in China in 1907. The strong, silent men are the strongest and the silentest you ever met, but perhaps you like them that way, and anyhow the heroine is a most attractive young person and there are plenty of picturesque Chinamen of all ranks, many tense situations, and several narrow escapes.

*Hills of Han*, by Samuel Merwin. Bobbs-Merrill Co.

## Small Town Folks

It will be interesting to see whether the people who liked the somewhat oversentimental *Friendship Village* stories continue to like Zona Gale as the far from sentimental and exceedingly skilful author of *Miss Lulu Bett*. The book is a study of small town life in the Middle West, particularly of Lulu, living with her married sister, whose husband is a dentist and a justice of the peace, as "the family beast of burden." Lulu is neither young nor charming, it isn't

that kind of a story at all, but she is a very real and human person, they all are, appallingly human. There is a certain flavor of relentless realism which suggests Arnold Bennett. It is not a story you forget in a hurry. It haunts you, and the more you think about it the more you admire the skill with which it is written, the finish, the restraint.

*Miss Lulu Bett*, by Zona Gale. D. Appleton & Co.

## Another Cape Cod Story

"The Cape," as every one knows, is Cape Cod, but Joseph Lincoln is not its prophet. He knows the Cape, of course; he is a very competent photographer of its landmarks, geographical and social, but his "quaint characters" talk a language which was never heard on sea or land, least of all on that flat and sandy peninsula. He can tell a very good story, as he does in *The Portygee*, his psychology, tho somewhat obvious, is true, but his thoroly "wholesome" humor lacks the faintest alleviation of subtlety. Cape Cod deserves a better interpreter.

*The Portygee*, by Joseph C. Lincoln. D. Appleton & Co.

## Unearthing Henry James

If you were a magazine editor would you recognize the genius of Henry James on sight? Here is a chance to test your perspicacity. Four of his short stories, hitherto unpublished in book form, have recently been gathered into a volume. Among them is "Poor Richard" which, when James was almost unknown, William Dean Howells advised "The Atlantic Monthly" to accept and to take "all the stories you can get from that writer."

Brander Mathews has bewailed, and with more than a little justice, the present fad for digging up and republishing the obscure and better forgotten works of well known writers, but in this case the resurrection of James's stories seems justifiable, for, no matter who wrote them, they are stories well worth reading. Unusual in type, slender in incident, they are full of good dialogue and subtle psychology.

*A Landscape Painter*, by Henry James. Scott & Seltzer. New York.

## Studies in Character

Some one once said, in comparing the pleasures derived from reading "best sellers" and good literature, that the enjoyment of the former was of the sudden biting sort as contrasted with the quiet feeling of intellectual delight of the latter, which steals over the reader almost imperceptibly. The latter is the case with Laura Spencer Porter's collection of essays, *Adventures in Indigence*. They are a bit hard to get into, in fact you may have to read several essays before you are aware that the charm of the author's leisurely, delicately humorous style has crept over you, but by the time you have finished "Mamie Faffelfinger," the fourth essay, you realize that you have found a friend, whom you will cherish enough to keep on the shelf with Lamb

and Stevenson and Chesterton and others dear to the heart of the essay lover. Miss Porter is at her best in character studies and there are many of them in this little collection.

*Adventures in Indigence*, by Laura Spencer Porter. Atlantic Monthly Press.

## The Peace Conference from Many Angles

Five new important studies of the Peace Conference at Versailles have appeared; it will not be long before the Peace Shelf in the libraries will rival in length the shelf of books on the Great War. Professor Scott of the University of Chicago has prepared *An Introduction to the Peace Treaties* which is almost indispensable for anyone who has not closely followed the diplomacy of the war and the Peace Conference and wishes to gain some understanding of what issues were involved in the discussions and decisions at Paris. Charles T. Thompson, superintendent of the Associated Press foreign service, has chronicled *The Peace Conference Day-by-Day*. Of particular interest is his personal interview with President Wilson immediately after the completion of his work in Paris. There has been much speculation as to whether the President regarded the Peace of Versailles as based on the Fourteen Points. Here is the answer in Wilson's own words:

I think the Treaty adheres to the Fourteen Points more closely than I had a right to expect, in view of the difficulties which arose and the great number of divergent views which had to be reconciled. The Fourteen Points were the guiding principle thruout and their spirit entered into pretty much everything that was done.

Another good journalistic account is *The Peace in the Making*, by H. Wilson Harris, correspondent of the liberal and somewhat pacifist *London Daily News*. Mr. Harris is well-informed and his pen-pictures of the personality and policy of the leading diplomats, tho less lively than those of Mr. Keynes, are far closer to the facts.

But by far the best account of the Paris Conference which has yet appeared is *Some Problems of the Peace Conference*, by Charles Haskins and Robert Lord, two American scholars who served with distinction as expert advisers to the peace commissioners. Professor Haskins acted as American representative in preparing the clauses on Alsace-Lorraine, the Saar Valley and other territorial changes in western Europe; Professor Lord was, in coöperation with Dr. Bowman, largely responsible for American policy with respect to the complex problems of the Polish boundary. The book is a complete, first-hand and absolutely trustworthy account of the political and territorial decisions taken by the Conference and the reasons why they were taken. It does not, however, undertake to discuss the non-territorial issues involved in the peace settlement, such as reparations and the League of Nations.

*The War, the World and Wilson*, by George Creel, is intended as a vindica-

"Help! The ship is sinking" "What do we care? It doesn't belong to us."

## Look what's happening to your ship

Yes, it's yours. Instead of "ship" read "public utility"—perhaps even the Telephone or Electric Light Company in your town.

Rates at low tide have stranded it on the rocks, while a surging sea of costs for labor and material breaks over it smoke-stack high.

Whether you're a stockholder or not, through investments by your trust company and insurance company you are part owner in the public utilities. So you are protecting your own money when you see to it that they have a high enough rate to keep going.

These public servants are necessary for your safety and convenience, too. For if electric service were forced to shut down, picture the result—

No street cars running. Telephone communication suspended. Factories idle. Homes deprived of electric light. Theatres and "movie" houses closed. Increased fire risk. Streets unsafe at night.

Even now the Electric Light Companies and Telephone Companies are unable to supply service to hundreds of thousands of applicants. Lack of funds stands in the way of adding equipment to extend the lines.

The reasons for such a condition are different in different places, and each case must of course be settled on its merits.

After all, though, it isn't a question of fairness or generosity to the Companies so much as a matter of self-interest to you. "How can I assure myself good electric service?"—that is your problem.

Your law-makers and public service commissioners take their authority from public opinion. And public opinion divided by the population of your community is you.

Published in the interest of Electrical Development by an Institution that will be helped by whatever helps the Industry.

# Western Electric Company

No. 18. Wherever electricity is called on to render its manifold services—in office or home, in city or country—Western Electric, through its 46 branch houses, makes the distribution of electrical products more convenient and more economical.

tion of all the policies of President Wilson's administration, but it is a much less effective campaign document than Ray Stannard Baker's account of the Peace Conference or Professor Dodd's biography of Wilson because it is too obviously prejudiced and recklessly overstated. Its chief value lies in its refutation of some misrepresentations of the Treaty by Mr. Keynes and other "liberals."

*An Introduction to the Peace Treaties*, by Arthur Pearson Scott. University of Chicago Press. *The Peace Conference Day-by-Day*, by Charles T. Thompson. Brentano. *The Peace in the Making*, by H. Wilson Harris. Dutton. *Some Problems of the Peace Conference*, by Charles Homer Haskins and Robert Howard Lord. Harvard University Press. *The War, the World and Wilson*, by George Creel. Harpers.

## Natural History

*Homings with the Birds*, by Gene Stratton-Porter. (Doubleday, Page & Co.) Curious adventures in bird study and bird photography. If you are the sort of person who studies birds in your own backyard you will find the book delightful. There are many excellent and interesting photographs.

*Science of Plant Life*, by Edgar Nelson Trauseau. (New World Science Series. World Book Co., Yonkers, New York.) A practically illustrated high school botany treating of the plant and its relation to environment. A supplement to laboratory and field work.

*Wasp Studies Afield*, by Phil and Nellie Rau. (Princeton University Press.) Descriptive report covering four years' study of many species. A notably thorough work to whose scientific accuracy is added an entertaining style.

*The Human Side of Animals*, by Royal Dixon. (Frederick A. Stokes Co.) An informal gathering of facts to show that animal intelligence differs from human wisdom in degree rather than in kind.

*Famous Pictures of Real Animals*, by Lorinda Munson Bryant. (John Lane Co.) Photographs of pictures and statuary of animals, by artists old and modern, accompanied by simple explanatory text. Excellent for children of all ages.

## History and Current Affairs

*The National Government of the United States*, by Everett Kimball. (Ginn Co.) A very up-to-date civics textbook by the Professor of Government in Smith College. Gives not only the constitutional framework of the Government but an accurate and adequate discussion of its functioning under actual conditions of political life and party struggle.

*International Waterways*, by Paul Morgan Ogilvie. (Macmillan.) A useful handbook to students of international law, including a historical discussion of the evolution of the principles of "freedom of the seas" and "access to the sea" for inland states. A reference manual to treaties governing the navigation of international waterways forms the second section of the book.

*Law in the Modern State*, by Leon Duguit (Huebsch). A subtle and ingenious French student of political theory analyzes the "myth" of the sovereignty of the central government and discusses the mechanism of public administration.

*The Casual Laborer and Other Essays*, by Carleton H. Parker (Harcourt, Brace & Howe). An analysis of the psychological causes of industrial unrest among radical unskilled laborers. Believes that the I. W. W. and similar movements of revolt are not based on any social theory but are the instinctive reaction to abnormal and oppressive living conditions. Explains the revolutionary mind on Freudian principles.

*The Law of Struggle*, by Hyman Segal. (Massada Pub. Co.) "Sensitiveness" as the cause of struggle and struggle as the fundamental law of life that makes for progress, treated philosophically.

*Studies in the History of Ideas*. (Columbia University Press.) First volumes of a series from the most productive philosophical department at present in the country. Thirteen papers by Woodbridge, Dewey, Montague and others ranging from Empedocles to the present day.

*Under Caesars' Shadow*, by Henry Francis Colby, D.D. (Neale Pub. Co.) Studies from the religious angle of the careers of Augustus, Tiberius, Caligula, Claudius and Nero, whose shadows darkened the path of Jesus.

*The Good Man and the Good*, by Mary W. Calkins. (Macmillan Co.) An exhaustive in-

roduction to the study of ethics. Written by a professor of psychology, primarily for college students.

*Essays in the Study of Siennese Painting*, by Bernard Berenson. (F. F. Sherman.) Carefully substantiated descriptions and discussions of a little-known phase of Italian painting, excellently illustrated. Mr. Berenson is an art scholar of thirty years' reputation.

## Psychic Phenomena

*Life After Death*, by James H. Hyslop. (E. P. Dutton & Co.) A psychic textbook inquiring into the spiritual phenomena of various religions, philosophies and civilizations.

*After Death*, by W. T. Stead. (George H. Doran Co.) Republication of the "Letters of Julia" with several new "spirit communications."

*The Seven Purposes*, by Margaret Cameron. (Harper & Bros.) Experiences with the planchette, recording conversations of information and comfort, many bearing prophecies about the war.

*The New Revelation*, by Sir Arthur Conan Doyle. (George H. Doran & Co.) An intensely human narration of the gradual change from a strictly materialistic viewpoint to an abiding faith in the truth of spiritualism, by a man too sane, too reasoning, too thoughtful to have any illusions on this much-mooted subject.

## Textbooks

*How to Write Special Feature Articles*, by Willard Grosvenor Bleyer. (Houghton Mifflin.) It is now several years since general studies of the science and art of journalism began to be printed and specialization has begun. The volume in hand goes thoroughly into the making of the "feature" story and illustrates the correct practice by numerous extracts from standard periodicals. Every school of journalism will add this book to its technical library.

*What to See in America*, by Clifton Johnson. (Macmillan Co.) A guide book that makes you really quite anxious to see America first. There is a chapter for each state with brief information about the chief points of scenic, artistic and historic interest, adequate maps and excellent photographs.

*Aircraft*, by Evan J. David. (Scribner's Sons.) A history of aircraft from the glider up, the development of flying during the war, commercial flying, transatlantic flying, aero mail, an explanation for the untechnical reader of why planes fly and how the most important maneuvers are performed. A book for reference rather than general reading.

*A Manual of Homemaking*, by Martha Van Rensselaer, Flora Rose and Helen Canon. (Macmillan Co.) Arrangement, furnishing and care of the modern house; making of clothing; planning and cooking meals. For the woman who is managing a household.

*The Elementary Nervous System*, by G. H. Parker, professor of zoology in Harvard University. (J. B. Lippincott Co., Philadelphia.) This second monograph in the series on experimental biology explains the elementary nervous system as it exists in the simpler forms, such as sponges, coelenterates and ctenophores.

*The Gun Book*, by Thomas McKee. (Henry Holt & Co.) Traces compactly the development of military firearms from "Greek fire" to the Lewis and Browning guns. For boys of all ages.

*The A B C of Aviation*, by Capt. Victor W. Page. (N. W. Henly Pub. Co.) Complete, practical and well-illustrated book, outlining clearly the elements of aeronautical engineering.

*Motor Vehicles and Their Engines*, by E. S. Fraser and R. B. Jones. (Van Nostrand Co.) The authors are both late U. S. Army instructors in the Motor Transportation Corps, and they have written a practical handbook on the care, repair and management of motor trucks and automobiles, for owners, chauffeurs, garages, and schools. There are nearly three hundred useful illustrations.

*Farm Management*, by J. H. Arnold. (Macmillan Co.), a secretary in the Office of Farm Management, U. S. Dept. of Agriculture, discusses types of farms, advantages of situation, organization, business methods, crop and live stock problems.

*Industrial Nursing*, by Florence S. Wright, R. N. (Macmillan Co.) A reliable manual for those taking up this rather new work, which was started in 1897 in a small way by John Wanamaker Employees Benefit Association, and which now has grown to be a recognized profession.

*English for Coming Citizens*, by Henry H. Goldberger. (Charles Scribner's Sons.) Simple and well-illustrated lessons in spoken English, based on the topic as a starting point. A book of value, especially to teachers.

*The A B C of Exhibit Planning*, by Evert G. Routzahn and Mary Swain Routzahn. (Sur-

vvey and Exhibit Series, Russell Sage Foundation.) Gives a carefully prepared and well-illustrated plan which should be studied by communities and organizations contemplating exhibits for such or similar purposes.

*Human Conduct*, by Charles Clinton Peters. (Macmillan Co.) A combination text-book of philosophy, psychology, logic, ethics, treated from the viewpoint of the individuals control of conduct. Appropriate for secondary schools or reading circle.

*Effective Farming*, by H. O. Sampson, Professor of Agriculture, Wintrop Normal and Industrial College. (Macmillan Co.) A comprehensive textbook designed for American schools, but a book which any student of agriculture, any progressive farmer, can use to good advantage.

*Mythology of All Ages*, Vol. III. (Marshall Jones Co., Boston.) Deals with the Celtic imageries still known to us, gathered with discriminating care by Dr. John Arnott Macculloch, and the early beliefs of the Slavs, by Dr. Jan Machal. In this volume is gathered material not new, but all of which is closely identified with mythology as distinct from fairy or folk tale remnants.

*Swimming and Watermanship*, by L. de B. Handley. (Macmillan Co.) Beginners and experts can learn swimming from this manual of practical explanation, easy to follow. Photographs make each point clear.

*Diet and Health*, by Lulu Hunt Peters. (Reilly & Britton Co., Chicago.) If you would be fat or thin follow Dr. Peters' simple rules enjoyably prescribed. She hasn't much patience with thin people, but relents in a late chapter and helps them out.

*Architecture and Democracy*, by Claude Bragdon. (Alfred A. Knopf.) Theories on ornament and mathematics and a new art of mobile color. A book of distinct personality and charm.

*The Theory and Practice of Color*, by Bonnie E. Snow and Hugo B. Froehlich. (Prang Co.) A guide to the intelligent use of color and an explanation of its laws and principles. Contains many beautiful colored charts.

*Office Management, Its Principles and Practice*, by Dr. Lee Galloway. (Ronald Press.) Comprehensive, alive and interesting, of practical assistance to executives. Valuable suggestions for efficient office equipment and system.

*Accounting as an Aid to Business Profits*, by William R. Bassett. (A. W. Shaw Co.) Explains how accounting should be made to serve the business man. Illustrated with charts and written with an understanding of common business troubles.

## Miscellaneous

*The Young Man and the Law*, by Simeon E. Baldwin. (Macmillan.) The ex-Governor of Connecticut discusses the advantages and drawbacks of a lawyer's career in the United States and the ethical problems and standards of the profession.

*The Disillusions of a Crown Princess*, by Princess Catherine Radziwill. (John Lane Co.) If you are one of those who find that reading of the domestic difficulties of royalty makes you more contented with your own hard lot you will be interested by this "inside story" of the ex-Crown Princess of Germany.

*The Romance of Aircraft*, by Laurence Yard Smith. (F. A. Stokes Co.) A history of the development of aviation with the emphasis on its romantic rather than its technical aspect and on personalities rather than on planes.

*The Complete Opera Book*, by Gustav Kobbe. (G. P. Putnam's Sons.) It contains the stories of the operas, hundreds of the principal airs and motives, brief histories of the composers, interesting facts about the productions and the singers who have made certain roles famous, scores of portraits, some brief and informing criticism. The book is arranged so that it makes a comprehensive, consecutive history of the opera and is intelligently indexed so that it is possible to find quickly the particular bit of information you want.

*A Survey of Religious Education in the Local Church*, by William Clayton Bower. (University of Chicago Press.) An analysis of the survey method as used for social and educational purposes, with practical suggestions for adapting it to religious education.

*Splendors of the Sky*, by Isabel M. Lewis. (Duffield & Co.) Articles on astronomy that tell in non-technical terms the progress that has been made in understanding the planetary system. Excellently illustrated.

*The Profits of Religion*, by Upton Sinclair. (Pasadena, California.) The author of "The Jungle" has taken to muck-raking the churches—with similar success at unearthing malodorous features and similar failure to portray a truthful picture.

## Letters to the Great and the Near Great

By John Citizen

Mr. Irvin Cobb,  
Blue Grass Region, Kentucky  
Dear Cobb:

Congratulations on that vote you got in the San Francisco Convention! Probably few votes cast in that or any other convention were so spontaneous and unbossed. Tammany; Wall Street, the Administration, the Senate, the liquor interests, the hyphenates—not your most jealous foe could ascribe that vote (or, more exactly, that one and one-half vote) to such influences or to anything but the admiration of a neighbor who knew you as a man or the admiration of a stranger who knew and loved you as a journalist. Perhaps if I and Mary Citizen had been there you might have had two votes more. And if you had had enough votes you might have been nominated! Many a candidate has been taken far more seriously who deserved it far less. Of one thing I am certain; to judge from photographs you are certainly of Presidential size.

Admiringly yours,

. JOHN CITIZEN.

Premier Witos,  
Warsaw, Poland.  
Dear Sir:

Being a foreigner, and ignorant, no doubt you meant no harm in writing to President Wilson as "at this hour of our country's greatest need nearer and dearer than ever to every Polish heart." Very possibly he may stand high in the opinion of Poland, but if you were to read the American papers you would see that President Wilson was an incompetent lunatic, a dictator, a traitor to the independence of his country, the enemy of the nation's liberties, a Bolshevik, a reactionary, a tool of England, a tool of Germany, a man from whom it is imperative to save the nation. You would learn that the League of Nations, which Poland joined in ignorance, is nothing but a dastardly conspiracy against the Monroe Doctrine and the weeping shade of George Washington. You would know that Wilson committed unforgivable sins in foreign policy; to wit, being elected for keeping us out of war, entering the war, not entering the war soon enough, stopping too soon, imposing severe terms on Germany, letting Germany off too lightly, encouraging Polish imperialism and disregarding Poland's just aspirations. That some of these charges seem to contradict each other only deepens the black wickedness of the man who could be guilty of them all. No, say nothing good of our President if you would please us, for do not the politicians tell us that he is very unpopular? Sympathetically yours,

JOHN CITIZEN.

## High Living

which costs only one cent per dish

The Quaker Oats breakfast is the height of good living, for the oat is the greatest food that grows.

Practically every element the body needs is there in right proportions. And in a luscious food. No price could buy a better breakfast for the grown-up or the child.

Yet you serve a large dish for one cent—the cost of a bite of meat.

Quaker Oats yields 1810 calories of nutriment per pound. It supplies sixteen elements in well-balanced form. A pound of round steak yields 890 calories, and of eggs 635.

One cup of Quaker Oats contains as many calories as a pound of fish.

### Food values

Note how foods differ in the cost per calory. These comparisons on necessary foods are based on prices at this writing.

### 85% less for breakfast

A Quaker Oats breakfast saves 85 per cent compared with the average meat breakfast. It supplies supreme nutrition for the first meal of the day. It saves the average family about 35 cents toward costlier foods for dinner.

#### Cost per 1,000 calories

Quaker Oats	5½c	Average fish	50c
Average meats	45c	Hen's eggs	60c

## Quaker Oats

The choicest one-third of the oats

In Quaker Oats you get just queen grains flaked. All the puny, insipid grains are discarded. A bushel of choice oats yields only ten pounds of Quaker. Yet these rich, flavory oat flakes cost you no extra price. Be wise enough to get them.

Packed in sealed round packages with removable cover

# "The Best Man in My Town Is B. P."

*One of our favorite manuscripts in the "Best Person in Your Town" contest, this answer would have appeared in The Independent weeks since had it not been for the shortage of white paper and other arbitrary things of a similar nature that make editors' lives miserable. In our opinion B. P. is a "real" best person, upright, kind and courageous—but let him speak for himself*

**B.** P. he is commonly called to distinguish him from the son and nephews with the same family name and who have grown into prominence in the small town. A cordial hand-clasp, a smile which lights up his face, a trust in his fellowman, and a big heart make Ben Wade a universal favorite. People in trouble turn to Ben Wade for sympathy and help as naturally as the sunflowers turn toward the sun.

Since early manhood he has lived on his farm at the edge of town and tilled many of its acres himself just as tho his name, as president, was not printed on the letterheads of the single bank of the village and as if his money had not helped finance all of the village enterprizes. No church for miles around has been built without his owning many bricks in its walls and the famous boys' school of his own town long ago became his special hobby. But Ben Wade dresses little better than his hired man, and if he loans out money it is as much for the accommodation of the borrower as for the interest.

In the church of his own denomination Ben Wade is one of the official board. He and his family are there as regularly on Sundays as the minister. He thinks, too, that in the best sense it pays to quit work a little early on Wednesdays and go to prayer meeting, even tho his neighbors are sometimes roused from their slumbers by the calling of his hogs on his return. After breakfast, even in haying time, the chairs are pushed back while Ben

B. P.—otherwise Ben Wade—of McKenzie, Tennessee, is willing to help anyone who wants to lead an honest, useful and God-fearing life

Wade reads a few words from the Good Book and leads the household in prayer.

Tho well past seventy there is no one in the neighborhood younger of spirit than he nor could a more tireless worker be found. Before his return from a business trip to the city he visited every boy of his acquaintance, whether he were then in the Confederate Home or a Freshman in the University. If the pastor's salary and conference expenses were falling short toward the close of the year, Ben Wade could get more contributions than all the other members of the official board combined. Even tho the meetings of the committee to erect a war memorial

drew well on into the night, he was there to the close and next morning his list of subscribers had already grown long before a single name had been added to most of the lists.

But after all what Ben Wade will be remembered longest for, perhaps, is the class of boys which he taught in Sunday school. He took them when they were "little shavers," as he called them, and he kept them till they were men grown. Ben Wade has not the remotest acquaintance with modern theories of pedagogy, but somehow he got the idea across to those boys that they must lead honest, useful, and God-fearing lives. Sometimes the boys whispered and were a bit restless, but they loved their teacher. As they left home, some of them for college, Ben Wade loaned them money to help secure an education. When one of them entered the business world, it was Ben Wade who gave the support and encouragement, which he most needed. When another of them returned as the circuit preacher, it was Ben Wade's horse that carried him to his charges. In vacation time when the boys came back to the place of their birth or else to visit their Alma Mater, they did not rest until they had been out to see Ben Wade. From early summer till late fall his home was filled with guests and during the day scarcely a train arrived which his automobile did not meet. From no one did they receive quite so hearty a welcome as from Ben Wade himself.

## For This Have We Congress

(Continued from page 168)

portance to the nation and consuming a large part of the time of Congress failed to pass; some of these, indeed, did not even reach the floor of either House. After a year of debate the Treaty of Versailles was killed; the restoration of the nation to a peacetime basis is yet to be accomplished. The Kendrick-Kenyon bill, now known as the Gronna bill, providing for federal regulation of the meat industry—a measure vigorously fought by the meat packers, if enacted and enforced, should have wrought a decrease in the cost to the consumer of one of the staple articles of food. Another measure of import to the purchaser, introduced but not passed, is the French "truth in fabric," or "honest cloth," bill, designed to prevent "deceit and profiteering that result from the unrevealed presence of substitutes for virgin wool in woven fabrics purporting to contain wool, and in garments or articles of apparel made therefrom," by providing that tags be used to show the contents of the fabric—virgin wool,

shoddy, cotton, and silk, and the relative proportion or percentage of each, together with the registration number of the person, firm or corporation making the fabric. The Curtis-Gard child labor bill, providing for the regulation of employment of minors in the District of Columbia, for their compulsory education and for a school census, was not reported out of either committee, altho, like the two preceding measures, it was backed by the National Consumers' League and other organizations working for social welfare and having the highest scientific standing. The Sheppard-Towner bill, providing for federal aid in the protection of maternity and infancy, to the end that over 17,000 mothers (23,000 in 1919) and nearly a quarter of a million babies under one year of age who die yearly from causes in the main preventable may be saved to the nation—a bill formulated upon the principle that the Federal Government share with the States the responsibility for the care of mothers and babies—

also failed of passage. The Smith-Towner education bill, prepared by the National Education Association and backed by practically all of the educational forces of the country, providing for a Federal Department of Education, with a Secretary in the Cabinet, was one of the measures not reported out of committee. Other measures not passed were the resolution granting to the Executive power to accept a mandate over Armenia, the Lane-Mondell bill, providing for land distribution among soldiers, and the Plumb railroad bill. More to the credit of Congress is its failure to pass the soldiers' bonus bill (passed by the House but not considered by the Senate), and the "sedition" bills, presented by those who would by this means have treated symptoms rather than causes of our malady.

The Sixty-sixth Congress will be known in history as a reveler in investigations. Over eighty were ordered by the House and Senate—one in every four working days.

The resolutions for investigations were most inclusive as to subject matter, ranging from those to investigate "Lansing resignation and affairs of other cabinet officers," the "suspension of Miss Alice Wood, school teacher,"

Nelson Harding

The pot calls the kettle black

the "acceptance of gifts by President," "whether Henry Ford benefited from improvement of River Rouge, Mich.," the "discrimination against individual hackmen in District of Columbia," "prices of men's collars," the "eligibility of Victor Berger," "use of power by Postmaster General," "living conditions of trainmen who lie over between trips," the "status of C. K. Martens, of Russia," and "garden, city, and suburb movement in Europe" to those investigating "influenza," "United States Grain Corporation officials involved in alleged speculations," the "strike of railroad employees," the "Shipping Board," "alleged chemical treatment of certain foods," "wheat problems in Southwest," the "charges against Louis F. Post, Assistant Secretary of Labor," the "high prices of meat and food, and profiteering," the "coal strike," the "shortage and prices of sugar," the "strike of telephone and telegraph operators," the "high cost of living," the "action by the Attorney General on Louisiana sugar situation," "print paper as to prices and discrimination," "Mexican situation," "Bolsheviki propaganda," and "campaign expenses."

Among the more important investigations made are those concerning war expenditures, the Shipping Board, the sugar situation, and the meat packers.

Only a few reports of the investigations actually undertaken have thus far been made, the work not being completed. A vast amount of testimony has been taken which lies entombed in printed reports that will never be read. Nor can one hope for more in the way of results—at least before the first Tuesday in November.

The Sixty-sixth Congress has already taken its place in history. The Congressional post-mortem boast of a Republican leader may load official documents with assurances to the world that the "record of diligent and intelligent consideration of the public business; careful scrutiny of and economy in appropriations; and wise, construc-

## The Public Confidence

An important part of the management of the Bell System is to keep the public informed concerning all matters relating to the telephone.

We consider this an essential part of our stewardship in the operation of this public utility. It is due not only the 130,000 shareholders, but it is due the whole citizenship of the country.

We have told you of new inventions to improve service, of the growth of service, of problems involved in securing materials, employing and training workers, of financing new developments, and of rates necessary to maintain service.

You have been taken into our

confidence as to what we are doing, how we do it, why we do it. You have been told of our efforts to meet unusual conditions; of how we have bent every energy to provide service in the face of storms, floods, fires.

It is an enormous task today to provide adequate service in the face of shortage of workers, raw materials, manufacturing production and transportation.

Nevertheless the service of the Bell System has been improved and extended this year. Over 350,000 new stations have been put into operation. And the loyal workers of the Bell System are establishing new records for efficiency and will establish new records for service.

# For a Comfort Shave

Soften the beard *before* lathering

This is the new way which does away with futile and irksome "rubbing in" and hot towels. Try it tomorrow

For generations men have sought to soften their beards with hot towels and by rubbing the lather in.

Now a new method has been perfected. Shavaid has shown men the nation over the way to more comfortable shaving.

Just squeeze a small quantity out of the sanitary collapsible tube and spread it on your dry beard with the tips of your fingers. Then apply your favorite lather with your brush as usual.

Note the cooling,

soothing sensation. Note how the lather stays moist and creamy on your face. And as the razor glides over your skin, you will be surprised to see how smoothly and easily your beard comes off. No "pull." No drawn, smarting sensation, even after a closer shave than usual. For Shavaid keeps your skin perfectly normal.

Nor will you need a lotion after shaving. Shavaid is in itself a soothing, healing emollient. And its daily use will keep your skin clear and firm in tone.

*Shavaid*

tive, progressive legislation" constitutes "the finest record ever made in the same period by an American Congress." No such flights of oratory can, however, change the place which this Congress has made for itself. Faced by post-war problems of reconstruction, national and international, problems more tremendous than any before in the nation's history, Congress has failed, with any degree of adequacy, to measure up to the demands made upon it. It has been one of the most partizan of all Congresses. It has condemned to its death "the President's" Treaty of Versailles. It has left the country nearly two years after the cessation of hostilities still a nation at war. It has ignored responsibility for human suffering at our doors. It adjourns, its members to attend to their own and their friends' political fortunes, the problems of the people and of other peoples, so far as these should concern us, unsolved.

That a record such as this could be written by any Congress is possible only because of our "fatuous faith" in our public men and our lack of intelligent interest in affairs of government.

The outstanding conviction in my mind from months spent in Washington is that we, the public, must do more than give proxies. We must know what our representatives do after we have voted them this power.

On November 2 we shall be put to the test. Are we to make possible a duplication of the record of the Sixty-sixth Congress by the Sixty-seventh?

## How About Your Lawn?

—do you have trouble keeping the grass cut and sod rolled?

The Ideal Power Lawn Mower has simplified the grass cutting problem for hundreds of large estates, public parks, colleges, golf clubs, etc.

Wherever the Ideal is used, labor troubles vanish and smooth, velvety lawns are maintained at a minimum expense.

The Ideal will cut from four to five acres of grass per day; doing the work of five or six hard working men with hand mowers. Moreover, the Ideal is a power mower and roller in one—the sod is continually

kept smooth and firm because it is rolled every time the grass is cut.

There is still time to get your Ideal and making a big saving on the care of your lawn this Fall, and at the same time have your machine ready for the early Spring rolling and mowing.

Furnished with riding trailer at nominal extra cost; also with special set of blades for use on putting greens.

You can secure the Ideal through your dealer or direct from factory. For Catalogue and complete details, address

## Meet the American Idol

(Continued from page 171)

him. One day when he was pitching for the Red Sox against the Athletics a formidable batter came up to the plate. "Don't groove the ball for him. He'll knock it out of the park," advised a teammate.

"Who's he?" asked Ruth, unimpressed.

"He's Home Run Baker," whispered his comrade excitedly.

"Who's he?" repeated the young pitcher impassively. He grooved the ball and struck Baker out.

He played two seasons with the Red Sox and helped them to win a world's championship series. He was getting a big salary and the world's series money was a fortune in addition. Ruth had money to spend and his first use of it was characteristic. He went to his adviser, Brother Paul, with a plan for setting his father up in business. Brother Paul pretended to listen to the project coldly (the boy's mother had long been dead).

"Maybe your father wouldn't do well in business," said Brother Paul. "He never was successful, you know. He never gave you a good home. I can't see that you owe him anything."

Ruth looked disappointed. He was used to acting on Brother Paul's advice. But this was one time when he decided for himself. His face cleared up after a few seconds and he said

quietly: "He may do well. He never had a fair chance. Anyhow, he's my father."

Then Brother Paul smiled: "That's the spirit, George," he said. "Go on with your plan. I hope it will work splendidly."

The plan did work well. Old Man Ruth was fairly successful during the short remaining term of his life and his son was proud of him.

Ruth did good pitching for the Red Sox. He didn't know that the Athletics were invincible so he went ahead and beat them. But his ability to knock home runs and bring other runners across the plate with him made him too valuable to use as a pitcher who of necessity would have to rest two-thirds of the time. So the Red Sox put him at first base and he came to bat every day they played. And he did things in home run getting that had never been done before.

During April of last year he made one home run, during May two, during June four, July nine, August seven, September six. Only nine of these homers were made in Boston; the others while he was on the road. Generally speaking, he played no favorites; he got at least three home runs at the expense of every opposing club. From the Detroit pitchers he got seven home runs. But there was an exception—Washington. He got no home run from Washington till the very end of the season. On July 5, July 18, and August 24, respectively, Ruth made two home runs and the same thing happened on June 5. He kept whacking out the longest hits ever seen; over fences and over grandstands that had never been so traversed before. He had opposing pitchers in a state of nervous prostration. When they saw Ruth at the bat they felt like the coon did when he saw Davy Crockett point his rifle.

The most impressive thing happened in Cleveland on July 18 of last year. Lee Fohl, the manager, sent in Coumbe to pitch against Ruth when the bases were full. Ruth hit a terrific liner that scored four runs and won the game for the Red Sox. Fohl immediately resigned.

Much to his disgust more and more pitchers began to "walk" Ruth; they wouldn't give him a crack at the ball. Still when the season closed his position as Home Run King was safely established for the time being and he thought that under the circumstances he ought to be getting \$20,000 per year. There was a bitter controversy, echoes of which are still resounding thru the baseball papers, and the Bostonians sold Ruth to the Yankees for \$125,000. They also satisfied Ruth's salary requirements.

Mr. Harry Frazee, president of the Red Sox, came out with a statement justifying his action in parting with Ruth. He admits that Ruth broke the home run record last season, but asks what guarantee there is that he would continue as well as he had begun. He might even fall ill and then where would the club be? Let the Boston fans

## Credit is Progressive

Local success—local reputation—creates local credit. As a business expands, extending its acquaintance and broadening its market, it gradually develops a national character and is entitled to a national credit.

The customers of the National Bank of Commerce in New York are concerns which have built up national and international relations, requiring credit resources proportionate to their operations.

Perkins & Co., Lawrence, Kansas

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$623.60 absolutely beyond question of doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

## SCHOOLS AND COLLEGES

### Training for Authorship

How to write, what to write, and where to sell.

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Dr. Esenwein

For many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *a Real teaching.*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from, photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes; descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 25 cents, annual subscription \$2.00. Besides our teaching service, we offer a manuscript criticism service.

150-Page illustrated catalogue free. Please Address

## Do Twice the Work with Half the Effort

Edward Earle Purinton, World Famous Business Efficiency Expert, Now Tells You How.

HOW many things have you failed to do that would have advanced you in business—simply because you could not find time?

At this very moment there are things on your desk which should be done immediately. You're going to do them all—when you can find time—but you never will until you learn the secret of getting things done with little effort.

This wonderful secret has been discovered by Edward Earle Purinton, one of America's foremost Business Efficiency Experts. Purinton's secret enables you to take things easier—yet get more work done. What formerly took days of high-pressure work, you can now do with casual ease in a few hours' time. You will have more

time for rest and recreation. Difficult mental work becomes as easy as addressing an envelope.

This wonderful secret, which thousands of big business men are now using with amazing results, is disclosed in the Purinton seven manual course in Personal Efficiency. In seven hours of vitally interesting reading you will be able to apply to your daily life the

whole of Mr. Purinton's remarkable idea which literally makes supermen out of everyday men.

### Send No Money

Simply mail the coupon. We will send you, charges prepaid, the complete Purinton Practical Course in Personal Efficiency. Keep it five days. Then if not satisfied, send it back and you owe nothing. If you are pleased it costs you only \$7.00 in full payment. Mail the coupon now, while you have the opportunity.

### Independent Corporation

who are blaming him for sending away a star pause and consider that a well balanced, smoothly working club sometimes does better without stars. And anyhow Ruth made a contract and then refused to live up to it.

Apparently, therefore, Mr. Frazee and his associates are satisfied. As to the Yankees they are more than satisfied. They are on the broad grin. Ruth is making his phenomenal performance of last year look like thirty cents. On June 30 of last year Ruth had only seven homers for the season; June 30, 1920, he had twenty-three, on July 21 he had thirty-two. It looks as if he is going to double last year's tally—at any rate bat out fifty homers this season.

Polo Ground fans have been greatly stimulated, excited and increased in numbers and save and excepting Ruth they can't see anyone as a hero. He has his team well up in front and a likely contender for the championship. Sometimes he disappoints his worshippers, but not often. Once recently he struck out five times in one day and was so mad he smashed his bat. Since then he has made more homers.

Take it on the whole, things are going mighty well with the boy from St. Mary's. They're using him and his career there now as an inspiration to other boys. Quite often he runs down to see them. He is not a talker, but his memory is good. He is still a boy and the adulation he receives is certainly welcome. But it has not unduly swelled his head. He has taken up golf and married a beautiful girl, so his time is fully and pleasantly occupied. As a special favor to him Yankee club officials avoid giving out his home address. He wants and is entitled to his private life.

Baseball stars as a rule do not remain long in the firmament. Ten years is a long time for one of them to stay in the front rank. Ruth is so strong and sound that he may last much longer than the average. Then again he may develop into a Nestor of the game like Comiskey, lasting practically forever, while succeeding generations of youngsters sit at his feet and learn.

Failing that, Ruth will probably be all right anyhow. His outlook on life is kindly but shrewd. He has various sources of income in addition to his salary and he is not spending all he makes. When baseball finishes with him Ruth will have money. Being a likable young man he will also have friends who are willing to do real services for him. He will probably have his choice of a dozen good business offers.

And he may turn them all down and decide to go it alone in some field of big business. If he does his admirers will expect him to make good. They say he has business sense.

Woodhaven, New York

Doctor (complacently)—You cough more easily this morning.

Patient (querulously)—I ought to, I practiced nearly all night.—Exchange.

## If We Had Anarchy Tomorrow

(Continued from page 169)

ment is the care of those unable to support themselves; such as paupers, the aged, the sick poor, the insane, the orphan. Under anarchy private charity would be charged with all the duties which now fall on the public purse. This would be a great step towards capitalism and away from collectivism.

Perhaps the greatest social revolution would be in education. The rich would hire private tutors or establish private schools; as they frequently do today. But the poor could not afford the tutor or the private school or the fee-supported college; their children would have to take the crumbs of charity or remain illiterate. A broadening gulf would thus open between the educated upper class and the uneducated masses which would eventually make aristocracy inevitable and democracy impossible.

Government is to the rich only a convenience; it is a necessity to the poor. A really democratic anarchist régime is only thinkable if inequalities of wealth have already been abolished before government is dispensed with, and if society is already so completely organized on a coöperative basis that it is impossible for such inequalities to arise thereafter. Lacking these two conditions anarchy means an open door to capitalism.

"Everyone for himself and the devil take the hindmost," said the elephant as he danced among the chickens. All very well for our financial elephants. But as for the proletarian chickens—!

## A Hundred Million Horsepower Waiting to Be Used

(Continued from page 172)

industrial America of the advisability of making the transition from direct steam power to electric power. Many of our railroads would electrify their systems at once could they secure the necessary capital.

Applications for licenses to operate water power sites capable of producing 2,000,000 horsepower have already been filed with the Federal Power Commission since the passage of the new water power legislation. Easing of the financial situation should bring a development of our water power resources comparable only to the railroad expansion in the period following the Civil War.

The twelve years' delay in enacting comprehensive water power legislation to permit this development cannot all be counted as lost. The discussion and controversy that have marked its course thru Congress have served to clear away non-essentials and concentrate attention on the matters of real public importance. It is to be doubted if the results finally achieved could have been secured in any other way. The legislation that has just been made law crystallizes the best thought and practice of recent years. It lays

## In the Heart of the Open Country

## THE STONE SCHOOL

Cornwall-on-the-Hudson, New York

FIFTY-FOURTH YEAR

**H**ERE is a school in the heart of the open country for boys from nine to nineteen years of age. Fifty miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. The Stone School offers the health and vigor of a sane and simple out-door life. With good health and sound body building as its foundation, this School prepares for college or business life. Its recent graduates are found in twelve leading colleges. The Stone School boy means one equipped and trained for individual efficiency and each boy is studied physically and mentally with that in view. There is a teacher for every six boys. Athletics are important at the school, which has two fields with excellent facilities for every sport under supervision. Swimming Pool. Every boy taught to swim. Woods life and hiking are features. Come and see for yourself.

down the broad outlines of a national policy for the development of a permanent natural resource and in its dealings with public utility corporations establishes principles that can be counted upon to exert an influence far beyond the scope of the act itself.

All water power sites on the public lands, the national forests and other Federal reservations, on the navigable streams and at Government dams come under the provisions of the act. The authority to control water power development where Government lands are involved rests upon the fact of present and continuing ownership. Where navigable rivers are involved, the authority rests upon the powers conferred by the Constitution upon Congress for the regulation of commerce. In one form or another the jurisdiction of the Federal Government extends over 85 per cent of the water power resources of the United States. This jurisdiction is now, for the first time, consolidated in one Federal agency, the Federal Power Commission, made up of the Secretaries of War, Interior and Agriculture.

The Commission has authority to issue licenses to provide companies for the use of water power sites under its control for periods of fifty years. If the conditions of the licenses are fulfilled it can be terminated before the end of the fifty-year period only by the purchase in condemnation proceedings of the properties erected by the licensee. Thus there is established a certainty and reasonable duration of tenure that has been lacking under previous legislation and has therefore retarded development.

The licensee at the end of the fifty-year period has a right to a new license upon reasonable terms, or to receive payment for his properties. The Government may take them over and operate them, or it may permit their purchase by a new licensee. In either case the purchase price will represent the "net investment," which is the original cost of the property, minus such depreciation, sinking fund and other reserves that may have accumulated from earnings in excess of a fair return on the property.

The licensee receives a full return of his actual investment. He is permitted neither to gamble for more nor to risk receiving less. No allowance is made for increases in land values, water rights or other similar items, or for depreciation that cannot or has not been met out of revenues.

The policy of returning to the licensee his net investment is fundamentally in the public interest. It is directed toward securing a public service at the least possible public cost. If a business is made hazardous, the investor either discounts the hazards in the price he charges for the use of his money or stays out. In either case the public suffers, for in the first case there is development, but at an unnecessary cost, and, in the second, no development.

The regulation of rates, service and securities is left to the states. Even when the power developed enters into

interstate commerce the Power Commission will not take a hand, except in cases where the states directly concerned have no agencies to perform these functions or cannot come to an agreement.

In the valuation of properties for the purpose of rate making, no value may be claimed by licensees in excess of their net investment. Here again recognition is given to every dollar honestly invested, but no more. The basing of property values on cost, which is one of the really striking features of the new legislation, means to the investor security for the capital used, and to the public charges based only upon the amount actually required to put the properties into operation.

Cheap and abundant power will be one of the most important elements in the future industrial and social progress of the United States. To increase production and reduce its cost without reducing present-day wage scales we must have an increased use of mechanical as compared with manual power and at a lessened cost for such power.

Power production and distribution in this country today are at the stage represented by the independent short line railway in transportation. The consolidation of short lines into great interstate systems has improved the quality and reduced the cost of our transportation service. In the field of power production and distribution we need the application of these same principles. Putting them into play will result in greatly increased consumption of electric power in the home and in industry; in the gradual substitution of large and efficient power stations, operating as links in extensive chains, for our present small and isolated stations; in the rapid electrification of our railroads and in the creation of new industrial centers in the West, near our greatest sources of water power.

Operating under the broad charter of powers conferred by the new legislation, the Federal Power Commission will be able to give invaluable assistance in the application of these principles in the field of power supply. We have wise power legislation, but it is not self-executing. The degree in which its administration is marked in the years ahead by fairness, intelligence and constructive imagination will determine the extent to which the nation will reap the benefits it promises.

Washington, D. C.

Janson is very refined in his tastes. He never reads anything "popular"—always it's Browning or Emerson or something equally literary.

One day he dropped in to see Smythe and found him deeply interested in a novel.

"What are you reading?" he asked.

"A story by Chambers," replied Smythe.

Janson sniffed.

"I cannot see," he said, "how an immortal being can waste his time with such stuff."

"Are you quite sure that I am an immortal being?" asked Smythe.

"Why, of course you are!"

"In that case," retorted Smythe cheerily, "I don't see any need to be economical of my time."—*New York Globe.*

# The Independent

FOUNDED 1848

## Buddy to His Dad

DEAR DAD—Thanks, Dad, for rescuing me from being a dyed-in-the-wool bigot on the subject of politics. Four issues of The Independent, to which you subscribed for me, cured me of taking pride in being a staunch Democrat. I still am a Democrat, but thanks to The Independent's policy of giving authoritative articles on what the different parties stand for, I am getting some real thoughts back of my opinions.

You have done some mighty clever maneuvering, Dad, to keep your son and heir from making a fool of himself and from growing to be one and I can see that sending me The Independent was just another of your well thought out schemes to help me to find myself. In fact it was a master stroke.

I like the magazine immensely, Dad, and I find it a well balanced mental meal. It has already given me poise in discussions of the questions of the day with other boys at college. I feel broadened, and Europe and our international problems are not as remote as they were before I started to read it. I wish I could get as much out of an hour's grind at mathematics as I do out of my delightful hour with The Independent.

It is going to do for me all that you intended it should, because like you, dear old Dad, it gets its message over without preaching.

Again thanks, and always affectionately,  
BUDDY

## Remarkable Remarks

MARY PICKFORD FAIRBANKS—Married life is an art.

ROY K. MOULTON—They will soon be selling carrots by the karat.

MRS. CALVIN COOLIDGE—I haven't given Washington one little thought.

MEREDITH NICHOLAS—America's need for leadership was never greater than now.

MRS. WARREN G. HARDING—A man to succeed must be well fed and well groomed.

WILLIAM HARD—How can people vote classlessly when they do nothing else classlessly?

JOB HEDGES—If any candidate asks "May I not?" we will say with emphasis "You may not."

PROF. JOHN ERSKINE—Kill off every known and suspected poet, and there will be as many as ever after a generation or two.

REV. GEORGE CHALMERS RICHMOND—The Democratic party has sold out to those forces in American life which face moral ruin and spiritual isolation.

JOHN BURROUGHS—I did something the other day that I had never done before or seen done. I carried a live skunk by the tail, and there was "nothing doing" as the boys say.

LINA CAVALIERI—Boiled fresh beans, mashed with a potato masher to the consistency of a thick soup, and applied to the skin for several nights, have cured ordinary freckles with ease.

## Pebbles

Boss—Why were you late this morning?  
Office Boy—My clock pointed with pride instead of viewing with alarm.—*New York Sun*.

"I always sleep with my gloves on. That is what makes my hands so soft."

"I'm, I suppose you sleep with your hat on also?"—*Boys' Life*.

As we go to press news reaches us to the effect that a Sinn Fein paper is giving away a paper pattern of the latest bomb with each copy.—*Passing Show*.

He—Here comes a friend of mine. He's a human dynamo.

She—Really?

He—Yes, everything he has on is charged.—*Electrical Experimenter*.

The little girl had the little hen fast and was trying to bring her head close to the ground. "What might you be trying to do?" exclaimed her father, coming upon the small girl in the garden.

"I'm trying to make this hen say her prayers."

"Well," said the parent sadly, "I hope she'll say: 'Now I lay me.'"—*London Opinion*.

Young John was late in attending Sunday school that particular Sunday and the minister inquired the cause.

"I was going fishing, but my father wouldn't let me," announced the lad.

"That's the right kind of a father to have. Did he tell you the reason why you should not go fishing on the Sabbath?"

"Yes, sir," replied John; "there wasn't bait enough for two."—*New York Globe*.

A lady who kept a little curly poodle lost her pet, and called on the police to find it. The next day one of the force came around with the dog, very wet and dirty. The lady was overjoyed, and asked a number of silly questions—among others:

"Where did you find my sweet, dear little darling?"

"Why, ma'am," said the officer, "a fellow had him tied to a pole and was washing windows with him!"—*Electrical Experimenter*.

A suburban housewife relates overhearing this conversation between her Cape girl and the one next door:

"How are you, Katje?"

"I'm well; I like my job. We got cremated cellar, cemetery plumbing, elastic lights and a hoosit."

"What's a 'hoosit,' Katje?"

"Oh, a bell rings. You put a thing to your ear and say 'Hello,' and then some says 'Hello,' and you say 'Hoosit.'"—*Johannesburg (South Africa) Times*.

The maid-of-all-work in the service of a Pottsville family, the members whereof are not on the most amicable terms, recently tendered her resignation, much to the distress of the lady of the house, who was loath to part with so excellent a servant.

"So you are going to leave us?" asked the mistress, sadly. "What's the matter, Mary? Haven't we always treated you like one of the family?"

"Yis, mum," said Mary, "an' I've sthooed it as long as I'm goin' to!"—*Exchange*.

*Oratory* such as the ancients never dreamed of—word-power of a new sort! In the politics of today the Mimeograph is performing many remarkable functions. From out of its flying wheels are coming the hot messages of the hour—to conventions, to delegates, helpers, voters. Because it is the speediest and most expedient means of getting important communications into the hands of many, it commands a multitude such as no Demosthenes ever swayed. Within an hour it delivers five thousand well printed copies of any typewritten sheet. Diagrams, drawings, etc. are easily duplicated in the same operation. Throughout the world, business and educational institutions are finding it a quick means of cutting costs and increasing efficiency. Why not get our booklet "E-8" today? A. B. Dick Company, Chicago—and New York.

## Our Senator Harding

How the Republican Nominee for the Presidency  
Looks to His Neighbors in Marion

By Charles Clement Fisher

IN writing Knickerbocker's History of New York, Irving found it necessary to begin with the creation of this globe; and after an exhaustive survey of all the learned authorities, ancient and modern, sacred and profane, he reached the conservative conclusion that it *had been created* and consists of land and water. But for a brief sketch of the early years of Warren G. Harding it seems safe to accept the record of the family Bible that his birth took place on November 2, 1865. This is a date in his calendar marked with a white stone; for on its anniversary, six years ago, he was elected to the United States Senate, and this year on the same date will be decided his presidential fate.

Senator Harding is of Scottish descent on the father's side; while his mother furnished some of that Dutch blood of which the Roosevelts are so justly proud. For our purpose it is enough to say that he is a thoro American, a typical American—no alien blood for several generations, no foreign education, not a single abnormal element in his composition.

Yet if there is apparently nothing unusual in their inheritance the family as a whole have somehow developed personalities quite out of the ordinary. Each one of the present generation is distinguished not only by strength of

character and winning personal charm, but also by a rare idealism. To those who know the family well Senator Harding's eminent position seems a fortunate recognition of ability rather than an anomaly.

He was born on the farm of his maternal grandfather in Morrow County, Ohio, and the environment of his childhood was precisely like that of thousands of other boys of the same age growing up in the country. He enjoyed not a single external advantage; for his father, marrying shortly after his discharge from the Union army, found the fees of a country doctor to afford a meager support for a rapidly increasing family. Plain living was their necessity, high thinking their privilege. Warren evidently made the best of both. Just like other boys he worked when he had to work, went to school when sent (except on circus days) and learned all kinds of sports. Of these his favorite was swimming, which he justifies on the ground that he is a Baptist.

But if his surroundings were ordinary, this boy quickly began to distinguish himself from his fellows. He was both precocious and enterprising. At eighteen he was graduated from a small college, at Iberia, Ohio. And before seriously beginning his beloved profession of journalism he had been an amateur editor, a house-painter, a

Senator Harding loved his mother. As long as she lived, he took a bouquet of flowers and went to call on her every Sunday morning. Linked with her in his boyhood memories are the church which he attended at Corsica (left) and the farm of his maternal grandfather in Morrow County, where he was born

© Keystone View

broom-maker, a fire insurance agent, a typesetter, a musician and a law student. He was as expert with his hands as he was eager in his mind. His constant desire was not merely to see or to hear some new thing, but also to do it. And while still in school he experienced the rapture and anguish of an ardent love.

When Warren was under nineteen he had some differences with his partner in insurance and went to Chicago (his first visit) to see his uncle, Mr. A. J. Harding, western manager of The Springfield Fire and Marine Insurance Company, with the hope of retaining the local agency of that company. He was taken to his uncle's home and treated so kindly that next day he tried to show appreciation by inviting his young cousin to lunch at a restaurant. Those were the days when the Palmer House was furnishing a room and four meals of delicious food for three dollars. The appetite of the boys was 100 per cent efficient and there was nothing mean about the host. He was appalled at the discovery that the waiter's check exhausted his only five-dollar bill, but never lost his nerve. Being too proud, of course, to borrow from his guest, after their parting he walked to the Dearborn station and practiced watchful waiting until he finally spied an Erie conductor who lived in Marion. This official, obeying his heart instead of his conscience, returned the penniless adventurer to his home without money and without price. The Erie was so used to being robbed that this little sting never touched it.

In 1885 his father bought the *Marion Daily Star* by the simple process of trading in a vacant lot and assuming the debts, which Warren was left to pay the best

way he could. And for a dreary period Friday night often found the Saturday payroll dependent upon an appeal to fortune. There be those who accuse him of having a poker-eye, but perhaps this has been no defect in his equipment for life.

How insignificant this property was can best be shown by the testimony of Warwick, his former lieutenant, now an editor of the *Toledo Blade*, who relates how, after the parade celebrating Cleveland's election three friends went into a restaurant to revive their exhausted bodies and minds. Harding proposed, "Jack, let's buy the *Marion Daily Star*." "If we do," I asked, "who's going to pay for these oysters?"

When Harding at the age of sophomores in college assumed this responsibility, Marion was a village of about four thousand, and the newspaper atmosphere was filled to the point of saturation by two party organs which played hideous discords in their personal attacks on each other and developed notes of harmony only after they discovered the necessity of joining in a duet to drown the piping of the infant rival. In six years of

struggle the editor had advanced enough to marry and to build the comfortable home to which was afterward added the spacious porch destined to become famous by its reception of distinguished visitors. Mrs. Harding applied her inherited talent for business with such zeal and industry that she became a material factor in the financial growth of their newspaper.

Harding's success as a publisher and editor has been due to no mere chance, but rather to qualities which characterize his career. During the early years of this enterprise "there were many hard days and long nights in the old *Star* office. But thru them all Harding was in and out among the workers, one of them, and with a sense of humor that shortened the hours. Most of the way in the early days the traveling was up-hill, but thru all the rough stuff of disappointment W. G. kept his head up and face toward success." And when success was won

it meant not only growth in the paper but also development in the executive instincts of the manager. His associates were always asked to say they worked "with him" rather than "for him"; and gradually they assumed such share in the management as to "carry on" with complete suc- [Continued on page 224]

Not a single advantage not possessed by these youngsters did Senator Harding enjoy as a boy. He worked when he had to work, went to school when he was sent, except on circus days, and loved to go swimming

# If You Were an Immigrant

An Italian Message to the American People

By Captain Alessandro Sapelli

*Captain Sapelli is the former director of the Italian Bureau on Public Information in the United States and he knows intimately the various phases of Italo-American affairs. In "Americans by Choice," a book to be published shortly by the War Records Publishing Company, he develops further his contribution to the pressing problem of Americanization*

**R**ECENTLY Frederick A. Wallis, Commissioner of Immigration, after spending a night among the immigrants at Ellis Island and subjecting himself for several hours to all the annoyances, delays and downright physical inconveniences which the immigrant must put up with when he comes to these shores, made a brief statement, which, in its simplicity, embodies a significant lesson and points out a great truth which most of us know but few of us practise.

*"It is highly important for us of the immigration service and those working with us . . .,"* Commissioner Wallis said, *"to make as good an impression as possible on the incoming workers. That is the very starting point of curing the country of anti-Americanism and Bolshevism."*

Speaking in general terms, we must admit that any American who goes to Europe is received everywhere with marked attention. It seems as if the people of Europe look upon those who come from across the ocean as more venturesome, bolder brothers who return to the old family after a long absence, strengthened by a vaster experience, with a broader vision of life, and called back by an indistinct, indefinable feeling of nostalgia. And if any American, no matter where or when born, visits Europe he finds there places and people to whom he is peculiarly attracted for no apparent reason; he feels as if there were awakened in him reminiscences of things never seen, perhaps, but always remembered; he experiences emotions which, though unjustifiable are nevertheless acute. It is true that many of the ideas, usages and customs may seem antiquated to Americans and at variance with theirs. They may perhaps feel that those people beyond the sea are bound to old traditions and almost suffocated by them, but nevertheless they try to justify and understand them.

Why is it then that so many Americans greet those who come to their shores much as a porcupine greets its enemies? They stand on the defensive, with bristles erect, as if a thousand dangers threatened them, and then, after a while, they adopt an offended attitude because the newcomer does not approach that bristling barrier in an attempt to overcome that hostility, which he knows he has not provoked and which cannot be explained except as a manifestation of blind egoism.

In fact, only blind egoism can make us forget that we too, prompted by diverse motives, came to these shores in search of fortune or of peace; only blind egoism can hinder us from seeing that the immigrant

These Italian reservists, who had lived and worked in America, all wanted to come back to this country as soon as their service with the Italian army was over

streams which hundreds of ships are pouring onto our shores consist of men who some day will become flesh of our flesh, to the benefit of the nation; that they are virgin ground ready to fecundate the seed scattered upon it—ground on which many of us unwittingly sow hatred instead of love.

Economists and employers of labor admit that the great tide of immigration which came to this country from about 1890 to the outbreak of the war, by furnishing an adequate labor supply, made possible the development of America's mineral wealth and the expansion of her industries, yet even among such keen observers as Dr. Jeremiah W. Jenks and Mr. W. Jett Lauck the fear persists that "the extensive employment of southern and eastern Europeans has seriously af-

fects the native American and the older immigrant employees from Great Britain and northern Europe by causing displacements and by retarding advancement in rates of pay and improvements in conditions of employment." It is this fear, that the immigrant from southern Europe may lower the standard of living, that accounts for much of the recent hostility displayed toward him, but if it is true, as we must all admit, that this immigrant from southern Europe has stimulated production and the development of the natural resources of the country, we are confronted by this dilemma: Is it more beneficial for the nation to attain remarkable industrial growth rapidly, perhaps even at the cost of holding back systematic wage increases, or is it preferable to retard this industrial growth in order to insure higher wages to "native Americans and older immigrant employees from Great Britain and northern Europe"?

The reply is self-evident. First of all, because the industrial development of the country benefits the entire nation. Furthermore this industrial expansion offers a broader field of opportunity to the "immigrant from Great Britain and northern Europe," who has greater technical ability and broader industrial experience, to assume directive and executive duties, which he would not have were it not for the new immigrant who assumes the more menial labors. In addition, despite the retarding influence on wage increases alleged to be due to this labor from southern Europe, wages have increased. If, during some periods, the increase has not been sufficiently rapid, the fault lies in equal measure with labor speculators, who have taken advantage of the ignorance and need of the [Continued on page 223

# Let's Give 'Em All a Fair Start

A Message from the United States Government to the American People

By Julia C. Lathrop

Chief of the Children's Bureau of the Department of Labor

International

In comparison with European starvation American children such as these appear well off. But we have only begun the child welfare work that is necessary if the United States is to progress normally

A TRAVELER who has spent a few months in Central Europe must feel startled upon returning to the United States by the difference between the lavish standards of ordinary comfort here and the depths of wretched poverty in which millions of families are existing there.

One thinks of our per capita wealth—greater than that of any other country—of the unexhausted plains of the middle west against worn lands whose costly tillage requires great skill and labor and which must support populations five to ten times as dense as the population of the United States; of our prospering industries and of all their empty idle factories, of the war-cheapened money which cannot be stretched to buy the needed products of our workshops.

The traveler dines well at the best hotels in half a dozen countries for a price of vast extravagance if kronen retained their old value, but trivial when it requires from fifty to two hundred to make a dollar. And this cheapened money which is so oppressively costly to the inhabitants, and which makes it possible for the American to live almost for nothing, exists at a time when great expenditures are needed for rehabilitating each country's social and economic life and for no more imperative item of expenditure than the protection of children. In short, the traveler comes home well understanding what Sir Bernard Mallet had in mind when he said to the Royal Statistical Society that "Financial and economic conditions after the war will have quite as much to say to the welfare of the community as any such measures as might come within the province of a Ministry of Health." Sir Bernard might well have added the Ministries of Social Welfare, of Education, of every portfolio which stands for activities directly conserving human life.

These economic contrasts between ourselves and Central Europe breed no complacency—rather they compel an uncomfortable self-examination when considered in their bearing on child welfare in this country.

Is the United States doing what its unapproached re-

sources permit for its children? Do we realize that child welfare no longer can be dismissed as a mere philanthropy, but that it must be recognized as a serious concern of statecraft? Every country in Europe knows this only too well.

How do we stand in the United States? There are two great divisions of the efforts to promote child welfare:

1. The activities for children who are dependent, delinquent and defective to use the conventional words which describe children for whom in some form parental protection is lacking, or whom Nature herself has defrauded.

2. The activities for normal children with normal homes and parents.

The United States has dependent children filling many institutions, or boarded out in a comparatively small number of cases—wayward children who appeared before our courts in 1918 to the estimated number of 175,000; feeble-minded children crowded into all the institutions for the feeble-minded, altho' not one state in the Republic takes care of all the feeble-minded who need its protection. Perhaps 500,000 is a conservative estimate of the number of children receiving some form of support or supervision from the public. Whether this estimate is sound or not, it appears certain that the total does not decrease and that the cost of care does not lessen, but that there is a constant slipping down from the level of family independence which thrusts new children into dependency—or pushes them out into delinquency.

Indisputably many dependent children and many delinquent children ultimately rise to the normal social level. But it is equally indisputable that most of our charities have been able to perform but a negative service to the whole body politic and perhaps that is all that should be asked.

How then shall we approach constructively the care of this great number? Social workers and modern social economists agree that most of these children come from poor families where incomes are too low for decent

living even if parents are industrious—fathers are dead and mothers are struggling with the impossible—trying to earn the living and “mother” the children at the same time—or mothers are dead and there is no “mothering.”

Space cannot be taken for statistics and proofs, but they exist and are convincing. For a great proportion of this half million army, the true remedy is direct and practical. Two words give the recipe—Abolish Poverty. A simple remedy, but slow in action. Yet not hopeless. There are signs of speeding up.

Poverty is not static, it cannot be defined in permanent terms of money. Perhaps no better gauge has been found than that drawn from the infant mortality statistics obtained in nine cities, which show that as the income drops from a decent standard of comfort, the infant mortality rate rises, until when the income is cut in two the infant mortality rate is doubled.

One companion of poverty chargeable with a share in all the consequences to children suggested above and many others more insidiously harmful are destroyed by prohibition. Obvious results are already seen in greater family stability and comfort. And if alcoholism in parents is responsible for any considerable share of the mental and physical deterioration in offspring assigned to it by reliable authorities, another generation will exhibit a genuine shrinkage in the numbers of mental defectives.

But when we turn from the discouraging aspect of injured childhood which our institutions and courts present to the consideration of that one-third of our population under sixteen—the 30,000,000 children who are the stuff out of which the nation's future must be made—we realize first that their numbers contain not only the half million or so who are especially handicapped or out of the running, but that of necessity many more must have been somewhat injured or their chances in life reduced by the causes to which the most unfortunate have succumbed. And we suddenly see that the surest way to lessen the problems of dependency and delinquency and defect must be to strengthen the whole

© Keystone View

The Hoover mission has been feeding 100,000 boys and girls a day in Vienna. President Seitz of the Austrian republic is inspecting one youngster's rations: a plate of cooked rice and a bowl of cocoa

fabric of the child population, so as to increase not only physical but mental and moral vigor, in short the power of resistance.

When we look at our 30,000,000 as a whole we are faced with signs of a social wastage which we all know is preventable, but to which we do not pay much attention because it is not new and its discussion is neither cheerful nor far away enough to be picturesque.

Thus, tho we know that infant mortality rates are a sign of the state of social well-being, we are not nationally excited to learn that ten civilized countries have a better rate than the United States. Strangely indeed we are still less aroused to learn that in fourteen civilized countries the deaths of mothers in childbirth are less than in the United States. A few

individuals are working to make the nation understand the need—a handful of public health nurses and social workers are helping in the rural areas where there should be thousands. A few devoted physicians regard these matters seriously, but the general public is indifferent.

We talked for a few months excitedly about our disgraceful illiteracy rate when the army draft revealed it afresh, and some of us insisted upon linking it with the lack of “Americanism,” which is only too true, but in quite another sense than was intended, for this illiteracy of ours is two-thirds of it among those of pure American parentage, while the most literate group the census shows are the children of the foreign born—a proof that immigrants really mean what they say when they insist that they come over to give the children a better chance. We are producing now illiteracy on the fields where American children work instead of going to school, for the great areas of rural child labor and of illiteracy are identical.

What have we done since the war ceased to cure this ugly inverted Americanism? It requires nation-wide expenditures for schools fitted for adults and for children. They have not been made.

Our schools need better buildings and equipment, more teachers, better trained and better paid. Especially do our rural schools need improvement. Unless rural schools are made adequate, we shall increase steadily our illiteracy and near-illiteracy, whatever regulations we make at Ellis Island.

But all this costs money? Will we pay?

The welfare of all children requires the same essentials—first and all-important—good wise parents, with fathers' earnings to provide a fair standard of family life, then decent food and clothing, proper housing, a true education, opportunity for clean, active recreation. All these are needed to give a fair start.

The standards here slightly indicated were set forth in detail in the series of Child Welfare Conferences of May, 1919, to which representatives came from various allied countries. They expressed with conviction, born of their war experiences, the [Continued on page 226

Some reasons for over  
a hundred years of  
du Pont success

By Edward Earle Purinton

Pierre S. du Pont, former president and now chairman of the board of directors. The management of the du Pont plant has never left the family

**T**HE chemist of today is the conqueror of tomorrow. If, before the Great War, the chemists of the Allies had been superior in number and skill to the chemists of Germany, there would have been no airplane or submarine attacks, no devastation by poison bullets or poison gas, no lingering deaths by thousands of Allied soldiers for lack of the proper care.

The beauty of the chemical arsenal is that, during peace, it may be devoted to great industrial pursuits and the winning of the trade war that America hopes to win thruout the world; but, on the approach of war, it may be suddenly transformed into a combination of munition factory, hospital and drug house, army equipment store, observation tower, communication center and supply base.

Germany spent fifty years learning how to lead the world in the discovery, manufacture and sale of dyes, drugs, various chemical compounds. In less than fifty months America took first place away from Germany, and is now producing 90 per cent of the staple dyes and derivatives needed by America. The du Ponts went further. Believing that a calamity is only a concealed opportunity, they learned a patriotic lesson from the calamity of war, and proceeded to found the first national chemical industry, self-contained and self-perpetuating, using American raw materials in the hands of American workers and the ownership of American capitalists, for the preservation of American lives, institutions and ideals, in war as in peace. Let us note a few results of, and reasons for, this patriotic business adventure, which has, by the way, cost the du Ponts over \$20,000,000. What are they doing, and why are the deeds of national importance?

First, the du Ponts are training and organizing an expert corps, probably the largest and finest in the world, of research men and technical authorities, who could, in time of danger, make this country virtually attack-proof by means of huge quantities of chemical munitions of war. Lieutenant Colonel Amos A. Fries, lately chief of the Chemical Warfare Service of the American Expeditionary Forces, deems the presence of

such a body of great industrial chemists as vital to the protection of a country as a trained military force. Already France, England, other Allied countries, have passed laws forbidding the entrance of German dyes on a competitive commercial basis; partly to keep Germany from regaining the dye monopoly, partly to encourage native manufacturers to educate and reward chemical talent for emergency use. The Great War showed that, hereafter, the second line of defense of any land will be the trained reserve of chemists; and the larger the reserve, the better for the country.

Second, the du Ponts are maintaining a peace-time factory capable of turning out, on short notice, all the high explosives needed by any army the nation could raise, including poison gases more deadly than those of Germany, and unlimited supplies of medicinal aids to the imperative surgery of war. Chemistry has a mutability like magic. When, for instance, you treat picric acid a certain way, you get for your product a commercial dyestuff; when you treat it another way, you get a high explosive ready to aim at a foe. It was natural and economical for the du Pont house, which manufactured more than 40 per cent of all the explosives used by the Allies, to take advantage of the knowledge, the plant, the organization, required for military service, in evolving a dye and paint concern, holding the chemists, machines and buildings against a future need in case of attack.

Third, the du Ponts are promoting, incidentally, the means for discovering and elaborating medicines highly esteemed by physicians and surgeons. Literally hundreds of the most common drugs and pharmaceuticals owe their existence to the research of chemists and the combination of chemicals in a dye plant. Some of the most widely used coal-tar products are atophan, held to be the sovereign remedy for gout; procaine, a substitute for cocaine, better and safer, without the bad effect of cocaine on the heart; and aspirin, the most popular aid for relief of many kinds of pain. Scientists believe that from the same source will eventually come specific remedies to cure pneumonia, tuberculosis, even cancer. Medical opinion holds that the dye industry

promises great things, even greater than it now performs, to increase the health of the nation.

Fourth, the du Ponts are helping to stabilize industry at large. When Bernstorff wired the Imperial German Government, "Shut off dye exports and you will put 400,000 textile workers in America out of business," what did he have in mind? The disruption of the clothing trade. Worse, the demoralization of a score of other essential industries—twenty-four, all told, to be exact—which depend for their very existence on chemicals derived from coal-tar. A dye famine would imperil \$3,000,000,000 worth of textile industries alone, shutting down production, tying up capital, throwing employees into a state bordering on revolution. Further, manufacturers of paper, leather, ink, paints, varnishes, furs, feathers, foods, pharmaceuticals, photographic materials, perfumes, and many other classes of goods need a large daily supply of colors and auxiliary products from the dye factory. Put an embargo on dyes and you throw 2,000,000 people out of work, to say nothing of keeping idle \$4,000,000,000 of invested capital. No wonder Germany wanted, and still wants, the dye trade of America grasped in her mailed fist. No wonder, also, that the du Ponts and other big dye makers have resolved that she shall never have this monopoly again.

Fifth, the du Ponts are stimulating college research and experiment, also the training of young men of marked chemical ability. Eighteen du Pont fellowships for post-graduate work, each carrying a value of \$750, and thirty-three du Pont scholarships, each of \$350, for senior class work, have been assigned to forty-six representative colleges, universities and technical schools of America which have specialized in chemical instruc-

war contract of the kind ever given, that for 115,000,000 tons of powder, this corporation served the country so well that not one complaint was recorded by Government officials. The company pride is so great that every big job undertaken for this or any other country has to be done right, for the sake of doing it right.

The du Ponts know how to regard and treat the public. A head man says: "It is the business of a corporation to tell the public what it is doing, and why; giving out the information regularly, freely, widely, accurately, forcefully. We maintain a Publicity Bureau whose sole function is to tell the truth about our business, apart from any advertising or press agent considerations." You cannot sell truth, but truth can sell your products. The time will come when the editor of a business house will mostly take the place of the advertising writer.

The du Ponts know how to make pure science a source of profit as well as benefit. Their laboratories are pure science laboratories—their products are financial triumphs of trade. This modern blend of the professional and commercial is ideal. No business can achieve high quality apart from the high dignity and authority of the man of science; and no man of science can render broad service apart from the broad stability and practicality of a business organization. The founder of this company, E. I. du Pont de Nemours, was a pupil of the great Lavoisier, the foremost chemist of his time; and on the basis of original research and development thus made possible has the whole enterprise been carried forward. Every college should be linked to the community thru a factory, every classroom should open to a salesroom, every man who knows should make himself a man who *does*.

The du Ponts know how to make blood relationship a mighty business force. They have made their *family* efficiency a marvel and a model for the whole country. Since the founding of the du Pont industries on American soil in 1802, the fourth largest manufacturing trade of America, and the world's largest house in the trade, have been owned and managed exclusively by members of this one family. The disintegration of American home life could be largely arrested by a national study of how to make a family a thinking, working unit, like that of the du Ponts.

Few people realize how far explosives break the ground for the growth of civilization and of na- [Continued on page 227]

tion or investigation. There are no "strings" attached to this annual investment of \$25,000 in our chemists of tomorrow; no beneficiary has an obligation thrust on him to enter the du Pont works, or to pay back the sum provided for his tuition. Partly because of this generous offer, the attendance in college and university chemistry classes of the favored institutions has recently grown to as high as 300 per cent of the enrollment prior to the war.

The du Ponts know how to work for the Government. Fulfilling the largest Federal

In 1802 the du Pont de Nemours family established this powder mill on the historic Brandywine just above Wilmington, Delaware. Today the house of du Pont is the largest one in the fourth largest manufacturing industry in America

# Simple When You Know It

But this American invention to trail U-boats was one of the most baffling secrets of the Navy Department during the war

**B**EFORE America entered the world war, a sailor with an inventive turn of mind was detailed to use the ship's hose on a part of the deck of one of our war vessels. By accident, the business end of the hose fell overboard and the end attached to the standpipe became detached. The jerk unloosened the coupling, and the sailor held the open end of the hose in his hand. He tied the detached hose to the rigging until he had shut off the pump, and then took up the hose. But as he did so, he heard a peculiar noise in the tube, and curiosity impelled him to put his ear closer. What he heard at first startled and amused him. He called a few of the other sailors nearby, and asked them to listen. Then the scientific interest of the sailor was aroused. The rush of water could be plainly heard. Suddenly a new sound was heard in the tube, and the sailor looked about to see what caused it. Far in the distance, another ship was passing, and what the sailor heard was the thrashing of her propellers.

Duty compelled the men to finish their job; but in this slight and casual experience was born the idea which resulted in the invention of the hydrophone, and its development by the Navy Department to such a state of perfection that all war vessels in the United States Navy, from the smallest sub-chaser to the largest battleship, are now equipped with the latest improvement on this device.

In construction, the hydrophone is comparatively simple. It consists of few parts; but the construction of the vital organ, the "ears," which catch and transmit the sound waves, is an absolute secret of the Navy Department, and has not as yet been disclosed. Nevertheless, these "ears" are known to be constructed somewhat like the human ear. The three chambers of man's ear have been mechanically imitated. There is an outer, a middle, and an inner ear; but where, in man, auditory nerves convey sound waves in the ether to the brain, a hollow rubber tube forms the path thru which sound waves in the water reach the stethoscopic device which leads to the operator's ear.

From a physical aspect the hydrophone presents no complexities. A hollow brass tube extends from the deck on which the operator is on watch, thru the bottom of the boat, and some three feet into the water below. Attached perpendicularly to this vertical shaft is a six foot horizontal hollow bar of hard rubber, on the outer curve of which is a double row of "ears." Above decks, in the operator's room, the stethoscope leads from the vertical shaft to the operator's ears, and a steering wheel attached to the shaft is within easy reach of the man on watch. There is also a circular dial

registering 360 degrees, on which the operator locates the submarine's position.

The hydrophone was developed at one of the American Naval Bases on the Atlantic Coast; and when the first sub-chasers of the 110-foot class were launched they were all equipped with it. Out in the Mediterranean, these sub-chasers were as thick in war time as pleasure launches in the days of peace. They made excellent use of the hydrophone and got marvelous results in locating hostile submarines.

One of the first discoveries made by American naval men in the Mediterranean was that German and Austrian submarine commanders had a secret way of communicating with their bases while remaining submerged. By acute listening, a definite code was deciphered, similar in some respects to the dot and dash system used in telegraphic communication. Sound travels at a tremendous rate of speed in the water, and the enemy submarines were found to have contrived a hammer-like device with which they tapped out signals against the metal hulls of their craft. These signals were supposed to have been picked up by their own secret bases, and they probably were. But what the enemy did not reckon with was that the signals were also heard by American sub-chasers.

The breaking waves dash high over a destroyer going at full speed

Listening as a fine art was soon developed to the *n*th degree. When an operator was on watch, every engine on a chaser was stopped, every man removed his shoes, all talking and all work ceased, and the men remained motionless during listening periods. The operator on watch placed the stethoscope, similar to the instrument with which a physician examines the heart beats of a patient, to his ears, and listened for the sound of a submarine propeller. Thru careful experimenting with the listening device the

sound of a submarine propeller was discovered to be quite different from the thrashing noise made by ships on the surface of the water. Here it may be well to state that the propeller of every ship has a characteristic sound when heard in the hydrophone. But the steady, subdued and "tubby" noise from the submarines was unmistakable. Some of the American sub-chasers and other anti-submarine craft were able to distinguish this sound at a distance of twelve miles; others, with finer-tuned instruments, operated over a range of forty miles. Consequently, the American ships were so distributed that every square mile of dangerous water was "covered" by expert listeners. In practise, learning to listen is a difficult task. The cultivation of fine hearing sensibilities requires time, concentration and [Continued on page 224]

# The Democratic Platform

By Talcott Williams and Norman Hapgood

## The Main Issues

By Talcott Williams

CHEAP party patter can always be said on the platform of the opposing party. President Wilson and Senator Reed are both standing on the Democratic platform just as the Republican platform holds comfortably ex-President Taft and Senator Hiram Johnson. If, as Democrats assert, Penrose and Lodge nominated Harding, so, and to the same extent, Murphy of Tammany Hall and Taggart of the Indiana Democratic ring nominated Cox. One is as true as the other.

We forget all the teaching of the war and its glorious memories of mutual action and inspiration by all men of all parties, if we do not realize that the great mass of Americans mean to do right by their land. Both conventions at Chicago and San Francisco were good conventions. If you have a wide national acquaintance and knowledge of men and read the roll call of both bodies, you will see that they are made up of men of experience in many fields, good Americans—some bad eggs—but fewer than in the past. Each convention, individually and as a whole, wanted the success of their view of national affairs and did the best they could under the circumstances. What you and I would have done, if we had been there. They put up good men of the same type. They adopted platforms intended to unite and not divide. They did exactly what that body of just men made perfect by their absence from politics for the occasion, which met in Independence Hall in 1915, Taft presiding and Lowell of Harvard leading, did when they adopted the platform of the "League to Enforce Peace," they compromised.

Why not avoid mental *strabismus* even when a Presidential campaign is on?

I prefer to go to the main issue. The Democratic platform apparently proposes to take Wilson's League and push it thru without substantial change. The Republican platform changes it by proposing to limit the President's power to act in matters relating to the Covenant by requiring for such acts the consent of Congress where the army and navy are required.

The Democratic platform, like the Republican, can only be fully weighed with the speech of acceptance by the candidate. The Democratic platform lays stress on the claims of the world. The Republican party on the claims of this country.

The real issue between President Wilson and the strong majority of the Senate (nearly all one party, nearly half the other) was (over Article X and thruout) whether the League should be amended to bring the two chambers of Congress in or leave power with the President. This last was natural to European countries because they always confuse President and Premier. We cannot. "The members of the League," says Article X, "undertake to respect and preserve, as against external aggression, the territorial integrity and existing independence of all members of the League." Under a host of past precedents the President could do all this without the consent of Congress and the Democratic platform, when it proposes to stand by the League and all its many extensions of the President's power, takes dangerous ground.

Adopted, the League would give at least as great powers to the President as Monroe's declaration of non-interference in the Western Hemisphere by Europe. It is no an-

swer to say, "Only Congress can declare war." President Roosevelt, defending the Monroe Doctrine, when the German fleet was approaching Venezuela, ordered Dewey to attack if it landed men and served notice on the Kaiser that would have brought war, if disregarded. On American issues we could permit this. Such a power is unwise and unconstitutional if extended by treaty to all the world's affairs. Given the League in being now and President Wilson could join the three Premiers in attacking Soviet Russia. Does anyone think this power should be his?

Our presidents have again and again used the army and navy without consulting Congress to execute a treaty and to protect territorial rights or the personal safety of our citizens. Under the treaty of 1846 with Colombia, presidents occupied all or part of the Isthmus of Panama almost every year and at last seized it "for keeps." Wilson seized Vera Cruz and McKinley went to Peking. Our presidents first landed in Hayti, Nicaragua and Santo Domingo and later asked Congress. Roosevelt seized Cuba under the "Platt Amendment" to keep order. All these were done without consulting Congress.

If this power is to be extended to all the world, Congress must be asked to consent as the Republican platform proposes. The Democratic platform leaves the President's discretion open. Already President Wilson has shown what he thinks can be done by seizing Archangel and Vladivostok, tho not at war with Russia. Is such power wise?

The Democratic party having won in 1916 by keeping the country out of war and refusing to prepare for one, proposes to win this election because it went into war and without preparation. It justifies extravagant expenditure by the needs of war when life and treasure were lost by its policy. Take the aeroplane. Everyone knew they were needed in war by 1915. None were made. Our troops fought without them. For every life so lost the President, the Democratic party and every man who fought preparedness in 1916 are each responsible. The claim of the platform for a party victory in a war won by an aroused nation in spite of the criminal lack of preparation, cannot possibly stand the battering of a campaign.

The financial plea of the platform is as fallacious. Inflation of the currency was not needed to finance the war. It has come because the Federal Reserve Banking Act (Dec. 23, 1913) omitted some of the precautions for safety provided in the plans laid before Congress under Republican direction, always more conservative in financial matters. No preparation was made in the act for possible war by a party and an administration never in favor of "preparedness," financial or military (witness 1860-1 and 1916-17). The addition of vast public credits which were sold under a policy which inflated the currency and finally depreciated the bonds, was the chief cause why prices rose past endurance. Public refusal to buy has led to cancelled orders. Cancelled orders to mill shut-downs. Land banks have added over \$400,000,000 in two years to credits stimulated by Democratic legislation, suddenly halted by the Federal Supreme Court. This flowing tide of inflation by Democratic legislation has so far floated bank credits, but when the ebb comes, as come it must, it will turn to as bitter mockery the claim that Democratic financial skill has kept banks out of bankruptcy as events dealt to the Demo-

cratic assertion in 1916 that Wilson had a patent right on keeping a country out of war.

On "labor" in all its phases, the Democratic platform has fully satisfied labor unions. The Republican platform here showed a courage in its support of law echoed by its candidate. The campaign is yet to come. If devastating strikes appear the labor plank may displace every other issue.

## Yes: the Democratic Platform

By Norman Hapgood

**D**R. Williams is such a courteous and high-class debater that I am glad to grant him all I can. He does not mention the Democratic plank on "Free Speech and Press," but I will concede that it is unmitigated hypocrisy. I will go further and say that if either of the Cabinet officers to whom it seems to refer had been nominated by the Democrats I should not have supported the ticket. I am not as generous as Dr. Williams. If the San Francisco platform and candidate had disappointed me on the pressing issues as much as the straddle on the League, followed by Harding's agreement in Johnson's interpretation, must have disappointed Dr. Williams, I should have had nothing whatever to do with the Democrats, their platform, or their candidates. I support Cox and the Democrats in this campaign not on party grounds but on their platform, on Cox's record in Ohio, and on his utterances on national and international questions before his formal speech of acceptance, which has not been published as I write. I salute the Democratic platform because it takes an attitude toward our foreign responsibilities similar in spirit to the attitude once taken by Mr. Taft, Mr. Hoover, Mr. Strauss, Mr. Lowell, Mr. Talcott Williams, and even Senator Lodge, and because it is more progressive than the Republican platform on the industrial issue, especially if we look at the two platforms as illustrated by the records of Harding and Cox. Before passing to these two critical issues I will say a few words on two other points raised by Dr. Williams. If I believed Cox likely to be subservient to Murphy, as Harding to Penrose, I should vote for neither of them. In my opinion the sole reason Murphy and his friends voted for Cox was that there was no other way of stopping McAdoo or else some administration dark horse like Davis. Cox's record in Ohio can well stand by itself, even without comparison with Harding's "deference and devotion" to George B., his loyalty to Foraker, and his rubber-stampism in the present problems, loudly proclaimed by himself. One of the readers of *The Independent*, holding a public office, bitterly assails me for dragging in the fact that Harding voted to refuse to allow Mr. Brandeis to sit on the Supreme Court and says I am arousing race antagonism. As a matter of fact I do not believe that Mr. Brandeis' being a Jew had much to do with Senator Harding's vote. I gave the case as a perfect instance of subservency to the political ring that always knows its masters' voice.

The other point is financial. Those who prefer the finance of Aldrich to the finance of Wilson, Glass, and McAdoo have their own point of view, and they are in general the same ones who are afraid labor may get too much out of something. For my part I am prouder of the results achieved by the Federal Reserve Act than of anything else in the domestic legislation of these times, and as for our war finance I look upon McAdoo as the greatest modern Secretary of the Treasury. Those who want our finance turned back to a Penrose-Lodge-Smoot standpoint will not be affected by any arguments of mine.

With Dr. Williams' last sentence I heartily agree. The election is more than likely to turn on whether we wish the great industrial upheavals of the next years to be met by Judge Gary, Senator Harding, Ralph Easley, and their

species of "courage," or by the spirit that Cox showed when he made of Ohio, even during the war, a place where labor could congregate and discuss as freely as directors of the Steel Corporation or the American Woolen Company. Let us go to the mat on this issue. It is on this issue that Harding, if elected, will in 1924 be beaten as decisively as Mr. Taft was in 1912. The country will have lost much and gained only further assurance that the industrial question cannot be smothered: it must be solved.

**N**OW for the outstanding question. In a country in which the press falls short of the best prevailing intelligence the *Springfield Republican* is a constant satisfaction. It says: "Last year the world had a chance to choose between Lenin and Wilson, with the odds on Wilson. That choice was lost when the Treaty was defeated in the Senate. . . . Let Mr. Wilson's opponents denounce Lenin and Trotzky to their heart's content; it will not alter the fact that the song of triumph chanted at Moscow over the discomfiture of 'capitalism' is an ode to the men who killed the Peace Treaty, wrecked the League of Nations, and made the world what it is today."

Recently I quoted Marshal Foch on our behavior and its consequences to the peace of Europe. Since then there has been plenty more to illustrate the League of Nations situation on its real side, not front-porch stuff from Marion, but the struggles of twenty-eight nations to reconstruct and guide the world, and their wondering why we alone of the great and eligible nations insist on setting back the clock. Since Foch gave his evidence not only has Nicolai Lenin said that the inability of the nations to act together in their League was giving a great start to Bolshevism, but Lord Grey has said: "One of the greatest lessons of the war is that thinking nationally, without thinking internationally, leads to disaster. Before the war, it seems to me, Germany was thinking more intensely nationally and less internationally than any other country in the world, and this led to disaster." Now the Republicans, under the proud leadership of Senator Harding and his everlasting noise about Americanism and America first, would adopt for our country this small conception of nationalism and inflict on us an American version of *Deutschland Uber Alles*, which properly translated only meant Germany first. Of course our guilt for the next war will not take the same form that Germany's took for the last war. It will take the form rather that has been pointed out by Foch and reinforced by what I have quoted from Lenin and Grey: a narrow-minded unwillingness to do our share in constructing peace, after doing our part in winning the war.

The question is not whether or not we shall be in the next world-war. Who supposes that we can keep out of it? The question is whether or not we are willing to help prevent it, or whether we are going to be kept from our part in world-leadership and world-protection by misquotations from men who lived and thought for themselves a century and more ago, and by third-rate oratory in the service of a petty conception of patriotism, of possible cost, and of possible calls for assistance in some policing. As if any possible calls of this kind could mean one billionth part of what the next war will cost us, to say nothing of the ruin to which it will bring the civilization of Europe.

On the second day of this month Mr. Taft made a characteristically frank declaration which ought to be known to every voter in the land. He said.

When Mr. Wilson brought to this country the League covenant as reported to the Paris conference I urged on the same platform with him that we join the League. I thereafter recommended amendments, some of which were adopted into its final form.

Had I been in the Senate I would have voted for the League and Treaty as submitted, and I advocated its ratification accordingly. I did not think, and do not now think, that anything in the League covenant as sent to the Senate would violate the constitution of the United States or would involve us in wars which

it would not be to the highest interest of the world and this country to suppress by universal boycott and, if need be, by military force.

I consider that the moral effect of Article 10 on predatory nations would restrain them from war as the declaration of the Monroe Doctrine has done, and that the requirement of the unanimous consent by the representatives of the great powers in council before League action would safeguard the United States from any perversion of the high purpose of the League.

Moreover, I believe that the issue of the League transcends in its importance any domestic issue and would justify and require one who believes so to ignore party ties and secure this great boon for the world and this country.

Yet he supports a candidate who declares himself sharply against the League altogether. The reasoning is too much for me. It is intended for other kinds of minds. But when a man never bolts his ticket, whatever the situation, why then he never does: and I do not happen to remember when Mr. Taft has ever bolted his.

## The Path to the Best for All

By Talcott Williams

I DO not think anyone could debate with Mr. Hapgood without wanting to be fair. I believe each of us desires what is good and only what is good for the great commonwealth of humanity. We differ in the means. He is with the Democratic party chiefly because he believes in one particular thing its platform already proposes, joined to a general approval of its candidate. I act with the Republican party because, with all its faults, I believe it governs and directs public affairs better than the Democratic party, which owes its power to its suppression of the votes of my fellow citizens of negro descent. This great wrong I can never forget. If the Republican party does not do all I think it should, it takes more to pry me loose than it would Mr. Hapgood, who joins his party "for this time only." With very many other fellow Republicans—enough I believe to defeat Senator Harding—I am waiting until the position of both parties and candidates is clear on the League and as to what the real issue of the campaign proves to be. It may be the supremacy of law, the equal freedom and protection of all men in seeking a job and the right of the public to free communication. If the mat is spread for that wrestle, I follow in the steps of those who sought freedom here and have shared, generation by generation, in the task of preserving it.

When President Wilson came to Washington in February, 1919, we were practically all for the League he brought. Why does Mr. Hapgood's splendid and sincere burst of loyalty for the League sound a little out of date and overstrained now? Read the daily papers! I wish there existed Mr. Hapgood's "struggles of twenty-eight nations to reconstruct and guide the world." Where are the twenty-eight? Is Persia among them, deprived of self-government by a treaty with Great Britain? Has Syria, where I was born and which I know and love, a chance for freedom with French troops crushing its liberty? Is Italy giving Albania a chance to become one of the nations which enjoy self-government? Albania! To which even the Turk gave local liberty, as I trust Italy may. When Poland wantonly attacked Galicia and Russia was it trying "to reconstruct and guide the world"? Were England and France, when they urged Poland on so as to protect holdings of Russian bonds, many usurious and semi-fraudulent? I know Mosul and its outfields well. I lived there once. Its people are better equal to self-government than the Hedjaz. Is England astride these oil fields "to reconstruct and guide the world"? Has Japan laid hold of the upper half of Saghalién "as one of twenty-eight nations struggling to reconstruct and guide the world"? Is this the reason why this member of the League is crushing Korea and has its flag still flying at Kiao Chan?

But why go on with this sad and discouraging record

which stares at us from the pages of every newspaper. In spite of all this, I believe in the League. I think a League of Nations is a necessity to prevent war. We ought to be in it. Is there no possible path to such a League and no policy in regard to creating a League feasible but one which accepts all these things and sees in them the "struggles of twenty-eight nations to reconstruct and guide the world" when, as a matter of fact, five members, a majority of the Council of the League, England, France, Italy, Japan and Greece, are working together to stake out eligible real estate and acquire it, while the world is in flames?

I appreciate the difficulty. Day by day, I see the stupendous blunder of President Wilson when he was not as ready to compromise in July, 1919, as, Mr. Hapgood tells us, with accuracy, he was in February, 1920; but this blunder of the President does not increase my confidence in his approval of the Democratic platform now. Both parties are reshaping their lines. Men are leaving each, both on the League and labor issues.

I think it wise for those of us who believe in a League and would like the League rather than none to wait until we know what is the best path to the best League and what the crucial issue is to be, League, labor or financial.

### Synonyms

A separate peace with Germany; Peace without honor; Peace without victory.

### A Home Duty

OUR League of Forty-eight States should have its attention called to the recent pitched battles in Denver, Colorado, and in West Frankfort, Illinois.

### To the Railroads

WE have granted you the increased rates you asked; we have returned the railroads to private ownership; we have readjusted wage scales to keep the men from striking. The public has paid for all this. Now, Mr. Railroad Corporation, it is up to you to give the fine service you promised us. Bad service can no longer be blamed on labor troubles, Washington mismanagement or inadequate rates. The American people have given you your chance—perhaps your last chance.

## Is Poland's Peril Ours?

NO doubt many shortsighted persons are congratulating themselves that by "withdrawing from foreign entanglements" we have escaped the duty now apparently incumbent on England and France of preventing Russia from destroying Poland. In just the same mood many a good, cosy-minded citizen read the news six years ago that a Balkan war had broken out and threatened to engulf the European Powers. "How thankful I am," he reflected, "that we have no European policy or obligations which could involve us in the struggle." Three years later he was serving in the army. That one lesson should have taught us that until the world is so organized that every nation is safe no nation is safe. Fires spread; and the wise citizen not only buys a fire extinguisher for his own home but supports a fire department.

Heaven forbid that the present outburst of Bolshevism should lead to a general war as did German imperialism! But it is not impossible. Suppose, for example, that Germany should join Russia against the Allies and attack the army of occupation on the Rhine—American soldiers among them. Suppose that the Bolsheviki should massacre such Americans as happened to be resident in Poland. Suppose

that as a last resort the Soviet authorities should invest their remaining productive power in building submarines to prey on "capitalist commerce of all nations." The news from eastern Europe is now just reading matter in the daily paper to most of us. But no one looking back on the history of the last six years can read it without a sense of dread.

### Those Bolshevik Idealists!

WE wonder how the apologists of Bolshevism like the recent alliance between the Bolsheviks and the Turkish Nationalists for the extermination of what is left of Armenia.

### Korea

KOREA was the "Hermit Kingdom." Some would like to make the United States a hermit republic. We all know what happened to Korea.

## Soul Saving by Groups

By Shailer Mathews

THE need of reorganizing our ethical thought is more apparent every day. The church has largely been concerned with inducing individuals to obey the Ten Commandments and assent to the law of love. At all events that is the morality set forth in the great Protestant Confessions. Such an ethic is oblivious to the fact that no one acts strictly as an individual. We all act as members of groups. The moral ideals of these groups may be very different from those of their members when acting as individuals. A ruthless highwayman may be kind when he is not acting as a highwayman.

This lack of a social ethic has been brought to light by the public letter of Mr. Frank Morrison of the American Federation of Labor, relative to the public and the labor unions. He says in effect that the only interest which the public has in labor is to see that it produces as much and as cheaply as possible; that therefore it will not be interested in higher wages or other economic gains on the part of the workingman. It would therefore follow, Mr. Morrison argues, that the obligation of the labor union is to itself and that its philosophy is abundantly able to find some sort of *modus operandi* with the employer. It owes no obligation to the public.

It is not necessary to discuss the truth of this position, altho if I have understood it correctly, both it and Mr. Morrison's preliminary remarks upon the division of interests in the economic process seem mistaken. But whether the economic analysis be correct or not, the exposition of the relation of a labor union to society at large is certainly an argument for recasting our ethical teaching.

A thoro-going individualist naturally shrinks from any concession to group consciousness, but as things stand at the present time the laboring men whom Mr. Morrison represents do not act in the world of industry as individuals, but as members of labor unions. Similarly the capitalist employer does not act as an individual but as a member of a group which has particular economic interests and functions. We shall never have a morality strong enough to bear the weight of our present industrial system until we take account of these obvious facts.

If Christianity is to be a moral force it must establish a morality that fits the actual world, not the world of the time of Moses or even the time of Thomas Jefferson and the farmers of New England. Whether we like it or not, the very structure of our social life forces us into groups that act as individuals. These groups must be taught that they have obligations and that loyalty to one's immediate group is not necessarily the supreme loyalty. The morality

of the labor union has not been exhausted when it denounces scabs and lays down conditions for employers. The individual workman is as impotent against his organized group as the individual citizen is impotent in international affairs. So, too, the morality of the employing class has not been exhausted when its members are good fathers and honest citizens. There is yet the overhead moral demand that the entire class of employees meet certain obligations.

The church must teach a social morality, the obligations of which rest, not directly upon separate men and women, but upon the groups in which the individuals find themselves. That means that labor unions, manufacturers' associations, associations of teachers and other groups of allied interests must learn that they are not ends in themselves, but must observe a moral obligation to give justice as well as to demand justice. The Ten Commandments if applied to individuals will produce little more than respectability. The Sermon on the Mount if really wrought into the action of social groups will help onward the Kingdom of God.

The possession of power means tyranny or service. The records of the past may tell of tyrants who have been known as benefactors, but the future will be secure only as any class with power uses that power for society and not for itself. Group selfishness means group hatred. A church that does not preach a morality capable of producing group coöperation will be of small service to its day. You cannot mend a leak in a dike by sticking your finger into a hole. That may do for legends, but it will not do for life. The church must be an ethical engineer, not a child trying to hold back a deluge with a chilled forefinger.

### Sympathy

THE Allies appear to have difficulty in getting the Germans to deliver coal. Well, coal dealers sometimes fail to make good their promises in our own country.

### Lower California

MEXICO is greatly troubled by the rebellion in Lower California, geographically cut off from the rest of the country by the Gulf of California. It is Mexico's business and none of ours how this trouble is settled. But if Mexico wishes a short cut out of the difficulty it would be no bad idea to sell out to the United States. The land in question is of little value to Mexico, but we could afford to pay a good round price for it since it would give us control of the mouth of the Colorado River and extend our Pacific coast line by several hundred miles.

## Speeches of Acceptance

WE have read them all: Harding, Cox, Coolidge and Roosevelt. As to their content every reader must make up his own mind, as we will ours. As to style, we must say that the next President, whichever he may be, should get his second-in-command to write speeches for him after he gets into office. A Presidential speech of acceptance, like the average party platform, tries to cover too much ground and covers it too thinly. More sledge hammer blows on the living issues of today and less formal eloquence about principles and ideals which no one disputes would be welcomed by a jaded public. Why not take Americanism and the Fathers and the virtues of the farmer and the horny-handed workingman for granted in the platforms and speeches of 1924? The American people are not Bolshevik that they should differ about the need for economy, efficiency, justice, a square deal, patriotism, the home, the dignity of womanhood, prosperity, liberty, order, democracy and the rest of it; we all want these things but we sometimes differ about the method of attaining or safeguarding them.

# The Siege of Warsaw

© Underwood & Underwood

The cathedral of Warsaw has added strategic importance in the recent fighting to the fame of its beauty. On August 7 a sentry's suspicions led to the discovery in its basement of a tunnel opening, leading to army headquarters across the street. The discovery foiled a Communist plot to blow up headquarters and execute a coup d'etat simultaneous with the Bolshevik attack

International

These Polish troops are part of the force that tried to defend Warsaw from the Bolsheviks. They were supplemented by French and British officers and by a squadron of American aviators

© Underwood & Underwood

The Polish Women's Battalion of the severity of the fighting was heavy, but the morale of the women was equal to that of the men. They were always outnumbered by the better armed and better equipped Bolsheviks. The victory was due to the bravery of the cavalry to which the women were attached.

© Underwood & Underwood

General Haller, leader of the Polish army against the Bolsheviks, has time and again proved himself a brilliant strategist. But his troops in the defense of Warsaw were outnumbered nearly two to one by the enemy and his eleventh-hour attempt to raise volunteer forces could not provide the necessary equipment and ammunition for them. The people of Warsaw, however, united in a courageous effort to protect the city. Squads of citizens wearing civilian clothes and straw hats got rifles somehow and drilled in the streets. Women acted as couriers behind the line. Many of the refugees coming into Warsaw abandoned their household goods and gave up their wagons for carrying barbed wire and supplies toward the front

# The Story of the Week

## The Conquest of Poland

THE military success of the Bolsheviks continues, tho the Russians advanced more slowly after they crossed the frontier of "ethnographic Poland," that is to say the regions inhabited by a majority of Polish speech. While sweeping thru Lithuania, White Russia and the Ukraine the invaders met sometimes with resistance from the civil population, but sometimes with encouragement and usually with indifference or a terrorized submission. In these border countries, tho historically Polish and containing large Polish settlements, the mass of the peasantry is neither Polish nor particularly friendly to Poland. Once back on truly Polish soil, however, the retreating Polish army was strengthened by the national sentiment of the populace. To counteract Polish nationalism the Bolshevik invaders appealed to class feeling and urged the Polish peasants to rise against their Government. In the occupied region, as formerly in Lithuania, they endeavored to overthrow the existing local governments and establish workers' soviets.

In spite of the collapse of the Polish armies Warsaw, the capital, and Lemberg, the chief city of eastern Galicia, still remained unconquered more than a fortnight after the Russians had reached the Prussian frontier in the north and Brest-Litovsk and the Bug River farther south. Every day rumors came that the fall of Warsaw was imminent, but the Russian strategy seems to have been based on the outflanking of the capital before a direct attack was attempted. Since aid from the Allies could most easily reach Warsaw by way of Danzig, the Bolsheviks advanced along the southern frontier of East Prussia in the direction of the Danzig-Warsaw railway to cut off this channel of aid. The Allies cannot well send troops and supplies directly thru Germany to Poland, because Germany is strictly neutral in the Russo-Polish war and would oppose any use of German soil as a military base by Allied or Polish troops. With Danzig cut off, Poland would be practically isolated. It has been rumored that there is also a political object behind the Russian strategy in keeping touch with the Prussian frontier, that the Russians intend to propose to Germany, if they have not already done so, a new partition of Poland and a restoration of the old frontiers much as they existed in 1914. But Germany continues to remain quiet in the face of temptation; if the Germans covet their old Polish provinces they know that any attempt to join with the Bolsheviks in reconquering them would involve renewed war with France and England.

## Prospects of Polish Peace

FUTILE as have thus far been the negotiations for a Russo-Polish peace they have continued. The Bolsheviks do not so much wish to reject the idea of peace, which is essential to the prosperity of Russia, as to postpone the final conclusion of the armistice until they are in a position to dictate terms to defeated Poland and to defy any intervention by the Allies. The terms offered by Russia comprise the drastic disarmament of Poland and the relinquishment of any claims to territory east of the "ethnographical frontier." What further terms may be demanded is perhaps the question on which the future peace of Europe depends.

The Allies do not altogether see eye to eye on the Polish question. France has been for active military intervention to save Poland as a barrier against both Russian and Ger-

man ambitions in eastern Europe. Italy wishes to keep out of the quarrel altogether. Great Britain, disapproving emphatically of Poland's Russian adventure, wishes to save Poland from destruction, tho not from punishment, to avoid active intervention if possible, and to turn the negotiations between Poland and Russia into a general conference on the affairs of eastern Europe in which the Powers would be represented and international questions cleared up.

Premier Lloyd George address the House of Commons on August 10 in a very frank speech summarizing the whole situation. He admitted that Poland had attacked Russia "in spite of warnings of France and England," that Poland had been completely defeated and that victorious Russia is "entitled to demand such guarantees as would be exacted by any Powers against repetition of an attack of that kind." But should the Bolshevik authorities, drunk with power, attempt to obliterate the independence of Poland within her legitimate boundaries Great Britain and the other Allied Powers would be obliged to go to the rescue on three grounds: that Poland, like other nations, was entitled to independent national life; that the

De Amsterdamer

HOLLAND'S VIEW OF POLAND'S POSITION  
"Help me, boys, or I can't hold the fort!"

League of Nations would be discredited if a Member State were destroyed and the other nations in the League lifted no hand to prevent it, and that the existence of Poland was essential to the stability and safety of Europe. If the Bolsheviks took an unreasonably imperialistic position England and France would send supplies to Poland and aid in the reorganization of the Polish army, but would not send their own soldiers. "With the force at the disposal of the Poles, if it is well directed and well organized, there ought to be no difficulty in resisting." He could foresee no contingency in which it would be necessary to employ a British expeditionary force in Poland, but it might be necessary to reimpose the blockade on Soviet Russia "by naval action or by international action, or by both." He hoped that in such an event the attitude of the United States would be friendly, since Polish independence was a cause very dear to American sentiment. He rebutted the charge of the Labor Party members that the Allies were attempting to "overthrow a government merely because it is revolutionary" by demonstrating from the testimony of many British Socialists and trades unionists how reactionary and anti-democratic was the form of government established in Russia by

the Bolsheviks. But in spite of his denunciation of the Bolshevik régime he ended his address with the hope that the Soviet Government would consent to a moderate peace.

## Poland and the United States

**I**N response to a request from the Italian Ambassador, Secretary Colby of the Department of State stated the position taken by the United States Government with respect to the affairs of eastern Europe. Three positions are taken up, defended and explained: that Polish independence must be sustained by "all available means," that the United States cannot recognize the Bolshevik Government on account of its bad faith in matters of international diplomacy, and that the United States will not take part in any agreements for the partition of Russia and will not even recognize the independence of the newly created republics until negotiations with a government representing Russia are once more possible. Outstanding statements in the American note are:

This Government believes in a united, free and autonomous Polish State, and the people of the United States are earnestly solicitous for the maintenance of Poland's political independence and territorial integrity. From this attitude we will not depart.

The Government therefore takes no exception to the effort apparently being made in some quarters to arrange an armistice between Poland and Russia, but it would not, at least for the present, participate in any plan for the expansion of the armistice negotiations into a general European conference, which would in all probability involve two results, from both of which this country strongly recoils, viz.: The recognition of the Bolshevik régime and a settlement of the Russian problem almost inevitably upon the basis of a dismemberment of Russia.

It is not possible for the Government of the United States to recognize the present rulers of Russia as a Government with which the relations common to friendly governments can be maintained. This conviction has nothing to do with any particular political or social structure which the Russian people themselves may see fit to embrace. . . . The responsible leaders of the régime have frequently and openly boasted that they are willing to sign agreements and undertakings with foreign powers while not having the slightest intention of observing such undertakings or carrying out such agreements.

This Government would regard with satisfaction a declaration by the Allied and associated powers that the territorial integrity and true boundaries of Russia shall be respected. These boundaries should include the whole of the former Russian Empire, with the exception of Finland proper, ethnic Poland and such territory as may by agreement form a part of the Armenian state.

Thus only can the Bolshevik régime be deprived of its false but effective appeal to Russian nationalism and compelled to meet the inevitable challenge of reason and self-respect which the Russian people, secure from invasion and territorial violation, are sure to address to a social philosophy that degrades them and a tyranny that oppresses them.

El Donaciano, Mexico City

First Mexican General: "Well, old friend, it seems that Villa has at last surrendered."

Second Mexican General: "What a disaster!" This cartoon, from one of the leading newspapers of Mexico City, seems to support the impression sometimes felt on this side of the border that the bandits' activities were not altogether without honor in their own country

On their journey all the way round the world to get back to their homes and parents these Russian children landed in San Francisco the other day in charge of the American Red Cross. They were picked up as refugees in the Ural Mountain region of Russia and the Red Cross is undertaking to get them safely back to Petrograd, from which they were driven out in the fighting of May, 1918

## Greater Greece

**O**N August 10 the Turkish Treaty, the last of the treaties closing the Great War, was signed at Sevres, near Paris. The Turkish delegates signed, as did representatives of the Allied nations with the exception of Serbia and the Arab Kingdom of Hedjaz.

Next to the partition of Turkey the outstanding feature of the Near Eastern settlement of the Great War, as embodied in the Bulgarian and Turkish treaties and in special agreements among the Allied nations, is the expansion of Greece. During the early days of the Great war Greek prestige was at its lowest ebb. The Allies and the Bulgarians alike used Greek soil as a camping place and the Greek court was a hotbed of intrigue; the nation seemed to be a mere passive counter on the diplomatic board. From this position Greece was rescued by the energy and genius of Eleutherios Venizelos, whom many observers called the shrewdest statesman at the Peace Conference. By entering the war at the psychological moment Greece claimed the rewards that came with Allied victory. By the subtle diplomacy of Venizelos Greece obtained recognition of her claim to Bulgarian Thrace, to Turkish Thrace (except for the immediate environs of Constantinople), and to a large part of western Asia Minor around Smyrna held by "mandate." And now the report comes that the islands of the Dodecanese, held for years by Italy, will be surrendered to Greece; the smaller islands immediately and the island of Rhodes after a plebiscite to be held after five or more years. Thus Greece rounds out her Aegean Empire and the dream of a Greater Greece is realized.

M. Politis, Greek Minister of Foreign Affairs, assures the world that the newly acquired territories will be administered in a liberal spirit. He said:

Politically the Turks are the easiest people to govern, so long as their religion is not touched. It is our intention to help maintain the mosques. We are so careful in this respect that we did all that was humanly possible to take Adrianople without damaging these master works there. We have already founded a Mohammedan chair in the University of Smyrna. We will do the same in Athens, as well as expend sums to keep up Turkish schools. . . . We will not employ carpet-bagging methods, tho it is difficult to harmonize the interests of the Turks with the 450,000 Greek refugees we had on our hands for several years, whose homes were destroyed by the Turks or were occupied by them.

In Turkish Thrace the Greeks are already completely

victorious, but fighting continues in Asia Minor. The Greeks have been almost uniformly successful thus far and have advanced far beyond the limits of their new frontier in Asia Minor, but the Turkish Nationalists can always retreat to new positions farther in the interior. The Armenians do not seem able to defend their own frontiers and the English in Mesopotamia and the French in Syria and Cilicia are finding difficulty in maintaining their positions against hostile Moslem populations, Turkish, Kurdish or Arabic. Several American destroyers have been sent to Turkish waters to protect the lives of American citizens should they be endangered.

## Irish Coercion Bill Passes

ON August 6 the House of Commons passed the Coercion Bill by 206 votes to 18. The small opposition vote was due to the fact that the Irish Nationalist members refused to participate. The Sinn Fein members of Parliament always refuse to attend, since they do not recognize the authority of the Parliament of the United Kingdom of Great Britain and Ireland over "John Bull's other island." The members of the old Nationalist party, the former followers of Redmond, took an active part in the debate, but withdrew before the vote was taken as a protest against the suspension of Joseph Devlin for disorderly conduct. Many of the Labor party members withdrew in sympathy with the Irish.

The Coercion Bill provided for "the trial by courts-martial or courts of summary jurisdiction" of Irish criminals, subject to the conditions that the penalty for any crime shall be that fixed by the statute or common law only, and that in cases involving the death penalty the court martial must include a judicial official of certified legal knowledge and experience. Persons sentenced to imprisonment may be sent to prison in any part of the United Kingdom; this provision, of course, is intended to make impossible the rescue of prisoners detained in the midst of a sympathetic neighborhood. Civil cases may be tried without a jury. Sums payable from taxation to the local authorities may be withheld by the Government if "the local authority has in any respect refused or failed to perform its duties."

The preamble of the measure practically admits the existence of rebellion in Ireland—"owing to the existence of a state of disorder in Ireland the ordinary law is inadequate for the prevention and punishment of crime or the maintenance of order."

During the discussion of the Coercion Bill, Mr. Asquith surprised the House of Commons by coming out in favor of "Dominion Home Rule"; giving Ireland the status now enjoyed by Canada and Australia. This not only goes far beyond the provisions of the Home Rule Bill now supported by Premier Lloyd George, but it goes equally beyond any proposal made by Mr. Asquith himself when he was at the head of the British Government. In reply, the Prime Minister raised the objection that with a Dominion status Ireland would raise an army and a navy of its own, as Australia has done, and that it would be dangerous to permit this while Irish sentiment remained hostile to England.

Archbishop Mannix of Australia was not only debarred from landing in Ireland but even from remaining on the ship to Liverpool. The British Government remembered—rather belatedly—that part of Liverpool was like an Irish city in England and that there was as much danger of a demonstration of sympathy for the Archbishop if he landed in Liverpool as if he had been permitted to carry out his original intention of going directly to Ireland. So he was taken off the ship by a British destroyer and conveyed to Penzance, Cornwall, and thence by train to London. He will not be permitted to visit Ireland.

## Cox Champions Covenant

GOVERNOR Cox accepted the Democratic nomination for President at Dayton, Ohio, on August 7. He declared the Covenant of the League of Nations to be the paramount issue of the campaign and devoted the first part of his speech to it. His position was exactly that of the San Francisco platform: ratification of the Treaty, with "interpretative" reservations if necessary, but without such "nullifying" reservations as were demanded by Senator Lodge. Particularly he denounced as dishonorable the proposal to make a separate peace with Germany, along the lines of the Knox resolution, and thus abandon once and for all our associates in the Great War.

CANTANKEROUS CANTU—LEADER OF THE LATEST IN MEXICAN REVOLUTIONS

The Democratic nominee for Vice-President has several of the famous Roosevelt characteristics. Like T. R. he likes to share outdoor sports with his sons, and to use the same concentration in play that he shows "on the job." Franklin D. has T. R.'s gift of always being in command of the situation, and that without any trace of self-consciousness

On the subject of ratification with reservations Governor Cox said:

The first duty of the new Administration clearly will be the ratification of the treaty. The matter should be approached without thought of the bitterness of the past. The public verdict will have been rendered, and I am confident that the friends of world peace as it will be promoted by the League, will have in numbers the constitutional requisite to favorable Senatorial action.

The captious may say that our platform reference to reservations is vague and indefinite. Its meaning, in brief, is that we shall state our interpretation of the covenant as a matter of good faith to our associates and as a precaution against any misunderstanding in the future.

Our platform clearly lays no bar against any additions that will be helpful, but it speaks in a firm resolution to stand against anything that disturbs the vital principle.

We hear it said that interpretations are unnecessary. That may be true, but they will at least be reassuring to many of our citizens, who feel that in signing the treaty there should be no mental reservations that are not expressed in plain words, as a matter of good faith to our associates. Such interpretations possess the further virtue of supplying a base upon which agreement can be reached, and agreement, without injury to the covenant, is now of pressing importance

Governor Cox proposed two reservations of the sort which he considered acceptable, as tending to clarify rather than to contradict the terms of the Covenant. They were:

In giving its assent to this treaty the Senate has in mind the fact that the League of Nations, which it embodies, was devised for the sole purpose of maintaining peace and comity among the nations of the earth and preventing the recurrence of such destructive conflicts as that thru which the world has just passed. The coöperation of the United States with the League and its continuance as a member thereof, will naturally depend upon the adherence of the League to that fundamental purpose.

It will of course be understood that in carrying out the purpose of the League the Government of the United States must at all times act in strict harmony with the terms and intent of the United States Constitution, which cannot in any way be altered by the treaty-making power

## Cox on Domestic Issues

THE latter part of Governor Cox's speech was devoted to a general, and somewhat diffuse, survey of national problems. A few of the more specific statements on the more important issues (the plums in the pudding, as it were) are here extracted:

One of the first things to be done is the repeal of war taxes.

I believe that a better form of taxation than the so-called excess profits tax may be found, and I suggest a small tax, probably 1 to 1½ per cent, on the total business of every going concern.

There is no condition now that warrants any infringement on

the right of free speech and assembly nor on the liberty of the press.

We need a definite and precise statement of policy as to what business men and workmen may do and may not do by way of combination and collective action.

The Federal Reserve Act is admitted to be the most constructive monetary legislation in history.

Many of the states have adopted a budget system, and with a success that carries no exception. . . . The same can be done by the Federal Government.

I am convinced that the expense of the Government can, without loss of efficiency, be reduced to a maximum of \$4,000,000,000, including sinking fund and interest on the national debt.

When we enter the League of Nations we should at the same time diminish our cost for armament.

The rehabilitation of the disabled soldiers of the recent war is one of the most vital issues before the people.

The women of America . . . are entitled to a voice in the readjustment now at hand.

All that we ask is that both parties deal in the utmost good faith with the electorate and tell the plain truth as to the amounts received, the contributors and the items of disbursements.

The Democratic candidate had nothing to say on the liquor question, which so many prophesied would be the issue of his campaign, unless a general reference to the duty of the President to enforce the laws be construed as relating to that issue. He emphasized two points in opposition to Senator Harding's confession of political faith; attacking the concept of "government by party" as an abdication of the constitutional right and duty of the President to use his own judgment as chief executive, and attacking the motto "back to normal" as a mere plea for reaction and a return to pre-war conditions.

## The Fourth Acceptance

ON August 9, Franklin D. Roosevelt, Democratic candidate for Vice-President, was formally notified of his nomination. His speech concluded the series of "keynotes" by the nominees of the two great parties and with it the campaign may be considered under way. In vigor, compactness and "fighting" quality the speech ranks high; higher, possibly, than the acceptance speeches of either Harding or Cox. Perhaps an aspirant for the Presidency must be more careful than a Vice-Presidential candidate to weigh his words and be certain that no phrase will give offense, and thus necessarily loses something of the free movement discernible in the speeches of Coolidge and of Roosevelt. A few quotations may be taken to typify the address:

The war was won by Republicans as well as by Democrats.

A real treaty for a real peace must include a League of

International

Governor James Cox has one kind of popularity in Dayton, Ohio, but his elder brother, Bill, has another. All the Dayton youngsters know "Mr. Bill" as the man who mixes the best sodas in town, and sometimes passes out a free one when the thermometer is high and the gang's funds are correspondingly low. "Mr. Bill" isn't letting his brother's candidacy for President of the United States interfere in the least with his own career as proprietor of the candy store and soda fountain

McCutcheon © 1920, by the Chicago Tribune

The patient public, like the lady in the melodrama, always pays

Nations. . . . The League of Nations is a practical solution of a practical situation. It is no more perfect than our original Constitution, which has been amended eighteen times and will soon, we hope, be amended the nineteenth, was perfect. It is not anti-national, it is anti-war.

The methods of the legislative branch of the National Government, especially in the upper House, require drastic changes. It is safe to say that the procedure of the Congress has progressed less with the times than in any other business body in the country.

Some people have been saying of late: "We are tired of progress, we want to go back to where we were before, to go about our own business, to restore 'normal' conditions." They are wrong. This is not the wish of America. We can never go back. The "good old days" are past forever; we have no regrets. For our eyes are trained ahead—forward to better new days.

## Watchfully Awaiting Those Rates

**W**ILL the increased railroad rates mean higher prices for commodities? Perhaps more citizens of the United States are asking that question than any other; even "who will be our next President?" takes at best a second place. The new rates become effective after five days' notice to the Interstate Commerce Commission and must all be in effect by January 1, 1921. Most of the railroad companies will have their new rates established by the beginning of September. The aggregate increase of income, if all the companies take full advantage of the authorized advance in charges, is placed at approximately \$1,500,000,000, of which rather over \$600,000,000 will be spent in wages and the rest will enable the railways to bring their equipment up to date as well as to secure the revenues necessary for the 5½ per cent return guaranteed under the Transportation Act. What the public wonders is what the portentous sum of \$1,500,000,000 is going to do to the pocket of the ultimate consumer, since it is certain that the merchant will not stand the loss if he can pass it on.

The Pennsylvania Railroad has published figures intended to reassure the public by demonstrating that the new charges will be spread out so thinly over the various classes of freight that there will be very little excuse for higher prices on ordinary retail commodities. Thus a barrel of flour shipped from Minneapolis to Philadelphia, if shipped in a carload lot, will cost only 33 cents more on account of the 40 per cent increase in freight rates in the Eastern zone; or about four cents for a twenty-four pound sack. Shipped in less than carload lots, the increase would

be about seven cents a sack. The added freight charge on a dozen eggs would be from one-half to two-thirds of a cent if shipped from Chicago to Philadelphia. Butter sent over the same route would cost about one-half cent a pound more than formerly. Oranges from "a typical Florida point" to the northeastern states would bear an added charge of three to three and one-half cents a dozen. Potatoes from "Virginia points" to the larger eastern cities would require an advance of about a cent a peck. All of these slight increases in price would be more than offset, in the opinion of the Pennsylvania freight expert, by the decrease in the cost of coal owing to the improved facilities for transportation which the new increases will make possible. "Good and adequate transportation will serve the people of the country at large in dollars, where a freight rate increase is measured in cents." That is the promise; let us hope it comes true.

As an aftermath of the outlaw railroad strike John Grunau and forty of his associates have been indicted for conspiracy to tie up the transportation of necessary commodities. Federal Judge Alschuler of Chicago has ordered an investigation of the mysterious "leak" by which it became known to the press in advance of the jury's verdict what the decision would be. Many of the outlaw strikers are now trying to get back their old positions in view of the increased wages which have been granted, and there does not seem any present prospect of new strikes.

## State Politics

**P**RIMARY and state convention contests were held in several states in July and August.

In New York, where there is a state-wide primary, the law permits informal party conventions to "designate" or "suggest" official tickets, and both parties took advantage of their opportunity in spite of objections raised by friends of the direct primary. The Republican convention at Saratoga selected a full state ticket headed by Judge Nathan L. Miller of Syracuse. He will be opposed at the primaries by Francis M. Hugo, Secretary of State, and State Senator George F. Thompson.

Altho Judge Miller was the nominee of the "machine" he is described as being personally of progressive tendencies, one evidence of which is the fact that he voted for Mr.

© Underwood & Underwood

Demonstrating again that truth is more melodramatic than fiction, Charles Ponzi, an Italian in Boston, earned the title of "financial wizard" by giving a 50 per cent profit in forty-five days to anyone who wanted to invest money with him. When his success became so spectacular as to attract the attention of the authorities Mr. Ponzi had accumulated millions of profit for himself and at the same time had not failed to satisfy one investor. During the subsequent run on his office he seemed to have unlimited surplus funds—the photographer who took this picture saw him cash a check for \$389,000 at the time. But bankruptcy proceedings were brought against him, he admitted to having served two terms in prison, and the rocket of his success fell as rapidly as it had risen when he was arrested on the charges of larceny and using the mails to defraud.

Hoover for President when a delegate to the Republican National Convention. Senator Wadsworth was renominated, but he, too, may have to face opposition at the primaries on account of his hostility to woman suffrage.

The New York Democratic Convention renominated Governor Alfred Smith on August 4 and selected a state ticket. One of the places on the ticket was given to a woman prominent in the suffrage movement, Harriet May Mills, nominated for Secretary of State. In spite of the opposition of Mayor Lunn of Schenectady, the convention adopted a "wet" plank, favoring such a modification of the Volstead Act as would permit the sale of light wines and beer.

In Kansas the chief interest of the state primary centered around Governor Allen's fight for renomination by the Republicans against the opposition of organized labor, which was offended by his Industrial Courts Act. Governor Allen won a sweeping victory. Senator Curtis and the Republican Congressmen of the state were also successful.

In Oklahoma and Missouri the primary elections tested the popularity of the League of Nations issue among the Democrats of the southwest. Senator Spencer of Missouri, Republican, will be a candidate for reelection. He will be opposed by Breckinridge Long, an "Administration" Democrat and an advocate of the League. The primary vote is regarded as a defeat for the anti-League Democrats.

In Oklahoma the friends of the Covenant won an even more striking victory. Senator Thomas Gore was defeated for renomination by Representative Scott Ferris. Senator Gore was an anti-Administration Democrat who had been one of the "little group of wilful men" opposed to the protection of American merchant ships against submarines. He had the advantage of local popularity and his defeat is a vindication of President Wilson's policies.

## Western Labor Riots

THE street car strike in Denver was broken by its own excesses, which not only alienated public sympathy but led to the intervention of Federal troops. On August 5 a riot broke out in the course of which two men were killed and many injured. The strikers did not confine them-

© Underwood & Underwood

President and Mrs. Wilson seem to be bringing back the Victorian era, at least in recreation. Their appearance in the park recently in this old-fashioned open carriage caused as much gossip in Washington Society as the announcement some months ago that President Wilson was going to take up bicycling.

selves to mobbing cars containing strikebreakers, but raided the plant of the *Denver Post*, a newspaper unfriendly to their cause, and wrecked it. On the following day a mob of strikers and sympathizers attacked the car barns and was repulsed with rifle fire by the police and the strikebreakers. Three more persons were killed in the attack. Federal troops were then sent into the city, equipped with tanks and machine guns, and a number of veterans of the Great War volunteered to help the police and soldiers guard the city. The labor union officials expressed deep regret at the disorders, disclaimed responsibility for them, and offered to end the strike and permit the resumption of traffic if the strikers were reinstated as a body by the company.

The labor troubles in West Frankfort, Illinois, were even more serious than the Denver riots since they threatened international complications. There is a large Italian colony in West Frankfort and much friction existed between the Italians and the English-speaking laborers. A mob invaded the Italian quarter on August 5 and again on the two following days, burning houses, looting, assaulting the Italians and attempting to drive them out of town. State militiamen were sent to quell the riots. The Italian consuls at Chicago and Springfield have undertaken an investigation. In 1891 the United States was compelled to indemnify Italy for the mobbing of some Italian subjects in Louisiana. The present case presents an obvious parallel.

International

Several men were killed and the whole city of Denver was thrown into disorder by the riots incident to the street car strike there on August 5 and 6. The strike leaders, it is said, violated an injunction of the city restraining the company from reducing wages and the men from striking. But the strike leaders maintain that the trouble was due entirely to propaganda for the open shop and to the use of strike-breakers. A thousand volunteer civilians, backed by machine guns, tried to restore order pending the arrival of Federal troops. The photograph at the left shows part of a crowd in front of the City Hall demanding the removal of police protection from the strike-breakers.

# A Little of Everything

Out in Kansas the farmer is threshing his wheat by electricity while his wife uses the same power to make toast, clean her rugs, wash her dishes and curl her hair

## Thresh Your Grain by Electricity

By C. M. Harger

With wheat harvesters demanding 70 cents an hour and threshers asking 40 cents a bushel for separating the grain, the farmer is looking for methods of reducing the labor cost of production. A national convention of wheat raisers recently declared that for the present crop \$3.13 a bushel must be obtained if they are to make a fair percentage of profit. This price is higher than the farmer has ever received, except for a short time before the Government control became effective.

To reduce the cost of his operations the wheat farmer of a considerable portion of central Kansas is utilizing electricity for power. In eleven counties over five hundred farms have electric current supplied by one central plant. The transmission lines, which furnish current to fifty-nine towns in their course over the farm country, are tapped by lines leading along the highways and with transformers at the farmyards. The farmhouses are equipped not only with lights but the farmers' wives are using electric toasters, vacuum cleaners, electric dishwashers and curling irons. The barns, garage, feed yards and dairy sheds are lighted, water is pumped and feed grinding performed by electric power.

But, most important of all in these days of shortage of man power on the farm, is the application of electric current to the threshing operations. The central station supplies a cable a half mile or more long with a transformer truck, carrying a motor and other equipment. The cable is stretched across the fields to the threshing separator and the current furnishes power which is even and steady and gives the finest surface.

The saving of man power comes from the elimination of the cumbersome engines, with their engineer, firemen, fuel

hauler and water hauler. One man from the central station at a cost of \$1 an hour supplies the power. Last season, when wheat was heavy of straw and threshing was difficult, a charge of \$100 to \$150 a day for the use of machine and engine with the men to handle them was made. This season threshers are expecting to charge 40 cents a bushel for the process of threshing. With electricity as power farmers buy a community thresher and the cost is reduced to 6 to 10 cents a bushel, something worth while when it is remembered that the producers claim that they are now paying \$2.75 a bushel to raise and deliver wheat. They have de-

manded that they have a living return, but where electricity can be utilized they have opportunity to cut the cost materially.

With a tractor to till his soil, electric power to thresh his grain, cut his silage and run his feed grinders, and motor trucks to haul his produce to market and handle other farm operations, the modern farmer is able to dispense with a great portion of the hired help formerly required. With the farm labor shortage so great, now only 73 per cent of normal compared with 84 per cent last year—then considered serious—every invention that can be added to the farm assists in producing the food-stuffs on which the nation is depending for its prosperity.

## Exit the Horse

By Robert H. Moulton

Preposterous as it may seem, not a horse is in use on the largest farm in the world, comprising some 200,000 acres. This huge farm is devoted entirely to the growing of wheat and was one result of the Government's efforts to increase wheat production during the war. The land is located on the Crow, Blackfeet and Fort Peck reservations in Montana and Wyoming. A corporation with a capital of \$2,000,000 is managing the enterprise, altho the approval and assistance of the Secretary of the Interior were necessary before the use of the Indian lands could

## The Basis of Success

By Edward A. Filene

Head of Filene's Department Store in Boston

A store has no right to succeed unless it is of real service to the community. Real service in a store consists in giving people merchandise of reliable quality for the lowest possible price, provided that merchandise is made and sold under just conditions.

The relentless application of this fundamental to every function of the business will greatly strengthen its ideals and greatly increase the success of the business. It is dependent for its value on its application to every question arising in the business and not only to some questions. So applied it will exclude anything, however desirable or benevolent in itself, that increases prices unless it is justified under the above rule.

No store can be a permanent success—and of course if it does not succeed it is not an ideal store—unless the fundamental truth that service must be the guiding purpose of the storekeeper is recognized, and it must be service not only to the public, but to the work people in the store. We should be careful to appreciate the important fact that our associates are entitled to an opportunity to work out for themselves their own remedies. This means that instead of handing down a ready-made scheme of betterment, we should give them freedom to better themselves. There can be no real freedom unless there is a margin of income over outgo, so that after the pay envelope has made provision for the necessary food, clothing and shelter, there must be sufficient remainder for recreation, for education, and for illness and old age.

Wide World

"See the World," the Navy slogan, has picturesque proof in this land cruise of American gobs on Egyptian camels. Evidently Jordan isn't a "hard road to travel" after you've been in the Navy

be secured. The reason that not a horse will be used on these acres is because all the work of plowing, harrowing, seeding, harvesting, etc., will be done by tractors. More than seventy-five of these machines are now the property of the corporation. Last fall a record of one acre plowed per minute was made, which is something quite impossible where horses are used. On one day alone more than 1,800 acres were turned and broken.

While there is a general manager of the entire farm, it is impossible, of course, for him to give his constant personal attention to every portion of it. Therefore, the farm has been divided up into units of 5000 acres, each unit having a farm manager, a general foreman and a crew of men. Each unit also has its own group of permanent buildings, modernly equipped.

One of the most difficult problems the general manager had to solve in the beginning was estimating the amount of machinery required on this vast project. This he did by figuring on the basis of 5000 acres, allowing a certain period for plowing, and estimating the number of tractors it would take to do it. Seeding was figured in the same way. Enough 11-foot seeders will be hitched behind the tractors to finish the job of seeding a unit in a week. In the same way, the number of threshers required was worked out.

## The Human Ant Heap

The builders of the Tower of Babel deliberately intended to create a skyscraper.

But the wild skyline of New York "just grew"—like Topsy or the

British Empire. Our insurgent individualism did not permit such minute building regulations as in Berlin and other German cities, nor did we realize in time how rapidly the industrial whirlpool was sucking in the population from the country and from foreign lands. When New Yorkers first became conscious of the problem of congestion they were already living in ten-story apartments and working in forty story office buildings.

What does congestion mean? Darkness: The shadow of the Equitable building on a December noon extends for a fifth of a mile and covers seven and a half acres. The transportation tangle: Mr. MacAneny, former president of the Board of Aldermen of New York, estimates that the daily population of the Woolworth Building alone would fill the subway cars for thirty minutes if they all wanted to go in the same direction at the same hour. Danger: The Board of Health prints figures showing that over a hundred babies are killed and several hundred injured every year by falling from windows, fire escapes and roofs. Crowds: If New York State were "built over" as densely as Manhattan borough it would contain three times the entire population of the world.

CONGESTED NEW YORK HAPPY LOS ANGELES  
Greater New York and Los Angeles are of about the same area: but their use of the space is very different. In these diagrams comparing the proportion of people to land in the two cities: each dot represents 25,000 people

Wyoming has more bank depositors in proportion to the population than any other state; Montana and Idaho come next.

\*\*\*

There are more than twenty million bank depositors in the United States, or nearly one bank account to each five persons.

\*\*\*

During the Great War suicides in the United States decreased by more than one-third according to the insurance companies.

\*\*\*

Within the last fifteen years it is estimated that the United States has lost two-fifths of its bird life. Only three states gained in the estimated number of birds within their limits.

\*\*\*

Altho the United States is a great producer of peanuts it imported in a single year more than \$40,000,000 worth of peanuts and peanut oil.

\*\*\*

In the course of a heavy thunderstorm this summer New York City lost 15,000,000 hours or more than seventeen centuries of sleep, estimates a metropolitan newspaper.

## The "White Peril"

The meek may inherit the earth, but the civilized inhabit it. It is estimated that since the early part of the eighteenth century the population of the world has increased by about two-thirds; roughly, 650,000,000. Half of this increase must be credited to the

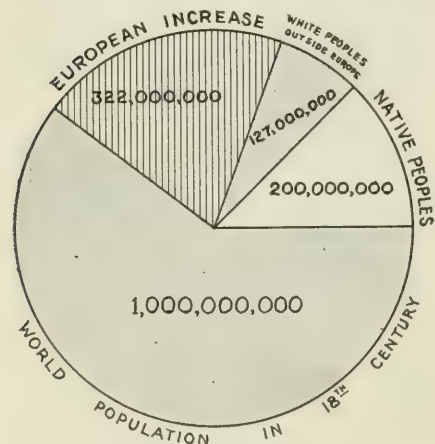

© Keystone View

This "human ant heap" is an expensive luxury dangerous to health and even to life. But we can't seem to get along without it

tiny little continent of Europe. According to a statistical estimate by Mr. W. F. Willcox in the *American Economic Review*, the number of Europeans increased from about 130,000,000 in 1741 to 452,000,000 at the outbreak of the Great War. To this should be added an increase of 127,000,000 in the "white" or European population outside of Europe, chiefly in America. This leaves only about 200,000,000 increase for all the "native" or "colored" peoples on earth. It is time for the Chinese to do some worrying about the "rapid multiplication of the white race."

The comparatively slow increase of non-white population is not due, as some suppose, to extermination by the rifles, luxuries or diseases of the white man. On the contrary, those parts of the world which have become most thoroly Europeanized have shown the most rapid increases of the native population. In exceptional cases, of course, contact with the European colonist has meant a decrease in native population; for example, among the Indians of the eastern United States, the Polynesians of the Pacific Islands, and the Australian blackfellows. But, on the other hand, the little island of Java has increased its native population tenfold since the beginning of the nineteenth century under the efficient rule of the Dutch, and now has almost as many inhabitants as England. Probably the increase in population in Java alone is greater than all

EUROPEANIZING THE WORLD

Three-fifths of the circle represents the world's population two hundred years ago, inclusive of all races. As the shading of the rest of the circle shows, the increased population is mainly of European stock

the decrease in native population, due to contact with the whites, the wide world over since colonization first began. But we must add to the increase in Dutch Java, the still greater increase in British India, and the marked increases in other well-managed colonial dependencies such as Egypt, French north Africa and the American Philippines. Japan, also, has nearly doubled its population since it began to assimilate the white man's industrial civilization.

But when we turn to those parts of the world which have remained in the savage state, like central Africa, or have clung conservatively to their old

An enthusiastic young American on Armistice Day left his tin hat on this statue in the Crystal Palace Grounds in Paris—and the French have let it stay there as a souvenir of "Les Americains"

civilization, like China or Asiatic Turkey, the population does not seem to increase at all. Of course, this is hard to prove, since exact statistics are lacking outside the area of European influence. Chinese "official statistics" are so unreliable that we cannot tell with certainty whether the great republic of the Orient has thrice or four times the population of the United States. But Mr. Willcox gives evidence for his opinion that the natural increase in the number of Chinese is very great in "normal" years, but is wholly eliminated every few years by famine, flood or civil war. The great Taiping rebellion of the middle of the nineteenth century, for example, probably cost China more lives than the Great War cost the whole world.

The uncivilized parts of Africa, Asia and the East Indies are, in comparison with their vast areas, almost uninhabited, as was the greater part of America in the days of Columbus. If the Dutch East Indies generally were as densely peopled as Java they would contain as many inhabitants as all Europe; yet in natural advantages Borneo, Sumatra and the rest are comparable with Java, the chief difference being that the Dutch haven't "got around to" developing the other islands as yet. In a word, except for the influence of modern civilization, the population does not tend to increase. It may

remain stationary at a low level, as in Africa, or a high level, as in China, but bad sanitation and bad government fix a limit somewhere which it cannot pass.

## Five Million Laborers Wanted

Everybody has his own theory to account for the high cost of living. The Inter-Racial Council, which favors a more liberal and positive immigration policy, points out that American industry is short some 5,000,000 unskilled laborers. The manufacturers report that they cannot get men and so are compelled to limit production, and limited production means higher prices.

What became of the missing millions? Mr. Barr, President of the Inter-Racial Council, thinks that part of the labor shortage is due to the general substitution of the eight-hour for the ten-hour day, but that most of it can be accounted for by the drop in immigration. If immigration and emigration had continued for the five-year period of 1915 to 1919 inclusive at the same rate as during the months immediately before the outbreak of the Great War there would have been an excess of immigration over emigration of more than 3,800,000. Actually 1,612,743 persons came to the United States and 1,180,859 departed from it during that period; a net immigration of about 432,000. This means that some 3,370,000 persons whom we would have had as permanent settlers in the United States if the world had been at peace are still in their home lands or dead on the battlefield.

There has been very little immigration of unskilled labor since the armistice. Mr. Barr estimates that from November, 1918, to October, 1919, five times as many unskilled male laborers left the country as entered it. Most of the recent immigration has consisted of women and girls. In some weeks several times as many women as men entered New York. It appears that a number of European Governments are deliberately discouraging the emigration of laborers in order that they may work for the rebuilding of their own countries.

Louisville, Kentucky, has found a new way to reduce automobile accidents. Gravestones have been set up at several corners in the downtown district with the legend "A Fatal Accident Occurred Here Last Year." There is something about the plain statement of fact more severe than any sensational warning. In the first week after the "gravestones" were put up not one serious accident happened

# Letters to the Great and the Near Great

By John Citizen

Mr. Franklin D. Roosevelt,  
Anteroom of Vice-Presidential  
Chamber

Dear Sir:

The shadow of a great name is sometimes an embarrassment, especially when the man who bore it once occupied the same position to which you now aspire. But I think you will bear up under the inevitable comparison as well as anyone. Theodore Roosevelt's career is written in history, yours lies before you, but you have begun it in the same progressive spirit and with the same ideals of diligent public service. Go forward and good luck attend you!

Yours sincerely,  
JOHN CITIZEN.

Governor Percival W. Clement,  
State House, Vermont

Dear Governor:

You have unquestionably a right to your own opinion on the question of equal suffrage and you have certainly

given a proof of your courage in refusing to change your opinion from motives of political expediency. But it is a pity that in all these months that the question has been pressed on your attention you have found no better ground for refusing to call the Vermont legislature into session than the fact that (to quote your own words) "the provisions for changes in the Federal Constitution, to which we Vermonters are loyal subscribers, are in conflict with those laid down in the Constitution of Vermont." You declare that, "As it stands and is interpreted by the Supreme Court today, the Federal Constitution threatens the foundation of free popular government."

Such arguments one might have expected to hear in 1791 and even in 1860, but it is passing strange that the ghost of the old doctrine of state sovereignty still walks the country in the full daylight of the twentieth century. Whatever its defects the Federal Constitution has the right of way over any local laws or customs, however excel-

lent. If this were not so the United States would speedily become the United States. To refuse to permit the Vermont legislature to meet and ratify the nineteenth amendment in the manner laid down by the Constitution to which the amendment refers, on the ground that Vermont amends her state constitution in a different fashion, is hardly better than legalistic pedantry.

A stronger argument which you use is that no constitutional change should be made until the people of Vermont have been directly consulted.

But who are "the people"?

Mary Citizen says that she is one!

Disappointedly yours,  
JOHN CITIZEN.

General Ludendorff,  
Berlin, Germany.

Geliebter Herr:

You promise to rescue civilization from Bolshevism if given a free hand. Many thanks. But we remember that it took five years to rescue civilization from Ludendorffism. JOHN CITIZEN.

## If You Were an Immigrant

(Continued from page 201)

immigrants, with dishonest employers, who for greed of gain have instigated and materially aided and abetted the maneuvers of these speculators, with legislators who have failed to provide the necessary laws for a well-balanced distribution of immigrants thruout the country, with the labor unions, who, failing to realize that the immigrants of today are the labor army of tomorrow, preferred to remain egoistically closed against newcomers instead of attracting and protecting the immigrant mass which, owing to the large demands on the labor market, was infallibly destined to flow here until the demand had ceased.

When the causes which had permitted the exploitation of the new arrivals disappeared, wages followed an ascending scale and the country reached a state of prosperity and well-being which had never been reached before. Then, because of the war, an abnormal situation was created in which America was called upon to supply all the markets and to make up for the cessation of importations from the belligerent countries, and as a result the demand for labor again exceeded the available supply and therefore the increase in wages, especially in certain trades, assumed the proportions responsible for the existing situation which we all view with alarm and the remedy for which lies only in a rapid numerous influx of new workers: to reestablish a normal equilibrium between labor and capital, to maintain and increase the industrial and agricultural output of the nation, it is necessary that we have new immigration.

This remedy may be regarded with hostility by those labor organizations which, having lost all sense of proportion, would substitute for the so-called tyrannical usages of the capitalist class, their own tyrannical laws. It may alarm those whose vast accumulated wealth offends all those who have any rational sense of justice. It may seem unfair to those who have become accustomed to the comfortable and profitable humdrum of methodically cheating their equals and who are fearful of honest competition. It may spoil the plans of those who do not see that freedom of thought and conscience has traveled a long way during the last three centuries. But the importance and necessity of this new immigration is clear to those who love this country for what it will become as well as for what it is; to those who consider it an eternal and intangible ideal, not a convenient and alterable contingency; to those who do not limit their efforts to securing benefits which they alone may enjoy, but who know that it is the duty of each one of us to sow for the harvest of future generations.

Today we are all, more or less, misplaced. As a result of the artificial situation created by the war we have become accustomed to an abnormal mode of living. We have cultivated everything except a common sense of sincerity. We are like so many invalids, who, having become accustomed to remain for long periods in bed and be nursed and petted, are content with the bad air of the sick room heavy with the odor of disinfectants, and refuse to step out thru the wide open doors

into the great sunshine and the fresh air which is life and regeneration.

Instead of seeking Utopian solutions which range from insensate internationalistic schemes to a restoration of jingoism, upon which the experience of half a century has passed adverse judgment, we should accept with calm serenity this new influx of energies onto our shores; we should try to avoid an increase in the urban trend of our populations, which is the major cause of most of our present troubles, and above all direct these new immigrants from southern Europe, especially the Italians, toward the virgin fields and abandoned farms which abound in this vast country, where they may become producers of the necessities of life and at the same time consumers of the output of our industries. But—and this is most essential—let us do this with that spirit of sincerity and brotherly love championed by Commissioner Wallis.

Let us help these pilgrims to our shores fulfil the hopes which instigated them to emigrate; let us so treat them that they will feel themselves surrounded by a bond of sympathy; let the instinctive love for the soil they will have cultivated, develop; then, the desire to become citizens of their adopted country, to take an active part in the life of the nation, to feel that they are brothers among brothers, equals among equals, will arise spontaneously in their hearts, and in this spontaneity lies the soundest guaranty of loyalty to the traditions which inspire us and the institutions which govern us.

New York

# Simple When You Know It

(Continued from page 206)

infinite patience. And the operators chosen for the task have had to qualify with 100 per cent hearing ability and knowledge of radio telegraphy.

For the beginner, under-water sounds are difficult to locate definitely. He cannot tell whether he hears a sound in the right or the left ear. Gradually, however, he is able to distinguish the ear in which he hears loudest the expected sound. In operation the sound may be heard, say, on the operator's right ear. He then immediately revolves the steering or direction wheel of his instrument until he hears the sound equally in both ears. That is to say, he learns to "place" it in the center of his forehead just above the root of his nose. When this has been done, he reads the dial of the compass scale on the shaft of the hydrophone and knows that he has located the submarine's direction. By carefully judging the strength of the sound heard, the operator estimates the distance it is from the ship. The cultivation of accurate distance-hearing has shown marvelous results in the work of the American sailors. Often oper-

ators have estimated the distance between a sub-chaser and a submarine to within 100 feet. When the operator has located the direction of the submarine sending signals or thrashing thru the under-currents of the sea, he immediately communicates with the captain thru the speaking tube. Then the death-like silence of the listening period is broken by feverish activity as the sub-chaser gets under way in the direction indicated by the operator. After a run of approximately the required distance, the engines are stopped and everybody returns to his barefooted silence, while the operator once more places the stethoscope to his ears. If his first estimate has been sufficiently accurate, the "fire" signal is given, the sub-chaser gets up full speed ahead, and the "ash cans," set to explode at different depths, are released. The concussion caused by their explosion often lifts the sub-chaser partly out of the water; and unless full speed ahead were maintained the chaser itself would be in danger.

After several enemy submarines had been destroyed the captains of the re-

maining enemy vessels decided to fool those "stupid Americans" by bluffing them. Their plan was to play "possum." When they knew they were discovered—and here it is well to remark that the Germans had listening devices on their submarines—they would dash off their course, run for a few miles, and then play "dead." But the chasers soon discovered this trick. Upon hearing a submarine propeller, or the hammer-tapping, they dashed in its direction; but instead of making the full estimated distance, ran only a short distance, stopped, and listened again. Then the operator heard that a new course had been taken by the submarine, and the chaser started off in the new direction. Because of the surface vessel's superior speed it was able to overtake the other. However, individual cases have been known of sub-chasers which hovered directly over a submarine, when the latter, thinking herself free, foolishly set off on a new course after playing "dead" for some time. It isn't necessary to dwell on what happened to those submarines.

New York

## Our Senator Harding

(Continued from page 200)

cess after his withdrawal from active participation. When The Harding Publishing Company was incorporated a portion of the stock was offered for sale to the employees, so that those who wished to do so could share in its profits. His methods of enlisting the coöperation of his employees, of drawing upon the initiative of each to the limit of his capacity, and, finally of rewarding effort, could hardly be improved upon. The flexible organic adjustment among labor, management and capital, which is urged by the economist, Harding has quietly put into effect in his own business plant.

In 1899 when Harding's name was presented in convention for his first public office the following statement was made: "Astronomers tell us that every star is a sun. In its genial, sunny way, the *Marion Star* has striven for years to throw the cloak of Democracy from the voter's back. It is read in hundreds of Democratic homes, and by its sound arguments, its appeals to justice and its witty exposure of sham and fraud, it has exerted an influence which no bitter party organ could have exercised." Today the *Star* is a newspaper of from sixteen to thirty full-sized pages as enterprising and trustworthy in news service, as well printed, as carefully edited as any daily in Ohio, and enjoys a circulation so extensive that the returns from advertising are highly gratifying.

If Mr. Talcott Williams is right in asserting that Harding never achieved enemies, then they must have been born or thrust upon him. No man in Ohio ever defeated and outlived a more persistent personal enmity than faced this

Underwood & Underwood

Senator and Mrs. Harding have always enjoyed all their work and play together. It was Mrs. Harding's business insight that first helped the *Marion Star* get its financial start

editor in his early struggles. His foes not only rolled stumbling blocks in his road to professional success, to social development, to political advancement, but they also poisoned the mind of his father-in-law (a man of wide influ-

ence in the community) to such an extent that for fifteen years after their marriage the father never entered his only daughter's home or spoke to her husband. And when reconciliation finally came it was Mr. Kling who broke the bitter silence of two decades. In all these years Harding never retaliated; not even when Mr. Kling was nominated for Congress and thus became a fair object for newspaper comment. It just seems as tho early in his career he had run the editorial blue pencil thru the word hate, and adopted as his motto Lincoln's "malice toward none."

Not without reason has Warren Harding often been likened to McKinley, whom James Boyle, his private secretary, stamped as "the kindest man I ever knew." This disposition, coupled with great generosity in the disposal of time as well as money, makes him an ideal companion, not only in hours of ease, but in calamity and under the petty irritations of wearying journeyings. In parenthesis it may be remarked that both Senator and Mrs. Harding have visited nearly every corner of the United States and Canada; also the Bermudas, Cuba, Jamaica and the Hawaiian Islands; and have made two tours of western Europe. Their home was truly a social center, the scene of frequent informal gatherings.

His affection for his mother (who returned it all) was truly wonderful. As long as she lived every Sunday morning saw him making her a call, bearing a gift of flowers. During a long critical illness when neither physician nor surgeon held out any hope for

his wife's recovery. Harding showed his devotion and Scotch tenacity, saying she must get well. And she did.

For the best of reasons he is the most popular man in his home town. He has shown not only a desire to assist every worthy enterprise, whether industrial, social or religious, with a liberality which often outran his means; but also in all activities consideration for the welfare and happiness of others. In a vain endeavor to save a factory from bankruptcy and its numerous stockholders from consequent loss he subscribed \$10,000 at a time when that sum spelled a fortune for him, and lost every cent with the smile of a true sport.

One consistent practice has always marked Harding's life, that of seeking and cultivating the acquaintance of all the worth-while people he could meet without intrusion, in apparent obedience to Darwin's principle of natural selection. He makes and holds friends for the simple reason that he values them as the best that life can give. In this respect he is endowed with the instinct, facility and fascination so marked in the character of Mark Twain. Men, women and children love him not for what he has done for them, still less for what he promises to do; but rather for what he is. Long before he attained eminence, neighbors began calling their boys Warren, so that now it is hard to count the list of his namesakes. Some are grown men, imitating his example and doing him credit.

Those who class the Republican candidate for President as conservative, or even reactionary; meaning thereby reverent of antiquity, satisfied with the existing order, content to pad along the path beaten by other men's feet, have another guess coming. He starts things. To illustrate, far in advance of the times he introduced the type-setting machine and the special news operator into his office and the game of bridge into his social circle. And he is decidedly a man of action. Nearly twenty years ago Governor Nash, in confidential talk, paid this tribute: "There seem to be other men in the Senate as able as Harding; but when I want something accomplished I always go to him. Somehow he gets things done." The writer has watched him in many directors' meetings, in political conventions, in assemblies of all sorts. When the tumult and the shouting died Harding was the one to offer the solution, or to reconcile antagonisms. He has always proved himself to be a leader; because he guides rather than drives, and possesses a mind patient, amiable, intent upon right doing, and capable of decision when the time comes to decide. He is progressive, not aggressive. Of all senators he was the last to be classed in the "group of wilful men." Firm in fundamental convictions, such as faith in constitutional government, in protection of domestic industries, and in the efficient power of justice, he is never stubborn. He is conservative only in the sense of being a conservator of what is worth saving.

Marion, Ohio

## An alarming condition among American children

*School authorities say one child in every three—rich and poor alike—is undernourished*

FROM no less an authority than Dr. Thomas Wood comes the alarming statement that no fewer than 5,000,000 of America's school children are suffering from malnutrition. Dr. Wm. R. P. Emerson says the number *undernourished* is greater than that—one child in every three!

Fathers and mothers who live in cities may think it's a condition of the poor; but statistics show it equally prevalent among the children of the moderately well-to-do and the children of the rich.

### In country and city

Parents who send their children to country schools may lay the blame on city life; but, says Louise Stevens Bryant, "rural school children on the whole show a higher percentage of malnutrition than do city children."

Wherever you live, whatever your circumstances, the chances are about one in three that *your* child is among these millions handicapped.

Lack of sufficient food is not necessarily the cause of this condition. Most often it comes from lack of food of the right kind, from an insufficient supply of certain food elements.

### The 16 vital elements

Sixteen natural food elements are needed to keep the normal human being strong and well and filled with that abundant vitality which provides for growth and the warding off of disease.

In the wheat grain Nature provides these sixteen vital elements in more nearly the proper proportion than in any other food, save possibly milk.

But many of the most important of these are lost in modern methods of wheat preparation, through removal of the six

outer layers of the wheat grain, commonly called the bran.

### We lose too many

We get a considerable part of the protein, the starch and the fat; but we lose practically all of the mineral elements which our bodies indisputably need—the iron, for instance, which makes red blood to carry the oxygen upon which all of the energy-yielding processes of nutrition depend—the calcium and phosphorus which build the bones and the teeth.

Only in the whole wheat grain can *all* the needed elements be secured.

### How Nature tempts us

Nature tempts us to take these elements of energy and health—tempts with delightful tastes and flavors.

As in Pettijohn's a whole wheat breakfast food, rich and gratifying to the palate.

Its steaming fragrance awakens sluggish appetites in old and young alike.

For its nut-like sweetness children love it; for its abundant nourishment grown-ups prefer it.

With cream and a bit of sugar, if you wish, it makes a vital energy ration of luscious flavor.

If you have a child who shows any of the signs of malnutrition (see panel)—try Pettijohn's.

If you yourself have been feeling below your normal in vigor and vim—try Pettijohn's. Perhaps with you it's simply a matter of relieving congestion of the intestinal tract. Pettijohn's with its natural bran laxative will soon set you right.

Your grocer has Pettijohn's—or will gladly get it for you. Make tomorrow's breakfast of this sixteen-vital-elements food.

Made by the Quaker Oats Co., 1625 H Railway Exchange Building, Chicago, U. S. A.

An official in Chicago's public schools has said: "It is noticeable that the children of special rooms for backward children give evidence of malnutrition. The backward child is usually a case of malnutrition."

### Is your child

Run down  
Frail  
Delicate  
Under-developed  
Pale  
Always tired  
Easily upset  
Irritable  
Backward in school  
Not himself

?

These are signs of malnutrition! The chances are your child needs more of the sixteen-vital-elements food.

Reopens Wednesday, October 6th

## The Veltin School

FOR GIRLS

160 and 162 West 74th St., New York

A Fireproof Sanitary School Building.

# BON-OPTO

## SHARPENS VISION

It's a system of treating the eyes at home; is practiced daily by hundreds of thousands of people with great satisfaction. The Bon-Opto system quickly relieves inflammation of the eyes and lids. It cleanses, soothes, and rests tired, dusty, work-strained eyes and is a help to better eyesight. Ask your druggist. He knows. He will refund your money without question, if you are dissatisfied. There is no other home eye treatment like Bon-Opto.

## Let's Give 'Em All a Fair Start

(Continued from page 203)

necessity of protecting children, not grudgingly or cheaply, but as an imperative national requirement.

What of Central Europe? It is grateful, touchingly grateful to the United States for the food and help which have kept uncounted numbers of children alive and which have aided in tiding over a terrible emergency not yet ended. Every country of Central Europe has child welfare problems of the greatest urgency and of such extent that they include practically all the children of each country. The United States has children carelessly fed, both rich and poor, but it has no hungry children, as Europe knows the word.

Feeding is still, as it has been for six years, the primary question over there, and it will be necessary to defend against the consequences of "hunger, the cruellest weapon," for an uncertain period in the future. The children who survive early childhood clearly require an abundance of nourishing food as they enter adolescence. Thus in Vienna, while the infant death rate has been until recently fairly stationary, the ten to fifteen year old children who have lived from one-half to one-third of their lives under war privation show a doubled death rate with a high tuberculosis mortality.

In last December and January the American Feeding Society examined in the schools 186,617 children, 96,789 were classed as "very badly underfed," 63,402 "badly underfed," 19,694 "underfed," the remainder, 6,732—less than three per cent of all—"good condition."

The European Children's Fund has this year fed 2,600,000 children in Central Europe—one-half of them in Poland—but it could only take the children who showed on examination the greatest need. It has given ordinarily one supplementary meal daily. In one small area two meals daily were given and the vigorous appearance of these children was appallingly superior to any other groups seen.

We are all familiar with the reports from Belgium, from Lille, from Treves and from all the areas where the war bore hardest. They all emphasize the physical dwarfing, the mental retardation from underfeeding during the growing years.

As the children are seated at a feeding station, cheerful and busy with their very palatable food, their appearance seems unexpectedly good, but a more careful observation of these children on the streets or in the schools discovers that the majority has a strange look of dullness as to hair and eyes, while the skin, also dull, too often shows eruptions.

In Budapest in two schools visited, one quite humble class, one professional, it was not possible to observe any improved appearance among the children of the professional class, and one is again reminded of the reality of the new classification Les Nouveaux

Pauvres—those who are too proud to ask charity and whose savings are exhausted. How infinitely rich and unspoiled is the stream of young life in our country as compared with any of the war countries.

Our population has not been reduced by lowered birth rates, and notwithstanding the loss of immigration from abroad, we are richer by about 5,000,000 children, all native born.

Every country in Central Europe has undoubtedly lost heavily in numbers by lessened births, and by deaths of children over nursing age. (It is noteworthy that owing to the nursing by mothers and extraordinary public provisions, the infant mortality rates were little increased by the war. In England it was reduced.) But the greatest losses persist, chief among them, the reduction of physical vigor, the dwarfing of body and retardation of mind, all by underfeeding; the deprivation of schools, the delinquency which has followed the breaking of family life and the social disorder.

For example, Serbia was compelled to close her schools when she entered the Balkan war in 1912, and eight years without schools have made an illiteracy problem which would be staggering if there were no other problems, and there are many.

The juvenile court in Vienna has many boy smugglers of food.

In Poland it is estimated that 26,000 teachers will be needed for the new schools. Polish will be their language; but for one hundred and fifty years the schools have been taught in the language of the conquerors, so new school books must be printed.

I have ignored the misunderstandings, the hostilities, the wars and the preparations for war which hinder all the arts of civilized progress in this great area. As this is written there seems a hope that a time is now arriving when peace may permit a sane life for each country. One great problem these countries have in common. It is the one whose difficulties I have tried to suggest—the protection of child life.

Nothing impresses the traveler more than the courage with which in all the tumult of this time certain great-minded men and women in every country keep aglow the ideals of just social democracy. Beyond all words of admiration are the courage and wisdom with which men and women carry on almost impossible tasks of keeping children fed and clothed and sheltered and in schools and at the same time constructing systems of free universal education and health protection. They are competent for any possible undertaking. Given peace and returning wealth, and out of their experience will come results of the highest importance in developing standards of child life worthy of democratic peoples. We have helped them. They may soon teach us. They are leveling up. Shall we do less?

Washington, D. C.

(Continued from page 205)

tional supremacy. They are needed in building railways, blasting tunnels, digging roadbeds, operating mines, clearing farms, running subways, planting orchards, excavating ditches, reclaiming swamps, doing many other kinds of agricultural and engineering work. In six months the du Pont Company lately received inquiries from 30,000 farmers about the use of dynamite. The company plant, occupying 400 separate buildings on 1640 acres of land, produces 50,000,000 pounds of dynamite a year.

The ramifications of industrial chemistry are almost unbelievable. Hardware stores, leather stores, drug stores, stationery stores, carry hundreds of articles for everyday use made in a chemical factory.

The world shortage of leather stimulated the du Ponts to engage in the manufacture of leather substitutes, of which Fabrikoid is the most popular. Millions of yards a year go into furniture, baggage, books, automobiles, house equipment, clothing, wall coverings, traveling goods, and scores of other daily necessities and comforts of life.

A real human being hates anything artificial. The very word "substitute" is odious to him, and equally the store clerk who tries to sell him such a thing. But when, for example, a substance is produced that more than rivals ordinary leather in appearance, cost, variety and durability, the fabric should not be termed a "substitute." Rather, it is an equivalent. A man can use it and not feel cheap—as he does feel, or should, when he buys a substitute.

Our space is nearly gone. A description of the organization and operation of the du Pont establishment would take another article as long as this. We cite merely a few of the notable features that are most striking.

The company's directors are men who do things for and in the company—not the proverbial high-hat dignitaries paid for a bland smile and the loan of a proud name. Of the twenty-eight directors, twenty-five are vice-presidents of the parent company or subsidiary companies, and each is the head of his own. The directors' meetings are as practical, purposeful and resultful as a shop talk of real executives. No banality, no false dignity, here. A vice-president should not be a cipher, as usual, but a fractional president, as in the du Pont Company. When the United States Government decides to make the national vice-presidency a job instead of a joke—if that time ever comes—the layout of the job might well be formed by the vice-president of an organization like this.

One of the great national problems has been to surpass "German efficiency" and be able to guarantee that chemicals, dyes in particular, can be just as good, even better, if "made in America." Not until the du Ponts perfected standardization of dye colors was it possible to match a tint or shade of any but German dyes. When you wanted a

A REMARKABLE STUDY OF LABOR'S NEW MASTERSHIP

## Labor's Challenge to the Social Order

By JOHN  
GRAHAM  
BROOKS

In this thoughtful work, a seasoned observer of social phenomena analyzes the recent shift of social control into the unaccustomed hands of Labor, and answers the questions, "What will Labor make of this power? And what will the rest of us do meanwhile?" The rich concrete experience of thirty years is cited to support his contention, "Democracy can and must be its own critic and educator."

**THE INDEPENDENT**

311 Sixth Avenue, New York City

certain blue, for example, you could not order by a catalog number with any likelihood of getting the hue desired—unless the maker of the dye was a German. The du Ponts now have such control of the pigment processes that the outcome is identical, for shade and wear, strength and delicacy, evenness and beauty, with the highest class German products. A staff of 100 expert chemists to watch the daily control of dye blending, a store of \$9,000,000 worth of chemicals on hand for instant use, and a miniature paper machine, woolen mill, other apparatus for testing colors during manufacture on a hundred kinds of fabrics for which the dyes are made; these examples of modern method show something of the care taken to keep the colors "fast" in our clothing and house furnishings.

THE salesmen of the company are as efficient, as reliable, as the chemists. More than 500 salesmen, actual or potential, are now taking regular instruction in the particular branch of their specialty—paints, explosives, chemicals, Pyralin or Fabrikoid; each course having started with a lecture and pamphlet on the history of the company, and extending over subjects like traffic, storage and delivery, advertising, sales, policies, orders, complaints, competition, associated companies. The student salesman, after passing both written and oral examinations under a department head, goes through a system of trade call tests; he calls on a member of the sales department, who assumes the role of a prospective customer, listens to the argument of the student, watches the method of presentation, regards the student's personal appearance, notes the general impression he creates, and marks him accordingly. The student visits the company plants to learn all about the materials, methods, manufacturing processes. The final grade of the student is the average percentage from all these tests.

The popularity of the salesman's course brought requests from graduates for new educational material prepared from time to time, and aroused so much interest in other departments that non-resident workers asked for instruction. The correspondence plan was therefore adopted, with headquarters and supervisors at Wilmington, so that employees anywhere in the world could have personal training and personal touch with the head officials of the corporation. This type of mail course feature, self-originated and self-contained, is not offered as preparation for advancement by any other business house in the world, so far as known.

The company takes delight in rendering unusual services to the public as well as to employees. For example, there was no good hotel in the city of Wilmington, and no comfortable theater, when the du Ponts began the erection of their home office building. So they just incorporated a first-class hotel and theater in the office building. The ownership of the hotel by the corporation grants the possibility of extending a royal welcome to the distinguished

guests coming from all parts of the world on business or pleasure.

And the departing worker is treated as cordially as the approaching visitor. When the sudden close of the war put thousands of munitions workers out of a job, the company called in the nation's great employers to redistribute labor in the quickest, easiest and best manner possible. Hundreds of du Pont workers, finding new positions elsewhere, could not afford the expenses of moving their family and creating a new home on short notice. The company solved the problems by advancing the money. Where the employee had rented a house near the plant or bought new furniture, the company took the house and furniture off his hands. Old employees naturally keep their friendship for the du Ponts. It is recorded that an ex-employee in a far city, hearing a stranger malign the du Pont organization tho densely ignorant of its character, was with difficulty restrained from doing the critic bodily harm! A man who wants to fight for his employer—not against him—is a refreshing sight in these days of loafers, agitators and strikers.

Forty-four per cent. of the stockholders are employees. The men's lives are protected by a group insurance plan. Good work is rewarded by a system of "merit pay," depending on length of period of employment, irrespective of other increases gained meanwhile. A community store, established by the company to supply the needs of the men and their families, grew out of conferences between officials and workers on improvement of living conditions; the store offers different grades of standard quality goods at prices lower than available anywhere else.

A man with a grievance always gets a hearing and a guarantee of fair play. The Employees' Conference Plan was instituted to provide consideration and discussion of all matters affecting relations of employer and employee, with the viewpoint of the latter in the foreground. The natural desire, and occasional request, of the men for more pay is met by a full presentation of the facts on both sides, analysis of current living costs, comparison of increase of costs and of wages, study of conditions at other plants and in the surrounding country, final conclusions based on elements of abstract justice, of sound business policy, and of the joint interests of employer and employee. Decisions thus rendered have always been approved by the men. It is even recorded that they have denied their own request for higher pay, when they found the request wasn't fair!

Here is suggested the solution of all labor troubles. If every employer and every employee were absolutely honest and thoroly informed, there would be no labor troubles. Mutual interests are always identical. Mutual benefits are always ideal. The world is waiting for the industrial evangelist who can prove, instead of merely preaching, that a man should earn what he gets, and get only what he earns.

## If You Send Us Poetry—

Remember that with paper at its present price every extra line deducts from your chances.

Remember that poetry which contains prosy or unmetrical lines is not poetry. A single flat phrase or limpy line affects a short lyric as a single drop of ink would affect a glass of water.

A poem should have something to say. There is too much "mystical" magazine verse of this type:

Arctrob in the silky twilight  
The low moon moans and flits  
Like a battered bat on a skylight  
Asearch for my weary wits.

A poem should have something to say; but that does not mean that it should have something to prove. We are suspicious of such verse as:

The cost of living is higher every day  
Because transportation costs too much to pay;

And we must save the nation  
By getting rid of inflation

Invent your own imagery, metaphors and epithets. Do not remind us of Bartlett's Quotations. Do not write such conventional spring verse as:

And now I tune my rustic reed  
To pipe beside the babbling brook.  
My shepherd's crook on flowery mead  
I lay, and sigh with pensive look.

But, on the other hand, mere eccentricity does not win a place. Don't do this:

I embrace the scarlet Revolution . . .  
It is more dear to me than apple pie,  
Or the lush murmurs of the sea lions at the park,  
Or a rainbow on East Grand Street,  
Or the lithe odor of burning rubber in the factory.

Be concise, compact, vivid, musical, imaginative and sincere.

Or enclose stamps for the returned manuscript.

## Remarkable Remarks

MARY PICKFORD FAIRBANKS—It's an awful job to dress me.

KING ALFONSO OF SPAIN—We must work for greater Spain.

MRS. WARREN G. HARDING—I am taking care of my husband.

HARRY COLLINS—Dress this autumn will be simpler in color without becoming somber.

H. W. GOSSARD—The foundation of good dress is an understanding of proportion and grace of line.

ELEANOR GUNN—Nothing can be imagined more delightful than the lingerie frocks which Paris has sent us.

BLASCO IBANEZ—The most magnificent well-dressed women that I have seen anywhere in the world were those who

walked down Fifth Avenue on Christmas morning.

ED. HOWE—The moving picture men have not the slightest trace of literary judgment, not the slightest trace of dramatic judgment, not the slightest trace of honorable theatrical judgment.

ALVIN JOHNSON—There will be several thousand votes cast for the Democratic candidates in the belief that Franklin Roosevelt is none other than the T. R. who so lately filled the world with his name and fame.

QUEEN MARIE OF RUMANIA—I felt rather mortified when in Paris just after the armistice I had to attend receptions frequented by all the beauties of the world and was not able to wear some of my splendid jewels.

## New Plays

*Ladies Night* at a Turkish bath. Bare farce. (Eltinge Theater.)

*Tickle Me*—A melange of girls, jazz, novelties and Frank Tinney. Louise Allen is refreshing as Mary Fairbanks. (Selwyn Theater.)

*Come Seven*, by Octavus Roy Cohen. Absurd and untruthful but amusing burlesque of negro life. All the parts taken by white players. (Broadhurst Theater.)

The difficulties of a young man who inherits a flapper boarding school provide amusement in *The Charm School*, a comedy by Alice Duer Miller and Robert Milton. (Bijou Theater.)

Luna Park, Coney Island, the acme of all shore pleasure cities, is better than ever this year and this is saying something. No summer visitor to New York should fail to take in Luna Park.

*Good Times*—The Hippodrome is one of the unmissable sights of New York. Everybody goes there and everybody finds there something he likes. The diving is the striking feature of this year's production. (Hippodrome.)

*The Americans in France*. Eugene Brieux dramatizes the conflict of the American spirit of innovation with French traditionalism. Explains why the two great sister republics sometimes "get on each other's nerves." A serious play, with the parts well taken. (Comedy Theater.)

*Enter Madame*—One of the six best plays that has blessed Broadway for several seasons. Gilda Varesi is a lightning artist in emotional acting and she plays the irresponsible, lovable, stormy prima donna with subtlety and power. Norman Trevor is excellently cast as her stay-at-home husband. (Garrick Theater.)

*Opportunity*—A rather crude but thrilling melodrama in which the hero makes a fortune, wins a wife, takes to drinking, sows plentiful wild oats, loses his fortune, loses his memory, almost loses his wife, regains his memory, regains his fortune; and as the curtain falls everybody is left confident of living happy ever after. (Forty-eighth Street Theater.)

# Lincoln in London

The statue just unveiled near Westminster Abbey is America's gift to Great Britain

Keystone View

Abraham Lincoln is more than a national hero. In Great Britain he is held in greater honor, if possible, than that accorded him by his own countrymen. Thousands of Londoners stood in the pouring rain to witness the unveiling of this Lincoln statue

Keystone View

It hasn't been often in history that you could catch the British premier singing "The Star Spangled Banner." But during the last few years London has had a chance to get used to "Oh, say can you see—" The English sang it often when our troops went marching thru the streets. They are singing it here to celebrate America's gift to Great Britain of the St. Gaudens statue of Lincoln

Much controversy was aroused in this country over the choice of a Lincoln statue to send to England. The Barnard statue, irreverently termed "the stomach-ache Lincoln," was recommended to be erected in Manchester, and the discussion of its faults and merits was prolonged and bitter. At that time we asked The Independent readers to vote on the various Lincoln statues: this one by St. Gaudens proved by far the favorite. Grouped near the statue in the photograph at the left are Civil War veterans who took part in the presentation ceremonies.

## As Man to Man

"Running a small town newspaper is a post-graduate course in the college of hard knocks." Harding and Cox both started this course at the bottom, and reached the top. The why and how of it shows up the men more clearly than any campaign can. If you would know your president read his newspaper, and find out why it grew.

By Chester T. Crowell

AT the close of a great war, with all its stupendous tasks in France and behind the lines, it is, to say the least, interesting that the Democratic and Republican parties should each have nominated for the presidency a newspaperman. At the request of The Independent I went to Dayton, Ohio, the home of James M. Cox; and to Marion, Ohio, the home of Warren G. Harding, to get acquainted with them—not as Governor and Senator—but as newspaper publishers, to find what sort of editors they are and have been, to discover what might be of interest about their newspapers.

Having been immune from partizan enthusiasm all my life, I took with me only one prejudice of which I am aware. As a newspaperman I have often been appealed to by politicians who owned newspapers and who called themselves newspapermen. I have a prejudice against them. My idea of a newspaperman is one who works in the editorial department. I do not consider an owner or an advertising man or a printer or a circulation department employee a newspaperman any more than the banker who carries the company's notes.

It was therefore a pleasant surprise to find that both Cox and Harding are really newspapermen. In fact they are the truest type of newspaperman because they have come thru the most difficult training school journalism has to offer. They are "country newspapermen." When Harding bought the *Star* and became an editor Marion was barely a cross-roads town. The Dayton of today is decidedly different from the Dayton in which Cox launched his career. Then it was a much smaller place and rather sleepy. Both of these Ohio newspapermen have known every end of the complicated business of publishing a daily paper. They have pursued the pestiferous personal

about William Snodgrass, who made a trip to Columbus on business, they have written editorials, covered big events, solicited advertising, boosted the town, and worried over the ubiquitous note that must be renewed. Running a small town newspaper is a post-graduate course in the college of hard knocks. The man who wins honors in its merciless final examinations has qualities that would have won him success wherever fate might have placed him. Cox and Harding succeeded in more than ordinary degree. Looking back over the files of their newspapers and gaining what knowledge I could of the histories of the communities they served I cannot discover where luck aided either of them. On the contrary I found numerous instances where luck ran true to form for the newspaper game and gave them a kick in the face about the time they might have been expecting the path ahead to be a little less perpendicular.

The fact that the two leading candidates for the presidency of the United States are editors and publishers offers a basis of comparison that is of unique value. The Independent, therefore, sent Mr. Crowell, himself a newspaper man who has owned and edited a small town paper, out to Ohio to interview Governor Cox and Senator Harding and to size them up thru their papers. Mr. Crowell was entertained informally by both the candidates and talked with them at length, and he also read their minds thru the back files of the *Dayton News* and the *Marion Star*, visited both newspaper plants and studied the relationship of the papers to the progress of the towns in which they are published. You'll know Cox and Harding pretty well when you've read this article

expecting the path ahead to be a little less perpendicular. Newspaper publishing in small communities is a precarious business. Usually these institutions move along from failure to failure, dropping disillusioned owners by the wayside at intervals of six months to three years and gathering in new idealists with savings to squander. Harding and Cox started at the bottom with approximately nothing, in unpromising fields. Today Cox has a prosperous newspaper in Dayton, which owns its own building, and another prosperous newspaper in Springfield. The *Marion Star* owns its own building and has a lot across the street on which a new building is to be constructed. The new building would long ere this have been occupied had the war not interfered. Both newspapers are published in the afternoon. Each has the largest afternoon circulation in its community in spite of spirited and able competition. Each has made a place for the local newspaper which did not previously exist. Before

Cox launched his enterprize in Dayton the Cincinnati papers covered that town as tho it were a suburb. Marion was covered by Toledo and Cleveland papers as well as by Cincinnati publications.

Jimmy Cox began as a reporter in his teens, working on a little newspaper in Middletown, Ohio, that was owned by his brother-in-law. The editor was also local correspondent for the Cincinnati *Inquirer*. There came the fateful day when Jimmy was in charge while the owner was absent. Just as the romance writer would record it there was a railroad wreck that day. An excursion train went in the ditch with more than an ordinary number of casualties. Jimmy made arrangements to hold the only wire available indefinitely. Then he ran out to the wreck and came back with the story. The following morning the Cincinnati *Inquirer* scooped the world. Again, just as the fiction writer would order it, Jimmy received a telegram from the *Inquirer* asking him to accept a regular job as reporter. He did so and remained there several years.

While he was a reporter Paul Sorg, who had been a member of the school board while Cox

Senator Harding likes to take off his coat and help make up the paper himself. This photograph was taken in the composing room of the *Star*

© Underwood &amp; Underwood

In quantity production the Marion *Star* is far below the Dayton *News*, so its plant is accordingly modest. But in quality the *Star* has some points of superiority

was a school teacher, was elected to Congress and asked Cox to go to Washington with him as secretary. Cox went. I know of nothing more characteristic of the story of Cox than that he was teaching both a day class and a night class at the time he attracted Sorg's attention. It would be like Cox to be teaching two classes. He has two newspapers, he is a Governor and running for President. He is that sort of man. Boundless, restless energy is one of the

first impressions he gives. I cannot imagine him as a school teacher unless he had two classes. In fact I am astounded to learn that he did not have three.

It is recorded of Cox that he was one of the most active of all the secretaries in Washington. On his return he went to Dayton and launched the Dayton *News*. He was then twenty-eight years of age. I took it for granted that this showed the political bee had stung him and he intended to go into politics via the press, but it seems not. On the contrary the evidence tends to indicate that he was running away from politics and getting back to the life he really liked best. Dayton looked to him like a very promising field. Boiler plate made up the larger part of the local newspapers; they did not take

Senator Harding's home, with its famous front porch. Multiply this comfortable, unpretentious frame house by several thousand and you can get a very good idea of Marion, Ohio, a town where people are good neighbors, and where there is no magnificence, and no slums. A good part of Marion's community standing is due to the efforts of the Marion *Star*

The Dayton News owns a large, attractive building in the business part of Dayton. Right: Governor Cox giving an editorial "once-over" to an early edition of his paper

sides in local issues. The town was sleepy and dull. It was in the hands of political bosses who were none too ethical and whose hold was greatly strengthened by the lack of publicity. The Cincinnati Inquirer had more circulation in Dayton than the local newspapers combined.

Cox threw the boiler plate out the window, took the Associated Press and began a vigorous editorial policy. He wrote nearly all of the editorials and he brought in nearly all of the big stories. As a writer there is nothing notable about him except vigor. But he had a nose for news. He knew what was going on in Dayton better than anyone else not on the inside. Naturally he became involved in all sorts of fights.

On one occasion he was opposing the granting of a franchise. The syndicate seeking the franchise sued him for \$500,000, alleging libel, and took advantage of a law which required Cox as the defendant in the suit to give bond in the sum of twice the amount

sued for or close his plant. Probably the real purpose of the suit was to kill his newspaper. The sheriff came and closed the front door. As soon as the sheriff departed Cox opened the door and issued an extra telling all about the suit. There is something about that stunt which appeals to me tremendously. A different sort of man would have been hurrying to the office of a lawyer. But the real newspaperman has an inborn faith that publicity will cure almost anything—that no one can be unfair if the public knows the story. Cox issued his extra. Also he was able to give the million dollar bond and save his newspaper.

The story of Cox as a publisher has been a story of turbulence and bitter fights, but they have not embittered the man. He has an uncanny way of going back over his trail and binding up the wounds of those who have had the misfortune to connect with one of his wallops. There are many men in Dayton who have felt the weight of his wrath who are today his friends. Some of the men he pursued until they were out of public life returned to good jobs which he helped to obtain for them. Cox is the type of man who is always [Continued on page 253]

# The Law and the Profits

By Senator Arthur Capper

Former Governor of Kansas

SOME sort of regulation, direct or indirect, of profits will end profiteering, if anything will, but no other measure has been proposed that will do so. Such regulation may be of a very indirect kind, as in the Kansas Industrial Court Act, but come it will at some time.

There are those who are so constituted that to them every great forward step taken in history, when it comes, is a surprise and a shock. They unconsciously believe that during their lifetime at least what has been will be. They deny the logic of events that transpire before their eyes. To such Bourbon minds the suppression of human thought and action is always adequate to keep society on an even keel. When suppression at last results in inevitable explosion they are astounded by so illogical a conclusion of the matter.

Profiteering has not been in the slightest degree affected by the condemnation visited upon it. It continues serene and undisturbed. It believes nothing will happen and popular anger will "blow over."

Yet what happens is that the public is thinking, turning things over in its mind, getting ready to accept any rational plan proposed to put an end to the arrogance of profit-takers.

Twenty years ago when a similar condition of public anger and thinking existed with regard to the stock watering, manipulation, and plunder of railroads, the principle was finally asserted that there should not be unrestricted profit in this business. The slogan became "the cost of the service," with a reasonable return or profit. It was answered by the Bourbon mind with the slogan, "the value of the service." Which meant that at any cost the value was so great that the public could and would pay it, and this meant any charge that was made. Precisely the same situation exists today regarding sugar. It is so valuable a product, so necessary, the public so accustomed to have it, that it will be purchased, no matter what the price.

But this year the Republican national platform expressly declares for the principle, as to railroads, of "the cost of the service." It condemns excessive profits in transportation.

The world moves therefore.

Today the state of Kansas has moved out far beyond the frontiers of twenty years ago as to controlling industrial profiteering. In its Industrial Court Act it applies the rule of control and regulation not only to public utilities, but to what it calls "basic industries," not public utilities at all, but declared (more or less arbitrarily) to be "affected with a public interest." Food industries and clothing and fuel are thus added to public utilities.

This means an extension of the public thought of public interest and public right in private industry. It

signifies a slowly but irresistibly growing and spreading idea that the primary right is the public right, not only in public utilities, but in private industries, as heretofore considered. It means that steadily the idea of human right and human welfare is overcoming the heretofore supreme idea of the right of property.

Property rights are being slowly worn down by the claims and demands of the rights of humanity, or of the public. The time is approaching when private industry will not be permitted to be the sole judge of its own conduct, and private property, ownership, will not have the supreme position it has always had heretofore.

The man who hopes to understand what is going on in the thought of the world will try to discover what the key to this process may be, what the principle is that is working, in order that he may have some conception of what the end will be. With a little analytical study of what has already occurred and what is being considered he cannot miss the fact that it all centers on the question of what is the fundamental and primary motive and purpose of industry.

Twenty years ago it was "all right" that the primary purpose of railroad investment was the profit. It no longer is "all right." The Republican platform of this year declares against "speculative profits in transportation."

Under the Kansas Industrial Court Act it is no longer all right in "basic industries" that private property shall have a free hand. It is no longer all right, under this law, that coal operators shall throw men out of work in the summer. They must keep producing.

There is a steady trend of thought, in other words, against the claims of private property where human interests are affected. The public steps in and shears private property of age-long rights and asserts as superior to them other rights.

What is going on is a slow development of the thought that the motive of industry is not private, after all, but public; that consequently the primary purpose is not to make a profit, but to render a service; that production is not incidental to profits, but that profits are incidental to production.

The public sense of public interest, once fairly it becomes conscious of the significance of this principle, cannot go backward, but will go logically forward to its goal.

This goal is maximum production, given the capital and labor available. The public will not consent to a coal industry shutting down for seasons of the year, in order to curtail production and increase profit. It will not consent to unnecessary, neglected unemployment, to indifference on the part of private property to idleness of hundreds of thousands [Continued on page 258]

# The League or Bolshevism? We Must Choose

© John T. McCutcheon in Chicago Tribune

The red peril

## A Message from the United States Government to the American People

By Senator Gilbert M. Hitchcock

Former Chairman of the Committee on Foreign Relations

**T**HE question of whether the United States shall enter the League of Nations has been appealed from the Senate, the representatives of the people, who after more than a year of controversy found themselves unable to make the decision, to the people themselves. The real issue is daily becoming clearer. It does not relate to the terms upon which we shall enter the League. The issue is whether there shall be a League, with the United States in its membership, competent to fulfil the desire of the world for permanent peace.

Let us strip aside the quibbles, behind which the enemies of the League of Nations have attempted to hide their real purpose. Let us get back to the essentials of the matter. Thru all the ages down to the present the world has been afflicted with the curse of war. The greater part of the money spent by governments, here and elsewhere, has been for the burdens of war. This has continued thru all the centuries. Do the people of the United States realize that 92 per cent of our appropriations for the fiscal year of 1920—the enormous total of \$5,279,621,262—were for obligations arising from war and for current military and naval needs?

Every generation has sent its men out to slaughter. Fifty wars have raged in the old world during the last hundred years. In the United States we have not been free from war's curse. In addition to the Revolution, the Civil war and the Indian wars, we have had the war with Mexico, the war with Spain and the war with Germany. We have been a peace-loving people. We have bent our efforts to keep out of war, yet we have not escaped its awful effects.

We came out of the world war with the conviction that we are a part of the world; that whenever the world is again convulsed with conflict we are going to suffer and probably be drawn into the whirlpool. We cannot stand aloof. We must, therefore, consider and give our solemn answer to the question: Shall it be war and preparations for war or a League of Nations to preserve international peace?

A League of Nations already exists. Twenty-nine powers are in its membership, but it needs no resort to speculation to assert that without the adherence of the United States the League will lack sufficient strength to carry out the purposes for which it was conceived. And so by their votes the American people are to decide not merely whether the United States shall take membership in it, but the fate of the whole enterprise.

Before the war the United States and the four great

nations associated with us in the formation of this League for peace, were spending some twelve hundred million dollars a year upon preparations for war. If the league fails, the world will sag back into the despair and desperation of a constant prospect of renewed war. Every nation will become an armed camp. Military and naval preparations will go forward upon an unheard of scale. The burdens of the people will be enormously increased. These are merely the preparations for war. What of war itself?

First there is the money cost. The nations that bore the principal burdens of the European war expended for the purposes of destruction more than one hundred and forty thousand million dollars. Their peoples will stagger under this burden for generations to come, if no relief is afforded in the cost of war preparations.

The war cost 6,000,000 lives and millions more of cripples. Hundreds of towns were destroyed and millions of wives were widowed. Pestilence and famine have come after. Law and order have been overthrown in various parts of the world. Bolshevism and anarchy have been propagated. The confidence of men in their governments has been shaken. It will never be restored until the governments of earth join together in a solemn compact that will guard against the recurrence of such a disaster. These, and not the quibbles of politicians, are the things we should have in mind as we cast our votes in November.

Narrow-visioned men attack the League of Nations as a form of internationalism. They object to internationalism. They are too late. Internationalism is here. We have not to choose between nationalism and internationalism, but the form of internationalism we will take. Our choice lies between the internationalism of justice, honor and peace, and mutual support between the civilized nations of the world, and the internationalism of Bolshevism.

Men will not forever tolerate recurring wars over controversies capable of quick adjustment by peaceful means. They will not for long submit to demands that they lay down their lives in unnecessary and useless slaughter. Taxpayers will not indefinitely comply with laws that take their savings for the purposes of destruction.

Have the opponents of the League been blind to the rising tide of protest against war among the peoples of all the civilized world? If we refuse to give support to the internationalism of governments, uniting to end wars, we soon will be face to [Continued on page 259]

# Getting on to Berlin

The First Complete Story of Our Combat Operations

By Captain Joseph Mills Hanson

ON the 4th of October, 1918, the whole western front from the Meuse to the English Channel was blazing with the fires of battle. In the north the Belgian army and General Plumer's Second British army were closely threatening Lille. St. Quentin had been taken, Cambrai was on the verge of falling, the French had recaptured the western part of the Chemin des Dames and cleared the country between the Vesle and the Aisne, and General Gouraud's army was pressing closely upon the last German fortified line in the Champagne. Fighting grimly at the hinge of the far flung battle front, the First American army on the morning of that day delivered its second general attack, whose most important immediate object was to bring the left, in the Argonne and the Aire Valley, up parallel with the right, along the Meuse.

The strong German positions around Exermont, backed by the wooded peak of Montrefagne (Hill 240), and enfiladed from all the commanding heights of the Argonne, in this section centering about the village of Chatel-Chehery, had thus far defied capture. It was for the reduction of these positions that two veteran divisions were put in, the First, on the right of the First Corps, against Exermont; the Thirty-second, on the left of the Fifth Corps, against the enemy strongholds east of that village, around Gesnes. If these divisions could force their way northward for four or five kilometers over the comparatively open uplands east of the Aire, the Twenty-eighth Division of General Muir, which had been stopped at Apremont in the narrow valley of the Aire, would be enabled to

elbow outmaneuvering room so as to pivot on its left facing westward and to make a frontal attack on the heights at Chatel-Chehery. Once these heights were taken, the Germans holding the lower part of the Argonne Forest against the Seventy-seventh Division would be outflanked and compelled to retire, thus forfeiting the great western bastion of their Meuse-Argonne front.

The heroic efforts of General Summerall's and General Hahn's troops were crowned with success, tho at very bloody cost. Going to the attack at 5.30 a. m. on the 4th, the First Division swept thru the Bois de Montrebeau, hurling from it the greater part of four German divisions, and at 7.30 a. m. had stormed Exermont and was holding across the lower slopes of Montrefagne. Thenceforward the progress of the indomitable regulars, made always against the most desperate resistance, was slower but constant. On the 5th Montrefagne was completely conquered, and by the 10th, having advanced about three kilometers by slow daily stages, the division gained Sommerance, the left flank, meantime, having for some days held the right bank of the Aire at Fleville. General Hahn's men, making equal headway thru the difficult woodlands and over the abrupt ridges in the sector next on the east, was on the same date up to the wire of the Kriemhilde Stellung in front of Romagnesous-Montfaucon.

These successes had enabled General Muir's division to make its difficult tactical dispositions in the river valley, where, after taking possession of several kilometers of the eastern bank in prolongation of the gains of the First Division, it prepared to assault Chatel-Chehery and

This is the sixth of a series of articles in which Captain Hanson tells the complete story of what the American troops did on the battle line in France—a series written from a thoro study of the official records and with the background of actual experience overseas. "Up the Line from Cantigny" was published in The Independent of March 27, "Those Desperate Days at Chateau-Thierry" in the April 24 number, "Zero Hour Along the Marne" May 29, "One Day's Work at St. Mihiel" June 19-26, and "Covered with Mud and Glory" July 24-31. The others will follow in the fourth issue of every month.

the crests immediately north and south of it by crossing the bridge at La Forge. The complicated arrangements for this attack by Gen. Dennis E. Nolan's Fifty-fifth Infantry Brigade, involved also the capture of the ridge of Le Chene Tendu, about two and a half kilometers south of Chatel-Chehery, by Col. A. L. Conger's Fifty-sixth Brigade, and of Hills 223 and 180 and the village of Cornay, north of Chatel-Chehery, by Gen. J. R. Lindsey's 164th Brigade of Gen. George B. Duncan's Eighty-second Division, which had been introduced into the American order of battle in the Aire valley between the left flank of the First Division and the right of the Twenty-eighth. These arrangements were not completed until just before daylight of October 7th, and the attack went off at 5 o'clock a. m. After a very stubborn struggle, which lasted all day and consisted in great part of close fighting with the German machine gunners whose nests infested the dense thickets and precipitous ridges along the edge of the plateau, the Americans at nightfall were everywhere firmly established on the higher ground. The enemy in the lower forest, in order to escape capture, immediately began withdrawing before the troops of the Seventy-seventh Division, and by the 10th of the month, the Twenty-eighth Division having meantime withdrawn, General Alexander's men, with those of General Duncan on their right, had finally cleared the entire southern Argonne and were looking across the Aire River at the point where, turning westward, it flows thru the pass of Grandpré before joining the Aisne. The western bastion of the German Meuse-Argonne front was thus finally conquered; tho they might continue to hold for a while in the Grandpré pass, the great advantages of their situation on that flank had been overcome and they were left, at best, in inferior positions.

The general attack of October 4 netted far less ground on the American right, toward Brioules, and in the center, toward Madeleine Farm, Cunel and Romagne, than it did on the left and left center, but it resulted in equally desperate fighting. In this section, deeply fortified and stubbornly held by the enemy, who still enjoyed the defensive advantages resulting from complete possession of the artillery positions and observatories on the Heights of the Meuse, the Fourth, Eightieth and Third Divisions went thru a long and grueling struggle. The Germans in their front occupied a succession of small woodlands in hilly country, among them the Bois des Ogons, Bois de Fays, Bois de Cunel and Bois Malaumont, lying about Madeleine Farm and south of the Brioules-Cunel-Romagne road. These woodlands were knit together by the complex trenches and wire forming the Kriemhilde Stellung, and here the Germans offered to the soldiers of General Hines, General Cronkhite and General Buck a resistance which the latter were able to overcome but very slowly.

On October 4 parts of the Bois de Fays were occupied by the Fourth Division, and on the 5th a foothold was

gained in the Bois des Ogons by the Eightieth Division. But it was not until after October 8, when the attack of the Seventeenth French Corps under General Claudel east of the Meuse had forced the enemy in that quarter to fight in his own defense, thus gradually eliminating the enfilade artillery fire on the Americans west of the river, that anything like marked progress could be achieved. General Cronkhite's men forced their way across the Brioules-Cunel road on the 9th and held the position until relieved by Gen. John E. McMahon's Fifth Division two days later. In the meanwhile, General Hines's troops succeeded in entering the Bois de Foret, northwest of Brioules, while General Buck's Third Division on the 11th captured the Bois de Cunel and Madeleine Farm, thus breaking down one of the enemy's most formidable centers of resistance in this sector. The 12th and 13th saw a continuation of violent local fighting all along the front, but it was somewhat disjointed, and conditions indicated that the time had arrived for another united effort.

During the period between October 4 and 14 the Germans had often resorted to furious counterattacks in their efforts to check the relentless American progress. Reports of prisoners clearly indicated that many German regiments were being fought literally to extinction, while scarcely a German division, once involved in the struggle, was able to extricate itself again, for by this time the enemy, staggering under the combined blows of Americans, French and British, was being driven from his defenses all along the western front and forced into open country, so that he was obliged to put forth his utmost efforts to hold the pivot of his general retreat, between Verdun and the

Argonne, until his northern armies could retire beyond the lower courses of the Meuse, in Belgium. It was of this period that General Ludendorff, writing in his memoirs and consistently endeavoring, even after the close of the war, to put a good face on the overwhelming German defeat and to belittle both the skill and the valor of the American armies, said that "in spite of their enormous numerical superiority, the attacks of the youthful American troops broke down with the heaviest losses. Their success on September 26 was merely due to the failure of a German reserve division and to the fact that at another point their attack was met only by a division which, tho a brave one, was very battleworn and had an extended front to hold."

The assertion of the German Quartermaster General that "the attacks of the youthful American troops broke down with the heaviest losses" would be more convincing if the maps of the daily position of the American front line in the Meuse-Argonne did not show advances on some parts of the front during every day of the battle and progress on every part of the front during most days; and this despite the fact that during the operations more than one-quarter of the total German army on the western front [Continued on page 252]

A view of Grandpré and the Aire River from a captured German gun emplacement on the edge of the Bois de Bourgogne. The troops of the 78th Division made three unsuccessful attempts, with heavy losses, before this line of resistance was overcome.

# Don't Keep Your Eye on the Ball

An article in which the author of "New Golf" gives some common-sense advice that may revolutionize your game

By P. A. Vaile

**W**ITHOUT the slightest doubt more nonsense and downright untruth has been written about golf than about any other game.

There almost seems to be, as James Sherlock, the famous English golfer, puts it, a gigantic conspiracy on the part of writers to pretend that there is a vast mystery about golf, whereas it really is an extremely simple game.

It is not in the mystery or the complexity of golf that its difficulty lies. It is in the supreme demand for mechanical exactness. The reasons for this inexorable demand, although interesting, are not generally recognized, and are well worth stating.

Three things tend to make golf a really difficult game to play accurately and well.

First, is the important fact that the ball is the smallest ball used in field sports.

Second, is the almost equally important consideration that the striking face of the club is the smallest thing used in field sports for striking a ball.

Third, the ball in this game is *farther from the line of sight* than in any other field game, except, perhaps polo, where the ball and stick are much larger, and the circumstances altogether different.

In aiming at anything, our desire is to get the line of flight as near to the eye as possible. We cannot possibly do this in golf, and, as the ball lies on or very close to the earth, it is not feasible to have a large striking surface on the club. It follows naturally that, to be successful, we must cultivate a high degree of mechanical accuracy.

This cannot be done without attending carefully to the main essentials of the golf stroke. The style is quite another thing. One need not, generally speaking, bother about style. It is well that each player's individuality should express itself, but it must do so *subject to certain fundamental requisites* which are really very simple and natural.

In the first place, it is necessary to *get a good grip with one's feet*. It is of just as much importance to have a good grip with one's feet as it is to have a good grip with one's hands; in fact, one cannot possibly use the best of hand grips unless the grip with the feet is right.

There is no straining after effect in the words grip with the feet. You must learn to put your mind into your toes. If you think this is in any way an exaggeration, ask a boxer or a fencer or a practised gymnast how he *holds the floor*. So it must be at golf. One must establish a firm and natural connection with the earth, or one cannot possibly get the best results from the stroke.

Needless to say, footwear is an important consideration in this matter. On a hard, dry course you may want rubber soles, while on a soft ground nails will serve you better. But one must not rely on such extraneous aids alone. One must definitely use the feet to hold to the earth, as tho one were playing barefooted; that is to say, one must put the intention into one's feet. Nothing less will do.

Next, probably, in importance to a good grip with the feet is a good grip with the hands. It is remarkable that Americans, generally very quick to follow the lead of success, have not adopted the grip that is almost universal among the greatest players, professional and amateur, of the world—the over-lapping or Vardon grip. Tho it was not introduced by Vardon he was undoubtedly responsible for making it popular.

As some seventeen or eighteen open championships and scores of minor events have been won with this grip, and as it numbers among its adherents such men as Braid Taylor, Vardon, and Ted Ray, now open golf champion of the United States, we must treat it with all respect; yet it is by no means certain that it is the best grip for everybody. Most certainly it is not so, as Sherlock says, for those with weak hands and wrists. Needless to say this includes most women players. Notwithstanding the wonderful success of those who have used, and are using, this grip, one of the grips that does not interfere with the power of the right hand, as the Vardon grip admittedly does, will probably obtain the ascendancy.

There is an interesting point in the old two-handed or double V grip, as used by the famous player, John Ball, which has never been mentioned. In his drive his hand is so far around his club, that the force of the blow falls across his wrist joint in the way in which it cannot give to the strain, that is to say sideways or in the direction in which it does not bend. Curiously, too, this grip lends itself to a slight slice or cut across the ball, which makes for better control.

We have dealt with the grip of the earth, and the grip of the club. There is a third and all-important grip that is never mentioned in the golf books. It is *the grip of the ball*.

The essence of grip and control is length of contact between the club and the ball. This is technically termed adhesion. It is easy to get too much, which means the vice of slicing. It is [Continued on page 260

This strip from a movie film shows ex-president William Howard Taft making one golf stroke. Follow it thru and you will see illustrations for and against some of the points that Mr. Vaile makes

# The Republican Candidate

A Debate by Norman Hapgood and Talcott Williams

## The Harding Nightmare

By Norman Hapgood

THE gloom into which I was plunged by Senator Harding's formal speech of acceptance cannot have exceeded the discouragement of such Republicans as Mr. Taft, Mr. Hoover, President Lowell, Mr. Murray Crane, and Mr. Oscar Strauss. We are facing the most momentous and urgent political issue of our day. If our politics were as free and active as those of England we should find men rising above their party habits in such an emergency. We should not find Mr. Hoover silenced, humiliated, and lowered in public standing by being shackled in a party that is now committed openly and definitely to keeping us out of the League of Twenty-eight Nations. If we were trained in a freer political atmosphere we should find him today calling for the election of Cox and of Senators committed to the League. He it is who praises Lodge's "apt phrase," repeating it and calling it the truth: "It would brand us with everlasting dishonor and bring ruin to us also if we undertook to make a separate peace." It is Hoover who says: "The Treaty is now in effect and cannot be scrapped." It is he who points out, with a knowledge second to none, the manifold things that even now the League is doing to keep European civilization from lapsing into anarchy: who points out that it is the charter of independence of Poland, Czechoslovakia, and Finland. Who better than Hoover knows the meaning of his words when he says: "Those American statesmen who conceive that Europe will meet our dissensions by abandoning the Treaty and summoning a new world peace conference are entirely ignorant of the European situation." In short words he says: "All talk of a new treaty is bunk." I say that Herbert Hoover owes it to humanity, to his country, to his own wonderful record, and to his high sense of responsibility and good will to throw off the petty partizan cords that bad advice has tangled him in and step forward in this moment of unspeakable danger as a leader in making the world-situation understood.

Of Mr. Taft I cannot speak in exactly the same tone, for he has often compromised too much; and now he is doing it again. Murray Crane's newspaper has already spoken sternly of Mr. Harding's lamentable speech, rigidly Republican as that paper is. Genuinely independent newspapers, like the *Springfield Republican* and the *New York Evening Post*, have their spirits bent in gloom and shame. No wonder, indeed. Harding's acceptance was in print at almost the same time that Marshal Foch said: "It is most likely that the United States is partly responsible for the present uneasiness of the world. It should have ratified the peace treaty with us. By keeping apart from us America has helped to promote disorders in central Europe and prevented the establishment of the economic equilibrium."

With civilization staggering we cannot pay much attention to other issues in judging Senator Harding. Out far beyond his other inadequacies stands this abject surrender on the League to Johnson, to Borah, to the extremists among the Germans, to Sinn Fein, to the Lodge whose acts now admit that his reservations were only tricks to beat Wilson and who stands out in his true colors against ratification on any terms. That is the Harding on whom

we must fix our attention. We may leave in the background the paltry talk about never having a policy in the Presidency until two-thirds of the Senate have sent him a written direction about what his policy should be. Shades of Roosevelt, Cleveland, and Wilson! Shades of the Lincoln who was one of just two men in the Illinois legislature to defy his party and the public of his state on the greatest issue of his day, and who later defied the country when he kept us out of a needless war with England. Shades of George Washington, standing firmly for his opinions and his responsibilities, whatever the opposition of Congress and whatever the public clamor. I pass this jelly-fish business by, and scarcely refer even to Harding's identification, during his whole career, with the reactionary bosses of his party, Foraker outstanding. Perhaps it will be enough, along this line, to recall the eulogy to the dead Republican Boss Cox of unhallowed memory: "I want to name a great, big, manly, modest but mighty grand marshal of an invincible division of the grand Republican army of Ohio, a man who is a division commander, has been unconquerable, and by sheer force of merit and ability has forged his way to the very forefront in the party councils. He has elevated his head high above the storm of calumny and abuse and won his way to a trusted place in the party, and we yield deference and devotion to George B. Cox of Hamilton County." How would you, independent readers of *The Independent*, like to see that man in the seat of Washington, Adams, Jefferson, Madison, Lincoln, Cleveland, Roosevelt, and Wilson? It is the same man who has been a rubber stamp as Senator, and would be proud of being a rubber stamp as President. Was Wilson wrong when he defied the storm by putting Mr. Brandeis on the Supreme Court? Or was Senator Harding wrong when he grovelled before illicit money and its political henchmen and tried to prevent Mr. Brandeis from taking his seat?

But these other pettinesses are by the way. The big, the over-shadowing fact is now that Harding has definitely, emphatically read the United States out of any intention of joining the League. She is to sit back in smug littleness and enjoy the advantages of hard work done by the other twenty-eight nations of Europe, Asia, and South America in reconstruction and in the working out of disarmament, new ideals, and new methods. We are to sit back and boast and sulk and complain about what our share might be if again trouble should arise. That Johnson has forced Harding into the open on this issue is at least one thing to thank heaven for, since it gives a chance, perhaps a slight chance, that even before these lines are in print some of the big patriots in the Republican party may have arisen to the need and spoken with the voices of free men.

It is curious to watch the struggles of earnest men who are bound to support their ticket at any cost and yet are wretched at being on the wrong side of the world's greatest question. Take Mr. Taft. One day he says this:

When Mr. Wilson brought to this country the league covenant as reported to the Paris conference I urged on the same platform with him that we join the League. I thereafter recommended amendments, some of which were adopted into its final form.

Had I been in the Senate I would have voted for the League and treaty as submitted, and I advocated its ratification accord-

ingly. I did not think, and do not now think, that anything in the League covenant as sent to the Senate would violate the constitution of the United States or would involve us in wars which it would not be to the highest interest of the world and this country to suppress by universal boycott and, if need be, by military force.

I consider that the moral effect of Article 10 on predatory nations would restrain them from war as the declaration of the Monroe Doctrine has done, and that the requirement of the unanimous consent by the representatives of the great powers in council before league action would safeguard the United States from any perversion of the high purpose of the League.

Moreover, I believe that the issue of the League transcends in its importance any domestic issue and would justify and require one who believes so to ignore party ties and secure this great boon for the world and this country.

Admirable, but he is a regular and must find a reason for not supporting Cox or he would be an outlaw and the Senate oligarchy, headed by Penrose, Smoot, and Lodge, would never forgive him. So he figures that the best thing to do is to scold Wilson, and a few days later to add a pious hope that something may happen. He says:

I believe that it will be found that when President Harding approaches the twenty-nine members who have already formed a league they will be reluctant to adopt some new form, especially if by any time the League shall have demonstrated its usefulness and practicability.

Hope! Mr. Taft hopes that Mr. Harding may change back again once more and defy Johnson and his own record. What a position for a grown-up man! To such extremes are we forced when our conclusion is made for us not by our minds and our consciences but by loyalty to a political organization. Sometimes I think I would rather be a dog, and bay at the moon, than be a party member in good and regular standing.

## Harding and the League

By Talcott Williams

THE Harding nightmare! Better talk with a few Democrats about the Cox cataclysm. So far as the League is concerned every fairminded man knows today and admits that the only League that has any chance of ratification is one that carries limitations similar to those imposed by the Lodge amendments. Regret this one can; accept it one must. New League or old, these limitations have behind them the solid center of both parties. Try the men and women you meet; read the newspapers; watch the general drift, we all know that this is the present posture of public opinion. Half the Democratic senators voted for these amendments. Every man whom Mr. Hapgood names, to my personal knowledge, has supported, as judicious, limitations of this general character in any plan thru which the United States enters into any permanent relation with other nations to keep the peace of the world. Many men would take the Wilson League unchanged rather than no League and see no need for change. Mr. Hapgood's small jury would. So would I. But every one believes some limitations are wise; second, that no limitations mean no League now or hereafter, the general opinion of the American public, our Constitution and the Senate being what each is and will be.

The broad current of opinion among plain men, the general average, runs that way. Why have both candidates turned aside from this path? Senator Harding, first because every one sees and knows that the country is chilling to any League and, second, because California is indispensable to a Republican majority in the Electoral College and Senator Hiram Johnson can turn the State over to Cox as he did to Wilson in 1916. Why does not Governor Cox propose the League with limitations, as his party and platform permits and thereby draw off the large Republican vote for a League, with amendments, and opposed to no League? Because his nomination at San Francisco and his election next November is impossible without the Federal

Administration's aid. He is secure at the South because he will be a beneficiary of the wholesale denial of the vote to American citizens. In the North, his nomination and canvass needs Administration backing. By temperament and past record Governor Cox leans towards an active policy abroad and Senator Harding to keeping within our boundaries. This difference has weight for each. So do the reasons I give. Men are but men and are swayed by a preference for success in any enterprise.

These things bring it about that each candidate turns from the main current which wants limitations on any League; seeking to win a definite, dissident, belligerent faction turns Cox to the League unchanged, dominated by the Administration, and leaves Harding swayed by the dread of a bolt. The difference is that the Democratic candidate follows the policy which has defeated Wilson and left him a discredited leader, in spite of great achievement, and the Republican candidate leaves the door open to change and a new League. Each has brought a challenge in his own party. The astute national chairman who directs the Republican campaign, Mr. Hays, sees that Mr. Harding has gone too far and wants to sidetrack the League issue because protest has poured in upon him. The Democratic Convention in New York, aware of the position taken by Cox before this had been formally announced, did what no Convention in the state has ever done before, given no approval to the national platform and barely mentioned the two candidates, tho one, Roosevelt, is a New Yorker.

Look at the newspapers and you will see how much more "news" there is about Harding than about Cox. You, who read these lines, as I say this, be you Democrat or Republican, can see that the mass interest gravitates to Harding and not to Cox. Look at the Ohio primaries. In a Presidential year, the vote of Ohio is evenly divided. In 1916, Cox polled for Governor, 566,201 and Willis, R., 561,002, majority 5,190 for Cox in a round 1,171,458 votes. Wilson did better, majority 89,503. He had the German vote, because he "kept us out of war," as witness the counties where his majority was gained. Mr. Cox will not, I fear, get this vote this time. So the state oscillates. In the primary this year about one Republican voter in four voted for the Republican candidates and about one Democrat in ten for Democratic seekers for the party nomination. What does this mean? Simply that the Republicans expect to win in Ohio and poll a heavy vote and the Democrats do not expect to win and are not worrying over who goes on the Democratic ticket. If the like comes in New York at the primaries, it will be for the same reason.

For Cox, no change is possible. He has tied himself to the Wilson League and the Wilson policy. In Harding's case, changes may come as it grows clear that a large Republican vote wants a League, with limitations in the line of the Lodge amendments. Mr. Hapgood is right in saying there is a strong Republican disaffection. Now is the time to make it known. Every Republican who wants a League who will let his city, county, state national committeemen know this will see a prompt response. August is not the time to make up your mind how you will vote. Wait until the canvass by October has settled the true issue of the hour and the actual position of both parties on the League. Why, by this time, four years ago, Mr. Vance McCormick hadn't yet discovered that Wilson was to keep us out of war for all time and that any preparation for war was high treason to Peace. It was not until September that those happy "unbroken family" pictures were on every fence in the Republic.

It is possible of course for Mr. Hapgood, even in August, to get into, shall I say?—seasonal heat over Harding and cast the Republican candidate for the villain of the world's tragedy. He knows and I know that when the returns are in, whichever man wins, both of us will know that the Republic has a good President and that only one thing is

certain, the Senate chosen will make it impossible, if Cox is elected, for him to carry out his promise of the Wilson League. If Harding is elected the way is open to him for whatever course seems best. We all know what events did to Wilson's pre-election policy in 1916 and events are still being born every hour and events not particularly favorable to the League. I regret this. I believe in the League. I look at it as alike wise in policy and in principle a duty. But my confidence in a Democratic President putting thru the League negotiated at Paris, independent of the Senate, without change or compromise, is not by any means as strong as it was when I went down the Bay of New York, July 8, 1919, to greet Wilson Triumphant.

But my dear friend Norman Hapgood is still just as sure as ever. Cox and the League are the two perfect creations of the Western World and all the evils of our politics in Ohio and elsewhere darken the Washington-like face of Harding. It seems he praised Cox, the Ohio Republican boss. He ought not to have done it. Neither ought Roosevelt to have written that letter about being a "practical" man himself to that most "practical" of men, E. H. Harriman. I too have made speeches at complimentary dinners. If everybody is to be hung (politically speaking) for every complimentary speech he has made at a complimentary dinner, who shall escape? Of course, this speech is good for a campaign and it is a good point for Mr. Hapgood to make, but it is a "point" and not an argument. What I really want to hear about are the cases in which Cox and his paper have bolted a Democratic ticket. He was 21 years old in 1896. Did he bolt Bryan and Free Silver? The Democratic party in Ohio has had its bosses and its political criminals. Cox is a good party man, just as Mr. Harding has been. In this, as in so much else, the two candidates are of a kind. Even Grover Cleveland had never bolted a Democratic ticket and the Buffalo Democracy is not a glorious company of political angels.

For myself, I cannot go into these contortions of the sibyl because I know that all we can ask or expect is that both these candidates are good men, who have doubtless sometimes bowed in the House of Rimmon. I did not accept the privilege of presenting the case for the Republican party in *The Independent* so as to see all white in my party and all black in the other. This is the campaign habit. I shared it once. I have outgrown it. As I look over forty-four years back to the Tilden-Hayes campaign in which I shared, I realize that the two great parties which divide American citizenship have put up pretty good men. Wrong-headed sometimes, and often lacking equipment, but good. I propose to see things as they are and I am following the advice I have given. Mr. Harding has gone farther than he should in leaving the platform. He may make it impossible for tens of thousands of his party, like myself, to vote for him, and the election is close. Every Republican vote is needed. Let no Republican who reads *The Independent* and wants a League fail to act as I have proposed.

But the real difficulty about the League is not in Mr. Harding or the wicked reactionaries over here and all the terrible perils to the honor of the Republic, Mr. Hapgood has discovered. The League has suffered from what has come in Europe, not what has been done here. We were all saying—I did for one, Mr. Cox is still saying it—that the League would work just like the Monroe Doctrine. Now it hasn't. Suppose we were in it now. Could we have prevented the folly of Poland in attacking Russia? Why is the League powerless? Because we are out of it? Not at all. Because the world has suddenly changed. We thought we could count on Russia, once. With Germany once defeated, we all believed England, France and Italy could control Europe. Have they? A strange revolution has come. Armies no longer count. Not a premier in these three countries has dared war so far. The Europe which has so changed is like the poor quaking Hindoo station-master,

alone in a depot in the solitary jungle, who wired to his superior: "Tiger jumping around platform. Please telegraph instructions."

It is all very well for Lloyd George to close his splendid speech for justice and the protection of the weak nations by saying that if Russia does not pause, "We will meet at Philippi." But it was at Philippi that Roman liberty ended and a new predatory world of the iron hand began! Can Lloyd George be certain that the English and French army will go with him to Philippi? Hoover is as certain as ever about the League, but does Hoover know it all? Hoover was big in Belgium. When you come to spread his opinion over the whole world of politics here and affairs abroad, I am not as certain about Hoover as I was before he left his regular job and became a universal provider of opinion and policy on all subjects.

Let me repeat. I am for the League. I think Harding has made a mistake big with peril to all the world, to us and to himself by not standing for the League with limitations. I think there is more safety there than in any other course. But I try to learn from events. Rhetoric cannot alter events. I cannot see, looking back on the result of the Wilson League and his insisting on it without change or limitation, that it is going to be a remedy for all the world's ills to have another Democratic President pledged to repeat Wilson's course. Mr. Hapgood may think that course was a stupendous success. I cannot see it that way. Nor do I find any one who is ready to believe that we can save the world. If Secretary Colby is right in proposing that we let Russia hold in bondage all the small peoples that are now free and if this is the Democratic world policy to which Governor Cox is pledged, then I am not ready for that kind of a League or that policy and no "Friend of Russia" can persuade me that a candidate favoring this hideous injustice ought to be elected President.

The world seems delightfully simple to Mr. Hapgood: Believe in the League and you will be saved. Perhaps. I prefer to wait and see what comes before I accept that creed and meanwhile I am making up my mind to vote in November for the best man, the best policy and the best party, all issues, the League included, being considered.

Moreover, every President Mr. Hapgood mentions yielded, compromised and got things done. Unless Cox does, he too will wreck the League. Those Presidents were all charged with truckling and time-serving. Cleveland made Daniel Manning his Secretary of the Treasury—a good secretary, too, he was—but Manning was the local Albany boss and his paper stood by Tweed for years and was at last a reformer. Brandeis has turned out good decisions, but was it not true that leaders of our American bar protested at his selection, men we all trust? As this was true, is it quite straight talk to the reader to call a Senator a "rubber-stamp" for voting against Brandeis, without at least saying that the opinion of good men was divided.

## Brass Tacks

By Norman Hapgood

I certainly do like Talcott Williams. He is earnest, honest, and open-minded. In stating that he will postpone his decision, and be guided in his vote in part by the League issue, he does himself credit and sets an example to his fellow Republicans. When he says of Senator Harding's course that it is "big with peril to all the world, to us, and to himself," I take off my hat to a man who puts citizenship first. Naturally I do not agree with everything Mr. Williams writes. I still think Mr. Hoover's energetic statements about the necessity of the League have value. I am interested in the fact that Mr. Taft sees no danger even in article ten. I think Mr.

Colby's Russian note a disastrous, muddle-headed departure from the principles of free political development, and if Senator Harding had nerve he could take up that issue and so drive it in that Cox would either have to repudiate Colby or be surely beaten in November. But there is no chance of Harding's doing anything so intelligent. He has side-stepped the Russian issue, on which he had a great chance to take away thousands of liberal votes, as he side-steps everything except the necessity of pleasing Hiram Johnson at one end and Judge Gary at the other, even if he breaks the hearts of men like Taft, Hoover, and Williams. His voting against allowing Mr. Brandeis to sit on the bench seems to me unsatisfactorily treated by my gallant opponent. The facts were investigated by a senate committee with a fullness never surpassed. If Senator Harding voted to reject and belittle the profoundest of living American jurists because the dress-suit brigade was opposed to him he should in liberal eyes pay the penalty of that vote. Dr. Williams says the Senator is "a good man." No doubt, no doubt. My point is that he would make a perilous and reactionary president.

There are too many points for me to answer in a brief rejoinder. I don't care whether Tammany approved the administration or not. Indeed I am rather glad it did not approve. If Mr. Williams wishes to argue that Democratic Senators will help a Republican President to make peace but that Republican Senators will die in the last ditch rather than allow a Democrat to make peace,—I have in the course of this debate already answered. Let me repeat, however, that Cox's very simple reservations were printed long before he was nominated for the Presidency. And as for Harding's having a "Washington-like face," I cannot see it. But God knows I wish I could.

### Long Distance Fares

SCIENTISTS used to talk of a trip to the moon. But that was before the Interstate Commerce Commission raised the rates.

### The High Cost of Being Good.

And the cost of getting to heaven is, of course, quite prohibitive.

### The Wish Is Father to the Thought

FRANCE has recognized the government of General Wrangel (appropriate name for a warrior!). The French definition of a Russian government seems to be "any Russian, whether he enjoys power or not, who will offer to pay the national debts."

### Thinking Around the Corner

By Preston Slosson

HOW strange it is that people are urged to do the most obvious things for the most far-fetched reasons! This thought was suggested to us by a letter to a metropolitan newspaper urging the building of more homes "to prevent the spread of Bolshevism." Well, a nation of home owners will certainly enjoy a degree of social security denied to a nation of uprooted migrant laborers. True enough. But the home is an older and a much more important institution than the government. A really logical thinker would say not "We must have homes or the commonwealth will be in danger," but "We must save the commonwealth from Bolshevism in order to give security to the home." All our political machinery is but scaffolding about the private life of the citizen and exists not for its own sake but to foster "life, liberty and the pursuit of happiness."

In the same vein the life insurance companies and the

journalist-physicians urge people to take care of their health or to contribute to the stamping out of contagious disease because of the huge economic loss to the community from sickness and premature death. We find it difficult to enter into the frame of mind of the individual who doesn't object to dying at forty but is appalled by the thought that the community will lose \$15,000 worth of his labor if he dies so soon. "Keep your health in order to be efficient at your business" is a strange appeal; no less strange because of its frequency. Efficiency in business is, at best, only a means to an end; a healthy, happy life is the end for which all business exists.

Again, at every election we hear the appeal: "Stress the issues which will help the party." As if parties had any excuse for existence except as the embodiment of some policy! Parties hunt around for issues, and sometimes take opposite sides of the same issue in different campaigns, as if the existence of a political party were an end in itself and the contents of a bottle made no difference so long as the label remained unchanged. We even hear of "treason" to a party, which is like talking of treason to a telephone or a motor car or any other tool of human purposes.

We think that in a saner civilization people will have large families because they love children and not because the birth rate of the nation is falling below that of some rival Power; that they will be healthy because they enjoy abundance of life and not because sickness brings incidental financial worries; that they will vote for what they believe instead of trying to believe in the ticket which they habitually vote; that they will play for the sake of fun and not because an occasional vacation refreshes them for business; that they will read and go to concerts because literature and music are glorious pleasures and not because they cultivate the mind or the social standing; that they will fight for their country because of the liberties it embodies instead of sacrificing those liberties, as Germany did, merely to enlarge the boundaries of national dominion; that they will be religious because they believe in God and not because religion is a bulwark of the social order. Common sense stresses the simplest and strongest motives instead of the most distant and indirect; but common sense is anything but common in our day.

### Senates

In the Latin tongue the Senate meant "the old men"; in the American tongue it means "the Old Guard."

### Think It Over

IN November you will elect a President, a Vice-President, a House of Representatives and a third of a Senate. The result will be known beyond a shadow of a doubt before the end of the month. Yet for four months thereafter you will be governed not by the men you have chosen but by the men who have lost office as a result of your vote. Don't you think the American constitution is sometimes a little slow in getting action?

### The Parable of the Covenant

A CERTAIN man went down the road from Jerusalem to Jericho, fell among thieves and was robbed. A benevolent Samaritan named Uncle Sam helped some good citizens of the neighborhood beat off the thieves and contributed something to the care of the wounded man. But when he was asked to lend his support to a permanent organization for lighting and policing the Jericho road he refused. He said: "It is none of my business to prevent robberies from taking place. Let them go on happening, and in each case I will make up my mind whether or not to do anything about it."

Was he a good Samaritan?

# The Story of the Week

## The Alcohol Issue

**A**LTHO both presidential candidates avoid the prohibition question on the ground that their business will be merely to enforce the law, it is yet an active factor in the campaign, since the liquor interests still have hopes that the law may be repealed or at least alleviated. Tammany's vote for Cox was secured in the Democratic Convention by the understanding that he secretly favored a wet policy, but since this reputation was hurting him in the prohibition states the Democratic leaders have been trying to obliterate that impression from the public mind. Chairman White, of the Democratic National Committee, made official announcement that:

The Democratic party as a party is not going to base its campaign on beer and light wines. It will stand squarely on the national platform for law enforcement. The wets are at liberty to interpret the platform in any way they choose.

Altho this statement is ambiguous and leaves any Democratic candidate free to advocate alcohol, it was received by the wets with dismay. Tammany men, regarding it as a repudiation of the private pledges made to them in behalf of Cox, threaten to trade off Cox votes to get votes for Governor Smith, who favors beer and light wines and a lax enforcement of the Volstead law. In the Republican primaries of New York, Tax Commissioner G. H. Payne is to contest the nomination for the United States Senate against Senator Wadsworth, who is opposed to prohibition and woman suffrage.

The Anti-Saloon League of America has analyzed the records of Governor Cox and Senator Harding and has come to the conclusion that both will favor enforcement of the law. The League will, therefore, not oppose either presidential candidate, but will concentrate its fight upon congressional candidates whom it may suspect of disloyalty to the Eighteenth Amendment.

William Jennings Bryan, who was nominated for Presi-

dent by the Prohibition party, refused that honor and has declared his satisfaction with the attitude of Cox on this question. In his stead the Prohibition party nominated the Rev. Aaron G. Watkins for President, with D. Leigh Colvin for Vice-President. In his speech of acceptance at Germantown, Ohio, August 11, Mr. Watkins asserted that "the supreme question of the hour is the entire extinction of the liquor traffic," but he also expressed himself on some of the "minor questions." He held that "the treaty of peace ought never to have been included in the Covenant of the League of Nations," but since it was included he favors its adoption with "whatever reservations and amendments are possible and absolutely essential." He condemned the weak Mexican policy of the Wilson administration and urged all possible measures of conciliation and then, if necessary, intervention to "compel the restoration of a decent state of affairs" in Mexico.

## Harding on Lemons

**I**N response to a telegram from Senator Flint, of California, stating that 150,000 fruit growers were facing ruin because Sicilian lemons were selling far below the American cost of production, Senator Warren G. Harding pointed out the need for a Republican protective tariff:

I feel an especial concern for the California fruit industries because they have given the country a splendid illustration of the beneficial results of highly organized, well managed co-operation. California's fruits could not have gained the great market and repute they have but for the workings of the big coöperative marketing associations, in which production, distribution, transportation and financial organization have all been coördinated to give service to both producers and consumers at the least possible cost. Therefore it is especially necessary that the great industry should not be permitted to suffer because of a maladjustment of tariff rates.

This is a complete illustration of the impossibility of sacrificing our own American people for the benefit of other countries. Sicilian lemons, owing to demoralized after-war conditions, distorted rates of exchange, and extraordinary pressure to get business, can compete in American markets with the home product and gain the business. But American markets cannot be systematically surrendered to foreign producers, however kindly we may feel toward our Allies; and the conditions that your industry faces are precisely those that many others do now or will later confront unless proper protection is given in view of the extraordinary conditions in the commercial world. The Republican policy of giving first attention to American interests, rather than to those of other continents, will insure against disaster to industries situated as is this one. To such a policy I gladly subscribe.

## Cox on the League of Nations

**I**N his address before the Democratic State Convention at Wheeling, West Virginia, Governor Cox made plain his stand on the Covenant and directed his attack on "the senatorial ring" who were determined to scrap the League and rule the country. He said in part:

The Republican party has passed into reactionary control. The fight which Roosevelt made to reform it availed for the time, but its effect was not lasting. Domination by political figures once violently repudiated by the American electorate is unblushing and undenied.

The men who control the United States Senate are determined to annex the Presidency to their domination, and in what they believe to be a certain Republican year they have done things that they would not have dared to think of doing in the past.

The campaign this year is not a contest for the triumph of a political party. It is purely a matter of concluding a duty to civilization, and doing it as quickly as prudent consideration of our country's interest suggests.

Leadership in a great moral question has been given to the-

© International Feature Service,

DONT YOU KNOW ME, POP?

A Hearst view of how the alcohol issue is being handled in the Democratic campaign

democracy for the simple reason that the Senatorial oligarchy, which for the time being has assumed control of the Republican party, has abandoned the idealism of other days. It is unnecessary to recall the issues of the war. We resisted a worldwide menace and we intend now to establish permanent protection against another menace. We know how easily wars came in the past. We want to make their coming difficult in the future. We have a definite plan. The American people understand it and after March 4, 1921, it is our purpose to put it into practical operation without continuing months of useful discussion.

The platform of our party gives us the opportunity to render moral coöperation in the greatest movement of righteousness in the history of the world, and at the same time to hold our own interests free from peril. Our position is plain. The circumstances of the last eighteen months convict the Republican leadership of attempted trickery with the American people. Under one pretext after another they prevented readjustment of national conditions. They proposed certain reservations to the League of Nations, and then they were abandoned, to be followed by nothing more definite than the announcement of a "hope" that an entirely new arrangement might be made in world affairs. What method they have in mind, if it is concretely in any one's mind, the people do not know. No unprejudiced person can deny that the consequence of abandoning the League and attempting an entirely new project will be prolonged delay.

If the voters of the Republic, without regard to party, desire action, and prompt action, along lines that are now clearly understood, they will render a verdict so overwhelmingly expressive of public indignation that scheming politicians for years to come will not forget.

By supporting the Democratic party you get the absolute pledge of action. The League of Nations will be ratified very soon after March 4, 1921. You need have no worry. Instead of America's interests being imperiled they will be conserved.

## Woman Suffrage Ratified

THE Tennessee Senate passed the resolution ratifying the woman suffrage amendment to the Federal Constitution on August 13 by a vote of 25 to 4 and the House of Representatives passed the same on August 18 by a vote of 49 to 47. Tennessee is the thirty-sixth state to ratify, so this means the amendment of the Constitution and the enfranchisement of 27,000,000 women in time for the next election. In sixteen states women already had the full ballot. The Nineteenth Amendment now adopted reads:

Article—Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any state on account of sex.

Section 2. Congress shall have power by appropriate legislation to enforce the provisions of this article.

Eight state legislatures, all southern, voted against rati-

Alley in Memphis Commercial Appeal

That last button

Do not let us forget the moral force of the United States in such an undertaking. It would not have been necessary for a single American soldier to cross the seas. It would not have been necessary for America to become entangled in any way in European politics. Ours would have been the quieting and steadying hand in a League which without America is incomplete.

History will lay a great share of the responsibility for the plight of the splendid people of Poland upon those little narrow men who today control the machinery of the Republican party. But for their desire to satisfy a personal spite, the Bolsheviks would not be knocking at the gates of Warsaw.

## Aid to Poland

SECRETARY Colby says that the United States will aid Poland with "all available means." Premier Lloyd George says "that England will grant her such assistance as is in our power." Premier Millerand says that France "will aid Poland with all their strength and in every way." All of the powers in the League of Nations are pledged to stand together in support of the new Poland that was created by the Paris Peace Conference. Altho these governments may express disapproval of the ambitions of the Polish expansionists they are agreed in their determination not to desert Poland in her extremity. The only question then is of ways and means.

Of all the powers the United States is most intimately

© 1920, New York Tribune, Inc.

THE HARE AND THE TORTOISE

We get kinda tired taking all the dust in our little two cylinder bus—But it's a pretty good wagon after all!

concerned in the Polish question because some four million of our people have come from Poland. Americans who are not of Polish descent have from the beginning of our national history taken a deep interest in the reestablishment of Polish independence. Mass meetings were held on Sunday, August 15, all over the United States at which resolutions were passed thanking President Wilson for his timely message and asking him to "extend to Poland further moral and such material aid as will strengthen the position of the Polish Government and make possible the conclusion of an honorable and just peace." Large sums of money are being raised in America for Poland and thousands of young men are eager to volunteer. But it will be a difficult matter to get reinforcements into Poland in time. The swift Bolshevik advance along the northern frontier may cut off the Danzig corridor which is Poland's only access to the sea. To ship troops across German territory from the Baltic or the Rhine would be a technical violation of German neutrality similar in form to the march of the German troops across Belgium into France.

The French scheme for the rescue of Poland is to back up Baron Wrangel in the hope that he will overthrow the Bolsheviks. For that reason the South Russia Government that Wrangel has set up at Sevastopol has been recognized by France and the French hope that the United States will follow their example. But it seems doubtful if Wrangel can make any greater headway than did Denikin, Kolchak and Yudenitch unless he has foreign troops and to employ them would violate one of the principles laid down in the Colby note.

England is hampered by the determined opposition of the Labor party. She could renew the blockade of the Baltic ports but that would bring increased misery upon the Russian people, especially the opponents of Bolshevism without weakening the Soviet armies, for they are well fed regardless of how many may starve behind the lines. It

is no wonder that the British tax-payer is becoming tired of supporting military expeditions against Soviet Russia. "Peace" is proving almost as burdensome as war. From the date of the armistice, November 11, 1918, to the end of March, 1920, the British Government has, according to official figures, expended \$440,000,000 on naval and military operations in Russia.

About half of this sum was spent for the support of the British forces on land and sea and the other half represents the cash and stores furnished to the Russian armies fighting the Bolsheviks. These stores are counted at their nominal value or cost, but since many of the munitions are non-marketable their actual value is only about a tenth of this. If so discounted the total amounts to \$280,000,000 instead of \$440,000,000. But however figured it seems a great waste since all of the expeditions failed and their net result has been to rally to the support of the Soviet, the patriotic Russians by making the Bolsheviks appear as defenders of the Fatherland.

#### DEFEAT OF POLISH TROOPS

The shoes of the Polish soldier show why he was not able to make a stand against the onrushing Russian. But were the Bolshevik boots any better?

## Consequences of the Colby Note

THE Colby note, according to London correspondents, burst like a bombshell in Great Britain. It knocked the ground out from under Lloyd George just at the moment when his counsel seemed about to prevail with the Poles, and it encouraged the French to renew their opposition to the British policy in Poland. The British Premier had come to an agreement with the Soviet Government as to peace and resumption of commercial relations, and he had at last persuaded the Polish Government to send a delegation to the Russian front to ask the Bolsheviks for their peace terms. He had recognized the independent governments of Esthonia, Latvia, Lithuania, Georgia and Azerbaijan. He had declared that no military assistance had been given to General Wrangel since last February, and that the British Government disapproved of his present advance from the Crimea against the Bolsheviks.

But the note signed by Bainbridge Colby cuts athwart all these plans. In this note the United States emphatically disapproves of any kind of negotiations with or recognition of the Bolshevik Government on the ground that it is unrepresentative and unreliable. Further, the American Government calls upon the allied and associated nations to declare their intention to respect and protect the territorial integrity of Russia within the boundaries of the old empire "with the exception of Finland proper, ethnic Poland and such territory as may by agreement form part of the Armenian state." This would mean that the Letts, Lithuanians and other allogenic peo-

A QUICK REVERSAL OF FORTUNE

Last spring the Poles took the offensive and carried their armies into Russia as far as Dvinsk on the north and Kiev on the south. But they fell back before the counter-attack and the Soviet forces regained the lost territory and then invaded Poland. Warsaw was attacked from the north, east and south, while another Soviet army pushed forward along the Polish-German border as far as the Vistula. Poland as delimited by the Paris Peace Conference is shown on the map in black and in addition to this Poland was given Galicia including Lemberg and a corridor along the Vistula extending to the free city of Danzig as a seaport. The treaty also gave Poland such parts of Prussia as should vote for union with Poland in a plebiscite still to be taken. The shaded area represents territory which the Poles took in their spring drive but which has since been recovered by the Soviet

ples who have seized the occasion to break away from Russia, must surrender their new freedom.

After the receipt of the Colby note saying that the United States Government would employ "all available means" to maintain "Poland's political independence and territorial integrity," the French Government took three important actions in opposition to the British policy. First, it ordered its representatives in London not to participate even as observers in the conversations going on there between the British Cabinet and the Soviet representatives. Second, it sent word to Warsaw advising the Poles not to accept the Soviet peace terms which Lloyd George had urged them to accept and approved as fair. Third, it made the following startling announcement:

The French Government, taking into consideration the military success and strengthening of the Government of General Wrangel, as well as assurances received as to the democratic form of his administration and his respect for engagements of the former Russian State, has decided to recognize as a Government of fact the Government of South Russia. A French diplomatic agent will be sent to Sebastopol with the title of High Commissioner.

When the news of the action of Premier Millerand was called to the attention of Lloyd George in the House of Commons he declined to credit it because only forty-eight hours before he had been in consultation with the French Premier at Hythe and they had apparently been in agreement. No notification of a change in the French policy had been received by the British Foreign Office.

When the news was confirmed it aroused considerable resentment in the British press, for this was the second time that the French Government had taken decisive action in international affairs without the approval or knowledge of England. A few months ago the French troops were sent over the Rhine to occupy Frankfurt without consultation with the Allies of France.

The publication of the Colby note caused great rejoicing in France, all the more because the French Foreign Office had given out a few hours before a communication of quite the opposite tenor. This statement, which had been received from the French Embassy at Washington and purported to present the views of the American Government, said that: "Better than any other people the Americans understand the sentiments which animate Russia today. The attitude of Russia is that of the United States in 1776, that of legitimate defense." This was found later to have been a newspaper story which thru some accident had been sent over as an official message.

Premier Millerand responded to the Colby note in a most grateful and cordial note, in which he states that the French and American policies are entirely in accord and that France "never varied in its determination to support the principles so clearly formulated by the Government of the United States." The French press, which has been expressing suspicions that England intended to grab the Crimea as well as the Baltic States, rejoices in this check to British aspi-

rations. The Colby note will not, however, be so welcome to the Italian Government to which it is addressed, for Italy has stood with England rather than France on Russian policy, and there is an official Italian commission in Moscow even now.

## The Collapse of Poland

"ALL is lost save Poland," says Grabski, the Polish Premier. It depends upon the negotiations now going on at Minsk how much of Poland is to be saved.

Thus ends an enterprise comparable only in rashness to Napoleon's invasion of Russia a hundred years before. The Poles, not content with the liberal limits assigned them by the Paris Conference and believing that they were in imminent danger of

an invasion by the Bolsheviks, took the offensive early in the spring and by May had captured Kiev, the Ukrainian capital, 250 miles beyond the frontier. The Russian territory thus conquered was larger than the whole of Poland, and besides this the Poles demanded an outlet to the Black Sea at Odessa and a share in the government of the Ukraine. The Polish Government in the peace terms which it sent to

the Soviet and made public on March 26, required Russia to renounce sovereignty to all territories west of the old frontier of 1772, when the first partitioning of Poland took place, these territories "to fall under a Polish protectorate to assure such peoples of the right of free decision as to their future fate and national connections by general vote." Poland further demanded indemnification for all the destruction of land, industries and railroads destroyed since the beginning of the war in 1914, altho Russia was supposed to be defending Poland against the Germans when this damage was incurred. Russia was further required to restore all works of art and libraries taken from Poland since 1772. Poland also asked for a share of the gold in the Russian treasury, as it was before the war, corresponding to her area. This treaty was to be ratified by a duly elected Russian Diet, and, as security until its complete fulfilment, the Polish army was to hold the Government of Smolensk, which would have brought the Polish frontier up to within 65 miles of Moscow. The territory thus demanded by Poland in the peace terms delivered to the Soviet in the spring included an area equal to Germany, in which the Poles do not constitute more than 5 or 6 per cent. This is very far from the Poland "in-

### THE NEW ANTAGONIST OF BOLSHIEVISM

Baron Wrangel, who is conducting a campaign from the Crimea against the Bolsheviks, has received official recognition by the French Government as head of the "South Russian Government." He was one of Denikin's generals in last summer's advance against Moscow but on the failure of this enterprise he accused Denikin of incompetency and took command of the remnant of his army. This was protected and refitted in the Crimea by aid of the British, but they refuse to support him in taking the offensive against the Soviet. He is said to have 150,000 troops

habited by indisputably Polish populations" that President Wilson stipulated in his famous Fourteen Points and insisted upon at the Paris Conference.

When the extensive scope of Polish demands were known in Russia they roused such a reaction that the Soviet Government received the support of many who had hitherto opposed it. General Brusiloff, one of the ablest of the Czar's officers, volunteered his services and was placed in charge of the campaign. He published a letter frankly confessing that the Imperial Government did wrong in imposing Russian rule upon the Poles in the old days, but appealing to his brother officers of the Czar's army to prevent a similar wrong being done to the Russians by Poland.

The Polish troops set out with the belief that they would soon reach Moscow. They had been equipped with American uniforms and munitions, partly obtained thru the French, partly sold directly by act of Congress to be paid for in six years. The army was trained and reinforced by 800 French officers and men. The Kosciuszko squadron of American volunteers did gallant service. On April 17 the question was raised in the House of Commons whether the supplying of arms and munitions to Poland by the United States Government had received the approval of the Supreme Council, but Bonar Law replied that any action which the United States may have seen fit to take in this matter could not suitably form the subject of question and answer in the House.

Prince Sapieha, the Polish Foreign Minister, stated in 1919 that "We have already 300,000 men in the field," and by 1920 this was said to have been raised to more than half a million. It was commonly reported in our papers at the time that the Bolshevik troops were much inferior to the Polish in number, equipment and spirit, and that the Soviet régime was on the verge of collapse from inefficiency, starvation and internal dissension. But now that the tide has turned we learn from the American military authorities at Washington that the Polish forces numbered only 140,000, while the Soviet placed 350,000 men on the Polish front.

There is now also observable a general disposition to disclaim responsibility for the Polish offensive. It has been universally supposed that the Poles were encouraged by France, but the French Foreign Office asserts that it opposed any movement beyond Poland's ethnographical frontiers. Premier Lloyd George told the House of Commons on July 21: "I saw that the action of the Polish Government earlier in the year was reckless and foolish, and I protested against it. I ventured to point out what might be the consequences, and I regret that my fears have been realized." For once the opposition agreed with the Government. Ex-Premier Asquith said: "The adventure has failed as it deserved to fail. Poland has been driven back within her frontier and she is now threatened by the way of reprisal with the very disaster that she thought to impose upon others." Lord Robert Cecil said: "Every military man whom I consulted at the time assured me that the conflict must end with the defeat of Poland." The Pope declares that he urged the Poles to moderation. Paderewski asserts that he opposed the forward movement, and the fact that it was not undertaken until he was out of the way tends to support his disclaimer. The primary responsibility for the adventure that has ended so disastrously rests upon Pilsudski, who is virtually dictator of Poland, but what outside encouragement he received cannot now be determined.

## Warsaw Holds Out

**A**FTER the Polish army was defeated at the front, 400 miles east of Warsaw, it fell back in such confusion that the Bolsheviks swept forward with little resistance and within two months their guns were bombarding the Polish capital. This swift advance was due to an efficient

Wide World

The American Red Cross is bearing a large part of the relief work for the increasing number of Polish refugees fleeing from the Bolshevik advance

corps of cavalry, an arm of the service in which the Poles have a historic reputation but of which the Bolsheviks have hitherto been able to make little use. The contempt of the Soviet generals for their opponents is shown by the fact that before they had taken Warsaw or even invested it they threw a column clear across Poland along the German frontier as far as Thorn on the Vistula River, altho by so doing they exposed an unprotected flank of over 100 miles to attack from the Warsaw side.

But altho the Poles were unable to take advantage of such an opportunity they rallied gallantly to the defense of their capital and held up the Russians on the Bug River. Old men, boys and women volunteered for active service. Troops were rushed from Warsaw to the front in motor buses, as they were from Paris to the Marne when the Germans threatened Paris. The French general Weygand was sent to Poland to organize the resistance.

The simultaneous declaration of Premier Millerand and Secretary Colby that France and America would aid Poland encouraged the Poles to hold out against the Bolsheviks both on the battlefield before Warsaw and in the peace conference at Minsk. The action of Secretary Daniels in sending the cruiser "Pittsburgh" with two destroyers to Danzig and the cruiser "St. Louis" with six destroyers to the Mediterranean gave the Poles hope that the United States intended to intervene actively in their behalf.

## British Labor Threatens Revolt

**T**HE British Labor Conference called to consider the Polish situation took on August 13 most unprecedented measures to meet the impending renewal of the European war. All the power of organized labor was placed in the hands of a Council of Action which was instructed to

remain in existence until they have secured an absolute guarantee that (1) the armed forces of Great Britain shall not be used in support of Poland, Baron Wrangel, or any other military or naval effort against the Soviet Government; (2) withdrawal of all British or naval forces operating directly or indirectly as a blockading influence against Russia; (3) recognition of the Soviet Government and establishment of unrestricted trading and commercial relationships between Britain and Russia.

The Council of Action is authorized to call for "any and every form of withdrawal of labor which the circumstances may require to give effect to the foregoing policy." The 1044 delegates stood in silence for a full minute to emphasize their realization of the meaning of this unprecedented measure. It was, as J. H. Thomas admitted, "a desperate and dangerous method," but he argued that

we believe that the situation is so desperate and dangerous that action thru the ballot box would be futile in this case, and that

only desperate and dangerous methods can provide a remedy. These solutions do not mean a mere strike. Do not make any mistake. They mean a challenge to the whole Constitution of the country.

This action on the part of the combined British labor bodies is the more significant because they have hitherto refused to resort to "direct action" in the place of parliamentary methods, even in defense of their own interests. Twice recently the efforts of the Left Wing to induce the conference to approve of direct action have been defeated by a vote of the majority.

It was frankly acknowledged that the establishment of a Council of Action with power to paralyze the industries and railroads and shipping of Great Britain was revolutionary and meant the substitution of a class dictatorship for political government, but Robert Williams said:

I tell you solemnly and seriously that you are infinitely more representative than the House of Commons, and you may be summoned to sit permanently as "a committee of national safety." I would rather act in an unconstitutional manner than go to war and go to hell under the forms of the British Constitution.

Nominally this action is directed against the Government. Actually, however, it is in support of the Government, or at least of the Premier, for Lloyd George has been trying to reestablish commercial relations with Russia and has advised the Poles to accept the Soviet peace terms. On both these points he has been opposed by France, which is actively supporting the campaigns against Soviet Russia led by General Pilsudski from Poland and General Wrangel from the Crimea. But the peace policy of the British Premier received a double blow in the almost simultaneous announcements from Premier Millerand that France would recognize Wrangel and from President Wilson that the United States would never recognize Soviet Russia. The chairman of the Parliamentary Labor Party, W. Adamson, who presided over the Conference, interpreted the Colby note as indicating that "the dollar-making instincts of the United States were coming to the support of the imperialistic impulses of France and that England would be drawn into the war in defense of Polish independence. The imminence of this danger induced the moderate and conservative factions of the labor unions to withdraw their opposition to "direct action" for political purposes. The first measure, if it became necessary to carry their threat into effect, would doubtless be to prevent the shipping of munitions to Poland and to cut off the coal supply to France by a strike of dockers and seamen. The Italian labor men took

this action some time ago. The International Seamen's Congress, now in session at Brussels, has passed a resolution refusing to transport troops and munitions.

## The Irish Crisis

ONCE again, as in 1914, Great Britain is on the verge of a foreign war, for the British Government is more definitely pledged to the defense of Poland against the Bolsheviks than it was to the defense of Belgium against the Germans. And once again, as in 1914, Ireland is on the verge of a civil war. But this time it is the south of Ireland that is in opposition to Parliament, not the north of Ireland, as it was in 1914. The modified Home Rule, setting up separate governments for Ulster and for the rest of the island, has been reluctantly accepted by the Ulsterites, but indignantly declined by the Sinn Feiners.

Premier Lloyd George stated his stand plainly to the House of Commons on August 16:

Subject to three clear and definite conditions, the Government is prepared to discuss with anybody who claims to speak for representative Irish opinion any proposals they put forward which in their judgment satisfy Irish opinion. These conditions are:

One, that six counties, representing the northern part of Ulster, must be accorded separate treatment. Two, under no conditions will the Government assent to any proposal which involves directly or indirectly secession of Ireland or any part of it from the United Kingdom. Three, nothing shall be agreed upon which involves any detraction from the safety of these islands in peace or war.

But, added the Premier, the Government had received no response to this invitation.

The British Government has not handled the Mannix case in a way to satisfy any party. Archbishop Mannix, of Melbourne, by his opposition to Australian conscription during the war and his advocacy of independence of Ireland since, has incurred the displeasure of the Australian Government. Premier Hughes in a speech at Bendigo on July 25 warned the American people against him in these words:

Mgr. Mannix says his one hope is that England and America will be enemies, and that Ireland will fight England, and that America will fight England. If that hope is realized we shall see a war the like of which the world has never seen. The hope of peace in this world lies not in the League of Nations, but in that firm alliance of understanding and coöperation which has existed for over 100 years between America and Great Britain and the British Empire. That man, therefore, who seeks to make bad blood between the British Empire and America is a criminal. If it were necessary to choose between the Kaiser and that man as to which was the greater criminal, I know which I would choose. The Kaiser was pushed into this, but Mgr. Mannix went into it of his own free will.

The British Government refused to permit Archbishop Mannix to visit Ireland, altho he explained that he had no political purpose, but merely desired to see his old mother. He was taken from the "Baltic" under technical arrest and landed from a destroyer at Penzance. Indignation meetings have been held in American, Irish and Australian cities over this interference with the freedom of the Catholic prelate.

The Lord Mayor of Cork and ten of his associates were arrested for holding a Sinn Fein Court in the City Hall. The Lord Mayor was tried by court-martial and found guilty of having made seditious speeches, upholding the authority of the Irish republic and repudiating British rule, and of having control of the secret police cipher.

Outbreaks of violence are frequent thruout the south and west of Ireland. Soldiers guarding a military airplane that had made a forced landing at Kantark, Cork, were attacked by Sinn Feiners. Two of the soldiers and four of the Irish were killed in the fight. At Limerick a conflict took place with the authorities in which several people were killed. Fires were started in many parts of the city by both factions as reprisals.

## WHY CAN'T YOU BE ?

The border line fence between the United States and Canada is being repaired this summer on one of its hardest and roughest fronts. Something less than one hundred miles of the international boundary along the lower edge of Alaska will be resurveyed by two engineering parties working from either end. Both governments are sharing in the cost.

New silver strikes of considerable promise have been made in the Portland Canal country, and miners have been going in from everywhere, much after the manner of the old Klondike days. They have not always known which side of the line they have been prospecting on, and it is to make this point clear and certain, and so to avoid complications with the mining offices, that the two governments have undertaken a survey.

it is at that same point, where the fencing began in 1905, that the silver hunters are now at work and in doubt.

Even in its doing-over stages, this fence-line survey is one of the hardest pieces of wilderness work that will be done this year, and in its original proportions it made a record. The southern end of Alaska—the part known as the “Panhandle”—has as twisted and crooked a shore line as perhaps the world can show. The boundary line is almost equally crooked, for by treaty terms it runs at about thirty miles from the shore for the full length of the strip, and to get it accurately located the fencers of 1905 were obliged to make very irregular tracks. In the main, however, this section of the international boundary, from Portland Canal to Mount St. Elias, was determined by a number of conspicuous peaks which were taken as ready-made landmarks, a mile or two here and there not counting seriously on one side or the other.

The line, located by careful heliotrope calculations, was marked in three ways: by monuments, by cutting out the vista, and by ascertaining the exact position of turning points or angles. The monuments were placed along the line at conspicuous points, such as the banks of rivers, the crossing of trails, and the summits of ridges or mountain spurs that happened to be on the line. They were of aluminum, bronze or concrete, three or five feet high, and solidly set into concrete beds, the materials for which were transported under difficulties into the wilderness.

Wherever the line passed thru timber a twenty-foot skyline was cut, ten feet on each side, making it literally an international right-of-way thru the woods. It is this blazed trail of the Alaska-Yukon border that is now being re-cut. Additional monuments are also being placed for the surer guidance of the prospectors.

Much climbing of mountains and scaling of glaciers is involved in this boundary fencing, for the line has to be carried over the hills and the rough places, regardless of what the country or the weather is like. Instruments and supplies must be lugged along for miles on miles, with only human backs to bear them.

NO, THIS AIN'T A KITE!

What I have here is a surf board made of "baka" wood, lighter than cork, so I can swim just the way they do in Hawaii

From time to time there is talk of projected electric railways to be distinguished by speeds of one hundred miles an hour or more. The success of such plans depend wholly on their financial backing. The possibility of such speeds was amply proved some years ago by the Berlin-Zossen experiments, and as soon as such a road will pay we shall doubtless have it. That we shall be able to ride at this speed very soon is the opinion of more than one expert. In this relation, it should be borne in mind that the attention of railway men has been distracted from the high-speed proportion by the consideration of electric terminal facilities made necessary in large cities.

"Fence posts" such as this are the only boundary protection that is needed between the United States and Canada

trains. The electric motor furnishes the means by which any speed which the roadbed or the car itself will stand can be maintained indefinitely.

Aside from the design of the roadbed, the method of controlling the trains therefore becomes the next in importance. As has been said, it is obvious that some extension of the block system must be employed in which the blocks are longer and the safety devices much more complete than anything in use today. One plan would be to divide the road into long blocks, each block ending at a stopping point, and to allow no train to start from one station until the preceding train had left the one ahead. Another plan proposed contemplates dividing the road into shorter blocks with intermediate blocks each long enough to enable a train to be brought to a stop on it. The power supplied to these blocks is to be controlled by the train on the next block ahead, and is to be cut off automatically from these intermediate blocks until there is no train in the block ahead.

The interesting feature about these

plans is the fact that the very means which makes it possible for us to attain such high speeds is the means which will enable us to make use of them. The electric motor is the only driving mechanism considered for such high speeds, and the electric railway system is one which readily adapts itself to automatic control. On such a road, not only would the signals be operated more or less automatically by the trains themselves, but the safety devices which would be necessary for the road would also be controlled electrically. There would be no difficulty in having the power supplied to one whole block cut off automatically by the presence of a train on another part of the road, a feature difficult to obtain, if any other motive power be used.

The high-speed road is more than a probable development in railroading, and that it will be purely electrical there seems at present to be no doubt. It is because the power is supplied to the moving trains from a stationary power-house that such speeds may be maintained, and the movement of the trains may be controlled automatically.

movements make headway is limited by the conditions that exist. The great economic condition which gives rise to unrest in the Northwest is the problem of marketing. Lying back of this economic situation is the natural situation conditioned by the climatic and geological environment. If the struggle with nature is encouraging, the struggle between industrial groups presses less severely. Hence the causal relation between rainfall and politics.

Mango is now being introduced as a tree crop in southern Florida. Evidently not all people agree that "its taste resembles a ball of tow soaked in turpentine and molasses" and that "it is so sticky that you must eat it in a bathtub," to quote two travelers' descriptions. The editor's own opinion is that it tastes something like a peach and something like a bar of soft soap and he quite agrees with the remark about the bathtub.

## The Effect of Rain on Politics

By Alvin H. Hansen, Ph. D.,

Associate Professor of Economics, University of Minnesota

Normal precipitation and politics correlate in Minnesota. The complexion of county politics corresponds quite closely to the normal rain and snowfall in the various counties of the state. The heaviest precipitation is in the southern tier of counties, and in the east central, northeast and north central counties. In these counties the normal precipitation ranges from 25.5 to 32.3 inches per annum. In the central and western portions of the state the precipitation is moderate, ranging from 23.5 to 25.0 inches per annum. The northwestern part of the state has the lightest precipitation, the normal ranging from 20.0 to 21.5 inches.

The vote in the recent primary election divided along the same lines. The regular Republicans carried the southern, eastern, northeastern and north central part of the state, while the non-partisans carried the central, western and northwestern part as the accompanying map shows.

The close correlation between rainfall and politics in Minnesota is clearly apparent in the chart following. All

the forty-three counties for which the normal precipitation is given by the U. S. Weather Bureau in its 1919 report are here arranged according to normal annual precipitation. Set over against the normal precipitation is shown the proportion of non-partisan votes as compared to the votes cast for the regular Republican candidate for Governor. The diagram shows the trend rather than the vote in each separate county. The first five counties were grouped together and the average non-partisan vote calculated for the group, the next five counties constitute the second group, and so on. The comparison is therefore between the average vote of the five counties with the largest normal precipitation and the average vote of the five counties with the next highest normal precipitation, and so on for the rest. It is apparent that the lower the precipitation the larger is the non-partisan vote.

Climatic and economic conditions give rise to social philosophies and movements, and the extent to which the various competing philosophies and

PRECIPITATION IN FORTY-THREE COUNTIES

# Getting on to Berlin

(Continued from page 237)

was thrown in against the Americans, and was utterly defeated.

The growth of the First American Army to a total of more than 1,000,000 men, divided into seven army corps and fighting on a front of 120 kilometers, determined General Pershing at this time to create two armies in the place of the one which had grown too unwieldy to be handled to advantage by one commander and staff. Accordingly, on October 12, the first army, with the First, Third and Fifth American corps and the Seventeenth and Thirty-third French corps, was placed under command of Lieutenant General Hunter Liggett and the right flank of its sector marked at Fresnes-en-Woevre, while from that point to Port-sur-Seille, east of the Moselle, the second army was created under command of Lieutenant General Robert Lee Bullard, with the Fourth American and Second French Colonial corps.

The terrific demands of the conflict, in which division after division fought in the inclement weather until its losses and physical exhaustion forbade further effort, produced rather rapid changes in the order of battle. On October 14, when another concerted attack was launched along the front from north of Verdun to St. Juvin, just east of Grandpre, the following divisions were in line from the Meuse westward: the Fourth, Third and Fifth divisions in the Third Corps, the Thirty-second and Forty-second divisions in the Fifth Corps, and the Eighty-second and Seventy-seventh divisions in the First Corps.

The attack of October 14 was met everywhere by a wall of machine gun fire, and it did not make extensive gains, although the gains made were highly important. General McMahon's division took Cunel and General Hahn's occupied Romagne and conquered the intricate wooded slopes of the Cote Dame Marie, thus decisively breaking the Kriemhilde Stellung, the last entrenched German defense zone.

Nowhere, however, was the fighting of the last half of October more continuous and sanguinary than it was on the front of General Dickman's corps along the Aire River, from a point east of St. Juvin to one west of Grandpre. General Duncan's Eighty-second Division troops, between the 11th and the 21st of October, took a considerable area near St. Juvin and approached Champigneulle, while General Alexander's men, on the 13th, took St. Juvin and three days later gained a foothold in Grandpre. On October 16 the Seventy-seventh Division, after three weeks in line, was relieved by Gen. James H. McRae's Seventy-eighth Division, which spent the remainder of the month in slowly gaining complete possession of Grandpre and the difficult hills north of it.

The lively fighting was thus in progress along most of the front during the latter half of October, it resulted rather in gaining advantageous ground

at various points from which another general attack might jump off than in achieving immediately decisive results. But the enemy's defense had worn so thin that Marshal Foch determined upon another tremendous effort, which would result in overwhelming the German armies. The date finally fixed for this effort was November 1.

So far as the First American Army was concerned, on October 31 it had achieved an average advance of 21 kilometers along its entire front since September 26; it had completely conquered the Argonne bastion of the enemy's Meuse-Argonne front and had very nearly completed the conquest of the Heights of the Meuse as well; it had taken 18,600 prisoners, 370 cannon and more than 1000 machine guns; was holding twenty-one German divisions at bay before it, and was closely threatening the enemy's arterial railway line between Montmedy and Sedan. Its mission in the renewed attack would be to make a clean break thru the enemy's line of battle and, still advancing on the axis Montfaucon-Romagne-Buzancy, to sweep over the heights of Barricourt, the left uniting with the Fourth French Army and then moving on Sedan, while the center and right swept down and across the Meuse toward Montmedy, the extreme right coming into liaison on the Heights of the Meuse with the Franco-American divisions north of Verdun.

While holding the enemy to an unrelaxing defense by means of front line activity, the Americans were, therefore, in large part recuperating their energies and making every preparation for another attack as powerful as the one of September 26. The divisions in line for the attack were the Fifth and Ninetieth in the Third Corps, the Eighty-ninth and Second in the Fifth Corps, and the Eightieth, Seventy-seventh and Seventy-eighth in the First Corps. Of these, Gen. John A. Lejeune's Second Division was to make a primary break thru, striking the remaining section of the Kriemhilde Stellung around Landres-et-St. Georges and thence driving northward toward Bayonville-et-Chennery and the Barricourt Heights.

The two-hour preliminary bombardment utterly disrupted the German defense, and from the first the American forces swept forward with almost un-

interrupted speed. By nightfall the Second Division had accomplished an extreme advance of more than nine kilometers, the divisions to its right making scarcely less progress. On the left, in front of Champigneulle and the Bois des Loges, the first day's advance of General Dickman's divisions was insignificant, but during the following night the enemy gave way, and on November 2 these first corps troops jumped forward thru Buzancy, General McRae's extreme left flank gaining contact with General Gouraud's patrols at Boulton-aux-Bois, north of the Bois de Bourgogne. On the other flank, swinging on its right toward the Meuse, General Hines' corps approached that river below Dun-sur-Meuse on the 3rd and the guns of the long range artillery, closely following the advance, were able by their fire to suppress circulation on the great German railway line at the junctions of Montmedy and Longuyon.

Advancing straight into the enemy's lines during the night of the 3rd, the Second Division by a remarkable march thru the rain-drenched woods to the Heights of Beaumont overlooking the Meuse at Letanne, forced the Germans to abandon an entire battle front which they had intended holding across the hills from Halles by Vaux-en-Dieulet and St. Pierremont to Chatillon-sur-Bar. The Fifth Division, facing east, crossed the Meuse at Briulles and Clerly on November 4 and, joining with the French and American divisions already on that side of the river, pressed on northwestward, while, to its left, General Allen's, General Wright's and General Lejeune's men came up to the stream on the following day. Still further to the left, General Dickman's corps reached the Meuse between Mouzon and a point opposite Sedan, the Forty-second Division and the First Division prolonging the left in the direction of that city until, on November 7, the ground occupied by them was taken over by General Gouraud's troops.

It was on November 6 that the Germans finally threw up their hands and begged Marshal Foch for terms on which the Allies would consent to an immediate cessation of hostilities. Terms were dictated to the German commissioners, who were granted seventy-two hours in which to submit the terms to their government and receive its acceptance, the pursuit of the German armies meantime continuing all along the front.

In the American sector, between November 7 and 10, the enemy was hurled from the heights southeast of Stenay into the plain of the Woevre, and on the 10th and 11th General Summerall's troops crossed the Meuse at Mouzon and Stenay, their advance being directed on the railroad at Montmedy. The enemy was retreating at every point along the western front when hostilities ceased under the armistice terms at 11 a. m. on November 11.

## The Little Boy

By Marion Clinch Calkins

His soul and body were so lean,  
And so loved wind and sunning,  
I have to think in fashioning him,  
God fashioned him for running.

His soul and body were so gay,  
And so loved games and leaping,  
I cannot think, in fashioning him,  
God fashioned him for sleeping.

## As Man to Man

(Continued from page 233)

looking ahead. The past is dead so far as he is concerned before the smoke clears from the field of battle. Taking such an important part in public affairs it was only natural that he should eventually become a power in politics. His enemies say that he became a boss—that it was merely a game of chasing away the other bosses so that he could take their places. They even hint that he was not a particularly good boss and assert that he had many of the faults of his predecessors. He is not without enemies in Dayton. He is the type of man who wins very loyal friends and equally enthusiastic enemies. But it is interesting to note that the loyal friends are vastly in the majority. It is also interesting to note that Cox did not wait until his newspaper was firmly established and financially independent before he launched his vigorous editorial policy. He was struggling to meet the payroll most of the time he was making enemies. It is said there are more than one hundred small payments recorded on the original note which was incident to his purchase of the *Dayton News*. It is also worthy of note that Cox has tried to keep his employees with him and there are quite a number of old timers in the plant.

One of these men told me about the time when Cox had his first private office. That was long before the *Dayton News* owned its own building. Cox was pleased with his private office and the lettering on the glass door. He had occupied it only a few minutes when he had a caller. Some seconds later there was a terrific crash of glass and the caller alighted on his eyebrow out in the corridor. The caller had come to participate in a fight with the editor and he had succeeded. But the new private office was a wreck. One of the old timers told me that "Cox is not much of a writer, but when it comes to digging up the facts he is a heller." He still has an office in the *News* building and is never happier than when at work there, tho he has not written much for his newspapers since he has been in public life. His editors do not praise his official acts, but I discovered that they follow the usual custom with newspapers owned by public men: they find occasion for reprinting a great deal of the favorable comment of other publications. The *Dayton News* is intensely partizan in its politics, but not bitterly so. I found editorials in its files praising nearly every prominent Democrat of recent years, and especially William Jennings Bryan, who seemed not to be especially delighted with the nomination of Cox. One editorial compared him with Gladstone, finding him equal to the British statesman and of the same type.

Speaking critically of the *Dayton News* it impressed me as being fully up to the standard that might reasonably be set for a city of that size—155,000 population. The *News* is not as aggressive now as it has been in local affairs.

# Do Your Teeth

Glisten Like the Teeth You See?

*All Statements Approved by High Dental Authorities*

Note the pretty teeth seen everywhere today. You can see that countless people clean teeth better than before. They remove the film which dulls teeth.

This new method is employed on millions of teeth every day. Dentists everywhere are urging its adoption. This is to urge you to test it—free—and see what it means to you.

## Film Dulls the Teeth

A viscous film forms on your teeth. You can feel it with your tongue. It clings to teeth, enters crevices and stays.

The tooth brush does not end it. The ordinary tooth paste does not dissolve it. So millions find that teeth brushed daily are still ruined by that film.

The film is what discolors—not the teeth. It is the basis of tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. Thus most tooth troubles nowadays are traced to film.

## Now a Way to End It

Dental science, after years of searching, has found an efficient film combatant. Able authorities have proved it by years of careful tests. Now great efforts are being made to bring it into universal use.

The method is embodied in a dentifrice called Pepsodent. And, to show its powers, a 10-Day Tube is being sent to everyone who asks.

## How Millions Have Proved It

Millions have proved this new way by a simple test. If you have not done so, make it. Film removal is vitally important.

Pepsodent is based on pepsin, the digestant of albumin. The film is albuminous matter. The object of Pepsodent is to dissolve it, then to day by day combat it.

This method long seemed barred. Pepsin must be activated, and the usual agent is an acid harmful to the teeth. But science has discovered a harmless activating method. And now

active pepsin can be every day applied, and forced wherever the film goes.

Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how the teeth whiten as the fixed film disappears.

When you see the results and read the reason, Pepsodent will need no argument. The cleaner, whiter, safer teeth are evidence enough. For your own sake, don't wait longer. Cut out the coupon now.

**PARK TAILORING COMPANY**  
Dept 329 Chicago, ILL.

One reason is that many of the battles have been won. The paper is well edited, it prints an excellent selection of world news, its features are good, and its makeup neat. Its staff gives one the impression of being adequate, competent, enthusiastic. The men like Cox as a publisher and they have the utmost confidence that they may differ with him in confidence and sometimes win the argument.

There has been a great change in Dayton during the time Cox has owned a newspaper there. Once it was closely allied to the surrounding farms. Now it is the center of specialty manufacturing which calls for skilled labor. It seemed to me as I walked the streets that there was a building and loan association office on every corner. Dayton is a city of home owners. It is a bustling, clean, beautiful city with very little labor trouble. In many ways it is an ideal industrial city. In ten years its growth has been 33 per cent, and this includes the period of the great floods in 1913. As soon as the water had receded the *News* was published on the street, and a few days later it announced in a front page editorial that "there has been enough of calamity" and that the *News* would publish "no more reminders of the harrowing days of the flood." That is again characteristic of Cox. His face is set always resolutely toward the future.

With all his energy and strong will he is a kindly man, there is a twinkle of humor in his eyes most of the time, and he loves a good story. Incidentally he is an excellent story teller. I was present at the daily conferences between Cox and the newspaper men. One of the correspondents asked a question and then added: "I don't wish to pry into the secret, but—" Cox laughed and said: "Don't worry. You won't." It was a very kindly laugh, in which all present joined. The faintest suggestion that he might not be able to take care of himself amused Cox. That is one of his most prominent characteristics. He is self-reliant, a dynamo of energy, gifted with common sense and saneness to a remarkable extent, conservative, not notable for vision or idealism, big enough to seek and take advice. During my interview with him his eyes kindled with the fire of the enthusiast only one time, and that was when he discussed the work a woman educator is doing to wipe out illiteracy. It was evident he has a passion for the common schools.

Cox is a comparatively wealthy man today. He has bought back the old family homestead which his father sold and added to it until it is now a well improved estate. The farm is in Butler County. I met Cox at his home, Trail's End. It is an ideal home, beautiful but above all else comfortable, and it has an impressive library. The automobile road winds around the hill under magnificent trees, behind which the house is completely hidden from view.

One takes the train in Dayton and arrives in Marion three hours later. The two presidential candidates are almost neighbors. Marion is a city of not

more than 30,000 population. It has some large manufacturing plants, but is still closely allied to the surrounding farming country and always has been. The city is well paved with brick and has beautiful trees along the sidewalks. It is an excellent example of a small Middle West community. There is almost no foreign element. Marion has an excellent park and a boulevard plan, part of the boulevards having been constructed. The name of Harding is associated with this and other enterprises which have tended to make Marion a pleasant place in which to live. His contribution toward such things has been ideas rather than money.

**H**ARDING, like Cox, began in the newspaper game while he was in his teens. He was a very young man when he purchased the *Marion Star*. He had much opposition to face and not a very good field for his enterprise. A prediction of failure at the time would certainly not have been unreasonable. Marion had more newspapers then than it has now, altho the town has grown tremendously. There was no particular political battle for the *Star* to fight. Evidently Harding's idea was that he could publish a more acceptable small town newspaper than Marion then boasted. He paid only \$300 for the *Star*. For a long time he slept on a cot in the newspaper office. He was reporter, advertising solicitor, printer, in other words, he was the typical small town editor of those times.

I looked over the files of the *Star* carefully. The impression I obtained was that of a kindly man desiring to serve his community. He gave the petty local happenings the appearance of importance they would naturally have to the community. The report of the death of a person had in it a real touch of human sympathy. One gathers an impression of deep love for the community and pride in its progress from the discussion of local problems incident to the growth of a town. The *Star* always was, as it still is, a good newspaper. Its telegraph service is excellent and its features well selected. Like Cox's *Dayton News*, the *Marion Star* is also intensely partisan, but not bitter. Its partisanship is shown more in its praise of Republicans than in its criticism of Democrats. A very large proportion of the editorials in the *Star* deal with strictly local matters. I found this also true of the *Dayton News* even during the most critical periods of the world war. Reading the files of those periods one cannot fail to be impressed with the thought that Ohio evidently did not expect the nation to be drawn into the world war. As between the two, however, the *Star* more frequently showed indications that its editor saw what was coming. The *News* followed President Wilson with the utmost loyalty in the long period of uncertainty before the war in the days before the President had begun to prepare the nation for the inevitable. In looking over the files of the *Star* I was especially impressed by an editorial in the issue of March 31, 1917, in which the growing

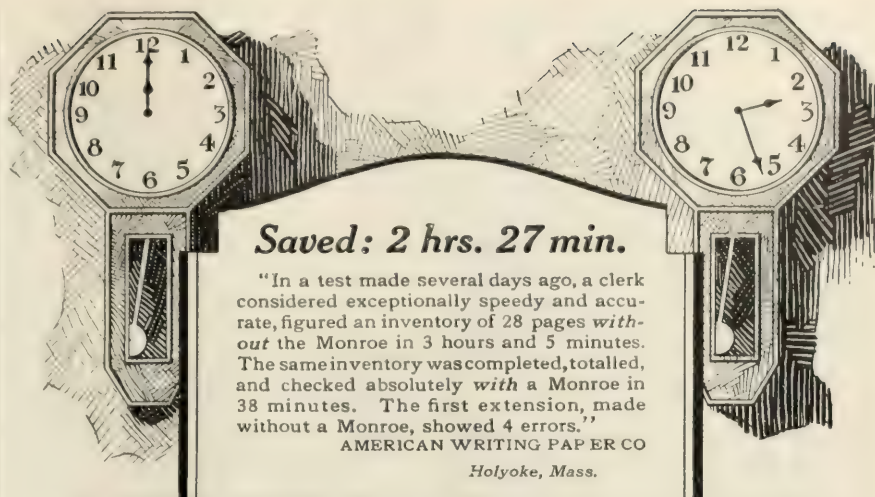

encroachment of the executive power was discussed. Evidently the idea which Harding has stressed in this campaign was very ripe in his mind then. Some of the sentences are almost the same as those he has recently used in criticizing President Wilson.

While Harding has been intensely loyal to the Republican party as an editor and otherwise, the editorials are not slavish in tone. There is a ring of sincerity to them. In this connection it is worth while to note that Harding's paper was not partizan in local matters, but seemed to make the burden of its message: 'Remember, gentlemen, that the issue, after all, is the welfare of the city of Marion. We may all have our opinions as to what is best to do and we may differ, but if we fight too bitterly we shall injure the thing we are fighting for.' The quotations are my own. I did not find any such sentiment in so many words, but such seems to have been the spirit of the policy of the *Star*.

There is a great deal of difference in the mission of a newspaper in a city the size of Marion and a city the size of Dayton. In the latter the press becomes a very effective weapon. In the smaller town Harding's policy is not only the wiser but it is the only policy which offers any hope of success, in my opinion. I do not think there can be any doubt about the fact that Harding has a deep love for Marion and for the Republican party. He is not of a belligerent turn of mind. He would be willing to engage in a factional fight if he thought it absolutely necessary, but his first instinct would be to act as peacemaker. I am told that he was busy trying to compose differences at the Republican convention when he was selected in conference as the man to be nominated. I cannot think of any role more natural for a man of his type than that of peacemaker, with a calm that could not be disturbed by the passions of the moment, with a serene faith that the difficulties really amounted to little compared to the purpose of the Republican party. Such also has been his attitude as an editor in Marion's local affairs.

It was a long time after Harding launched into his career as an editor before the *Star* was sound financially. Very patiently and very slowly Harding established a place for it in Marion before it even began to make much progress. Its very existence had to be justified before it could begin to grow. The situation in Dayton was decidedly different. Dayton really needed a newspaper and had needed one for a long time when Cox started there.

After Harding married, his wife helped him with his struggling newspaper. She was most active in the circulation department if it could be called a department of such a small business. Mrs. Harding is a woman of great energy and initiative. She is a "good business man." Mrs. Harding is slender, has a beautiful profile, and eyes that glow with intense interest during a conversation. The Senator and his wife are such inseparable com-

## SCHOOLS AND COLLEGES

## Training for Authorship

How to write, what to write, and where to sell.

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein.

**Dr. Esenwein** for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes; descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 20 cents, annual subscription \$2.00. Besides our teaching service, we offer a manuscript criticism service.

311 Sixth Avenue

New York

panions that the people of Marion who have known them for many years usually speak of "the Hardings."

Quite aside from Marion's natural pride in having a presidential possibility within the corporate limits, the people there are very fond of the Hardings. Evidently this small town publisher has been a good neighbor and a model citizen. In walking about the streets of Marion I found Harding's picture in a window of nearly every building in the city, whether a business house or home. I saw only two Cox pictures. One was in the office of the opposition newspaper. One gets the impression that Marion is about 90 per cent for Harding. As he walks about the streets, usually in the company of some delegation, he waves his hand to people across the street or on their front porches in typical small town style. They wave back without paying any attention to the crowd accompanying their neighbor. They are used to it now. Harding is pre-eminently a good neighbor and a plain sort of man. Somehow I got the impression that the friendly greetings along the way meant more to him than the visiting delegations. He is a very modest, shy, somewhat diffident sort of man. I cannot avoid the feeling that he would be just as well pleased to go on with his newspaper business and not have to spend so much time away from home.

Harding has one of the most impressive countenances I have ever seen. The official campaign portraits of him are excellent likenesses. They do not—indeed, they could not—exaggerate the character so plainly written on that face. In repose, his expression is rather sad. He is a tall man, with a large head and large features. His is the face of a man who has worked hard, both with hands and brain, who has struggled every step of the way and has learned infinite patience, charity of judgment, mercy, and who has developed a magnificent character. There is a kindly twinkle in his eyes. He, like Cox, is an excellent story teller and loves a good story. When his face lights up with amusement it is really merry, but in repose he looks the part of statesman, thinker, the man who knows long years of incessant effort. He does not give the impression of even approximately the boundless energy of Cox, but rather of a man who would like to take things a little easier but for his inability to win the argument against a stern conscience. There is something Lincoln-esque about his expression; not that he resembles Lincoln, for he does not, but if some one were to tell me that he had walked five miles to take a customer his forgotten change, as Lincoln did, I would believe the story without the shadow of a doubt.

He, like Cox, has been able to keep his employees. There is a tradition around the office of the *Star* that when new men come to work in the editorial department they shall hear a brief lecture on the spirit of the institution. Harding has delivered that lecture a great many times, and now his managing editor carries on the tradition.

The lecture has been written, tho it was probably never delivered twice in exactly the same words. As it has been written it follows:

REMEMBER there are two sides to every question. Get them both.

BE truthful. Get the facts.

MISTAKES are inevitable, but strive for accuracy. I would rather have one story exactly right than a hundred half wrong.

BE decent, be fair, be generous.

BOOST—don't knock.

THERE's good in everybody. Bring out the good in everybody, and never needlessly hurt the feelings of anybody.

IN reporting a political gathering give the facts, tell the story as it is, not as you would like to have it. Treat all parties alike.

IF there's any politics to be played, we will play it in our editorial columns.

TREAT all religious matter reverently.

IF it can possibly be avoided never bring ignominy to an innocent woman or child in telling of the misdeeds or misfortunes of a relative. Don't wait to be asked, but do it without the asking. And, above all, be clean and never let a dirty word or suggestive story get into type.

I want this paper so conducted that it can go into any home without destroying the innocence of any child.

That creed and others closely similar to it are by no means uncommon in American newspaper offices. I have been familiar with such expressions as these since I was a cub reporter, but all newspapers do not live up to this creed very well. A close examination of the files of the *Star* reveals a very evident desire to live up to every word of that creed in the finest spirit.

One of the old timers in Marion told me an interesting story about "the Hardings." That was the term he used. He said that many years ago a plumber came to Marion when plumbers were more of a novelty than they are now and that Harding became acquainted with the plumber. He asked the plumber about his work and they struck up a friendship that lasted for some years. Eventually the plumber left Marion. Some years later the Hardings ran across him by accident in another city and learned that he was blind. They made sympathetic inquiry and discovered that his blindness could easily be cured by a simple operation. They immediately financed the operation, which resulted successfully. Nothing would ever have been known about it in Marion but for the fact that Mrs. Harding missed a reception which the townspeople had prepared for the Senator and herself. She thought courtesy required that she should be present when the operation was performed on the blind plumber. The old timer concluded his story by saying: "They've done lots of things like that." Perhaps this, in part, accounts for the fact that the business men of Marion bought pages and half pages by the dozen in Harding's newspaper to print Harding's picture, when he was nominated at Chicago. The *Star* very seldom makes any reference to Harding's political activities.

The fact that Mrs. Harding has played an important part in the suc-

cess of the *Star* seems to have given her husband the idea that there is room in a newspaper office for women. Three of the reporters on the *Star* are women. Two of the eight linotype operators are women. There are women in every office and every department of the newspaper. There are nearly as many women in the office of the *Star* as men.

**S**UMMING up my impressions of these two men I would say that each is in his own way a type of the more than ordinarily successful American newspaper man with both editorial and business ability—that each has been drawn into politics more because journalism and politics are such close neighbors in Ohio than because of any original intention to seek public office. Common sense and character are the most notable characteristics of each man. Leaving aside all questions of platform and party affiliation, and judging them simply as two editors, one of whom will soon be President of the United States, my personal feeling is that either one will make an excellent President. Neither has, so far as one can now judge, elements of greatness which show promise of linking them with the greatest American statesmen. But they both have those elements of sanity, common sense, appreciation of the ordinary life of the ordinary American, which all our greatest Presidents have had. They are of the people and close to the soil. There is nothing awe inspiring about either of them. I have not the slightest doubt that their equals exist by the thousands from Maine to California. I think they would be the first to assert vehemently that this statement is true and that they have been chosen by the turn of fortune's wheel in the great gamble of politics.

They are not the types of men I would expect to bring some great message to the American nation. It will astonish me if either of them makes a great issue in American public affairs by introducing some new thought. But each of them, none the less, has within him powers that will enable him to rise to greatness should the emergency present. They are plain men, conscious of their limitations, harboring no illusions of greatness. But such men have in times past made for themselves immortal fame when fortune willed them the crisis that made opportunity.

In looking over the files of the Marion *Star* I read an editorial in the issue of March 22, 1917, in which the assertion was made that "the cranks of the country" won the election of 1916, but that the nation would learn a lesson it would not soon forget, and that the nation would go back to plain old-fashioned Americans in 1920. We will omit the partizan reference to the present administration and pass comment only on the prediction: the sort of men the *Star* said in that editorial, published March 22, 1917, would be the choice of the people in 1920, Cox and Harding both are.

## MOODY BIBLE INSTITUTE MONTHLY

Continuing The Christian Workers Magazine

Beginning September, 1920, we enlarge the magazine to three columns, and improve it in many ways.

Our October issue will contain several contributions of exceptional interest and value, among them one on which Dr. J. H. Ralston has put much care, entitled

"The Downward Drift of Christian Thought."

This will be supplemented by one from our Edinburgh correspondent, the Rev. W. Graham Scroggie, being a scholarly

"Review of Professor Peake's One-Volume Commentary."

showing its exceedingly dangerous character from a doctrinal point of view. Assuming it to have a wide reading, Mr. Scroggie says it will prove "a set-back to a true spiritual revival more than any other single volume of our time."

A New England pastor sends us a good working homily on

"Three Phrases Descriptive of the Christian Life."

The issue will also contain an unusual biographical study by Principal W. C. Stevens of Midland Bible School, Kansas City, on

"Noah, and What God Thought of Him."

We prefer to give our readers new and fresh matter each month, rather than reprints from old books and other publications, but occasionally such a reprint has a rare and present value, such as Professor Robert Dick Wilson's article on

What Does "The Sun Stood Still" Mean?

This appeared in the Princeton Theological Review about two years ago, and we have been awaiting a good opportunity to place it before our readers.

But the above is a small part of what we have in store, as manuscripts are already in our hands of articles and original reports of addresses by such Christian educators, Bible teachers, pastors and evangelists as the following: Principal T. R. O'Meara, Dean R. A. Torrey, Rev. W. H. Griffith Thomas, Rev. A. B. Winchester, Rev. Lewis Sperry Chafer, Rev. George E. Guille, Rev. Leon W. Tucker, Rev. A. E. Thompson, Rev. John Timothy Stone, Evangelist L. W. Munhall, Evangelist W. E. Biederwolf, Evangelist Charles Inglis and others.

Please tell your friends about our new name, The Moody Bible Institute Monthly, and the price, \$2.00 a year, 20 cents a copy.

**What return  
do you get  
for your savings?**

In former years 6% was considered a big return without taking undue risk. Now, when Government bonds yield this and when the premier bonds of European nations may be bought at far more attractive yields with possibilities for greater profits than have been offered in many decades it may be well to consult these opportunities.

Our Special Monthly Instalment Plan increases your immediate purchasing power by enabling you to pay 20% down and 10% a month and take full advantage of the present attractive prices of these Foreign Issues.

Send for our Book F.G.B.-23, also ask for 88-L.L. which gives details of our Monthly Instalment Plan and its special privileges.

**DUNHAM & Co.**  
 Investment Securities

43 Exchange Place New York  
 Telephones 8300-16 Hanover

**The United States Life  
Insurance Company**

in the City of New York

Organized 1850. Non-Participating Policies only. Over Forty-five Million Dollars Paid to Policyholders.

JOHN P. MUNN, M.D., President.

Good territory open for high class, personal producers, under direct contracts with the Company. Address Home Office, 277 Broadway, New York City.

**7% Higher Interest Rates**  
 Owing to a general advance in interest rates, we shall for a short time at least, be able to get Seven Per Cent for our customers on First Mortgage Loans. We suggest that you take advantage of this and arrange to take some of these loans at the higher rate. Good loans are offering. Write for Loan List No. 710  
 Perkins & Co., Lawrence, Kansas

**AN INCOME FOR LIFE**

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$623.60 absolutely beyond question of doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

**Stop the Leaks That Keep You Poor**

Saving money is hard work until you get the secret. No matter how large or how small your income you will never save as much as you should until you get the knack.

If the average business were operated on the haphazard basis on which our household finances are run, there would be fifty times as many bankrupts. The truth, whether we admit it or not, is that very few families know where their money goes. At the end of each year we find ourselves little better off, if any, than at the beginning. We have earned \$800 or \$1,500 or \$5,000, yet practically all has been spent—and the pitiful part of it is we have nothing to show for it!

New Method Makes Saving a Pleasure Instead of a Hardship

If you are interested, write for free booklet called "How We Stopped the Leaks That Kept Us Poor."

THE INDEPENDENT, 311 Sixth Avenue, New York

**The Law and the Profits**

(Continued from page 234)

of persons willing to work and seeking work, but deprived of work because of the consideration of profits. In a word, profits will not continue to be the primary consideration in industry, whether private or "affected with a public interest," for all industry will be held to be charged with a public interest, as all industry necessarily is.

At Chicago a powerful group of big business magnates, assembled at the Blackstone Hotel to keep a hand on the Republican national convention, decided unanimously against the Kansas Industrial Court Act. At Montreal the American Federation of Labor also unanimously decided against it. I do not believe the Industrial Court Act is the solution of industrial unrest, but it has broken thru traditional industrial ideas in a revolutionary way, and it has extended the principle, beyond the line of public utilities, of the public interest or "cost of the service," as opposed to "value of the service," and in these respects it is in line with social evolution and ominous to industrial autocracy. It is another step taken in the slow progress of man in his human right to live and pursue his happiness, against the rights of private property.

Is the trend then toward state socialism? Is it if it is not properly directed. But the goal is not necessarily state socialism, and ought not to be.

During the war the state did assume a direct overlordship of industry, in order to shape it to certain desired ends. These, however, are not the ends of peace-time industry. The purpose of wartime direction is concentration of industry with a view to production of war supplies. The methods of war are not those of peace. We employ different methods, but we do not accept different principles in war than in peace. Principles remain the same, and the principle underlying the shifting to war methods of control of industrialism is the principle I have mentioned, that industry is a servant of the public and exists to produce and serve and not primarily for a profit, but profit is incidental, as in the case of railroads, to well conducted industry.

That such regulation of industry by law or by acceptance of the rule of rendering public service is not socialism is evident from the railroad status. When transportation was under Government operation the criticism directed upon it was that Government management was the negation of good management because of the absence of an incentive to initiative. But when the railroads were turned back to private operation, under Government control, there was a sigh of relief on the part of industrial leaders, because they recognized that the incentive to initiative and efficiency was not destroyed under the provisions of the Esch-Cummins Act. This incentive, of course, is profit. But in this case only a "reasonable" profit.

If in railroads a "reasonable" profit is a sufficient incentive to efficiency

and gives scope for full initiative, then so are "reasonable" profits in what are now regarded as clearly private industry a sufficient incentive, tho these profits may vary in different industries with the variable risk in them.

Roger Babson describes going into a great metropolitan bank, marching up and down before which were soldiers with rifles. "Everything was guarded as if this were the most sacred spot in America." It was not a home. On his way he happened to see a mother, a grandmother and several children being evicted from a home. "As I sat in my office later," he writes, "a vision came to my mind of the Bolshevik. For the first time I momentarily caught his point of view—that this Government is organized to protect property rather than people."

The remedy for profiteering is to convince industry, by force of law if necessary, that industry is not conducted first of all for profit, but as a public service, that employment and production are primary obligations that it must assume, and that it is a servant—not in any sense a master.

*Washington, D. C.*

## The League or Bolshevism? We Must Choose

*(Continued from page 235)*

face with the internationalism of men who have taken things into their own hands.

In the United States we have, as yet, seen no marked tendency in this direction, but there is a lesson for us in the things that have come to pass in Europe. We can no longer ignore the fact that Russia's millions are thoroly committed to the communistic theory. France and Italy are coming increasingly under the control of socialistic ideas and socialistic leaders. No other leaders can long hold control in the existing state of public opinion in those countries. Germany has been reorganized into a socialistic nation of 75,000,000 souls. We are impressed with the growth of socialism in Great Britain and the adoption of socialistic ideas by British statesmen.

For this development in the nations of Europe, war and preparations for war, the burdens and the horrors of war are largely responsible. It spreads across frontiers as readily as trade and commerce and much more irresistibly. If war and war preparations are to continue to be the principal business and the chief expense of national government, we will not be immune from the development of socialism and Bolshevism on an impressive scale in the United States. It will not be confined as in the past to soap box oratory. It will seize the political power.

I repeat, therefore, that we are called upon to choose between the internationalism of a League of Nations, a society of states whose standards are mutual protection, with honor, justice, liberty and self-government, and the internationalism of the Bolshevik.

**W**HY can one man sell where another fails? Why can one man get the sought-after job when another, better qualified, is turned down? Why does everyone "believe in" one man and have no confidence in another, who really has as much ability? The thing that counts is not only what you say *but how you say it*. If you are interested, write for our free booklet called "The Secret of Being a Convincing Talker—How I Learned it in One Evening."

**THE INDEPENDENT**

311 Sixth Avenue

New York

**Don't Keep Your Eye on the Ball**

(Continued from page 238)

not difficult with a little practice to regulate it. Then one has, practically, the stroke that is Hary Vardon's staple shot. It has the merit, too, of being a most reliable stroke when one has acquired the knack.

There is still another matter of the greatest importance, wherein, by the way, all the greatest players of the world, including Braid Taylor and Vardon, mislead their readers. That is the management of one's weight during the swing.

The triumvirate are agreed that in addressing the ball one should have one's weight distributed equally between the two feet. They say that, "thereafter, during the upward swing, one must not move one's head nor hips; yet, they tell us that, by some inscrutable means, at the top of the swing the *weight goes on to the right leg*."

This is, of course, simply an impossibility. They do not even attempt to carry out in their own play what they say in their books. As a matter of fact, the weight in the swing *never goes on to the right leg*. It cannot do so if one follows the directions for the swing, but it is needless to encumber one's mind, in play, with countless things to remember. The secret of managing one's weight in the golf-stroke is to give half of it to each foot. It is impossible to improve on that idea; maintaining that idea, which connotes keeping one's head quite still during the drive, means that at the top of the swing there will be, if anything, a little more weight on the left foot than on the right.

Included in this question of weight is the old, old admonition about keeping one's eye on the ball, that has been done to death. Keeping one's eye on the ball would be useless unless one kept one's head steady. One might gaze steadfastly at the ball, but if one ducked one's head or lifted it, the stroke would be ruined, as many are. It is keeping one's head still that is important. As a matter of fact, the eye has fulfilled its function so long before it gets to the ball that *therein lies the great danger*. The eye desires to anticipate the flight of the ball, and one must fight against that tendency.

The young professional, Hayes of Newport, can drive a fine ball with his eyes shut and his face turned up to the sky. I have seen him do it repeatedly.

Vardon says, quite rightly, that, as one hits the ball, the head should come up and turn naturally. Unless it does so, one is apt to check the follow thru.

In the upward swing it is important to let the hands lead the body. In other words, do not let the body "get in front." The importance of this is seen in the downward swing which is the converse of the upward. James Sherlock says, and it has never been better expressed, that the club should be "picked up" and carried back a long way before the forearms begin to turn. After all, one of the most important

things in golf is to be perfectly natural. The more natural we are, the less we have to think of at the time we are making the stroke. There is really no time to think of anything except *hitting the ball*.

The downward swing starts before the upward swing is finished. This is a paradox, but it is very sound golf. The fact is that the body starts to return toward the ball before the club head has reached its lowest point in the upward swing. Look at the motion pictures of the famous players and you will see that, in nearly every case, at the top of the swing the driver sinks a little below the horizontal. Then look at their bodies and you will be surprised to see how much they have started to unwind before the club has started to return.

This statement is sure to be much debated, but it is true beyond doubt. As the hands lead the body back and away from the ball, so, conversely, does the body lead the hands back to the ball. So it will be seen that the body has started the downward stroke before the arms have finished the upward stroke. That is one of the secrets of the beautiful rhythm of the perfect golf stroke. There is no stopping, no jerking at the top of the swing; the upward stroke is insensibly merged in the downward stroke, so that the closest observer, even a camera at fifteen-hundredths of a second, cannot find anything disjointed in the movement.

Another bit of advice which is most woefully neglected by many teachers is that at the top of the swing one's wrists should be underneath the shaft. One must remember that, in the downward swing, altho the player wants to hit the ball, the throw or force of the club is *backward* (away from the hole) and *downward*, so one must be *underneath the shaft*. It is impossible to exaggerate the importance of this much neglected principle.

There are many other important considerations, but these are the prime essentials in the drive, the stroke wherein all men—and women—most desire to excel. They are fundamental, and yet so simple that, once grasped, they are used subconsciously.

Take a concrete case to illustrate the point. We ought to give up the old and foolish idea that the left is the master-hand in golf. That has ruined more potential golfers than any other fetish of the games of fetishes. The truth is that the right is the master hand in golf. When one has got that into his head, one does not need to think of it any longer, for it is natural. One just does it, without any thought of allocating so much power to each hand, and the result is good, while it is fatal voluntarily to make the left hand interfere where it is not useful.

The secret of teaching golf is to impress upon the golfer that there are an amazing number of things which it is expedient, after one has addressed the ball, to *forget*.

WILLIS C. COOK, Republican National Committeeman from South Dakota—The Democrats nominated the wettest kind because he was the wettest kind and because all the wets wanted him and they made a wet platform in wet territory and a dry platform in dry territory.

## New Plays

*The Girl with the Carmine Lips.* Lipstick and slapstick farce; largely liquor and lingerie. (Punch and Judy Theater.)

*The Checkerboard.* A queer mixture of melodrama, farce and Russian dancers. Prettily staged. (Thirty-ninth Street Theater.)

*The Cave Girl.* by George Middleton. Clean and clever comedy; well written, well acted and well mounted. As sure a success as the author's "Adam and Eva" and "Polly with a Past." (Longacre Theater.)

*The Bat.* by Mary Roberts Rinehart and Avery Hopwood. A perfect play for the detective story habitué. It keeps the audience on edge with one exciting episode after another and leads skilfully to an altogether unexpected dénouement. May Vokes as "Lizzie" breaks the tension with some really funny comedy. (Morosco Theater.)

## Daisy to Her Father

DEAREST FATHER—I just never expect to get thru acknowledging all the wonderful and thoughtful things you do for me.

When the first issue of *The Independent* to which you subscribed came to me here at college, I thanked you, but entirely in the spirit of your thoughtfulness in seeing to it that I had plenty of reading matter at hand. It has only just this evening come to me, Daddy, that all the opinions I have "spouted" in the last two months that have gained me such a deliciously gratifying reputation as a young lady who is up on things, are the result of my reading *The Independent*.

But, Daddy, I'm afraid you have come a cropper in one respect; you're going to find me a most terrific debater on the questions of the day when I get back!

It used to embarrass me so when the boys talked of the situation in Russia, American political developments, communists and the other big topics of the day, but now, thanks to *The Independent*, I am the proud possessor of opinions on these and many other of the live topics of the day.

Think of it, Daddy, when Billy came down for the week end in his sizzling Stutz, I was able, while riding with him, to discourse quite authoritatively on the impetus that Uncle Sam has given the good roads movement by coöperating with our state governments in highway improvement!

Don't you tell Billy that I read *The Independent* every week, and whatever you do, Daddy, don't mail him a subscription. He thinks my knowledge of highway development is just wonderful.

With heaps of love,

DAISY

## Remarkable Remarks

GEORGE BERNARD SHAW—I am a Classic.

CONSTANCE BINNEY—I simply love raw eggs.

MADAME NAZIMOVA—No part of me is dead.

GOVERNOR COX—I am not tied to my front porch.

QUEEN MARIE OF RUMANIA—Smile when your head is aching.

LADY DUFF-GORDON—Immodesty in dress is ruinous to woman's charm.

DAVID W. GRIFFITH—A man's heart has much to do with his business deals.

REV. GEORGE CHALMERS RICHMOND—This world is not in love with Thee, Oh God.

ROY K. MOULTON—I never get tired of the beauties of Coney Island. I never go there.

COMMISSIONER WALLIS—The people who come here are neither beggars nor prisoners.

NEAL R. O'HARA—Now a question whether Lipton or Ponzi is the world's best loser.

H. G. WELLS—Women's vote has temporarily added to the forces of reaction in England.

KING ALFONSO—I am a Spaniard, which does not preclude me from loving you all equally.

W. L. GEORGE—The world belongs to men because to men love is not so important as to women.

CALVIN COOLIDGE—We must eternally smite the rock of public conscience if the waters of patriotism are to pour forth.

MICHAEL MONAHAN—To have nothing to say and to say it at all hazards, passes for much that is called achievement in literature.

DANIEL WILLARD—The recent increase in rates allowed to the railroads will have a tendency to reduce prices rather than increase them.

LADY ASTOR—Women's equality of moral courage is essential in public life to help the growth of better social and international relations.

GUGLIELMO FERRERO—Why has man no longer time to sleep when he can today produce in an hour what his fathers could not produce in a month?

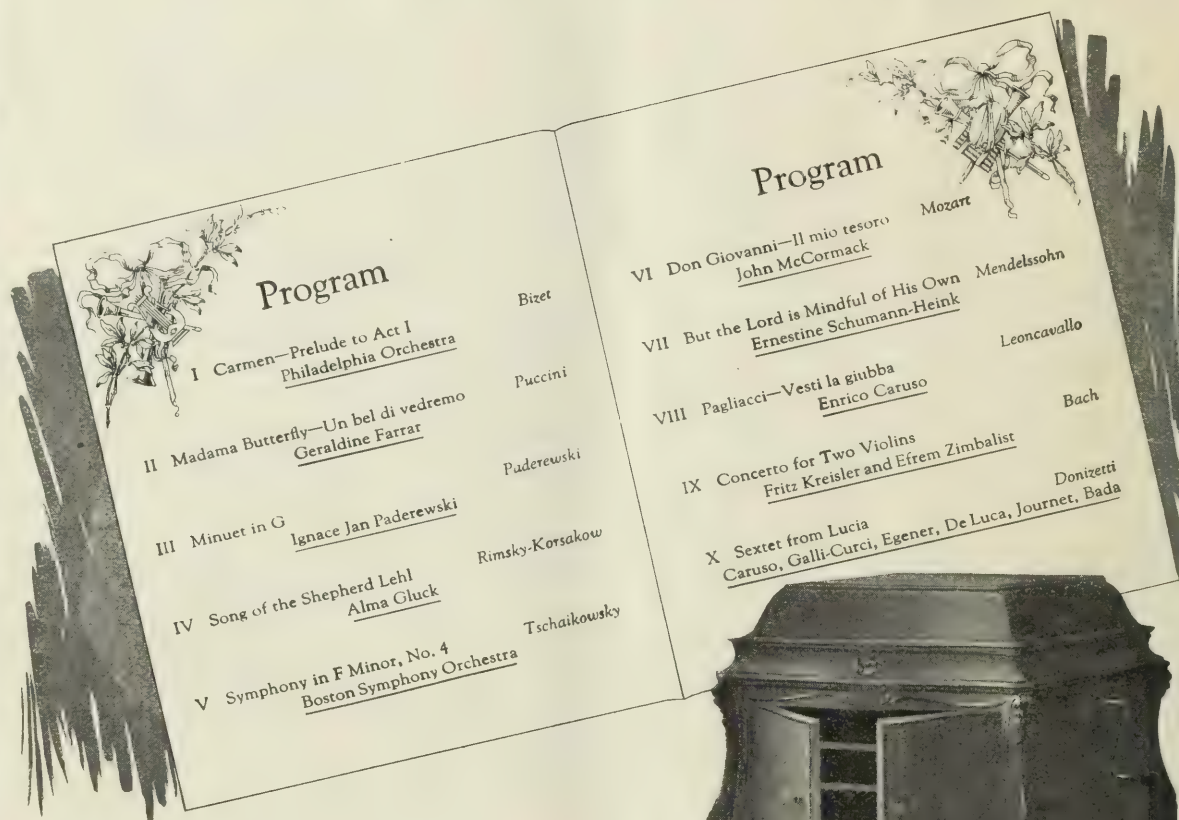

CHOLLY KNICKERBOCKER—I never could quite understand why the socially ambitious ones always select Southampton as a summer camping ground.

MISS FANNIE WOLFSON—There is no reason why romance stamped with the official O. K. of the U. S. A. should not be as attractive as any other kind.

F. L. MULFORD—The essentials of a good home are a man and woman resolved by their mutual efforts to make this world a better place in which to live, and a

# Look at this for a program!

It is possible on the Victrola only! For only with Victor Records on the Victrola do you get the subtle shades of color, tone, and interpretation which mean pre-eminence. When you hear Victor Records played on the Victrola, you hear precisely what each artist heard and approved as his or her own work. Any other combination must necessarily be less than the best.

Be sure you get a Victrola and not an imitation. \$25 to \$1500. Victor dealers everywhere. New Victor Records demonstrated at all dealers on the 1st of each month.

## The Little Dots That Make the Mighty Map

By Chester T. Crowell

WHILE the villages of New York, Pennsylvania, New Jersey and Massachusetts do not resemble those of Texas, they have an astonishing number of qualities in common. The points of dissimilarity are more in appearance than in the characteristics of the people. Villages in New England and New York are old. One sees at a glance that these substantial old structures have the charm of age. Usually the trees are beautiful, the streets are well paved and there is an indication of wealth. These villages give me the impression that they are populated by persons who are moderately wealthy and not very energetic but who are enjoying wholesome, healthy lives.

What might be fittingly termed a typical Texas village ought not to be more than twenty years old. Nearly all the structures would be of pine boards. Some of them lack paint altogether, while very few of them show new paint. One gets an impression of drab colors, weather dimmed circus posters on barns and billboards, very little paving, fences that lean drunkenly, ditches overgrown with rank weeds, impossible sidewalks, and a ridiculously large number of pitiful little pine box churches. A village of five thousand inhabitants may have as many as ten or twelve churches, all in debt, in need of paint or repairs, some of them lacking preachers. Texas villages generally are built around a central square which has some sort of public building, courthouse, postoffice, city hall or perhaps only a band stand. There are scores of sad-looking band stands in the central squares of Texas villages, and it is very rarely that one hears a band concert. About the only time the band stand is used is when someone makes a political address.

A characteristic of Eastern villages that impresses and pleases me is the uneven topography. In Texas we have an impression that a city lot should be as flat as a pancake. And the lots must all have perfect right angles. It had never occurred to me before I came East that a piece of ground of irregular shape had any value at all. Here I see half-moons and triangles beautified, and I observe quite a bit of more or less perpendicular scenery where the baby might fall out of the front yard and splatter on the sidewalk twenty feet below. In Texas most of us would regard such a piece of ground as valueless.

We also have a bias in favor of straight streets. I suppose that is because all our villages expect to be great cities. Not being certain just where Broadway

and Forty-second street may blossom, ample provision is made from the beginning. Small Texas villages will readily appropriate money to straighten a street.

On the whole Texas villages give more appearance of life than the villages I have seen in the Eastern states. There is an uncertain element about a Texas village that stirs the imagination. None is so securely anchored that it may not disappear. Scores of them have done so during the past twenty years. Usually the reason is difficult to find. You ask and someone naively explains: "Everyone just moved away." And that is all there is to it. On the other hand, a Texas village may take a notion to grow into a wonderful little city or even a big city. Temple, Texas, when I first knew it was merely a wide place in the road. Fifteen years have passed and now it is one of the best constructed small cities in the Southwest. Waco, Texas, was a village for many years, now it is a city and making wonderful strides. Farther down in Southwest Texas many small cities have grown up where some enterprising real estate agent turned a pasture into city lots, sold them, and opened a bank, a cotton gin and a country store. Other ventures of the same sort disappeared within a few years. Texas villages are a good gamble. You cannot lose much and you may strike it rich. If the people who have so generously bought Texas oil stock had bought Texas city lots, I venture to say that not one per cent. of them would show a loss. Of the others, nearly all would double their money within three years.

That aspect of the village does not seem to exist in the East. I get the impression that most Eastern villages have been about the same size for a quarter of a century. Kingston, New York, is one of the most beautiful communities on this continent. In Massachusetts I have seen many beautiful villages.

I know that people in the East think Texas villages are "wild and woolly" places, infested by romantic cowboys, but it is not true. Out in the cattle country of Western Texas most of the villages have never had a saloon. Such cities as Abilene, Amarillo and El Paso were wild and woolly villages thirty years ago. Since that time the West has gone dry under local option laws and most of the prosperous villages of the cattle country have been established since prohibition. In the old days out there, village life was very picturesque and very happy. Without moving picture shows the people invented their own entertainment. They had dances, horse races, foot races, all sorts of athletic contests including "stunts" in horseback riding too intricate to describe

in the limits of such an article as this. They had a distinctive and characteristic life which had developed quite naturally because they were a bright, active and isolated people. Today they are entertained by aged films that are blurred and flicker. The ministers howl about dancing so that about fifty per cent. of the population bitterly opposes it, making those who participate feel like criminals. Little groups that gather for cards and dominoes in the parlor in the evening quite often pull down the shades. What, then, is the life of a Texas village today? There isn't any. That is the plain truth of the matter. There simply isn't any. Those people are starved for decent entertainment. I have seen them gather by the thousands on the occasion of a political speech simply because they yearned for a reunion. When I went thru rural Texas in 1918 with a train carrying captured German war implements and selling Liberty bonds, people came fifty miles to be in the crowd and buy pink lemonade and swap yarns and eat ham sandwiches and try to talk above the howls of the sunburned infants.

I hope Eastern villages are not so devoid of life. I am inclined to think they do not suffer quite such utter boredom, but I was not able to find just what their life consists of.

Some of the most delightful villages in the world are in New Jersey, but they are really suburbs of Greater New York. They are not in the truest sense villages and ought not to be compared with Texas villages. Still I feel like saying in passing that New Jersey probably has the loveliest villages there are. One reason is that the people in them are not all small town people.

IT is difficult to understand just why small town people think they are so virtuous and honest as compared to the people of the larger cities. In any small town one meets the shrewd skinflint whose piety is part of his stock in trade. He uses his church affiliation to sell things to trusting women of the congregation or to equally trusting men. One finds the fellow who assures you that what he offers is absolutely all right because he knew your father and mother when they were children and he would rather God would strike him dead than to permit him to cheat you. He puts the whole deal on a sort of family friendship or religious basis, placing you at a severe disadvantage in making the necessary inquiry from a business point of view. But the type of small town man I am talking about would cheat you out of the filling in your teeth if he can "put it over." Somehow it has always seemed to me that the typical city scoundrel who flashes a roll of bills and diamonds and orders extravagant meals is much more honest. His game is to excite your cupidity. He tries to make you start after his money and then he gets yours. Unless you have a certain elasticity of scruple or absolutely lack honesty, you are entirely safe from the big, red faced, fat man who tells you "there's millions in it." The small town fellow either sells you the balky horse or the sick cow or the homestead with the uncertain title or he makes you feel that somehow you have done grave injury to a loving old soul who spent a large part of his life caring for your father and mother and helping to pay the mortgage on the church where they were married.

When I get to hell I am going to get so much pleasure out of meeting all those fellows that the sulphur fire will scarcely annoy me. I may not even notice it. Those fellows will come from villages everywhere.

Then there is the village cross-examiner who wants to know what you are doing in town and where you come from and how much you earn and where you are stopping and what you pay for your room and are you married and why didn't you bring your wife along. These pests are in every village in Texas. But I met one in Newburgh, New York, and another in Amenia, New York, and another in a village in New Jersey, so I take it for granted that they are everywhere. I have often wondered why someone doesn't smash their noses. I have often wondered why I didn't. One comes to the town for a definite purpose, however, and usually

expects to leave soon. It is easier to answer questions about yourself, if you have nothing to conceal, than it is to explain why you smashed someone's nose. Moreover, one can never be sure that this is not a reverse-English idea of hospitality. In Western Texas I know it is. There, some villager will cross-examine you until you think he is

the sheriff and you are about to be mistaken for a fugitive from justice. About the time you reach for your documentary proof of identity, he offers to carry your suitcase to the hotel for you and perhaps volunteers useful information that may save you time and trouble. I try to feel appreciation but I don't. I cordially hate such people. They are one of the reasons why boys leave home. They are the reason why so many millions of people will pay outrageous rents for two or three little square holes in a mountain of brick on Manhattan with permission to die without being noticed by the neighbors rather than have a real house with a yard around it for half as much money.

Eastern villages contain hundreds of thousands of persons who have not been to the nearest city for twelve months. I cannot understand that. In Texas people pay very little attention to distances. As a boy I have often gone one hundred miles on the train to spend an afternoon with a girl I liked. Many times I have made a trip of 200 miles to have dinner and chat with a little group of friends. Persons who like to drive automobiles make trips of one hundred to three hundred miles in Texas without regarding the adventure any more seriously than a trip to the post-office. Texas roads are not nearly so good as Eastern roads, either.

But there is one impression I have of villages wherever I find them that will make all of them seem alike to me until that characteristic changes. They always know what is wrong and they don't know how to throw their hats in the air and cheer. Cities cheer. They love the game. Success is what they want. They are not money mad. A person who is money mad is the last man on earth who can make money. If the bankers and brokers, who villagers think have horns, were money mad they wouldn't send strange messenger boys around town with thousands of dollars wadded into cotton sacks. They would be afraid the boys might steal it. But they are playing a game they like and it never occurs to them that anyone would break the rules any more than a baseball [Continued on page 288]

### Do You Want to Talk Back?

Very possibly you will disagree with Mr. Crowell's estimate of American villages. If so, speak up! Put your retort on paper before it has time to cool off and send it in to us — not more than 200 words — and we'll hold a town meeting in the columns of *The Independent* to present the inside viewpoint of small town life.

# Are We Downhearted? No!

A Message from the British Nation to the American People

By The Rt. Hon. C. A. McCurdy, K. C., M. P.

Food Controller of Great Britain

ON the whole we are getting over the troubles of the war very well. The financial recovery of the United Kingdom has been more rapid than anyone would have ventured to hope for eighteen months ago. We have much to be thankful for. Never were the industrial classes enjoying more material prosperity than they are enjoying at the present time. The rise in wages that has followed the war has been of the most substantial and startling character. During the first twelve years of this century—the twelve years before the war—wages in this country rose a little more than one per cent. In 1912 the earnings of employed manual wage earners in the United Kingdom were as follows: The average earnings of 8,700,000 men were £15.9 per week. The average earnings of 4,600,000 women were 10/7 per week. The national income was estimated at something under £2,000,000,000. The total wages bill of workers of both sexes was estimated at £740,000,000. I cannot say what the total wages bill is today. It grew enormously during the war and I can say that since the armistice there has been a further increase of something like £500,000,000 to the annual wages of British workers. In many industries wages have been more than trebled since 1912, and altho the increased cost of living should heavily discount the material advantages to be derived from the rise in the wages level, the actual advantages enjoyed by the workers, the increased comforts which they enjoy are obvious to every observer.

On the other hand there is an abundance of electricity in the political atmosphere. Side by side with continuous new demands for further increases in wages come demands for economic or political changes in the structure of the British constitution, which if persisted in must ultimately lead to direct conflict more or less violent between labor and the rest of the community. We are bothered by the Socialists and the syndicalists whom no increase of wages or division of profits will satisfy as long as the capitalist foundations upon which British industry has been built up are allowed to remain, the revolutionaries who desire to substitute Soviet government—whatever that may mean—for the British constitution, and the Direct Actionists, who keep on issuing their ultimata as to the

foreign policy to be pursued by the British Cabinet under penalty of a general strike if their edicts are not obeyed.

The Bolsheviks of Great Britain are very active just now. At a conference recently held in London a British Communist Party was formally added to our other political parties.

Membership is limited to those who stand for the dictatorship of the working class for the Soviet system, and for support of the Third International.

It is a real revolutionary party, out, as one of the speakers said, to demonstrate "the historic and revolutionary value of a gun in the hands of the working man."

Straight talk of this kind has no attractions for the average British working man.

What attracts and mystifies him is a vague conception of Bolshevism as some sort of democracy where the people have come into their own. He knows nothing about the Third International and desires none of the heavy civil war which Lenin recommends to his followers in this country.

But he believes in Bolshevism as he believed in Bombadier Wells. He has had the tip to put his money on Bolshevism as the latest and best thing in democracy, and he means to back Bolshevism against the Poles, or against Mr. Churchill, or against the League of Nations itself.

The love of the British working man for Lenin and Trotzky is not an intellectual or Platonic affection, based on any appreciation of their moral qualities or political virtues.

Bolshevism is merely a banner with a strange device which the labor party have adopted like the young man in "Excelsior," as one of their party banners.

*Bolshevism, Nationalization of Industries and Direct Action* are the flags, the oriflammes, under which British labor means to go into action against the Coalition Government when the day comes.

The question of most interest is when that day will arrive.

If we could believe everything we are told we might expect the general strike and the commencement of the "heavy civil war" with some confidence in the coming autumn.

At the Trade Union Congress held in London on July 12, 1920, a resolution was carried by a card vote of [Continued on page 292

# The Steel Strike Teaches Us—

Three articles in which a member of the Interchurch Investigating Committee, a prominent manufacturer, and a clergyman point out some important aspects of the Interchurch Commission's report on the steel strike

## "An Industry Drifting Towards Unrestricted Warfare"

By George W. Coleman

Member of the Interchurch Commission to investigate the steel strike, former president of the Associated Advertising Clubs of America, author of "Democracy in the Making"

**J**UST before the publication of the report on the steel strike by the independent commission appointed by the Interchurch World Movement it was declared with emphasis by one group of insiders that the publication of this report would kill the Interchurch. Another group of onlookers were quite certain that such action would mean the rehabilitation of the organization. Apparently there was not a son of a prophet among them on either side. The gripping truth of the matter is that the report will stand on its own legs, gather its own momentum and register on its own merits.

Already this report of 90,000 words, still fresh from the bindery, is making its own fame. The press thruout the country, daily and weekly, has accorded it marked attention. On July 28, the date the report was released, it was given 2000 columns of newspaper space in the press of the country. The *New York World* and the *New York Tribune* declare that the findings of the commission have already been given more newspaper attention than any sim-

ilar report of the past fifty years. Nearly all the editorial comment was such as to leave in the reader's mind an impression favorable to the report.

A real investigation of a strike in a major industry, involving three hundred thousand workers and hundreds of millions of capital, spread over several states and continuing for months, is no small task for anyone. Never before has a body of church men been entrusted with such a responsibility.

The first outstanding fact in the situation is that the commission came thru the ordeal solidly united in a unanimous verdict that faces the facts, weighs the evidence and applies the moral law categorically, without

evasion or subterfuge. The eight men and one woman composing the commission had never worked together before as a body and were in considerable part strangers to one another. They came from different denominations and from various parts of the country and included both the clergy and the laity. Every member is an individual representing in himself or herself a wide constituency of well-

But how about the people in the street?

Thomas in *Detroit News*

meaning, responsible American people of religious mind who would have confidence in the findings of said individual. In the midst of our present-day maze of confusion and divisiveness of interest which prevails more or less in every camp, it is of the utmost significance that these widely separated individuals could present unanimously so explicit and detailed a report on so controversial a subject.

Another matter of peculiar interest which has been largely overlooked is the confidence bestowed by labor upon a body of church people in the midst of a great strike involving the workers economic existence. Notwithstanding Judge Gary's instructions to the subsidiary steel companies granting the commission an open door for its investigations, there was a good deal of material in their possession of value to the commission which was not forthcoming. On the other hand, the labor organization welcomed us to their innermost circles and gave us the right of way wherever we wanted to go.

On the day after Thanksgiving, in the New York office of our commission, Mr. William Z. Fitzpatrick, one

That working hours were unfairly augmented was one of the grievances for which the steel workers struck—this long waiting in line for pay outside hours, for instance, is one of the many minor complaints

of the two generals leading the strike, himself a sincere Roman Catholic, speaking on behalf of the strikers, the preponderating portion of whom were Greek or Roman Catholics, asked our commission, a body of Protestant churchmen exclusively, to present the case of the strikers to the Steel Corporation, agreeing to abide by our advice, whatever it might be. That is the first time, so far as I know, that labor has ever entrusted so much to representatives of the church. Of course we could not refuse such a request. And of course Judge Gary would not listen to us on such an errand. Nothing came of it. But it was an illuminating incident nevertheless. It is commonly said

that labor distrusts the church and regards it as a class institution. Actions speak louder than words.

Very few people, relatively speaking, will read, in full, the report, which is a volume in itself. But, on the other hand, very few people will fail to learn that a weighty pronouncement has been made against the twelve-hour day and the seven-day week as inhuman and un-American. It will also be made clear that the Steel Corporation with its great [Continued on page 290

# Shall Labor Get Complete Control?

By Charles Piez

President of the Link-Belt Company, former Director-General of the Emergency Fleet Corporation, former chairman of the Illinois Workmen's Compensation Commission

**I**N the limited time at my disposal I was unable to secure a copy of the steel strike report presented by the independent commission appointed by the Interchurch World Movement, and such knowledge as I have of this report is gleaned from Mr. Coleman's article appearing in this same issue. The article, however, develops the salient points of the report sufficiently indicate the weaknesses of the report when judged from the standpoint of an industrial manager.

Mr. Coleman and the other members of the Commission made the primary mistake in concluding that the strike "was waged wholly in the cause of hours, wages and control of jobs and over the manner in which all these matters were determined," and I am afraid that this primary error resulted in a train of erroneous conclusions. To those of us who have spent the last two years on the industrial firing line, the steel strike was but one of a series of broad, industrial disturbances that were deliberately designed to wrest the control of industry from its owners, and place it in the hands of the radical element of organized labor.

These disturbances began with the strike of the shipyard workers in January, 1919. In this case the men, under exceedingly unwise and intemperate leadership went on a strike in defiance of an agreement solemnly entered into with the Emergency Fleet Corporation, an arm of the Federal Government. The agreement had but nine weeks to run to expiration, yet so intolerant and arbitrary was the leadership, that the

plants in the entire Puget Sound district were shut down without giving the men concerned an opportunity to express themselves on so vital a matter, thru a fair referendum.

I was at that time Director General of the Fleet Corporation, and know that there was no question of hours or conditions involved. The Government had spent millions in safeguarding the workers, in adding to their comfort, in providing them with a voice in matters affecting their interests, and had organized with the sanction and coöperation of the men, a tribunal, on which the Government, the men, and the public had representation, to decide all questions of hours, wages and conditions. Every one of the conditions which Mr. Coleman and his committee contend for had been properly met, but the men struck against the Federal Government in the face of the agreement. And what is more, organized labor in the Seattle district surrendered to radical leadership and organized the strike to force the hands of the Government.

The propaganda issued by the reds during and previous to that disturbance, the utterances of the leaders of the general strike, a majority of whom were aliens, rather leads to the conclusion that the strike had its origin, not in a question of hours, wages and conditions, but in a purpose to secure control of industry in the Puget Sound district. Only the courage of Seattle's executive stood in the way.

The spirit of unrest which followed the armistice

lent a fertile field for the demagogue and the paid agitator. Any statement, no matter how wild and unfounded that labor was being exploited, that labor alone produced wealth, and that industry's profits were swollen far beyond the fair and reasonable limits, found a ready audience and general credence.

Very few wage contracts survived the onslaughts which the general dissemination of such misinformation brought about, and employers generally feel today that a labor contract is observed only so long as it is to labor's advantage to do so.

Will not Mr. Coleman admit that the failure on the part of labor to observe its contracts to the letter is a fatal barrier to the spread of collective bargaining, and will he not further admit that until labor accepts responsibility for the breach of labor contracts, it

should forfeit public sympathy? If the breach of a contract were an occasional offense condemned by labor generally, we might pass it over as an exception, but when the national organization of labor condones, rather than condemns, such an evasion of contractual responsibility, then why build any hope on a lasting settlement of labor difficulties thru collective bargaining.

In inquiring into the steel strike, would it not be wise to measure its purpose by the character of its leaders? William Z. Foster, one of the two leaders, is an avowed Syndicalist, who has publicly announced that "the wage system is the most brazen and gigantic robbery ever perpetrated since the world began." John Fitzpatrick, the other leader, is a man who was violently opposed to the passage of any [Continued on page 289]

# The Duty of the Church

By Shailer Mathews

Dean of the University of Chicago Divinity School,  
Director of the religious work at Chautauqua Institution

THE special commission appointed by the Department of Industrial Relations of the Interchurch World Movement has made its report on the steel strike. Considerable attention has been given such parts of the report that have been published and it bids fair to become something of a storm center. Already the press devoted to anti-labor propaganda has begun to attack it as well as some of the individuals concerned with it. The main object of these attacks is to discredit the findings on the ground that they represent radicalism within the Interchurch World Movement and the Federal Council. How far such criticism is really justified is a question of fact. How far these criticisms are propaganda is also a question of fact. In one of the criticisms, the radical point of view of one of the investigators is argued because he holds "that the teaching of Jesus Christ should be brought into the industrial field and that the cardinal principle set forth in the Sermon on the Mount should be injected by the churches into industrial relations." If that be radi-

calism, a good many of us are not afraid of it! Whatever else can be said of the report, one thing is clear: it challenges the trustworthiness of our news gathering agencies. The press of the country emphasized the radical and revolutionary purposes on the part of the leaders of the steel strike. The report finds evidence of no such purposes, but sees in the strike an orthodox labor union attempt to improve the conditions of the working man, reduce his hours of labor and win recognition of some type of collective bargaining. This estimate will certainly require strong evidence if public opinion is to be converted.

The report also suggests the question as to how far it is the business of church organizations to investigate industrial affairs. There is bound to be a difference of opinion here. Men who earnestly agree that Christian principles must be applied to social affairs are not agreed that it is wise for religious bodies to investigate and report on strikes. Some limits to pronouncements are obvious. The churches are [Continued on page 291]

Inside one of the foundries, where work is hot and hard and indescribably dirty

# Your 650,000 Servants

A Message from the United States Government to the American People

By Herbert E. Morgan

United States Civil Service Commission

**E**ACH work day 45,000,000 American men, women, and children go forth to earn a living for themselves and their dependents. Of this vast army of bread-winners, approximately 650,000 are employed in the offices, laboratories and workshops of the United States Government.

At the height of the war expansion about 850,000 civilian employees were considered necessary to keep the machinery of government in motion. Further reductions are to be expected, but it is certain that the pre-war figure of less than 500,000 never again will be reached.

All of these Government employees, Mr. Businessman and Mrs. Housewife, are just as much your servants as the clerk in your shop or office or the maid in your home. You pay their wages and it is your right and duty to see that they return in service dollar for dollar for what they receive. It is no less your duty to see that they have just compensation for the service that they render you.

Your federal civil servants are constantly striving to increase and improve the output of your farms. They are bringing new seeds and plants to America from all parts of the world and endeavoring to grow them profitably in American soil. They keep a watchful eye on the food you eat, that it may be free from poisons and adulteration, and safeguard your health in a hundred other ways. They collect your letters and packages from a mail-box in New York City and deliver them at the road-gate on your ranch in California. They mint the coin and print the paper money you use in the transaction of your daily business. They count you and your neighbors periodically. They dig canals and make ice cream. They build battleships and study the habits of bugs. They burrow into the ground and fly into the air in search of scientific knowledge for your benefit. They do ten thousand things that affect the life of every citizen and that are accepted as a matter of course, with little thought as to how they are done or what the bills amount to.

It costs you considerably more than half a billion dollars a year to pay off your help. That, surely, is a good reason why you should interest yourself in the kind of men and women you employ, the conditions under which they work, and the manner of their working.

There is no denying the fact that the civil service of the United States today is not 100 per cent efficient. The fault, however, is not with the employees themselves; it lies in conditions over which the workers have no control.

Under the civil service law of 1883 a good system of competitive examinations and appointments on merit has been built up for the classes of positions covered

Harding in Brooklyn Daily Eagle

As Mark Twain said of the news of his own death, "This is slightly exaggerated. But let it remind you, Mr. and Mrs. Voter, that Uncle Sam's business is your own. It's up to you to see that it is run right

by the law. But beyond certification by the Civil Service Commission for appointment of those applicants who are proved by examination to be eligible the merit system is not fully operative even in connection with the positions to which it applies. Haphazard practices in assignments of work and in promotions, over which no central authority has jurisdiction, have brought about inequalities which are discouraging to the workers. This condition and the relatively low salaries paid by the Government cause a "turnover" in Government forces that could not long be withstood by a private business. At the time of this writing many branches of the public service are sorely depleted as to personnel because of competition with private employers. This is true especially of the technical and scientific forces. Uncle Sam is wrestling with the servant problem on a large scale.

Furthermore, our administrative system presents the anomaly of filling certain inferior positions through the test of merit under the civil service law and excluding from the scheme thousands of higher offices, which should stand as a reward for meritorious service but which, in fact, are often held as payment for service to the political party in power.

A situation such as this cannot fail to produce apathy in the ranks. Indeed, the wonder is that so many capable men and women spend their lives in the service of the Government under conditions as they exist today.

A fundamental difference between the business of the Government and that of a private enterprise is that the Government business does not aim at profits. The making of money for his employer is the ultimate test of the worth of an employee in private business. The expectation of reward for results produced serves as a spur to effort. The test of money profits is lacking in the Government service, but the incentive to work need not be. There is a way to establish real efficiency in the public service and that is by so improving conditions that employment by the Government may be regarded as a career earnestly to be sought; by establishing a real merit system which promises reward for work well done, dismissal for failure.

How can this be brought about?

First, there must be a reorganization of the Government departments and offices with a view to preventing duplication of work. Representative Good, chairman of the appropriations committee of the House, has said:

Today duplication in the Government service abounds on every hand. For example, eight different departments of the Government, with large overhead organizations, are engaged in engineering work in navigation, irrigation and drainage; eleven different bureaus are engaged in engineering research; twelve different [Continued on page 286

# The Democratic Candidate

A Debate by Talcott Williams and Norman Hapgood

## How Big Is Cox?

By Talcott Williams

JAMES M. Cox, in seven weeks, has forced the League and the Covenant on the country exactly as President Wilson did a year ago when he started on his disastrous tour. The President's object was to break down the Senate. Instead he split his own party vote in the Senate and public opinion did not rally to his support. When the war had just closed it was possible and wise to try to force the League thru without analysis or discussion. This is no longer possible. Exactly as President Wilson led the country to begin asking just what the League would require of the United States and halted the movement for its ratification, so the naked issue of the League by Governor Cox will force a like challenge. The Democratic candidate, as far as his record and equipment goes, has not proved equal to defensive analysis of the League. His letter of acceptance and his brief episodic speeches have not revealed the capacity for arguing out the working of the League and making it perfectly clear that the President has not too much power under the Covenant.

This direct challenge has had this great advantage. It has brought to his support two newspapers widely known, the Springfield (Massachusetts) *Republican* and the New York *Evening Post*. The circulation of the two papers, perhaps 50,000 to 60,000 together, is not large, but their position as independent journals undoubtedly awakens a wide range of independent voters over the country to the support of Cox and the League. The weight of the New York *Evening Post* is undoubtedly diminished by the circumstance that Mr. Thomas W. Lamont, its owner, is a partner in J. Pierpont Morgan & Company, the great international bankers. Mr. Lamont has done all that an honorable man could do to give its able editor, Mr. Edwin F. Gay, complete control; but facts have their weight. With these papers, various independent Republicans have come to the support of Cox and the League. This all counts. A bolting league of Cox independents is talked of.

It is necessary for both parties to show just how the League will work. This need for explanation comes at the very time when in England, France and Italy men are demanding that opinion, labor action or the power of the national legislatures, all and several, shall pass on every step such as a League might order.

The great mass of voters will not swallow the League with Article X, whole, unexplained, because of appeals to war emotion and the "great heart of the world." Can Cox make such argued explanation as is needed? He shows no signs of this and he is revealing himself as a man who urges without arguing. Mr. Franklin D. Roosevelt has made the sad blunder of saying we hold the votes of Santo Domingo, Hayti and Nicaragua, with other states in the League. This is not a nice thing to say and it is not true, if we are truthful in our declaration that our present control is temporary, solely to develop these small lands so that they can vote for themselves. Mr. Cox has not, in the past, argued things out. Senator Harding has a definite plan for taking the existing League and Covenant, opening negotiations, laying American objections before the leading foreign powers, securing their consent, and getting the League changed by mutual compromise, concession and consent, as was our

Constitution, so that European countries, both parties in the Senate and the American people as a whole will be satisfied.

Governor Cox wants the League unchanged. This is natural. He is a good man; but he has always gone with his party and his newspapers have acted with the state party machine. He was early trained in the newspaper methods of the Cincinnati *Enquirer*, methods effective but not always respected. These methods do not train a man for a constitutional argument. Governor Cox is snappy, impulsive, with a quick temper, not always under control in public or in private life. Senator Harding is deliberate, a party man, careful, conscientious, and a man of judgment and consideration. He seeks advice. At Washington, in personal conversation, he made no secret of the fact that by getting the advice of a group of able constitutional lawyers, the Covenant could be made both safe and effective. Senator Elihu Root's trip to Europe for the organization of a court, more effective than that of the Covenant, will offer the Republican candidate information and advice of which he will undoubtedly take advantage. All the European countries are ready for compromise.

This will bring up issues for which so far Governor Cox has not revealed himself equipped. He takes the League unchanged with only interpretative amendments. His reforms were isolated—widows' pensions, almshouses, prison improvement. These were all good, but led nowhere.

Long as the Cox letter of acceptance is, nothing opens a general policy. Under the League we could be called on to aid Poland in her extremity. Everyone knows the country would not hear to this. Mr. Cox ventures no opinion. He does not speak on Armenia, tho it is plain as day that the country is opposed to a mandate. He feebly sees the weight of income and profit taxes. He proposes a tax on all sales. He does not see that under such a tax—to take the iron and steel trade—that the Steel Trust (United States Steel Corporation), which goes from the ore to finished products, would pay only one tax. In the case of "independent" companies which turn ore into Bessemer, which in turn goes to a company which turns pig into steel and this into shapes and bars, each step being done by a separate corporation, a tax would fall at each stage, a heavy handicap. His Ohio budget scheme he could not enforce. In Congress he created no impression, for all an anecdote or two to the contrary. So far Cox has been rather striking in his speeches, but shallow. He has thought out little he has proposed.

Passing from the League, the letter of acceptance is mushy. On labor issues he is vague and dangerous. What does "the writ of injunction should not be abused" mean except evasion? For prices and profiteering he proposes "modernizing local market facilities." Can anyone put that into a policy or a statute? Or this proposal for profiteers: "Compelling these exceptions to the great mass of square-dealing American business men to use the same yard-stick of honesty that governs most of us . . ." or "suffer the penalty of criminal law." Either this means what all experience shows impossible, reducing prices by statutory penalties, or it means nothing.

"It is the duty of the Federal Government to stimulate

the work of Americanization." This is bunk. The Federal Treasury ought, as the Republican platform and candidate proposes, to aid the state in education. Cox wants it "to inventory the possibilities of progress legislation," mindful doubtless of southern jealousy of the education of the negro.

This great racial question he never mentions. No condemnation of lynching for him. Schools for the poor mountain white and ignorant, but not for the negro. His election cannot take place except thru the suppression of the negro vote. He is not even aware that some two-thirds of the increase in farm tenancy is due to negroes buying lands. For their aid he has no word. Duties to the oppressed he can see abroad, not at home. Federal expenditure should be "a maximum of \$4,000,000,000 a year." How, for what purpose, on what distribution? Not a word. The income tax has no comment. He avoids the tariff. The paragraphs on the Federal Reserve Bank are "hot air" and incredibly ignorant. Look at the present deadlock in credits, the exorbitant profits of the Reserve Banks, the suspension in banking accommodations to commercial needs, canceled orders and universal anxiety. Cold storage regulation and irrigation are commonplaces. An ocean route via the St. Lawrence on foreign territory is proposed when no more money would open the Erie to ocean vessels of the new economical type.

This plea for the League as it is and these random suggestions do not constitute a fit or effective program for a President-to-be. The United States is a vast going concern which calls for judgment, prudence and the capacity both for taking advice and seeing the problem as a whole. Men once predicted that showy men, swift to conclusions and careless of argument, would appeal to the people for President. This is not the record of our history. Worst of all, the leadership of southerners in Congress, the heavy taxes laid on northern states, reckless administration in railroads, current commercial anxiety, extravagant expenditures grow on a public environed by many perils. Do we want the past seven years continued?

## Cox and His Record

By Norman Hapgood

IT is not up to me to prove Governor Cox a great man. His power of growth in the Presidency will determine his size. So far we only know that he has been a successful and progressive Governor three times in a Republican state; that he has carried out the many reforms he has planned; that he spoke clearly on the League of Nations long before he was nominated and is speaking clearly now; that he stood for industrial freedom even in wartime, so that workingmen from Pennsylvania and West Virginia had to go over into Ohio in order to consult together about how they could deal on something like equal terms with the steel companies and the other vast aggregations of capital which are just as much the bosses of Penrose, Lodge, Smoot, and Brandegee as these gentlemen are the admitted bosses of Senator Harding.

I would like to add a word to what Dr. Williams points out about newspapers. It is certainly significant that Cox is supported by the Springfield *Republican*, perhaps on the whole the most just and independent of our dailies. The *Evening Post*, long famous for its independence, is in the absolute control, for three years, of Mr. Gay, former head of the Harvard Business School, one of the deepest and most exact students of business and economic tendencies that our country has. Before taking a final stand the *Post* waited many weeks to see if Harding had anything real to say on any subject. The *World*, with its powerful independent and progressive editorial page, has also come out for Cox. The New York *Times* is committed to no party and it is conservative, but it is supporting Cox because it looks upon the League question as the most urgent of all

considerations. The most influential newspapers in support of Senator Harding are the Hearst newspapers and the New York *Sun*.

Evidently Dr. Williams's experience of the impression Cox is making differs from mine. Every Democrat with whom I have talked intends to vote for Cox, and every pro-League Independent. Among my pro-League Republican friends a considerable percentage are going to bolt their ticket and vote for Cox. Let the readers of this weekly inquire around among their own acquaintances. I do not believe they will find a Democrat voting for Harding unless that Democrat has an income of \$25,000 or over. I don't believe they will find an Independent voting for Harding unless he is a relentless opponent of the League. And I am sure they will have no trouble in finding Republicans who are going to bolt Harding, either on the League issue or because they think 1921 is too late in history to put in office a professed servant of the Penrose ring. The wool trust, the steel trust, the sugar trust, and what is left of the money trust, since it was crippled by the Federal Reserve Act, may (or may not) be all right in themselves, but they ought not to issue orders to the next President of the United States, either direct or thru their servants, the Senate oligarchy.

AS to the negro question, I must decline to discuss it. It seems a long time ago since Senator Lodge introduced his famous "force bill." It is still longer since a revengeful North, its bad passions let loose by Lincoln's death, inflicted a wicked "reconstruction" by carpet-baggers on the South. Does Dr. Williams think the question of reviving an old sectional bitterness is one of the leading issues of this campaign, or does he hope to get negro votes in northern cities? Is this constructive statesmanship? I can do no more with this business than I can with Senator Harding's convenient forgetfulness about what he had written about the Irish question. Senator Johnson stirred up a large following by reading various national antipathies and very possibly Senator Harding may do the same thing. A good many Italians vote in New York and Boston and Harding and Lodge take an extraordinary interest in helping Italian imperialism to choke the new Czechoslovak nation. But there is no use in arguing these appeals. Certainly I think Cox needs no defense for sticking to the actual issues.

That Republicans are annoyed with him for his handling of the League of Nations question is comprehensible. He says briefly: "I am for it." He says our boys did not go to France with reservations. He says every consideration on which we fought, and by which a great nation ought to be guided, calls us to the side of the twenty-nine nations now in the League. The idea that the whole League can be made over again and suit some nation that may some day emerge from the brains of Johnson and Lodge in Washington, as beautifully as it emerged at Chicago, is just what Herbert Hoover calls it, "bunk and worse." It is what Mr. Taft, in his politer language, shows to be impossible. Governor Cox is telling clearly his position on the League. Why should he stop to deal with the flimsy ghost of what Johnson may refuse to do, or the Senatorial followers of Johnson, even if the people vote for the League, since Johnson already has Harding as completely nailed to the mast on the Treaty as Penrose has him nailed on economic privilege? For some weeks I have known that the frightened Republicans were hoping to scare up a new division when Root gets home, but we will deal with that cloud of dust when it reaches our shores.

As to George Washington, I invite any reader of The Independent to go into a library, take the writings of Washington, edited by Ford, look up the index, and see what Washington said to the kickers against the treaty between the thirteen states. This is not an advertisement,

# The Massacre of Nikolaievsk

*Photographs from Adachi*

The partizan or Red guerilla band that captured the Siberian city last February tortured and killed Japanese and Russians and burned a large part of the city. The Japanese garrison of 333 officers and men was wiped out and 360 Japanese civilians were killed. The number of Russian victims of the Red regime is said to be about 5000

The Red rulers of Nikolaievsk. Trapitsin, their leader, is seen leaning on his hand, while Nina, his mistress and chief of staff, sits beside him. After taking the city they put the officials and merchants in prison, outraged their wives and killed their children

The Japanese Vice-Consul, Ishida, with his wife and little daughter, were massacred when the consulate was burned. The Consul had appealed in January to his Government for additional troops but it was not until spring that the melting of the ice enabled the Japanese to send aid

The Japanese at Vladivostok hold a memorial meeting for the victims of the Nikolaievsk massacre. Offerings are laid before the tablets of the slain. The affair has roused the Japanese people to bitter resentment and has led to the Japanese occupation of the entire coastal region. The Soviet and Vladivostok Governments both disclaim responsibility for the Partizans and proffer sympathy to the Japanese

The docks along the water front on the Amur River were burned by the Reds as they left the city

The Russian refugees who had fled from the Reds are returning under Japanese protection

but I have brought these quotations together, for comparison with the present League of Nations fight, in a book just published, called the "Advancing Hour," and I regret there is not space to quote them here.

As to Poland, anybody who imagines our soldiers would have been sent over there is good material for the Harding-Johnson scare-mongers. See George Washington on the same subject. See Taft on Article X. Perhaps if we had been in the League it might have been strong enough to tell Poland not to begin its idiotic war on Russia. And perhaps a few innocents believe that if crazy performances like the Polish invasion start another world-war we are very likely to keep out. Our business is to help prevent such a war, not throw fits of alarm about our responsibilities that must cause in Switzerland, Denmark, Holland and Belgium a pitying smile.

If Dr. Williams does not understand the reference to abusing the writ of injunction, I think it is understood by most men who work with their hands. It is one of the most familiar scandals in the history of government for the benefit of a dominant class. Industrial injunctions go always—one way. I don't remember seeing any injunction against the American Woolen Company's throwing thousands of men out of employment to affect a political campaign. It is time to stop using them to help capital in its disputes with labor.

The next President of the United States will be Cox or Harding. I ask no more of any reader than that he read carefully all that so skilful a critic as Dr. Williams can find to say against Cox, and compare the result with what we all know about Harding, for it is one or the other. The differences are limitless! You take your choice. Dr. Williams speaks of prices as something fixed by God. Harding says: "You can never reduce the cost of living except as you reduce the capacity to live." That is enough to keep my brain working for a long time. If it means anything I don't know what it is. Presumably Senator Harding might concede that the world-war increased the cost of living. Measures that would prevent war, and reduce preparations for war, lessen the cost of living. Senator Harding voted in favor of leaving the armament business in private hands, and thereby voted for other wars even more surely than he did in the position he has taken on the League of Nations and in his itching to interfere with Mexico. "I am a believer in universal and compulsory service, oftentimes alluded to as conscription." No wonder: that position is logical for one who is against the League, against letting Mexico alone, and against taking the munition business out of private hands. Also for a person all of whose votes favor profiteers, and who is now trying to get back a Mark Hanna tariff, it is perfectly natural to believe that nothing has anything to do with the cost of living, but why should Dr. Williams blame Cox for not discussing the tariff? Wilson took it out of the private offices of the trusts and out of politics. Also I may remark that President Wilson, who does believe the cost of living can be affected, proposed a series of legislative steps at the expense of the profiteers. Presumably the President believed that if the metal, textile, and mining industries tripled their profits in the war, that had something to do with prices and the cost of living, and the same consequence would follow from the food corporations having two and one-half times as large profits as before the war. The Republican majority took none of the steps urged by the President nor did it take any others. I don't like to make such rough statements, but it is true that if Harding is elected the Government will pass back completely into the hands of big business graft. When Dr. Williams gets after Cox on the Federal Reserve Act and the tariff he raises a sharp and real division. Anybody who wants to put the Money Trust back where it was before the Federal Reserve Act, and to open up the tariff question for another twenty years' fight in favor of bigger

profits for bigger industries, will vote against Cox anyway. He can get further consolation in supporting Harding since that bold fighter has come out fearlessly in favor of doing something for the North American Indian.

## What Does Cox Say?

By Talcott Williams

**D**ISAPPOINTED I am, this time in my most friendly antagonist, Mr. Norman Hapgood. He is not punching me, he is punching the sand-bag. Warming doubtless, but not efficient. I once had a dear and most lovable collie from whom a chipmunk escaped by darting thru a hole in a common or garden-variety stone wall. We never passed that stone wall without that most intelligent animal barking and pawing at that hole with vociferous energy. Mr. Hapgood can never take a walk abroad in this debate without being certain that "tariffs" and "trusts" are in the Harding hole and that the sure way to catch Harding is to bark at "trusts" and the "tariff."

Today we are not walking past the Harding hole. We are considering what show James Middleton Cox has made before the country as a possible President. Either he or Harding will be President. The betting odds are two to one for Harding. I look on them as about even. What has Cox done to make a fair-minded voter want to vote for Cox electors? He has written a long letter of acceptance of about twelve columns. This is about as long as the Gospel according to Mark. I do not say this irreverently; but solely to remind the reader what can be done with about the same number of words if you have something to say. I know Mr. Hapgood has read the letter, because he does not allude to it.

Mr. Cox has a good subject. He cannot complain of that. He is telling 30,000,000 voters what he thinks a President of the United States of America ought to do in the next four years, at the most momentous crisis in modern history. I think in all history. What has Mr. Cox said he is going to do? Gentle reader it is a month since you read it. You have been hearing about it ever since. What did he say?

On the League, he was right. No question about that. I have said this before and repeat it now. He has shaken the whole Republican fighting line. As to voters, I am not so certain. Maine will leave us wiser. I am but one of a great multitude of Republicans who are waiting to hear from Harding on this point before they are certain they can vote for him. Some efficient League, more than a mere court, we must have, and there are enough of us to turn the doubtful states.

But Cox, what did he say? He is for the League, but how? If there is a deadlock over the League, what will he do? This is vital. Will he follow Wilson in refusing compromise? Voters have a right to know that. Cox dodges here. Harding proposes to make himself clear. Cox does not. I do not like it. I do not believe Cox knows. Has he the kind of mind that grapples with such a question? Unlike Harding he has not studied it and Harding has turned to Elihu Root. Cox has Woodrow Wilson. A difference!

As to other questions, what does Cox say? We have to adjust ourselves to heavy taxes. Who shall pay them? The many, says Cox, by a sales tax and in a way which helps trusts, as I show above and Mr. Hapgood does not make answer. I admit the Republican party has more property holders, more of the 11,000,000 or so who own their homes, more of shareholders, more of bondholders, more payers of insurance premiums, more voters who are in business for themselves than the Democratic party; but it and its leaders have no more relation to the "trusts" than the Democratic party and its leaders except in the cartoons. In both parties there are leaders affiliated with the trusts. In both party conventions these men this year had a large say in

selecting a candidate that looked likely to win, but from Allison's Interstate Commerce Act, 1887, and Sherman's Anti-Trust Act, 1890, to the Railroad Act passed this year, the statutes restraining and controlling the great corporations have been passed by Republican majorities in Congress. They have enacted all our constructive legislation on this issue.

As for the "Money Trust" and the Federal Reserve Bank, banking capital has never made the profits or charged as high interest rates as in the past twelve months; it has never so tyrannized over business and never before raised rates so arbitrarily to the greater profit of fortunate speculators. This is one reason why I want a new deal in the Treasury Department. I am a little weary of Berlin banks and banking families so near our fiscal and banking affairs. What Cox says about taxation, the tariff, currency, banking, exchange, is prattle. He does not know the language. He is a good man. He means well. He is zealous for the right as he understands it. He is ignorant and he talks like a man who does not know how little he knows and thinks instead any good American can show the experts what honest-hearted patriotism can do.

Harding is, if anything, too cautious, but he sees the difficulties and he moves in the right direction. He believes in experts, in training and in experience. He wants a cabinet of ability. Cox will not only select men like the present cabinet, right-hearted and inexperienced, but the Democratic party itself lacks men of financial experience.

With unfeigned regret, I note that on the negro question Mr. Hapgood says, "I must decline to discuss it." Norman Hapgood is and has been a soldier in the great army of liberty. He has fought the good fight for free criticism. Here is a great issue cutting to the very core of human rights, organized oppression and the denial of rights constitutional, human and divine, and he "must decline to discuss it." No man can support and be a beneficiary of these pillaged votes without being on the side of open avowed wrong for which justice will yet come. No one of us can be true to freedom and pass this evil without open protest and condemnation. Mr. Hapgood may "decline to discuss it." Events, time and divine justice will continue the discussion.

The Republican party has its faults, but to it much can be forgiven because it has loved liberty much. If much wealth is marshalled in its ranks it is also true that Republican states, in their industrial and progressive legislation, are far in advance of Democratic states, taken as two groups. The Republican party denies to no citizens their votes. The world over it is the great tribe of the People of the Advance seeking better things for the republic and the welfare of man, and leading humanity thru the Wilderness of Wrong to the Promised Land.

### Open Debate

These articles by Mr. Williams and Mr. Hapgood close the formal debate on the Republican and Democratic platforms and candidates, and open the question to discussion from the floor. In other words now is the time for you to write us your own opinion as to the next President of the United States and the party that he will represent. We will publish a large number of these replies and for each one that we use we offer a reward of one year's subscription to *The Independent*. Try to keep your argument within the limit of 150 words. Manuscripts will not be returned.

## Clear the Track for the League!

PERHAPS the most valid of the reproaches directed against the League of Nations is that the Great Powers have preferred to handle the hottest and heaviest problems thru the Supreme Council of the Allies (some-

times known now as the Conference of Ambassadors) instead of thru the Council of the League. So long as treaties closing the Great War still remained to be negotiated there was a good excuse for this double-headed management of European affairs, since only belligerents can close a war, but now that the Turkish Treaty has been signed and the last of the hostile nations has thus made peace, it would be well if the Council of the Allies were to abdicate and turn over its remaining duties to the Council of the League. There is no excuse for keeping alive two international organizations where one will serve, and it is better that the temporary organization should yield to the permanent.

## An Intimation

HENRY Harrison Lewis devotes the July 15 issue of his journal, *Industry*, to an attack upon the Inter-church World Movement, which he accuses—to use his own spelling—of giving "free reign to investigations" into industrial relations. He charges that Professor Harry F. Ward of Union Theological Seminary in an address before the World Survey Conference at Atlantic City last January "intimated that the teachings of Jesus Christ should be brought into the industrial fields and that the cardinal principle set forth in the Sermon on the Mount should be injected by the churches into industrial relations." We agree with Mr. Lewis that it is a very serious thing to have such an idea even intimated. If the churches should attempt to inject the Sermon on the Mount into industry there's no knowing what might happen. It might prove disconcerting to both the capitalists and unionists. But perhaps there is no occasion for alarm. If we all hush it up people won't pay any more attention to what the Rev. Ward says than they do to the rest of the preachers.

## Reconsideration

THE action of Speaker Walker, of the Tennessee House of Representatives, in changing his vote from "No" to "Aye" on the ratification of the suffrage amendment brings into the spotlight an abuse of parliamentary practise that has gradually grown to a serious evil. Mr. Walker is an opponent of woman suffrage and therefore quite properly voted against it, but when he saw that his side was defeated by 49 to 47 he changed his vote to the affirmative for the purpose of getting the right to reconsider at an hour more favorable to his cause. There is no reason to think that he had become converted to suffrage in the brief interval between counting the ballots and announcing the result, or that he is so weak as to abandon his principles in order to shift to the winning side. It was then a dishonest vote, contrary to his convictions, a parliamentary trick that might have frustrated the right of 17,000,000 women to vote. The fact that it is a trick commonly played does not excuse it, but does prove the need of a reform in the rules.

It is quite proper that the right to reconsider should be restricted to the majority, for otherwise the minority might continue to call up a question that had once been settled. But this rightful restriction is removed when a member of the minority, under the pretense of changing his opinion, changes his vote. He should be taken at his word and not be allowed to deceive the assembly a second time on the same question, therefore his vote should be counted for the affirmative whenever the question is brought before the house for reconsideration. This simple addition to the rule would prevent the abuse by the minority of the power to move reconsideration and it would also put a stop to the almost equally objectionable trick employed on the other side when a member of the majority moves a reconsideration, not because he has changed his mind, but to prevent any future attempt to reconsider.

# Americans Who Broke Records at the Olympiad

© Kadel & Herbert

Top place in the running high jump at the seventh Olympiad was won for the United States by R. W. Landon, of the New York Athletic Club. Landon lived up to his club symbol of winged feet by going cleanly over the bar at a height of 1.94 meters, or 6 feet, 4½ inches, thereby establishing a new Olympic record

© Keystone View

Frank Loomis, of the Chicago Athletic Association, scored the first point for the United States in the Olympic games at Antwerp and broke a world's record by winning the 400 meter hurdle race in 54 seconds, one second faster than the previous record. His time was all the more remarkable because the race was run over a very soft track

International

The pole vault, like baseball, is rather an American specialty, but Frank Foss, of Chicago, made it one of the most popular Olympic events by his spectacular vault of 13 feet, 5½ inches. Incidentally, it set a new world's record

International

In the Marathon, the long cross country run of 26 miles and 385 yards, which is the preëminent event of all Olympic games, Finland took first place this year, thanks to the famous Kolehmainen, a veteran Olympic entrant. His time for the Marathon was 2 hours, 32 minutes, 35½ seconds, cutting down by 19½ seconds the previous record, set by McArthur, of South Africa, in 1912. South Africa came very near claiming first place again in the Marathon this year. Gitsham, of South Africa, led the field easily for the first half of the race until he was forced to drop out because his shoes had been badly torn by the sharp cobblestones. Kolehmainen, who he won the Marathon for Finland, has lived in the United States seven years and has taken out naturalization papers here

Wide World

The greatest hurdler in the world, Earl Thomson, of Dartmouth University, set a new record of 14½ seconds for 110 meters at the Olympic games and won the race for Canada

# The Story of the Week

## Egypt to Be Independent

THE *London Times* announces that the British Mission of Investigation, headed by Viscount Milner, will report in favor of the abolition of the British protectorate over Egypt and the recognition of Egyptian independence. Egypt regains control of foreign relations, subject to her not making treaties contrary to British policy, and will have the right to maintain diplomatic representatives abroad. Egypt will recognize Great Britain's privileged position in the valley of the Nile and agrees in case of war to afford every facility for access to Egyptian territory. Great Britain will maintain a garrison in the Canal Zone. Capitulations will be abolished.

It was expected that Lord Milner would recommend a very wide extension of home rule in Egypt, but this forecast of his report goes much farther than was anticipated and meets practically all of the demands formulated by the Nationalist members of the Egyptian Legislative Assembly, led by Zagloul Pasha.

Viscount Milner, who was appointed to investigate the cause of the unrest in Egypt, has reported in favor of relinquishing the British protectorate over Egypt and giving the Egyptians virtually complete independence

When it was announced that the Milner Mission would visit Egypt for the purpose of investigating conditions and ascertaining native opinion, the Nationalists declared that they would have nothing to do with it since even to confer with the mission involved a tacit acknowledgment of British authority. But it is understood that Lord Milner had sufficient opportunities to talk unofficially with the representatives of all factions and that after he returned to London he consulted with Zagloul.

Most of the measures indicated have long been in contemplation and are in conformity with the declared British policy. The capitulations, that is the extra territorial privileges according to which aliens are not amenable to Egyptian laws or to be tried in Egyptian courts, were intended to be abolished as soon as a system of law and justice recognizing the rights of foreigners could be established. In fact, Germany was required by Article 147, Section 6, of the Treaty of Versailles to "renounce the régime of the capitulations in Egypt" as well as "to recognize the protectorate proclaimed over Egypt by Great Britain." Nominally, Egypt was before the war a dependency of Turkey and under the sovereignty of the Sultan. Actually, however, it was governed by Great Britain in a much truer sense than the British dominions, such as Canada or Australia, and Lord Kitchener was virtually ruler of the country. At the outbreak of the war this legal fiction was thrown off and the Egyptian government declared war against Germany, altho technically being a vassal state Egypt had no such rights. It was not until three months later that Turkey took the other side and declared war against England. During the war the Canal was defended

by Great Britain and Egypt was used as a base for attempts to capture Constantinople and for the invasion of Palestine. On December 18, 1914, a proclamation was issued declaring that "the suzerainty of Turkey over Egypt be terminated and that Egypt henceforth constitute a British protectorate." The Khedivate was abolished and the Khedive, Hilmi Pasha, was deposed because of his adherence to the enemies of the British King. In his place Hussein Kamel Pasha was made ruler with the title of Sultan of Egypt. He died in 1917 and was succeeded by his brother, Fuad, a man of little ability, foreign educated, who hardly speaks Arabic and is out of sympathy with his subjects.

After the war was over and the restrictions of the military régime were relaxed a strong anti-British feeling developed. The Egyptians were resentful that the Arabs should have been made the protégés of Great Britain and established as a kingdom while Egypt, with its high historic traditions, was placed in a subordinate position. Attacks upon trains and British residents in isolated localities were frequent. Riots broke out in villages and cities. The suppression of these by the military authorities increased the dissension. Zagloul Pasha, Vice-President of the Legislative Assembly, started for Paris with a delegation of Egyptians to lay their cause before the Peace Conference, but they were deported to Malta. This action was recognized as a mistake and was overruled by the British Government. Last June Zagloul was invited by the British Government to England to confer on the future government of Egypt.

## America and the Egyptian Question

THE declaration by President Wilson in April, 1919, that the United States as well as the Allies recognized the British protectorate over Egypt dashed the hopes of the Egyptian Nationalists who were expecting American support in their demand for complete independence. The ques-

THE SPREAD OF WOMAN SUFFRAGE

It was New Zealand in 1893 that first recognized in government the fact that world women have been granted the right to vote—and the map is filled with the years of other nations following suit.

tion was brought up in the Senate when the Treaty was under consideration, since that document required the recognition of the British protectorate by Germany. Senator Owen of Oklahoma inquired about the action of the United States, and received from Secretary Lansing the following answer:

In reply I beg to state that the department does not understand that Egypt was, prior to the British proclamation of December 18, 1914, in possession of full independent sovereign rights.

The effect of this Government's qualified recognition of April, 1919, was to acknowledge with the reservation set forth at that time only such control of Egyptian affairs as had been set forth in the notice of the British Government transmitted to the department on December 18, 1914, a copy of which is enclosed.

It is assumed that it is the purpose of Great Britain to carry out the assurances given by King George the Fifth of England to the late Sultan of Egypt, as published in the London *Times* of December 21, 1914.

It has been repeatedly stated in the American press that at the time when the British protectorate was declared the British Government promised that it should be limited to the duration of the year. No such pledge, however, appears in the official documents as published. The assurances referred to in Mr. Lansing's letter as having been given to the Sultan promised the revision of the system of treaties, known as the capitulations, after the war, and it is declared the aim of the British Government

while working thru and in the closest association with the constituted Egyptian authorities, to secure individual liberty, to promote the spread of education, to further the development of the natural resources of the country, and, in such measure as the degree of enlightenment of public opinion may permit, to associate the governed in the task of Government. Not only is it the intention of His Majesty's Government to remain faithful to such policy, but they are convinced that the clearer definition of Great Britain's position in the country will accelerate progress towards self-government. The religious convictions of Egyptian subjects will be scrupulously respected as are those of His Majesty's own subjects, whatever their creed. . . . The strengthening and progress of Mohammedan institutions in Egypt is naturally a matter in which His Majesty's Government take the deepest interest and with which your Highness will be especially concerned, and in carrying out such reforms as may be considered necessary, your Highness may count upon the sympathetic support of His Majesty's Government.

The Milner plan provides the way by which these promises may be rapidly carried to fulfilment.

The moment toward which woman suffragists have been working for nearly a century was celebrated by the unfurling of this suffrage flag at headquarters of the National Woman's party in Washington. The thirty-sixth star, for Tennessee's ratification, had just been sewed on the flag by the chairman of the party, Miss Alice Paul, who is standing in the balcony

## Russians Repulsed

THE Soviet forces before Warsaw have suffered a reverse as sudden and dramatic as that of the Germans before Paris in the battle of the Marne. The Polish capital was enveloped on three sides and the Bolshevist advance guard had reached the suburbs when the Poles rallied and attacked with such fierceness that the enemy was driven back in confusion. General Pilsudski himself led the Polish center in a direct drive against the Russian front to the east between the Bug and Vistula rivers. Under the impact of this blow the Russians retreated beyond Siedlce to Brest-Litovsk, which is on the Polish frontier.

On the south in Galicia where the dashing young Cossack cavalryman, General Budenny, has been trying in vain to capture Lemberg, the Poles have also recovered and relieved the pressure on the Galician front.

Last week we called attention to the recklessness of the Bolsheviki in throwing their forces forward in the north along the German border till they reached the Vistula regardless of the fact that this left them exposed to flank attack for a hundred miles. The Poles took advantage of this rash maneuver and by striking simultaneously from Thorn on the west and Warsaw on the south they cut off and captured a large part of the Soviet army.

The French officers in Poland ascribe the initial success of the Russians in recovering their lost ground and overrunning half Poland in a few weeks rather to the demoralization of the Poles than to the valor of the Bolsheviki. A French colonel reports that he saw a troop of 400 Red horsemen who had only 200 carbines among them and more than half of these were so rusty as to be quite useless. The rest of the men were armed only with sabers and clubs. Most of the troopers rode barebacked and their spurs were made of telegraph wire wound around the boot or bare foot. The infantry, according to the French, are worse off. Their clothing is ragged and far from uniform, and they are without shoes. They have to live on the country for lack of commissariat and do their cooking with an old beef tin as the sole utensil. They have few cartridges for their guns and many of these are duds.

If this is a true picture of the equipment of the Bolsheviki it is no wonder that they fell back rapidly when the Poles under French command attacked with British tanks, French 75's and American machine guns. The arrival of the French reinforcements and the promise by

FRAGE ROUND THE WORLD

at women are people. Now in considerably more than half the area of the evening fast. Jamaica has adopted woman suffrage within the last few days

President Wilson of American aid restored the courage of the Poles and they have routed the Reds on every side. The number of Bolsheviki prisoners taken during the first week of their reverse is estimated at 75,000. General Weygand, the French commandant, says that "Poland will be the grave of three-fourths of the Bolshevist army." The Poles have captured immense stocks of war material, including the big guns that the Bolsheviki had brought up for the bombardment of Warsaw.

## The Danzig Gate

THE Polish war has put a severe strain upon one of the most delicate points of the Versailles Treaty. President Wilson in his fourteen points stipulated that Poland should "be assured a free and secure access to the sea," but it was difficult to contrive this without violating the other Wilsonian principle of self-determination, for the only practicable port was Danzig, where the Poles constituted only about five per cent of the population. The problem was solved at the Peace Conference by giving Poland a "corridor" to the sea, consisting of a strip of territory, largely Polish in population, cutting off East Prussia from West Prussia. Danzig, however, was not ceded to Poland, as the Poles demanded, but was restored to the status of a Free City, as it was in the sixteenth century. Poland was given the right to include the city within the Polish customs frontiers and to conduct its foreign relations. Poland was granted the control of the Vistula River and of the railroads and telegraphs, and was ensured "without any restriction the free use and service" of the docks and waterways "necessary for Polish imports and exports." A High Commissioner appointed by the League of Nations was "entrusted with the duty of dealing in the first instance with all differences arising between Poland and the Free City of Danzig."

An Englishman, Sir Reginald T. Tower, was appointed High Commissioner of Danzig and he has come into conflict with the French and Poles over the question of the admission of munitions. When the French cruiser *Gueydon* arrived with a load of war supplies for the Polish army the Commissioner refused to allow them to be landed and shipped into Poland on the ground that he did not have enough troops to protect them. The southern end of the Polish corridor was at that time threatened by the Bolsheviki and there was also danger of a rising among the Germans who accuse the Poles of using their military power

Spencer in Omaha World-Herald

Unholy (perhaps)—but human glee

to overawe the Germans in the plebiscite area. The constituent assembly of the Free City of Danzig passed by a vote of 62 to 21 a resolution calling on the Commissioner to proclaim the neutrality of Danzig in the Russo-Polish war. This would prevent Poland from importing the munitions needed in her campaign against the Bolsheviki. It would seem that the Commissioner had no power to declare the neutrality of Danzig since the Treaty of Versailles puts Poland in charge of the foreign affairs of the city, but on the other hand the Treaty as quoted above gives him the power to deal with all differences arising between Danzig and Poland.

Sir Reginald asks for 20,000 troops before he will feel justified in permitting the passage of munitions. But the League of Nations will not meet until September when President Wilson calls it together at Geneva and by that time the fate of Poland will doubtless be decided. The French Government contends that the Commissioner has no right to interfere in any way with Poland's free use of the port and that the 2000 troops in Danzig, with the support of French, British and American warships, are sufficient to maintain order. Sir Reginald has conceded to the demand of Premier Millerand to permit the unloading of the French vessels, but the dockers refuse to handle munitions intended for the Poles.

## Minsk Peace Conference

THE Polish and Russian peace commissioners finally got together on August 17 after long delays and repeated postponements for which each party blames the other. The place of meeting is the city of Minsk, 150 miles east of the Polish frontier, but in the region recently overrun by the Poles. Chairman Danilevsky of the Soviet delegation in his opening speech said:

We are not conquerors and shall evacuate Polish territory immediately Poland gives us guarantees that the Polish republic has abandoned its aggressive policy and is resolved to commence peaceful constructive work.

Soviet Russia and Ukraine are regarding with full sincerity and a brotherly feeling of solidarity the workers and peasants of Poland, and desire only one thing—restoration with Poland of solid, friendly and neighborly relations.

The Bolsheviki at Minsk, as they did at Brest-Litovsk, insist upon all proceedings of the conference being open to the public.

The British, Italian and American govern-

ments, fearing lest the Poles in their elation over their victory should again attempt to move on Moscow, have warned them against passing beyond their ethnographical frontiers as laid down by the Allied Supreme Council. Premier Lloyd George of England and Premier Giolitti of Italy in conference at Lucerne issued a joint declaration calling upon both parties to refrain from aggression. They adhere to their intention of restoring intercommunication between Russia and the outside world, but denounce the Soviet for surreptitiously slipping into the peace terms the provision for reducing the army and putting arms in the hands of the workmen of Poland.

## Bolshevist Peace Terms

THE terms presented to the Polish delegates at the Minsk conference are mostly the same as those previously submitted to Premier Lloyd George and Earl Curzon some weeks ago and approved by them. The line laid down by the Soviet for the eastern boundary of Poland follows for most of the distance that drawn by the British Foreign Secretary Curzon and where it deviates, as in the neighborhood of Cholm and Bialystok, it gives to Poland more territory than was allowed her by the Paris Peace Conference. Hostilities are to cease within seventy-two hours after the armistice is signed. The Russian army is to hold the line it occupies at the time of signing, while the Polish army is to retire fifty versts (thirty-three miles). The neutral strip between is to remain under Polish administration under control of mixed commissions constituted by trade unions. The Polish army is to be reduced to 60,000 men, supplemented by civic militia made up of workers. The Russian forces will be withdrawn simultaneously with the Polish demobilization until only 200,000 Russian troops remain near the neutral zone. The Russians insist upon the right of free transit for goods and men thru Polish territory.

The Bolsheviks stick to their old formula of peace without annexation or indemnities and with complete publicity. Russia and the Ukraine renounce all indemnities and recognize in full the independence and liberty of the Polish republic and the full right of the Polish people to establish their own form of government. The Poles will be required to restore the railway and agricultural material taken from the Russian territory they lately occupied and to reconstruct the bridges they demolished. Poland is required to grant complete military and political amnesty and to grant lands to the families of Polish citizens killed or disabled in the war. The treaty and protocols are to be published immediately after signature.

The treaty is proposed in the name of Russia and Ukraine jointly, seeing that Poland professed to be fighting Russia in behalf of Ukrainia and that Petliura, the Ukrainian leader, joined forces with Pilemski, the Polish president, in the offensive against the Soviet. The Ukraine is now under the control of the Moscow Soviet, but it would seem from the wording of the peace terms that the Ukraine Bolsheviks insisted upon a separate national organization. The fact is that the Russian Bolsheviks, being internationalists by principle and looking to an extension of their revolution thruout the world, care little where the boundaries are drawn. That is why the Bolsheviks are willing to give the Poles more territory than the Allies would concede to them and why they so readily recognized the independence of the border states of Esthonia, Latvia, Lithuania and the like which President Wilson in his recent note refuses to recognize. The Republic of Latvia has sent a diplomatic representative, Alfred Nagel, to the United States, but he has been refused admission at Ellis Island, by a State Department order.

The clause requiring Poland to form a militia of workmen and turn over its surplus arms to them points toward the promotion of a Bolshevik régime in Poland. This

clause did not appear in the Soviet terms as submitted to the British and Italian premiers. Consequently Mr. Balfour has sent a peremptory note to the Soviet Foreign Minister declaring that present terms "are in fundamental contradiction" to those communicated in advance by the Soviet envoy in London. Mr. Balfour adds that "on the answer to these questions the future policy of the British Government will depend."

## Poles Invade Silesia

ACCORDING to the Treaty of Versailles the inhabitants of Upper Silesia were to be allowed to vote whether they would remain in Germany or join Poland. The plebiscite to determine this was to be held under the auspices of the League of Nations and in the meantime the disputed district is policed by French, British and Italian forces, the United States having declined to participate in the maintenance of order. But in spite of the presence of Allied troops there have been frequent conflicts between the Germans and the Poles and each party accuses the other of trying to expel its opponents and to run in colonies of its own nationality in anticipation of the referendum. The trouble culminated in riots at Kattowitz, which is a German city surrounded by Polish peasantry. The French General Gratier, who has command at Kattowitz, has placed the city and the region roundabout in a state of siege. But the Silesian Poles have been reinforced by Polish troops from over the border and the Germans and Jews are fleeing into Germany by the thousand. The Inter-Allied Commission is endeavoring to disarm both factions of the population.

## Seven Assassinations a Day

ON Sunday, August 22, the Irish broke their shooting record by killing seven constables within twenty-four hours. The most daring of these deeds was the murder of Police Inspector Swanzy at high noon and on the highway in Lisburn. He was walking home from the Protestant church with his mother and sister when three men with rifles confronted him and fired a volley. He fell and the assassins, after discharging their guns again into the body, fled and escaped in a taxicab. Last March when the Sinn Fein Lord Mayor MacCurtain of Cork was killed Swanzy was in the service there and the coroner's jury charged him with the murder, along with Premier Lloyd George and Viscount French, Lord Lieutenant of Ireland. On account of local hostility Swanzy was afterwards transferred to Lisburn, a strong Unionist center. On learning of his assassination the Lisburn people set out to burn the house of every Nationalist and to drive all the Catholics out of the town. The property destroyed in these Lisburn reprisals is estimated at \$2,500,000.

On Saturday constables and police sergeants in Dun-

dalk, Naoroom, Kilrush, Galway, Tralee and Athlone were killed and several others wounded.

The special activity of the Sinn Feiners is due to their resentment for having prevented Archbishop Mannix of Melbourne from landing in Ireland and for the conviction of Lord Mayor MacSweeney of Cork for sedition. The latter was conveyed to England and is confined in Brixton prison. He has gone on a hunger strike, but the Home Secretary says that he will let him starve rather than release a convicted criminal. A general strike is threatened to secure his release.

## When Greek Meets Yank

THE United States is once more winner of a majority of events in the Olympic games, held this year in Antwerp with twenty-seven nations competing for the athletic honors of the world. The first Olympiad, planned as a revival of the ancient Greek games, was held in Athens in 1896. Paris had the next in 1900, and the United States the third, held in St. Louis in 1904. In 1906 the Olympiad was again at Athens, in 1908 at London, and in 1912 at Stockholm. Then the Great War cut off international sports, and when the nations of the world could at last plan for the seventh Olympiad the honor of staging it fell to Belgium.

On August 14 King Albert opened the seventh Olympiad with an inaugural address, and as spokesman for the 3000 athletes gathered in the crowded stadium a white-clad Belgian swordsman swore before his king that all assembled would take part in the games in a chivalrous spirit for the honor of their countries. Then the delegations, carrying their national colors, marched once around the track: Australia, Brazil, Canada, Chile—smallest delegation of all—Denmark, Egypt, Spain, Esthonia, United States—with a team of 300 athletes—Finland, France, Great Britain, Greece, Holland, India, Italy, Japan, Luxembourg, Monaco, Norway, New Zealand—represented by two boys and a little girl swimmer—South Africa, Portugal, Sweden—with a long procession of girls in blue and white gymnastic costumes, and a half regiment of giants—Switzerland, Czechoslovakia and Belgium.

Two competing nations of previous Olympiads, Ger-

many and Austria, were barred from participation, as were all enemies of the Allies in the war.

The Marathon, always the chief event of the Olympiad, was won this year by the famous Finnish runner, Hannes Kolehmainen, who ran the course of twenty-six miles and 385 yards in 2 hours, 32 minutes, 35 2/5 seconds, breaking by four minutes the previous world's record for this race. Kolehmainen, tho the rules of the contest required him to run for Finland, has lived in Brooklyn for seven years and has taken out his citizenship papers here. The first American competitor to finish the Marathon was Joe Organ, who came in seventh. The race was run under the worst possible weather conditions, over thick mud or sharp cobble stones, and in pouring rain and a northwest gale.

In the track events the Americans showed more propensity for first place. They established three new world's records: the 400 meter hurdle race, won by Frank Loomis of Chicago A. A.; the pole vault, won by Frank Foss, also of Chicago A. A.; and the 400 meter relay race. And an American, R. W. Landon of New York A. C., broke the Olympic record for the running high jump. The total of points in track and field events gave 212 to the United States, with Finland second with 105, Sweden third with 95, and Great Britain fourth with 92.

Swimming and boxing contests followed the track and field events in the second week of the Olympiad. Duke Kahanamoku, the great Hawaiian swimmer, broke the world's record that he himself had set by swimming 100 meters free-style in one minute, 1 2/5 seconds. Women contestants came into more prominence in the swimming events than ever before, and three Americans, Ethelda Bleibtrey of New York, Irene Guest of Philadelphia, and Mrs. Frances Schroth of San Francisco, broke the record for women in the 100 meter free-style swim.

## Uncle Sam's Twelve Votes

FRANKLIN D. Roosevelt, Democratic candidate for Vice-President and former Assistant Secretary of the Navy, in speaking at Butte, Montana, on the League of Nations, said:

The Republicans are playing a shell game on the American people; they are still busy circulating the story that England has six votes to America's one. It is just the other way. As a matter of fact, the United States has about twelve votes in the Assembly.

Until last week I had two of them myself, and now Secretary Daniels has them. You know I have had something to do with the running of a couple of little republics. The facts are that I wrote Haiti's Constitution myself, and, if I do say it, I think it a pretty good Constitution.

This remark created a sensation and gave rise to such adverse criticism that Mr. Roosevelt took occasion in his Portland speech to explain his statement more fully:

During the last week I have been demolishing a silly argument about England being able to outvote us six to one in the League of Nations. I have shown first of all that it is the Council of the League which is the true governing body, and that in that Council the whole British Empire has but one vote, just the same as the United States. And I have shown that while in the Assembly, a very large body, which has primarily only recommendatory powers, five of Great Britain's dominions, like Canada, South Africa and Australia, each have a vote, the United States of America will undoubtedly have the support of twice as many of our neighboring and friendly republics in the West Indies and South America.

I cited, for instance, the fact that the Republic of Santo Domingo is at the present time being administered by the United States Navy, and that as the interests of the two countries are closely bound up together, the votes of both countries would undoubtedly be found in the same column. The same thing is true of the Republic of Haiti, tho in that particular case they have a President and Cabinet of their own. It is true also that the interests of other republics, such as Cuba, Panama, Nicaragua and Brazil, are so akin to ours that we shall be of mutual support to each other in the Assembly of the League of Nations.

What I am driving at is this: The above simple and clear statement got under the skin of the partizan Republican leaders

Thomas in Detroit News

We didn't send our greatest athlete to the Olympic games

The "Aquitania," one of the world's largest liners, broke the transatlantic record on her last voyage because of the increased efficiency of oil over coal as her engine fuel. After the "Aquitania's" war service as a transport was over she was refurbished, almost rebuilt as far as interior arrangement went, and fitted with oil-burning engines in place of the old coal-burning ones. The oil-burning engines cut down from days to hours the time needed to "fuel" the ship, reduce the temperature of the engine rooms many degrees, require only about a quarter of the previous number of firemen, save cargo space in the ship, and make for cleanliness and increased efficiency. Above is the "Aquitania" in New York harbor. The photograph at the left shows the oil feed system, pipes, pump, suction strainers and heater. At the right is a corridor of the engine room with a fireman looking into one of the oil furnaces

to such an extent, and under the skin particularly of the partisan Republican press, that they sent some one to the State Department the other day and misrepresented me, saying that I had said that the United States has control over the governments south of us. A cleverly worded story appears from Washington making it appear that the State Department has denied my claim about those republics in the League of Nations.

I am glad that the State Department has denied the absolutely false statement given to them as coming from me. I wholly agree with the State Department. I reiterate exactly what I said before, that the United States will have voting side by side with it in the League of Nations not six states, but at least twice that number, and this because of the simple fact that these little republics have the same kind of interests that we have, and that it is even more certain that we will all be voting the same way than that Canada, Australia and South Africa will be found voting with England.

## Campaign Contributions

COX claims that the Republicans have a fund of \$15,000,000 to expend on their campaign. Roosevelt says that the Republican fund is \$30,000,000. Chairman Hays of the Republican National Committee claims that the Republicans are keeping to their rule of limiting campaign subscriptions to \$1,000 from any one contributor. Treasurer Upham says the Republican National Committee has raised only \$944,353.82 since the nomination of Harding. Treasurer Marsh of the Democratic National Committee says that if the Democrats raise \$800,000 he will consider it a large and adequate campaign chest.

Senator Kenyon, chairman of the Senate campaign expenditures committee, has asked Governor Cox to produce the proof of his charge of a fifteen million dollar Republican fund before the committee at Chicago on August 30. The Senate committee has also summoned both Chairman Hays of the Republican campaign committee and Chairman White of the Democratic campaign committee to appear before it with the books showing all contribu-

tions to their party funds. Kenyon promises a thorough investigation of the whole question within three weeks.

## The Socialist Campaign

IN the New York convention of the Socialist Party of the United States a divergence of opinion developed on the Bolshevik program and tactics. Consequently a referendum of the entire party membership was taken on two questions. As the result of this it is announced that the Socialist Party endorses the Third International with reservations, but disapproves of the adoption of the "dictatorship of the proletariat" as practised in Russia. The Third International is the organization established at Moscow under the auspices of the Soviet for the conversion of the world to communism. It expects this to come about through a revolutionary rising of the wage-earning classes and their seizure of property and power. The rival organization, the Second International, with headquarters in Switzerland, sticks to parliamentary methods and is willing to cooperate with other classes and parties in securing practical improvements in labor conditions. Most of the Socialists and Laborites of England, France and Belgium adhere to the Second International, but a National Communist Party has just been formed in England that supports the Third, including the dictatorship of the proletariat.

The Socialist Party of the United States has selected as its delegations to the next convention of the Third International in Russia, James O'Neal and Algernon Lee of New York and J. E. Cohen of Philadelphia. The party declares its disapproval of the Socialists of Poland for supporting the Government in its war against Soviet Russia.

The five Socialists, who were expelled last spring from the New York Assembly on the ground of belonging to a seditious organization, are conducting a vigorous campaign for reelection at the special election of September 16.

# A Little of Everything

## Metal Wings

**C**ANVAS, wood and a maze of bracing wires have been the materials of the airplane builder ever since the Wrights flew their first machine over the sand dunes of Kitty Hawk. From time to time some one has come forth with the suggestion that metal be used instead of wood, but the suggestion has received little serious thought. The bracing wires have been slowly reduced in number by improved designs; but the wood and canvas might have remained to the present day if German aircraft constructors had not departed from the time-honored idea and experimented with metal planes. During the closing months of the war German airmen appeared over the Allied lines flying marvelous all-metal machines. At the time these were considered freaks of little if any real value. Aeronautical men outside of Germany were only too hasty in their condemnation of the all-metal German machines. How, they asked, could one

make a practical all-metal machine? Was not the weight of even the lightest aluminum alloy considerably heavier than wood, matching strength with strength?

And so the German aircraft constructors stole a long march on the aircraft constructors of all other nations. With the ending of hostilities certain all-metal German machines came into the possession of the Allied experts, and then the advantage of this new form of construction became known. Still, it was a much mooted question whether such construction was practical in any machine other than one intended for aerial combat, wherein engine power was almost unlimited since the main consideration was performance irrespective of expense.

Several weeks ago an all-metal monoplane made a new American record. This machine, the JL-6, is nothing more than a German Junkers limousine six-seater—one of several machines of this type brought to these United States by an enterprising business man who has the future of aviation at heart. The speed of the all-metal monoplane was surprising. But most surprising was the low fuel consumption. This seemingly heavy machine excelled by a good deal the efficiency of the relatively flimsy wood and canvas planes.

Germany has scored a very decisive success in airplane construction. To deny that fact would be foolhardy. It appears that Dr. Junkers of Germany has gone ahead along new lines, ignoring the old misconceptions about the heaviness of metals and the necessity of canvas for the wing surfaces. He has produced machines with thick, unbraced cantilever planes, corrugated aluminum alloy for the wing surfaces, and all-metal struts. At one stroke he has wiped out canvas, wood and the maze of wires, and in their stead he has introduced tremendous strength, unapproached wearing qualities, fire-proof characteristics, and unrivalled efficiency.

The wood and canvas airplane—the airplane which we know so well—is a frail structure compared with this all-metal machine. The wood and canvas machine has a life of about a year or two with steady use; the all-metal airplane, with little to deteriorate from exposure to the elements, has a life of several years. The all-metal machine can withstand hard landings, which would cost the usual airplane smashed members.

Germany is not confining the all-metal construction to small airplanes. Already she has constructed several giant airplanes, one of the largest being the Zeppelin-Staaken monoplane. This machine proved one of the greatest surprises in store for the Allied officials who visited Germany right after the armistice. It is powered with four 260 horse power motors, mounted as tractors on the leading edge of the wings. The mechanics can actually get about inside the monoplane wings and repair and adjust the engines while in the air. This giant accommodates eighteen passengers, or it can carry a one-ton load of useful cargo. All comforts are included for the passengers—easy chairs, large windows, pantry, lavatory, a luggage compartment, and a sleeping cabin which also serves as a collision buffer in a bad landing.

## Teaching New York to Read

The New York State Department of Education has shown a commendable initiative in using the census of January, 1920, as a campaign map for the war on illiteracy. By special arrangement with the Federal Government, on the request of Governor Smith to the Director of the Census, the Department of Education obtained permission to make a copy of the names and addresses of persons who admitted to the census enumerators either that they could not read and write in any language or that they could not speak English. Only the names of adults were copied because the regular school authorities under the compulsory education law were quite effectively dealing with the instruction of the children. New York's

© Keystone View

The first transcontinental aerial mail was carried across the United States by this all-metal plane. Note the corrugated surface arranged so as to offer no resistance to the wind

© Keystone View

This is one of the all-metal aeroplanes owned by the United States Government and used for the transcontinental mail service. Another similar all-metal plane is engaged in forest fire patrol work

illiteracy problem, unlike that of the southern states, is almost wholly a question of adult immigration. These lists will, of course, be kept confidential from the general public but copies have been sent to school superintendents in all parts of the state so that they can find out who are the men and women in their own localities who need the night school or the "Americanization class" to give them the rudiments of an American education. Thus illiteracy will be tracked down to its lair, individual by individual, and with proper zeal on the part of the local authorities it should be practically eliminated soon.

How great is the task is shown by the census figures; 382,039 New Yorkers between twenty-one and fifty years of age are recorded in the census as either unable to read or write or un-

able to speak English. This is certainly a minimum figure, as some illiterates may have been skipped by the enumerators or because of pride may have boasted a knowledge they did not possess. Probably 400,000 would be an inside figure for the age-groups considered. There are also, of course, children and young persons under twenty-one as well as some aged immigrants or illiterate backwoodsmen over fifty who might have been added to the total. But even if 382,039 be taken as the measure of New York's problem of illiteracy, it is worth noting that this figure is greater than the total population of the state at the first Federal census and greater than the population of Arizona, Delaware, Idaho, Montana, Nevada, New Mexico, Utah, Vermont or Wyoming by the census of 1910.

self-evident conclusion is that the American public ranks the minister as an unskilled laborer.

## The Vocal Clock

Although so far no one has complained of the effort of counting the strokes of the clock, there is no doubt that the mental exertion would be less if the clock used words instead of strokes to tell us the hour. Such a clock has now been invented by Vincent Pinto, a Philadelphia inventor, who studied clockmaking in Italy. It is the size of what is known in the United States as a grandfather's clock. That is, it has a very long pendulum, and stands in a narrow case about seven feet high. According to the inventor, however, the mechanism may be condensed sufficiently to fit a case the size of an alarm clock. It can be made to call the hour, half, or quarter hours, or all of them with a phonographic mechanism, and has chimes in addition. At present this clock, which is made by hand, says at eleven o'clock at night: "It is eleven o'clock. Time to go home." This remark is a joke of the inventor at the expense of his eighteen-year-old daughter who entertains many friends.

## Nerves of War

The sinews of war about which we talked so much a few years ago no longer interest us vitally, but the nerves of war are just beginning to be a national problem. They are the after results of that thing which we are not to call shell shock, tho we are never told what else to call it. There are 50,000 cases now under the care of the United States Public Health Service, and the War Risk Insurance Bureau has made the rather startling estimate that the peak load of war nerves will not be reached until 1927 or possibly even 1929. There is urgent need now of trained workers to deal with these cases and the need will grow. It is a need, too, that extends beyond the army. Civil hospitals, factories, schools and courts are beginning to see that the

IT'S THE HAT—AS WELL AS WHAT'S UNDER IT—THAT COUNTS

Would you call these women pretty? They each have beauty enough to be chosen as a model in the recent New York fashion show of the Milliners' Association, but they are being made to look their worst here by wearing hats unsuited to them. The obvious moral was drawn with emphasis by the Milliners' Association: Don't buy a hat because it looks well in the window!

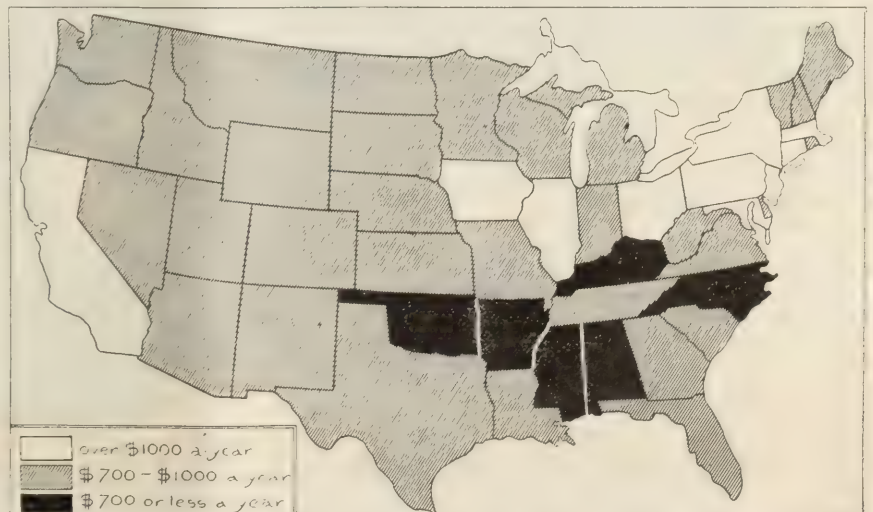

# Saving Souls Is Under-paid Labor

Under modern conditions and the present scale of prices the minimum wage necessary to maintain the American standard of comfort is generally placed in the neighborhood of \$2,000 a year, at least for married folk. There is no state or territory in the Union, except the District of Columbia, in which the average salary of the clergy reaches this sum. In only ten states, according to statistics gathered by the Interchurch World Movement from eighteen Protestant denominations, does the average minister get a thousand dollars a year, and in six states he gets less than \$700. The average for the whole United States is \$937 or \$4.38 for each church member.

How do ministers' salaries "stack up" with those of other occupations? Well, the Interchurch World Movement also investigated the steel strike and its severe comment on the inadequate wages paid the workers has awakened widespread interest. But it declares that the highest salaries ordinarily paid to ministers are about the same as the wage of an expert roller in a steel mill and "the lowest is lower than *any* wages paid in the steel industry."

The United States income tax returns for 1916 show that one lawyer in

five has an income of more than \$3,000 a year; one doctor in seven; one architect or engineer in ten; one minister in a hundred! Except for the elementary branches of teaching, which are in many states almost exclusively filled by single women, no form of professional, skilled or semi-skilled labor is so poorly paid as the ministry. The

This map of the United States shows how low the average salaries of our Protestant ministers are—in all but ten states ranging under a thousand dollars a year

This earnest young person is trying to pass a mental test given her by one of the students at the Smith College summer school, which is training women for psychiatric social work not only with soldiers but in schools, courts, factories and civil hospitals

psychiatric social worker is the person to help them solve some of their toughest problems—and there are in this country just about 150 psychiatric social workers.

The Red Cross has called for at least 130 psychiatric workers this year and seventy more next year to work among ex-service men; in civilian work the supply does not begin to meet the demand. It is a profession with an infinite variety of possibilities; one which any social worker would do well to investigate. Summer courses for trained social workers, and for beginners who will take work next winter, are being given this year at the New York School of Social Work, the Chicago School of Civics and Philanthropy, and the Smith College Training School of Social Work in Northampton, Massachusetts. The Smith College School was opened during the war, in the summer of 1917, and has trained about half the psychiatric social workers now in the country. Thirty-two of the students there this summer are on Red Cross scholarships, which means that they are pledged to six months' service with the Red Cross in Public Health Service hospitals.

## The Centrifugal Gun

Further details of the centrifugal machine gun, invented by E. T. Moore, a lawyer of New Jersey, and which successfully met the tests of the War Department, have been made public. The main parts of the gun consist of an upright shaft attached to a powerful electric motor capable of giving it a rotation of 10,000 revolutions a minute. Attached to the shaft, and at right angles to it, is a hollow steel arm eight inches long, which serves as the gun barrel. Balls instead of bullets are used, and are half an inch in diameter and of .50 calibre.

In Mr. Moore's opinion the most essential part of the gun is the timing device, which lets the balls into the barrel at just the proper time and interval to insure their emerging from the end of the barrel the instant it reaches the opening in the stationary gun covering or casing which incloses

the revolving barrel. This outer opening is in the front of the gun.

As the projectile moves out thru the gun barrel the barrel itself is continuing its rotatory movement. The force and speed with which the ball leaves the gun, therefore, is the resultant of two forces, its radial force acquired by its motion out thru the barrel and the peripheral force, which is the force acquired from being rotated about the shaft at a rate of 850 feet a second.

When the muzzle of the gun barrel has just reached the opening in front, the ball, due to the timing device which let it into the barrel at just the proper point in its revolution, is at the end of the barrel and ready to fly out in a straight line with the force acquired from its centrifugal motion. For each revolution of the gun barrel a single projectile is automatically fed into the breech-block at a definite point of the rotational movement, and is released from the breech-block and permitted to enter the barrel at another equally definite point of the rotational movement.

The centrifugal gun, according to the tests just made by the War Department, is capable of firing about 2000 balls a minute. When it is desired to cease firing, the feed from the hopper is shut off, stopping the flow of balls into the breech-block. Then the motor is stopped.

The hopper is a patented container with a revolving bottom fitted with grooves. As the machine gunner turns a crank or handle the balls are ground one by one into a tube which leads to the breech-block. Instead of grinding them out by hand, the same power that operates the gun may be utilized to drive the mechanism of the hopper.

As now designed two men can carry the machine and tripod, and two more men can transport the batteries.

"Fire control with our gun is constant," said Mr. Moore. "There is no smoke, noise or flash. Instead of 2000 men being exposed to enemy fire and covering much ground and area, less men than make up one squad would be used in operating our gun, and the fire control would come from one central point. Distributing our guns at certain intervals would cover an enormous front line. The lack of fire or noise from our gun conceals the position of the same and prevents the enemy from ascertaining its location."

It is a well known

fact that bullets fired from a gun held rigid will not all strike in the same place, but will show a lateral and vertical spread. Mr. Moore has figured that the lateral spread of a ball from the centrifugal gun is approximately five feet for each hundred feet that the ball travels, and the vertical spread three feet for each hundred feet. Thus, at a distance of 300 feet the centrifugal gun would cover a street fifteen feet wide for a distance of nine feet above the ground, at the rate of 2000 shots a minute, thereby rendering anybody's chances of remaining alive in that area exceedingly slim.

## By The Way—

The only quadruped that cannot swim is the camel.

# SELL YOUR OWN REAL ESTATE

Easily — Promptly — Profitably

Save Agents' Big Commissions

**YOU CAN GET CASH FOR YOUR PROPERTY—** just as other wide-awake property owners are doing—if you will use The Simplex Plans for Selling Real Estate. These proved-out, time-tested Plans show you how—exactly how—to make a quick cash sale of your building lot, land, farm or improved city or country property. They save time, money and effort. They get results where real estate agents fail. They are complete, practical and efficient. They are easy to understand. They are simple to follow.

It makes no difference WHERE your property is. It makes no difference WHAT it is. The Simplex Plans will show you how to turn it into cash. This is convincingly proved by the fact that more than 5,000 properties in the United States and Canada have already been sold by this scientific method.

Don't waste a single cent or a minute's times in hit-or-miss experimenting. Get and examine these effective Plans at once—today. This you can do without cost, risk or obligation of any kind.

## Quick Results!

## Plans Sent Free

You don't have to buy a "pig in a poke." We trust you. Mail the coupon below and we will send you—without a penny down—a complete set of these original, copyrighted Plans for ten days' free examination. Take plenty of time to go over them carefully. Decide for yourself. Be your own judge. Keep them if you want them. Remail them if you don't. It's all up to you. It costs you nothing to investigate. Remember, these Plans have been tried, tested and proven hundreds and thousands of times. They are the concentrated results of

the world's greatest real estate salesman's twenty years' experience. They contain the simon-pure, sure-fire secrets of successful selling.

Take advantage of this extraordinary offer today. Just mail the coupon. Do it right now. Pay nothing in advance. We will send the Plans by return mail, prepaid, together with convincing proof of what they have done for others and what they will do for you. When you receive them examine them carefully. See for yourself how they make it easy for you to market your real estate to the greatest possible advantage. Then if you wish to keep and use them—as thousands of others have done—send only \$10 in full payment. Otherwise return them and you will owe nothing. Do not delay. Act now—before this ten-day, free-examination offer is withdrawn.

## Your 650,000 Servants

(Continued from page 269)

organizations are engaged in road construction; while twelve, with large overhead organizations, are engaged in hydraulic construction, and sixteen are engaged in surveying and mapping. Sixteen different bureaus exercise jurisdiction over water power development. Nine different organizations are collecting information on the consumption of coal. Forty-two different organizations, with overhead expenses, are dealing with the question of public health. The Treasury Department, the War Department, the Interior Department, and the Labor Department, each has a bureau dealing with the question of general education. These departments operate independently: instances of coöperation between them are exceptional. Each of these departments is manned at all times with an organization prepared to carry the peak of the load and maintains an expensive ready-to-serve personnel. . . . The system is wrong, and Congress alone can change the system.

The first important step toward reorganization was a change in the rules of the House of Representatives, effective on July 1 last, which provides that all executive estimates and all appropriations shall be handled by the committee on appropriations, instead of by eight committees, as in the past. This action followed the President's veto of the budget bill. It is a practical application of the budget principle. Hereafter all officials with designs on the public purse must report to one committee of Congress, whose business it is to see that the garment is cut according to the cloth.

Secondly, there must be a reclassification and readjustment of the duties and salaries of Government employees so as to correct inequalities which have arisen as the result of injudicious practices in the past, and place Government salaries in proper relation with those in private employ. Readjustment does not necessarily mean raises in pay for everybody in the public service. It simply means consistency—fitting the salary to the job. Readjustment in the District of Columbia has recently received the attention of the Joint Commission on Reclassification of Salaries, which was authorized by a provision in the legislative, executive and judicial appropriation act approved March 1, 1919. The report of this commission is now in the hands of Congress. A large part of the field force has already been reclassified and readjusted. Effective July 1, 1920, the entrance salaries of postal employees, who constitute probably one-third of the Government force outside the District of Columbia, were substantially increased and provision was made for automatic advances, dependent upon good work, for a certain number of years, after which the rule of the survival of the fittest will prevail.

This increase in the pay of postal employees, without corresponding increases in the pay of other federal civil employees, has resulted in still more confusion by creating a marked disparity in salaries of employees in dif-

ferent branches of the service who are engaged in practically the same grade of work. The natural result is that the postal service is being recruited at the expense of other branches.

The following is typical of letters received almost daily by the Civil Service Commission:

How can you expect to get first-class men for this work at \$3000 to \$3600 a year? We pay our men \$6000 and expenses.

This letter came from the western manager of a large oil concern and was prompted by the announcement by the Civil Service Commission of an examination to fill a position of expert driller under the Bureau of Mines. Might it not be possible to conduct the Government's business with fewer employees, adequately paid, and, therefore, of better quality? True economy in employment is not measured by the amount of salary alone; it is measured by the amount of salary as compared with results produced.

Third, there is needed a system of promotions on merit thruout the service under competent central jurisdiction. There can be no question that at present "outside" influence is often brought to bear in the matter of promotions. A system in which the employees themselves, the department interested, and the central governing agency are all represented, is entirely feasible. Such a plan would prevent a recurrence of the inequalities which now exist and which it is sought to correct by the reclassification which has already been recommended.

No such system could be completely effective unless it held dismissal as the penalty for falling below a fair standard.

The fourth obvious step is a provision for promotion of worthy subordinates to the more responsible and, therefore, the more remunerative positions. No lengthy argument should be needed to convince any intelligent person that the prospect of advancement thru merit to the supervisory offices would tend to improve the quality of applicants for Government employment.

For many years it has been evident on every hand that the efficiency of the civil service has been seriously reduced by the retention of aged employees who have outlived their usefulness. This defect is being corrected by the recently enacted law which provides for retirement with an annuity. Semi-monthly contributions by the employees to the pension fund are required by the law. The purpose of retirement and pensions for Government employees is not philanthropic; the idea is based upon sound business principles.

The substance of these recommendations for the betterment of the civil service is simply this: "The palm to him who merits it."

A message from the American Government to the American people is much like a letter from yourself to

# A Million Dollar Secret

## A Subtle Principle of Success

This subtle principle in my hands, without education, without capital, without training, without experience, and without study or waste of time and without health, vitality or will power has given me the power to earn more than a million dollars without selling merchandise, stocks, bonds, books, drugs, appliances or any material thing of any character.

*This subtle and basic principle of success* requires no will power, no exercise, no strength, no energy, no study, no writing, no dieting, no concentration and no conscious deep breathing. There is nothing to practice, nothing to study, and nothing to sell.

This subtle and basic principle of success does not require that you practice economy or keep records, or memorize or learn to do anything, or force yourself into any action or invest in any stocks, bonds, books, or merchandise.

This Subtle Principle must not be confused with memory systems, "will power" systems, Christian Science, psychology, magnetism, thrift or economy, nor should it be confused with health systems, auto-suggestion, concentration, "personality," self-confidence or opportunity, nor should this Subtle Principle be confused with initiative, mental endurance, luck, chance, self-analysis or self-control. Neither should this principle be confused with imagination, enthusiasm, persuasion, force or persistence, nor with the art or science of talking or salesmanship, or advertising.

*No one has yet succeeded in gaining success without it.*

*No one has ever succeeded in failing with it.*

*It is absolutely the master key to success, prosperity and supremacy.*

When I was eighteen years of age, it looked to me as though I had absolutely no chance to succeed. Fifteen months altogether in common public school was the extent of my education. I had no money. When my father died, he left me twenty dollars and fifty cents, and I was earning hardly enough to keep myself alive. I had no friends for I was negative and of no advantage to any one. I had no plan of life to help me solve any problem. In fact, I did not know enough to know that life is and was a real problem even though I had an "acute problem of life" on my hands. I was blue and despondent and thoughts of eternal misery arose in my mind constantly. I was a living and walking worry machine.

I was tired, nervous, restless. I could not sleep. I could not digest without distress. I had no power of application. Nothing appealed to me. Nothing appeared worth doing from the fear that I could not do anything because of my poor equipment of mind and body. I felt that I was shut out of the world of success and I lived in a world of failure.

I was such a pauper in spirit that I blindly depended on drugs and doctors for my health as my father before me. I was a "floater" and depended on luck for success. The result of this attitude on my part was greater weakness, sickness, failure and misery as is always the case under similar condition.

Gradually my condition became worse. I reached a degree of misery that seemed intolerable. I reached a crisis in my realization of my failure and adverse condition.

Out of this misery and failure and pauperism of spirit—out of this distress—arose within me a desperate reaction—"a final effort to live"—and through this reaction, arose within me, the discovery of the laws and principles of life, evolution, personality, mind, health, success and supremacy. Also out of this misery arose within me the discovery of the inevitable laws and principles of failure and sickness and inferiority.

When I discovered that I had unconsciously been employing the principles of failure and sickness, I immediately began to use the principles of success and supremacy. My life underwent an almost immediate change. I overcame illness through health, weakness through power, inferior evolution by superior evolution, failure by success, and converted pauperism into supremacy.

I discovered a principle which I observed that all successful personalities employ,

either consciously or unconsciously. I also discovered a principle of evolution and believed that if I used it, that my conditions would change, for I had but one disease—failure, and therefore there was but one cure—success, and I began to use this principle and out of its use arose my ambition, my powers, my education, my health, my success and my supremacy, etc., etc.

*You may also use this principle of success deliberately, purposefully, consciously and profitably.*

Just as there is a principle of darkness there is also a principle of failure, ill-health, weakness and negativeness. If you use the principle of failure consciously or unconsciously, you are sure always to be a failure. Why seek success and supremacy through blindly seeking to find your path through the maze of difficulties? Why not open your "mental eyes" through the use of this subtle success principle, and thus deliberately and purposefully and consciously and successfully advance in the direction of supremacy and away from failure and adversity?

I discovered this subtle principle—this key to success—through misery and necessity. You need never be miserable to have the benefit of this subtle principle. You may use this success principle just as successful individuals of all time, of all countries, of all races, and of all religions have used it either consciously or unconsciously, and as I am using it consciously and purposefully. It requires no education, no preparation, no preliminary knowledge. Any one can use it. Any one can harness, employ and capitalize it, and thus put it to work for success and supremacy. Regardless of what kind of success you desire, this subtle principle is the key that opens the avenue to what you want.

### It was used by

Moses,	Clemenceau,	Elbert Hubbard,
Caesar,	George Washington,	Shakespeare,
Napoleon,	Marshall Field,	Mozart,
Roosevelt,	Sarah Bernhardt,	Mendelssohn,
Rockefeller,	Galli-Curci,	Copernicus,
Herbert Spencer,	Nordica,	Confucius,
Emerson,	Melba,	Mohammed,

Abraham Lincoln,	Frick,	Pericles,
		Lycurgus,
		Benjamin Franklin,

and thousands and thousands of others—the names of successful men and women of all times and of all countries and of all religions, and of all colors, make a record of the action of this Subtle Principle of success. None of these individuals could have succeeded without it—no one can succeed without it—no one can fail with it.

Every one realizes that human beings owe a duty to each other. Only the very lowest type of human being is selfish to the degree of wishing to profit without helping someone else. This world does not contain very great numbers of the lowest and most selfish type of human beings. Almost every one, in discovering something of value, also wants his fellow man to profit through his discovery. This is precisely my attitude. I feel that I should be neglecting my most important duty towards my fellow human beings, if I did not make every effort—every decent and honest effort—to induce every one to also benefit to a maximum extent through the automatic use of this subtle principle.

I fully realize that it is human nature to have less confidence in this Principle because I am putting it in the hands of thousands of individuals, but I cannot help the negative impression I thus possibly create. I must fulfill my duty to each member of humanity, just the same.

I do not urge anyone to procure it because I offer it without any obligation whatsoever. I urge everyone to procure the Subtle Principle of Success because the results it holds in store for each individual are great—very great.

This subtle principle is so absolutely powerful and overmastering in its influence for good, profit, prosperity and success, that it would be a sin if I kept it to myself and used it only for my personal benefit.

So sure am I of the truth of my statements—so absolutely positive am I of the correctness of my assumption and so absolutely certain am I that this Principle in your hands will work wonders for you—that I am willing to place this Subtle Principle of Success in your hands, at my expense, without any obligation whatsoever, on your part. You will recognize the tremendous value of this Principle within less than thirty minutes—in fact, almost immediately, as you become conscious of it, you will realize its practicability, its potency, its basic reality and its power and usability for your personal profit, pleasure, advancement, prosperity, success and supremacy.

Thousands of individuals claim that the Subtle Principle of Success is worth a thousand dollars of anyone's money. Some have written that they would not take a million dollars for it. You will wonder that I do not charge a thousand dollars for the Subtle Principle of Success—for disclosing this Principle—after you get it into your possession and realize its tremendous power and influence for your success and supremacy.

I, myself, have derived such tremendous results—amazing results—from its power, that I want every man and woman to have this key to success, prosperity, wealth and supremacy. This is why I am willing to send it to any one—to any address, without any obligation whatsoever—this Subtle Principle of Success is yours to keep, yours to use for the attainment of your success, happiness and supremacy.

Remember, you are under no obligation whatsoever, to pay or to return anything to me. The Subtle Principle of Success is yours to keep.

*You would never forgive me, and I could never forgive myself, nor could the creative forces of the Universe forgive us, if I failed to bring you to the point of using this subtle principle of success. You would never forgive me if I failed to do for you that which you would do for me, if our positions were reversed.*

You want success of some kind. This is your opportunity to get it—to get what you want.

Write your address on the form below, or write me a postal or a letter, asking me to send you the Subtle Principle of Success without any obligation of any kind whatsoever, on your part, and you will receive by return mail, the Subtle Principle of Success—a Principle of supremacy—the key to your every success—the equal of which you have never seen.

yourself, for the American people are the American Government. Public opinion, as expressed thru the ballot, can accomplish any reform in our governmental system. You, Mr. American Citizen, can have an executive civil service that is 100 per cent efficient as soon as you interest yourself in the institution sufficiently to insist thru your representative in Congress upon a business-like administration of the public business.

Washington, D. C.

## The Little Dots That Make the Mighty Map

(Continued from page 264)

player would run to third base instead of first and try to call his single a three-bagger.

Cities draw the people who are striving to do something, to reach a goal. Day after day they see men and women speed over the line and win their laurel crowns. The vast horde of strivers has time to look up and cheer because each hopes to get there in his turn. If Caruso lived in a village someone would probably have him arrested, thinking that he must be drunk or he wouldn't be singing so much. Babe Ruth would probably be suspected of bribing the pitchers. In a village one always hears: "He's a nice fellow but—" Until they can leave off that "but" they all look alike to me whether they are built of pine boards or ivy covered rock.

New York City

## Pebbles

"Madeline is quite a noisy girl."  
 "Yes, she combs her hair with a bang."  
 —Froth.

Mabel—Did the doctor treat you?  
 Helen—No; he charged me five dollars.  
 —Jester.

Tim—I've got to work hard next year.  
 Tam—Why, aren't you coming back to college?—Gargoyle.

Harold—Bring me an egg nog.  
 Waiter—We have plenty of eggs, sir, but we are all out of nogs.—Punch Bowl.

"Helen changed a lot last year."  
 "How's that?"  
 "She had a job as cashier."—Purple Cow.

She (upon leaving restaurant)—That waiter seems terribly tired.  
 He—I'm pretty well spent myself.—Pitt Panther.

The Bride—Oh, Jack, I could sit here forever!  
 The Groom—So could I, darling. Let's go back to the hotel and have lunch first.  
 —Life.

"I want to ask for your daughter's hand," said the suitor to her father.  
 "All right, boy. Go to it. Take the hand that is always in my pocket."—Ladies' Home Journal.

Jack—You've got a bad cold, Pete.  
 Pete—Yeh.  
 Jack—How'd you get it?  
 Pete—I slept in a field last night and someone left the gate open!—Boys' Life.

## Shall Labor Get Complete Control?

(Continued from page 268)

Workmen's Compensation legislation in Illinois. He has in the ten years I have known him, never to my knowledge advanced, or even advocated any constructive piece of legislation, and he has held his position with the Chicago Federation, because he is honest and because he is a skilled labor politician. John Fitzpatrick hasn't the slightest idea of the problems of industry, he can't conceive of overhead expense as anything more than graft, and he lacks all knowledge of the problems of production, distribution and the sale of the products of industry. His horizon begins and ends with the wrongs that labor has suffered, and he usually refers to wrongs that wise legislation and a changed relationship have remedied.

That the commission succumbed to the spell of Mr. Fitzpatrick's personality is a tribute to Mr. Fitzpatrick's dramatic powers, but hardly to his sincerity or to the justice of his cause.

To Foster and Fitzpatrick the steel industry presented an opportunity for organization, not for a righting of industrial wrongs. It was the great labor prize of the industrial field, and to succeed in organizing the Steel Corporation, would bring to the leaders the broadest recognition and the highest reward the labor world had to offer.

The real or imaginary wrongs of the workers played not the slightest part in the decision to organize the steel industry.

It was the citadel of the open shop that was the subject of attack, it was the last barrier against complete and final unionization of American Industry, against which Foster and Fitzpatrick combined their resources.

And it is to the everlasting credit of Judge Gary that he successfully resisted this attack, for it is to the interest of the public that the principle of the open shop be sustained.

We have had many examples in the past two years of the effects of unlimited power in the hands of arbitrary, unwise, and selfish leadership. Organized labor has grown in membership, in political influence, in political power, and the public is today concerned, not with bringing industry within the pale of the law, but in devising some means of enforcing upon labor collective responsibility for collective action.

Lenin and Trotzky are said to head an organization of six hundred thousand members, yet they control the destiny of one hundred and twenty million people.

The leaders who could control the railroads, the coal mines and the steel industry thru the complete organization of the employees of these three vital occupations, would have a strangle hold on the public.

The effect of a complete labor control of industry would be infinitely more baneful to the public's interest than a complete monopoly of industry by capital, because it would be harder to regulate, and more difficult to end.

We have escaped monopoly by capital, let us see to it that our emotions and sympathies will not lead us into the toils of a labor monopoly.

Our labor friends are skilled in the art of arousing sympathy, and are ever ready to make appeal to that great quality in the American people. But let us all meet these appeals with the knowledge that, for the nonce, labor is the top dog in the industrial struggle, and that hereafter labor's plea for general control of industry must be weighed in the light of its influence on the public welfare.

Labor today controls our railroads and our coal mines, and the public is in daily dread lest a new demand will result in another stoppage of the service of these two vital industries.

The spirit of competition, that life-giving fillip of American enterprise, no longer exists in these industries, and the deterioration in service shows it.

Are we prepared to surrender still another of our large industries to the control of an unseasoned, unwise, an often wholly selfish and an always irresponsible leadership? And would Mr. Foster and Mr. Fitzpatrick give us better and cheaper steel and a more contented mass of employees than Judge Gary and Mr. Schwab?

Let us admit that there is a sad lack of understanding between many employers and their employees, but let us also acknowledge the tremendous strides which industry generally has made in the last decade in the improvement in the sanitation and safety of its workshops.

As political democracy has evolved to its present, by no means complete state thru the slow process of centuries of strife and adjustment, so industry is advancing steadily toward better understanding, a more effective coöperation, toward, if you please, a more democratic form of administration. There is much to overcome before a perfect scheme of industrial control is reached, and it cannot be reached without occasional strife. But that is no reason why we should despair of the ultimate result.

The leaders of labor and the leaders of industry represent a cross section of American manhood. Neither are lily white, neither jet black. They are engaged in an economic struggle in which the public's interest frequently suffers, and it therefore behooves the public to revise the rules under which the contest takes place.

The most effective revision would be to enforce responsibility for losses deliberately, arbitrarily, or inconsiderately inflicted. That would, at least, narrow the bounds of the conflict and reduce the loss. And in the meantime, the public would itself learn to appreciate the relative value of the three factors in industry, capital, labor and management, and would find a way of determining the compensation due to each. For that, after all, is the problem.

Chicago

## One Girl and a Rotospeed will do the work of 50 Typists

75 good, clean, sharp form letters a minute. This is what can be done in your own office by any stenographer or office boy.

**Exact Form Letters—20c Per Thousand**

Better form letters than you ever thought possible—letters with the clean-cut appearance of neatly typed originals that exactly duplicate the typewriter type, can be printed at the rate of 75 per minute on the Rotospeed.

**No Type, Trouble nor Muss**

The Rotospeed stencil is prepared quickly and easily. No type to set. Typewrite your letters on a sheet of stencil paper. Attach the stencil paper to the Rotospeed and turn the handle. That's all. A child can do it. The Rotospeed has a semi-automatic feed—self-adjusting impression roll, an unlimited head-spacing device and improved receiving tray—all these exclusive advantages—yet, it's the simplest stencil duplicator in the world.

**Ruled Forms Easily Printed**

Ruled forms of all sizes from 3 x 5 inch cards to 8 1/2 x 16 inch sheets are printed on the Rotospeed just as easily as form letters and at a cost of a few cents per thousand.

**Illustrations and Signatures Quickly Reproduced**

Sketches can be copied or traced on the stencil paper and fine signatures written so that a completely typewritten, illustrated and signed letter will be printed at one operation.

**Only One Model—Price \$43.50 Complete**

This machine does everything that a stencil duplicator can do. There are no accessories or higher priced models. The price includes full equipment and sufficient supplies for printing twenty-four different jobs. The saving on this much work will pay the entire cost of the Rotospeed.

**Free Trial at Our Risk**

We offer to place the Rotospeed in your office on trial. We do not employ salesmen. The machine must sell itself. Write for our proposition and the Rotospeed booklet. Let us show you how others in your line of business are increasing their profits and saving expense the Rotospeed way. Just sign and mail the coupon or pin it to your letterhead.

## BON-OPTO

### SHARPENS VISION

It's a system of treating the eyes at home; is practiced daily by hundreds of thousands of people with great satisfaction. The Bon-Opto system quickly relieves inflammation of the eyes and lids. It cleanses, soothes, and rests tired, dusty, work-strained eyes and is a help to better eyesight. Ask your druggist. He knows. He will refund your money without question, if you are dissatisfied. There is no other home eye treatment like Bon-Opto.

wealth and mighty influence has stood for this thing year after year, in the face of promises to quit it, and that the hours of work per week are greater now than they were ten years ago.

Another thing will get widely registered. Those industrial managers who will not tolerate collective bargaining, who will not cooperate with labor unions and who rely upon the old boss method of hiring and firing whomever they please, whenever they please, for whatever cause they please, will be obliged to discover some method, as yet unknown to them, whereby absolute autocracy in industry can be made to work without creating such a hubbub as to disorganize all the rest of current life. Dummy employee associations, under-cover industrial spies, outreries against the closed shop, charges of Bolshevism, however forceful and interesting at times, are hopelessly ineffective substitutes for genuine representation of the workers, frequent conferences, mutual understanding and practical cooperation between employer and employee.

The commission was entirely persuaded that the conduct of the recent steel strike was strictly orthodox according to labor union policies in its every phase, with no acceptance whatever given to the radical ideas of the I. W. W. or of Bolshevism. The press of the country quite generally gave the impression that the wildest radicals were in the saddle and that the objective was the complete overturn of our entire industrial system.

The strike was waged wholly in the cause of hours, wages and control of jobs and over the manner in which all these matters were determined. The annual earnings of 72 per cent of all the workers were below the standard set by Government experts as the *minimum of comfort* level for families of five. Likewise as many as one-third of the productive iron and steel workers were below the Government level named as the *minimum of subsistence*. All this in spite of the fact that the most highly skilled men in the steel works are perhaps the best paid men in industry.

The commission reports a very sad and dangerous and unnecessary suppression of civil liberties, especially in Western Pennsylvania, where press and pulpit, very largely, and officers of the law were all used as partizan adjuncts of the steel companies, and strikers were grievously denied not only free speech and assemblage, but also were denied protection of property, life and limb.

Altho the commission did not have time to make a thoro investigation of welfare work and safety devices in the steel mills, there is much to indicate that the companies have made a record in these directions in which they may take just pride.

The strength and efficiency of the strikers' organization in comparison with that of the companies was pitiful to behold. It is amazing what courage and hopefulness men will display thru long weeks of dreary fighting against such tremendous odds. The strikers had little or no chance of winning the battle, having insufficient organization, inadequate leadership, no control of the great avenues of publicity, very limited funds, class prejudice from without and race prejudice within. They have gone back to work—those who were permitted to do so—compelled by the lash of economic necessity, sullen and revengeful, and nothing has been settled, no grievance removed, no confidence or good will generated.

Unless something is done by the companies on their own initiative, or under the stress of Government supervision or thru the pressure of public opinion, to put their industrial relations on a more stable basis in the light of the present hour, the tragedy will recur, the battle will be fought all over again, the fearful waste and extravagance of another industrial conflict of huge proportions will again be saddled upon a public which is fast approaching the limit of its endurance.

The report closes with a number of practical, constructive recommendations, calling upon the Federal Government to set up a commission to bring about immediate conference between the companies and the workers for the purpose of eliminating the twelve-hour day and the seven-day week and for the readjustment of wage rates; also to establish an adequate plan of permanent free conference to regulate the conduct of the industry in future. The Federal Government is called upon to make a full inquiry into the past and present state of civil liberties in Western Pennsylvania, to investigate and regulate labor detective agencies, to make public two reports of recent investigations made by the Government into the conditions in the steel industry which never have been made properly available.

If there is immediate response to these suggestions and the work proposed is pressed with vigor and fairness to both sides, something substantially worth while will be accomplished in due process of time. But how much more satisfactory in every way it would be, how much more might easily be accomplished, how quickly would the present dangerous drift be turned, if only a true light might break out from within the camp of organized capital, engendering at once a better spirit within the camp of organized labor, and producing a working basis by which all future differences may be settled without resort to the power of brute force! It is being done in some industries. Why not in steel, too?

Boston

## The Duty of the Church

(Continued from page 268)

composed of different classes which are united in support of certain activities of the church, but are not united as regards political and industrial opinions. No one group can quite represent the other and therefore can hardly speak as the representative of the church. Unanimity of opinion among church members seems possible only when the issue has been lifted into the sphere of morals.

Such facts as these, however, do not warrant total indifference on the part of individual Christian people to proper investigation of industrial and social conditions, nor do they forbid organized groups of Christians using such reliable information as is obtainable or of getting it if it is not otherwise obtainable. As a matter of fact, this report on the steel strike is not that of any denomination or group of denominations. It was drawn up by a commission appointed by the Industrial Relations Department of the Interchurch World Movement. It did much of its work thru the professional investigators furnished by the Bureau of Industrial Research. The fact that the report was adopted by the Industrial Relations Department of the Interchurch World Movement after no little discussion is evidence that the department has confidence in the methods employed and in the information the report contains. The report is thus made by representatives of representatives of organized Christianity and is published by a group of men as to whose character and sympathy there can be no fair question. It is idle to say it is merely partizan.

The whole matter shows that we need a body of experts, partizans of no opinions, capable of making scientific studies of social conditions and of making reports upon the same. If we only had such a body possessing the respect and confidence of all parties concerned we should be much better able to see the moral issue involved in an industrial situation. Only by the massing of facts will it be possible for us to see elements of justice and injustice in a conflict between interested parties. Until such reliable data are gained, our moral teaching must very largely deal with principles rather than with distinct situations. In so far as the commission on the steel strike has pioneered in this sort of method, it deserves appreciation. In so far as it has failed to maintain the strictly investigative spirit, its findings will naturally be discounted. It ought to help us to distinguish between moral issues and detailed programs of reform; for it is one thing to stand for justice and another to be an umpire as to what is justice. At all events, discussion of the facts which the report sets forth can no more be regarded as industrial radicalism than criticism of the church for attempting to apply the teaching of Jesus to social affairs can be attributed to all employers.

## Are We Downhearted? No!

(Continued from page 265)

2,760,000 to 1,636,000 "demanding the withdrawal of all British troops from Ireland and the cessation of the production of munitions of war, destined to be used against Ireland and Russia."

"And in case the Government refuses these demands," the Trade Union Congress proceeds, "we recommend a general down tools policy and call on all the trade unions here represented to carry out this policy, each according to its own constitution, by taking a ballot of its members or otherwise."

This resolution denying the right of the majority in the state to settle the political policy of the state is itself a majority resolution of the Congress.

I sincerely hope that both in Ireland and in Poland the skies may clear and the storm clouds disperse.

But the British Government can hardly consent to have its hands tied in case of worse troubles ahead by the ukase of the British Trades Unionists.

If the British Government succeeds in escaping trouble with the trade unions over our foreign policy, or in attempting to deal with the murders in Ireland, there are still rocks ahead nearer home. The miners are in the words of one of their leaders, rising like lions after their long slumber in unvanquishable numbers, and moreover they are realizing that "we are many and ye are few."

Realizing this fact they intend to use it, as I am informed, to obtain a further large increase of wages, to which the Government is not likely to assent.

The rise of wages cannot go on forever, and I do not believe that these new demands of the coal miners are the result of any feeling that present wages are not fair and reasonable.

They are pushed on by those who want to give the new remedy of Direct Action a fair trial, who want to try once more whether the Government cannot be reduced to impotent submission if a great industry withholds its services.

They want to realize the millennium of which Disraeli drew such a remarkable picture eighty years ago:

The whole of the north of England and a great part of the midland counties were in a state of disaffection; the entire country was suffering; hope had deserted the laboring classes: they had no confidence in any future of the existing system. Their organization, independent of the political system of the Chartists, was complete. Every trade had its union, and every union its lodge in every town and its central committee in every district. . . . A flowing standard of silk was borne before the leader like the oriflamme. Never was such a gaunt, grim crew. As they advanced, their numbers continually increased, for they arrested all labor in their progress. Every engine was stopped, the plug was driven out of every boiler, every fire was extinguished, every man was turned out. The decree went forth that labor was to cease until the charter was the law of the land; the mine and the mill, the foundry and the loomshop, were, until that consummation, to be idle; nor was the mighty pause to be confined to these great enterprises. Every trade of every

kind and description was to be stopped—tailor and cobbler, brushmaker and sweep, tinker and carter, mason and builder, all; for all an enormous Sabbath that was to compensate for any incidental suffering which it induced by the increased means and the elevated condition that it ultimately would ensure.

But there are two saving facts, first the British working man is not by nature a revolutionary, and secondly he is not in fact oppressed or underpaid.

The progress achieved in eighteen months of reconstruction is amazing. There are still mountains to be removed. But already we can say that industry is restored, signs of comfort and prosperity about us. We who did not lose heart in 1914, are hopeful that we shall still surmount the difficulties of 1920.

London, England

## Books of the Hour

THE MAINTENANCE OF PEACE, by S. C. Vestal (Putnam). A somewhat ponderous defense of the doctrine of the balance of power as the only preventative of wars.

THE CITIZEN AND THE REPUBLIC, by James A. Woodburn and Thomas F. Moran (Longmans, Green). A good civics textbook, with particular emphasis on party organization.

THE NEW FRONTIER, by Guy Emerson (Holt). The spirit of liberalism, the product of the individualism and experimentalism of the frontier, as the pervasive principle of American life.

STEPS IN THE DEVELOPMENT OF AMERICAN DEMOCRACY, by Andrew Cunningham McLaughlin (Abingdon Press). High-hearted historical essays on the evolution of the American ideal of democracy.

THE BALKANS, A LABORATORY OF HISTORY, by William M. Sloane (Abingdon Press). A reprint of Professor Sloane's well-known history of the Balkan wars with added material to bring it up to date.

IRELAND AN ENEMY OF THE ALLIES? by R. C. Escouffaire (Dutton). An attack on Irish nationalism by a Frenchman embittered by the pro-German policy of the Sinn Fein extremists during the Great War.

THE UNITED STATES, AN EXPERIMENT IN DEMOCRACY, by Prof. Carl Becker (Harpers). Keen, clear, impartial analysis of American institutions and traditions, reminding the reader in many ways of Bryce's *American Commonwealth*.

A STRAIGHT DEAL OR THE ANCIENT GRUDGE, by Owen Wister (Macmillan). A well-intended attempt to remove American prejudices against the English by a reconsideration of history. Makes many true and effective points, but is a little exclusive in its attitude towards nations outside the frontiers of Anglo-Saxondom.

THE IRISH CASE BEFORE THE COURT OF PUBLIC OPINION, by P. Whitwell Wilson (Revell). A correspondent of the London *Daily News* presents the British case against Irish independence to an American audience. A remarkably fair-minded and adequate summary of the reasons for viewing with distrust the Sinn Fein propaganda.

THE GHOST IN THE WHITE HOUSE, by Gerald Stanley Lee (Dutton). This book is about spiritual politics, not spiritualistic politics, as the title might indicate. The ghost is the mind of the hundred million human beings whose insistent needs must haunt the desk and pillow of the next occupant of the White House. Mr. Lee, who is well known to every independent reader, tries to interpret the ghost and reduce his vague aspirations to thoughts about the political and industrial problems of the day.

PROBLEMS OF PEACE, by Guglielmo Ferrero (Putnam). The great Italian historian narrates the events of European politics from the time of the Holy Alliance to the organization of the League of Nations. His purpose is that Americans should better understand the historic roots of the problems with which Europe must grapple: "the meaning of the death struggle between France and Germany, the persecution of which the Catholic Church has been in turn the author and the victim, the revolutionary struggles in the Russian Empire which resemble the sulphurous emanations and intermittent rumblings of a volcano half asleep, the bitter internal discords in France which die down only to revive again, or the hideous death agonies of the Hapsburgs."

# The Independent

## The Cover

The statue of "The Maid of 1620," which is reproduced on the cover of The Independent this week, is to be erected in Plymouth, Massachusetts, to the memory of the women of the "Mayflower." Its dedication will be a part of the Tercenary celebration this fall to commemorate the landing of the Pilgrims at Plymouth in 1620. Henry Kitson, who designed this statue, is the Boston sculptor who made the famous "Minute Man" statue at Lexington, Massachusetts.

## Remarkable Remarks

**LEON TROTSKY**—In a year all Europe will be Bolshevik.

**DR. PEASE**—Cigaretts are fast bringing human civilization to ruin.

**MEREDITH NICHOLAS**—Happiness is the true touchstone of Democracy.

**MARTHA KEELER**—Girls are human documents and they won't stay put.

**NEAL R. O'HARA**—France has become décolleté beyond the decimal point.

**HERBERT COREY**—Many a treaty has left more enduring scars than the war which made it possible.

**GOVERNOR COX**—This is a progressive age and the seat of power rests in every home of America.

**WHITNEY WARREN**—I believe in d'Annunzio, and I think him the bravest man I have ever known.

**DR. J. B. CRANFILL**—The United States Senate crucified a bleeding world on a cross of partizan politics.

**PREMIER LLOYD GEORGE**—The last people in the world to complain about interfering with Russia are the Soviet Government.

**SECRETARY BAKER**—The interpretation of the Chicago platform by Senator Harding is even more obscure than the platform itself.

**OTTO H. KAHN**—Europe for the past year has been suffering less from the effects of the war than from the effects of the peace.

**JOHN BLAKE**—Decide as early in life as you can just how much time you can afford to waste, and never waste another hour beyond that limit.

**FRANKLIN D. ROOSEVELT**—By not signing the peace treaty we have placed ourselves in the same class with Bolshevik Russia, Mexico and unspeakable Turkey.

**HERBERT HOOVER**—If those who wear silk stockings could see the millions of people in Europe who have no stockings at all, they would take less satisfaction in the sheen and pattern of their costly hose.

**MRS. VINCENT ASTOR**—If there ever were women who gave dinners at which dogs and monkeys were the guests of honor, and at which eating off gold plates was the standard of luxury, they were surely rather to be pitied than scorned.

## Pebbles

Judge—I sentence you to be hanged.  
Optimistic Prisoner—I love to be kept in suspense; it's so exciting.—*Widow.*

Simpleton—I see by the society journals that Mrs. Dashaway is going to Europe for her gowns.

Keene—Judging from her appearance I think she must have left her clothes somewhere.—*Cartoon's Magazine.*

Andrew Carnegie was once asked which he considered to be the most important factor in industry—labor, capital, or brains. The canny Scot replied, with a merry twinkle in his eye: "Which is the most important leg of a three-legged stool?" *The Virginia.*

Casey—Ye're a har-rd worrucker, Dooley. How many hods o' murther have yez carried up that ladder th' day?

Dooley—Whist, man—I'm foolin' th' boss. I've carried this same hodful up an' down all day, an' he thinks I'm worrakin'! —*Cleveland Leader.*

"No, sah, ah don't neber ride on dem things," said an old colored lady looking in on the merry-go-round. "Why, de other day I seen dat Rastus Johnson git on an' ride as much as a dollah's worth an' git off at the very same place he got on at, an' I sez to him: 'Rastus,' I sez, 'yo' spent yo' money, but whar yo' been?'"—*Ladies' Home Journal.*

A long and patient but vain effort on the part of a khaki-clad driver to induce a mule to draw what appeared to be a load of laundry thru the gateway of a local hospital afforded considerable amusement to the boys who were watching the proceedings. The mule would do anything but pass thru the gate.

"Want any 'elp, chum?" shouted one of the boys to the driver, as he rested for a moment.

"No," replied the driver, "but I'd like to know how Noah got two of these blighters into the Ark!"—*Tit-Bits.*

## New Plays

*The Lady of the Lamp.* A pipe dream transporting a young American into the imperial palace of Chengtu, 1200 years ago. Georgeous Chinese scenes and amusing situations. (Republic Theater.)

*Spanish Love,* by Avery Hopwood and Mary Roberts Rinehart. A thrilling and very beautiful tragedy. A large part of the action takes place in the midst of the audience without footlights or makeup. (Maxine Elliott's Theater.)

*Greenwich Village Follies*—An ultra-modern "revusical" show which rises to great artistic heights thru its staging by John Murray Anderson, in its colorful costumes designed by Robert E. Locher and James Reynolds, and in the dancing of Margaret Severn and Mlle. Phebe. It has low-brow comedy aplenty, too, including the inimitable Savoy and Brennan. But as Savoy would say, "You don't know the half of it, dearie," till you've seen the show for yourself! (Greenwich Village Theater.)

# The Congress of Nations

In the friendly competition for athletic honors among the twenty-seven nations represented at the Olympic games there has been evidenced a spirit of real international good will. Athletes of amateur standing can usually be counted on to be "good sports" in the best sense of that abused phrase. Perhaps the atmosphere of these outdoor games may furnish a stimulus to the councils of international diplomacy

## The Call of the Offshore Wind

A Message from the United States Government to the American People

By Admiral W. S. Benson

Chairman of the United States Shipping Board

THE eyes of the world are upon us as we work for the establishment of a permanent American merchant marine. They saw our shipyards work wonders during the war. They saw our ocean tonnage rise under the stress of necessity until our country had taken second place in point of carrying capacity among the maritime nations of the world. Foreign powers watched us closely then—but no more closely than they are watching today. They know, what many of our own people do not understand, that ships alone, tho we have thousands of them, will not give us a permanent American merchant marine.

Our merchant marine was built backward, when considered as a peace time proposition. It had to be. Our war need called for ships and more ships. Our peace problems call for operators and efficiency in cargo handling. Now it is a question of seeking cargo. We had no such problem to deal with during the war.

As it existed on the day of the armistice our merchant marine might be compared to a gigantic tree, miraculously created, with but the slenderest roots. Unless new roots were given it, it would wither and die. The very enormity of it would hasten the process. The job of the Shipping Board was then to give the war-created merchant marine roots capable of sustaining it and inducing larger growth. These roots must reach deep into our national life.

A nation capable of whipping into shape between the declaration of war and the time when supplies were most urgently needed a fleet able to carry 93 per cent of the supplies, some seven million tons, and 45 per cent of her fighting forces overseas, certainly is capable of sustaining such a fleet when built. This fleet, with additions made since the armistice, amounts to approximately 3400 vessels of about 16,920,000 dead-weight tons. It cannot be sustained on a permanent basis, however, unless it receives from the whole people the same attention that was given to its building.

No American who is not unmindful of the lessons

"We must keep ever in mind," says Admiral Benson, "that the merchant marine has a direct relation to all of us, whether we be engaged in the work of the shop, the farm, or the forge"

taught by the war can fail to understand the importance to the nation of a large and efficient merchant marine, not only in times of conflict but also in times of peace. We were content before the war to allow 92 per cent of our foreign commerce to be carried in vessels flying foreign flags. It did not seem to hurt our pride that only 8 per cent of our foreign commerce was carried under our own flag. We did not understand the relationship of our merchant marine to our national prosperity, the extension and development of our foreign trade or even to our national defense.

We do understand these things now. We built a merchant marine during the war and put our faith in it. We should have the same faith in it today. Any American who lends himself to propaganda in any way tending to injure American shipping is a mighty poor sort of an American.

The unusually high record of performance of the shipbuilder, the ship operator and those who manned our ships—the American youths, the men of tomorrow—is sometimes forgotten because of the insidious spreading of exaggerated accounts that now and then find their way into our press, frequently under foreign date lines. It is evidence that the art of propaganda so effectively used in the war is still being used in an attempt to tear down what we are bent upon making permanent—an American merchant marine made up of ships built by Americans, owned by American capital, sailing under the American flag and carrying the products of this country to all the markets of the world.

An impression has been spread in some quarters that our vessels, constructed during the war, were strictly of an emergency character, hardly capable of standing the wear and tear of peace time usage. It is a fact that not all of those vessels were entirely satisfactory, but the greater bulk of this tonnage is not only seaworthy but of the most efficient type. This is proved by insurance returns, which show that ship losses, despite unusually severe operating conditions, are far

below normal in the government built merchant fleet.

I say, therefore, have faith in the American merchant marine. And do more than that. Take an active interest in its development. We cannot hope to have our merchant marine on a basis of healthy development until our people become more ship-minded and express their interest in the fleet thru legislation and investment and shipping securities. We must keep ever in mind that the merchant marine has a direct relation to all of us whether we be engaged in the work of the shop, the farm or the forge. No matter what our walk in life we should know how vital the development of the American merchant marine—a merchant marine worthy of the name—is to our future welfare.

At the rate we are turning out ships, the Emergency Fleet Corporation anticipates the completion of the present building program within a relatively short time. By the end of this year it is likely that most of the 2300 ships on the active building program will have been completed. Shipping history was made on the afternoon of Wednesday, July 21, when the Hog Island shipyard within the space of an hour launched seven

These scouts live far inland but they manage to go to sea tho they don't go near the water. With a tree for a mast and a wooden platform for a deck they've rigged up a sail and all the paraphernalia of boating and they're becoming "ship-minded" as fast as they can

401-foot vessels, representing 54,775 dead-weight tons of shipping. These seven fabricated steel ships were the last of the 122 built at this yard since August 5, 1918, with a total dead-weight tonnage of nearly 1,000,000.

With the completion of our program almost at hand, we have turned from the problems of ship production to the questions that daily arise in connection with the operation of our vast fleet. It is no longer a question of getting ships. It is now: How are they to be operated so that our main purpose—the establishment

of a permanent merchant marine—will be accomplished?

One of our basic needs is more of the right kind of youths trained for the sea who will enter our service on a merchant ship at the bottom rung with the hope, ambition and power ultimately to own the ship. The records of our Sea Placement Bureau, in this connection, are encouraging. They show that during the last six months, out of every ten men entering the service of vessels under our control, six on an average were American citizens. And this percentage is growing higher every week. In 1917 only [*Continued on page 315*]

## The Poison of Bolshevism

An intellectual who escaped from Soviet Russia said: "The worst is not that the Bolsheviki force starvation upon us; not that they make us freeze almost to death. The worst is that they have made such scoundrels out of us"

By Leo Pasvolksy

THE national crisis brought about by the war with Poland has afforded the Soviet Government and the circles closely associated with it an opportunity for an appeal to those elements of the Russian people which still persist in their opposition to the régime, particularly to the former officers and the intelligentsia, or educated classes. In the work of gaining the good will of the officers, the Soviet authorities have been assisted tremendously by the attitude taken at the very beginning of the Polish invasion by General Alexis Brusilov. In his letter to N. I. Rattel, the Red chief of staff, General Brusilov laid down two general principles which, in his opinion, were necessary in order that the Russian could meet the Polish danger. In the first place, he emphasized the supreme importance of arousing in the people a feeling of national patriotism, without which it would have been utterly impossible to create a fighting army. And in the second place, he proposed to the chief of staff that a special council be created, of men experienced both in military and civil affairs, for the purpose of organizing the struggle against the Poles.

As regards the first point, he said:

It is necessary for our people to understand that the

former Government was not right in holding under its domination a part of the Polish people and enforcing its rule by violence for over a century. Free Russia did exactly what it should have done in striking the chains off the former subject peoples. But in liberating the Poles and giving them an opportunity to order their affairs in accordance with their own desires, Russia has a right to demand the same thing from them, and the Polish invasion of the lands which since time immemorial belong to the Christian Orthodox Russian people, must be repelled by force.

As for the idea of a council, Brusilov considered that it was necessary that this council should be put in charge of the matter of supplies, both of food and munitions, and should not interfere in anyway with the actual military operations.

The Soviet authorities not only published Brusilov's letter most prominently in the official organ of the Government, the *Izvestia*, but also immediately created a council of the kind suggested by Brusilov and asked him to become the chairman of it. Several other generals of the imperial régime were also invited to become members of this council; the most important among them being General Polivanov, formerly Minister of War under the imperial régime, General Klembovsky, General Parsky, and others. Later on, General Brusilov was

appointed commander of the Soviet troops operating on the western front against the Poles. The successful leader of the last great offensive during the world war, General Brusilov in the last few weeks fought again over some of the territory on which he had fought so successfully against the German-Austrian armies.

Brusilov's appeal to the officers was also published prominently in the *Izvestia* and was reprinted in the newspapers published for the Russian prisoners of war abroad. In this appeal, which was signed by several other generals beside Brusilov, the officers of the old Russian army were addressed as follows:

We appeal to you to recall again your love for your motherland and to serve her with body and soul. We appeal to you to forget all your sufferings, no matter by whom they were caused, and to enter into the ranks of the army, obeying all the orders of the Soviet Government, in order that we may, by our common effort, save our Russia from dismemberment and destruction. If we shall not do this, Russia will perish, and we shall bear the blame for it. The future generations will deem us responsible for the destruction of our motherland and will accuse us of causing misfortunes to our people, because we considered only egotistical motives and class interests.

The Soviet Government took particular pains to bring this appeal to the attention of the Russian officers who were kept in concentration camps as counter-revolutionists, and as a result of it, many officers entered the ranks of the Red army.

An appeal analogous to that of General Brusilov was also issued by Admiral E. A. Berens, addressed to the naval officers of the imperial régime. Admiral Berens is at present chief of naval staff, and commander-in-chief of the naval forces of Soviet Russia. Formerly, under the imperial régime, he held the post of naval attaché in Berlin, in Holland and in other countries.

But while it was important for the Soviet régime to enlist the services of the officers and thru their presence in the ranks of the army to instill a patriotic feeling among the troops, it was just as important and perhaps even more so to do away with the opposition of

Keystone View

When the Reds sent their famous propaganda boat down the Volga they backed the arguments for Bolshevism with the force of well armed troops

the intelligentsia and to enlist its support. As one of the methods for doing this, the *Izvestia* published very

prominently an article signed by Professor N. A. Gredeskul, a former member of the First Duma. The article was entitled "The Polish Advance and the Intelligentsia." In this article the professor attempted to answer the question as to what should be done now when all the internal fronts of the civil war have been liquidated, with success on the side of the Soviets, and when only the Polish front remains.

Professor Gredeskul considers that the victory on the Siberian and the South-Russian fronts signified the choice of the Russian people, and that it remains for the intelligentsia merely to recognize this fact that to "begin the realization of the great social change." Thus at the end of the civil war, it should have been the duty of the intelligentsia to give all its powers to the work of the

rehabilitation of Russia, but the possibilities of creative work in this direction were interrupted by Polish invasion.

Analyzing the causes of the invasion and the aims which the Poles pursue, Professor Gredeskul considers that the first object of the invasion is to crush Bolshevism and not permit the establishment of a "Socialist régime in Russia." But that is only one side of the question. A more important purpose which the Poles have in view in their military operations against Russia is to crush Russia. Professor Gredeskul warns the intelligentsia that if Poland should be victorious over Russia, she would crush and destroy her, and this work of destruction would be absolutely without any mercy, for Russia would be destroyed under the guise of Bolshevism. Russia would then be placed in the position of a barbarous country. She would be dealt with as "a madman fit for a strait-jacket."

Nor does Professor Gredeskul have any faith in the Entente powers, for he considers that the Allies pursue exactly the same aim as do the Poles, viz., the destruction and the despoliation of Russia.

And the conclusion that Professor Gredeskul drew from all this was as follows: [Continued on page 324

# Women as Citizens

By Anna Howard Shaw

A hitherto unpublished article written just before her death by the great leader of the woman suffrage movement in America

**T**HE two most important facts that the war indelibly impressed upon the consciousness of mankind are: first, the solidarity of the human race and the interdependence of nations; second, the realization that women are not apart from humanity but are a part of humanity—that there is no sex in suffering or in justice, in freedom or in government.

When the United States Government called upon American women to organize for war it was the first time in history that a great government recognized at the very beginning of a war the importance of the conservation of women's work in the conduct of war . . . Women realized the obligation and the duty to respond . . . It was the first time that it was generally recognized that the co-operation of both the man-power and the woman-power of a nation is absolutely necessary, in times of war and of peace, if all the interests of the nation are to be conserved . . . This necessity was manifest in keeping alive those agencies of government in the home and in the educational, social and spiritual life upon which the hope of the future is based.

The immediate response of women to the call . . . proved, if proof were needed, the efficiency, the loyalty and the patriotic devotion of women.

It aroused and strengthened in women a civic and political conscience that will forever pre-

vent them from failing to recognize the sacred obligations and duties of citizenship.

It showed the governments of the world that public concerns are not narrowed or controlled by sex but that these concerns are human and universal in their application, and that no class, no race, no sex, can justly be eliminated from participation in national life without a corresponding loss to the group and to the state.

**W**OMEN are not and never have been a group apart with their interests different from those of men. They are a part of the life of the nation. Their interests are identical with and bound up with national success. Therefore they will never permanently separate themselves from men in order to secure success in the field of industry, education, social or political life.

The war, dire tho its results in many directions were, taught the lesson of a new democracy not only in respect to the solidarity of the human race but in respect to the existing unity of human interests.

It made clear that the world would never be a safe place for democracy until it is established upon the sure foundation of equality, liberty and justice for all.

. . . And that is the kind of democracy that is dear to our hearts and for which women pledge their lives and their honor.

# Entering the Promised Land

A million women signed the petitions carried in this last march for woman suffrage in New York

## Four Interviews Concerning Suffrage

By  
Donald Wilhelm

**W**OMEN seem to have hung their rope ladders on the gates so long kept shut by their political lords and masters and climbed up the mossy old walls behind which for ages they have been condemned to water the vines and wait. And now it looks as tho they might draw their ladders up after them. For, as Governor Calvin Coolidge, the Republican candidate for Vice-President, admits, theirs is the power and the glory—and the responsibility, too. In other words, the Canaanites, the zealots of this changing day, have entered Canaan, and now perforce must cultivate it and make it flower supremely.

"But in national affairs, the touchstone of all affairs, how shall women do that best?" I asked no less a person than Franklin D. Roosevelt, the Democratic candidate for Vice-President, who for seven years has been Assistant Secretary of the Navy and is by common reputation one of the best informed men in Washington.

He enunciated his "message" to American women straightway:

"How shall women best express themselves in our national life?" Mr. Roosevelt repeated. "Well, read two papers, one representing each side. Read the platforms and the statements of the issues presented by the candidates. Get the national rather than the local point of view. Then make up your mind."

He went on to explain:

"My fundamental thought is that women voters have to face the same danger that men voters have to face, or an even greater danger—the danger of getting their information about public questions from one side and taking that information as the absolute truth. Please understand, too, that I am not suggesting that women should read a Democratic paper and Democratic statements only. I am asking them to read both Democratic and Republican papers and statements, then to make up their minds. If they do that, and get the national rather than the local point of view, they will improve the entire running of our Government 50 per cent in a very few years.

"The great majority of women voters have come into the franchise so recently that they are not bound by the party traditions or inherited tendencies that men are bound by. Man, the average voting man, is more or less influenced from the age of fourteen up by the politics of his father, with the result that most men voters instinctively have a more or less distinct party trend. On the other hand I do not subscribe to the talk about

women being emotional when they come to make up their minds. When it comes to making up their minds I can't believe women are any more emotional than men."

It was then suggested that the advent of the enormous woman electorate is much like the advent of a new state. "How then," the Secretary was asked, "shall women exactly express themselves in national affairs? With the ballot, merely?"

"Absolutely no," he replied, emphatically. "The most, and the least, and the best that women can do in and for the nation is for them exactly to express themselves not only with the ballot but also in the other ways that men express themselves. They ought by all means to seek public office, not for the office but for the service they can render the nation in office. I have no doubt on that score. In the various bureaus and boards that I have worked with the presence of women has without question improved the general tone of things and, I think, broadened efforts and made them more businesslike."

"And how else should women express themselves?"

"Well, in a broad way, both collectively and individually, as men do. Thru their organizations. Individually, too. I hope, however, they will not put much faith in perfunctory propaganda directed at legislators. To illustrate, I observed when I was in the New York State Senate that as soon as measures of any large importance came up propaganda for or against these measures would appear—printed postal cards, for instance, or telegrams, furnished by some organization or other and sent to constituents to be signed and forwarded. Soon I paid very little attention, and I think legislators generally do, to such perfunctory communications that express no individual point of view. But when I received a personal call from a constituent I found unusually that he had given the matter in hand no little thought, and I knew I could learn something from him. He came to educate me, and I wanted to learn. Again, when I received a long, hand-written communication expressed in an individual's terms, I knew it meant individual thought and I gave it ten times the attention I gave a form letter, card or telegram."

The Secretary of Agriculture, Edwin T. Meredith, whose views, it was felt, ought to be of especial interest to women on the farms, next pondered the leading question. At the outset he granted that when rather recently he took office he was disconcerted by

© Western Newspaper Union

Miss Anne Martin, candidate for United States Senator from Nevada, believes that "it is necessary for the welfare of the nation that women's viewpoint should be expressed in government"

sional politicians "interfered" by bargaining their influence for office.

"Men in politics," the Secretary replied, "usually belong to one of two groups. There is one great group who want their party to win because they want its policies applied for the good of the nation. There is another group who want their organization to win in order to secure patronage. I feel that women will not in the main belong, in the near future at least, to either of these groups, but that they will go into politics to get specific things done. It will be easier now for them to get things done, for when they express themselves to Congressmen and Senators, or State legislatures, those in office will know that half of their constituents are women. My thought is that women can and will accomplish a vast deal, largely from their own firesides, by education—by the creation of public opinion. It may be doubted if any great and enduring change in any nation's life was ever achieved except by change of public opinion. In general, I think women instinctively will accomplish most by devoting themselves to causes—to the improvement of the tone of politics, abolition of child

the traditional disharmony between Congress and the executive departments, which, he agreed, is disturbing when Congress and the President are of the same political faith and all but disastrous to satisfactory governmental service when they are of different political faiths. He added that he believed women are too practical and direct long to endure such quibbling and cross-purpose. "Women," he smiled, "are quite too accustomed to bringing home in their market baskets what they go shopping for."

He added: "I feel that women are going to want and to demand better service on the part of the Government—better laws, more efficient management of public affairs, also the elimination of political interference and patronage."

It was suggested that the hundreds of women who attended the political conventions saw very clearly how, in both the major parties, profes-

labor, better health, better education and citizenship—causes such as these."

Causes, yes! Causes rather than presidential candidates, in this election surely, many leaders say. "But what kind of causes?" I asked a progressive United States Senator who has fretted the Republican old guard greatly by his liberalism.

"You want to know, for your own information," he replied, "what causes women can champion with best results to our national life?"

"Exactly."

"I'll tell you in a minute. They ought to take up the whole question of popular government. They ought to learn, they ought to establish schools in which to teach, the principles of popular government and the processes by which the people can control the politicians. Some of these principles are the initiative, the referendum, the mandatory primary, the preferential ballot and the short ballot, the use of the publicity pamphlet, the use of corrupt practices acts. It will never be possible to have a Government that is as good as honest people

© Keystone View

Mayor Miller (center) and the four councilwomen round her defeated an all-man ticket for the city government of Jackson, Wyoming, this year. Two husbands ran for office in opposition to their wives, but were beaten. Jackson used to be a pretty fair sample of the "bad town" of the wild and woolly West, but even the men are strong in their approval of its petticoat government now

desire until principles and processes such as these are in effect."

But the writer doubts, so far as women are concerned, and apparently most of the experienced leaders of women also doubt, if now, when women have barely come of age politically, they could be rallied in support of causes as fundamental, and as abstract, as these that the Senator suggests. "For at this juncture," Miss Anne Martin, the first woman candidate for the United States Senate and now a second time candidate, told me, "women must not, of all times, risk the ground they have already gained."

"They must play safe?"

"Yes."

Then shall women express themselves by their sweet, clinging-vine appeals to gallantry?

That would be to build the future of women on the most insecure foundation in the world. "In the South especially," one Southern woman, a national committee-woman in the Democratic party, said in an interview—"that is a great danger, a far greater dan- [Continued on page 316]

The Dennison factory at Framingham, Massachusetts, gives its employees the profits their own industry and imagination create

# Where the Workers Own the Stock

By Professor John R. Commons of the University of Wisconsin

In collaboration with A. P. Haake, O. F. Carpenter, Malcolm Sharp, Jennie McMullin Turner, Ethel B. Dietrich, Jean Davis, John A. Commons

**D**ENNISON for the Dennisons! Not the Dennison Family, but the Dennison Workers. Every stockholder, every director, every officer of the Dennison Manufacturing Company, Framingham, Mass., is an actual, active employee of the company. There are other stockholders—preferred stockholders—but they have no voting power.

Seventy-five years ago the great-grandfather of the Dennison family began to make paper boxes in his kitchen. A knife, a scissors, a pot of paste, a slab of wood, were his factory.

His jewelry boxes were in great demand. He added other paper products. Today the company manufactures 10,000 separate articles, sends its products to all parts of the country and many parts of the world, sells millions of tags and baggage checks to large railway companies, millions of Christmas cards to small retailers.

A splendid organization, several valuable patents, a few monopolies, big dividends, the period of risk and development has passed and the company is as safe as any industrial investment may be.

But prosperity brought its perils. There were certain stockholders who saw the Dennison industry merely as a means to an end, the end being profits and then some more profits, with the absentee owners in the saddle in unchallenged enjoyment of money and power.

The president of the company, himself a Dennison, saw another vision. He saw the Dennison equipment and the Dennison workers as something more than engines for turning out more profits. He saw them also as instruments for manufacturing paper boxes and tags, and paper napkins and 10,000 like articles, and sell them to railroads and people who use them up in making the world richer. He determined that while he had control he would fix it up so that those who looked at the industry in his own broad-minded fashion should always keep control. And that is how there came to be government by imagination.

Who is it that creates the profits of the Dennison Manufacturing Company? It certainly is not the absentee stockholders. The original Dennison evidently had a creative imag-

ination. His imagination was used in making boxes that nobody ever thought of before, and creating markets that nobody ever imagined could be created.

Who, then, are the real descendants of the original Dennison? Shall we say they are the workers? The original Dennison was a worker. But it was not his work that built up this magnificent business—this going concern that lives on fifty years after he died. It was his creative imagination. He *hired* the workers and they did what he told them to do, after his imagination had told *him* what to do and how to do it.

The real descendants of the original Dennison are those of the 3000 workers who work primarily with creative imagination. It is by imagination that the Dennison Company has developed 10,000 separate articles, and it will be imagination that will make and sell the innumerable new articles and the better old ones that it must make and sell if the concern is to keep going another seventy-five years.

If not all of these three thousand work with imagination how shall we discover those who do? Shall we appoint a committee and give it power to pick and choose? No, that will leave too much room for favoritism. Favoritism will discourage imagination.

An automatic method of choosing was first sought by means of the pay envelope and the length of service record. Men who stick and rise would seem to have imagination. So \$1,200 a year and seven years' service were hit upon as the boundary line where imagination crosses over. Then came the war and the unstable dollar, and a change seemed desirable. Of the change finally adopted, a company booklet says:

Eventually the tremendous changes in the value of the dollar, and more especially the irregular application of these changes among various classes of employees, entirely destroyed the salary line as a true dividing line between those of the employees whose effects upon profits were important and appreciable and those whose effects upon our net profits account were remote and heavily

conditioned by the policies of the management. Principal employees are now limited to those who have had five years or more of service and whose position with the com- [Continued on page 313]

# Training the Elephant

By Talcott Williams

I LEARNED, at a time when I was seeing more or less of the elephants in Barnum & Bailey's circus, that it was a hard job to teach an elephant, with four legs, to stand on a rolling ball. The ball was small and rolly. The elephant was large and timid, with a timidity born of a conservative temperament and large passions. The mahout had a good deal to learn himself, particularly if he was a new trainer.

Senator Harding is having a similar job with his elephant. A League of Nations is right and inevitable. The only difficulty is to get it. It is an agreeable and praiseworthy assumption of advocates of the League that an overwhelming majority of the country is for the Versailles League, but is prevented by a few Republican politicians, twenty or so in number, from putting it over.

This is desirable, but not true. So was the claim in October, 1918, by amiable enthusiasts that Wilson had a majority with him in the then approaching election. Instead, the President lost both the Senate and House. A majority of all the voters is for the League; but the opposition to it is strong, widespread and grew all last year, after the terms of the Covenant were known. The present election gives the first straight out fight on the principle that there ought to be common action by the great nations to prevent war, to enforce international justice and to govern the world.

This issue has been settled by Senator Harding in eight weeks after this Presidential campaign opened. The elephant has all four feet on the rolling ball of a League, even if the League to which all the European powers belong, but Russia and the German states, has proved a rather unstable and uncertain foundation in the past year. Both the parties which divide the rule of the republic are now in favor of organized relations between the great powers whose working and whose decisions the United States will support by its influence and policy and "put teeth in it," which can only mean by force of arms. The issue of the campaign is therefore no longer "League or No League." This country is not to stand alone. It is to bear its share of the world's responsibilities.

THE issue of the campaign is how this duty shall be discharged, by an organization which pivots on a Council, with an international court as subsidiary, or by one that pivots on a court, with a council which upholds the action of the court "upon justiciable questions." This last is a very important and very weakening limitation of Senator Harding, but as the United States in twenty-six treaties has accepted arbitration and judicial action on issues not justiciable and the new Hague court, as now organized, will decide its own jurisdiction, time will lessen this objection. Every lawyer will agree with me that when it comes to jurisdiction every court grabs all the power that it can get.

Senator Harding would have been more accurate and more effective if he had pointed out that the Council under the Versailles Covenant has failed because its decisions have to be unanimous or ineffective. Lloyd George frankly declared a month ago that the reason why the League Council had not acted on the collision between Poland and Russia was because the Council was not unanimous. The strongest plea for Article X of the Covenant was that the United States could not be advised to act unless it consented to be advised, because the decisions of the Council have to be unanimous. As the President decides the action of the United States on the Council, he can practically decide when the United States shall, under

Article X, be under a moral obligation to defend the boundaries of another country by its army, a very wide addition to the powers of an American President.

A unanimous executive body will always come to deadlock as the Council has over Poland, France wanting war against Russia and England opposing. The Assembly has also to act unanimously or not at all except in certain specified cases. At Versailles, no big power was willing to accept a majority decision in Council or Assembly, save in very limited instance in the latter. At the close of the war we all had the hallucination that the "allied and associated powers" would act together. They have not. They have split. They always will. I doubt if there was a single advocate of the Covenant, versed in history and political science, who did not hope for future amendment introducing the majority or two-thirds rule in the Council. No one can wish this in the Assembly. The small states will combine against the big. Nations are not equal.

The great powers must rule the world or it will not be ruled at all. How shall this rule be exercised? By an international court, whose decisions the powers will "uphold and enforce" or by a Council of the great powers, only able to act when unanimous?

This is a straight out issue on which every voter must make up his mind before next November. Most lawyers will incline to a court. Not all. Wilson is a lawyer. He never got a practice. He is southern by birth. The South, and southern and Democratic Presidents have generally exalted executive power. The North and northern and Republican Presidents have not, in general, pushed forward the President's powers. There are exceptions on both sides, as witness John Marshall and Theodore Roosevelt.

For everyday use, the lesser bodies of the League are of more constant, continuous value than Council and Assembly. The Labor Conference, the Colonial Conference, the Marine Conference, the Military Commission and the assemblage in one place of a large number of existing international bodies are products of the Versailles Covenant of great value. Their destruction would be a world loss. Senator Harding proposes to combine what is good and excise what is evil from both organizations—the Hague tribunal and the League. He does not say what in each he will keep alive and what shall die the death. The education of the elephant is not complete. Possibly, the mahout has something to learn. He will have to define himself farther in the two months to come; but he has gone far enough to save the Republican party from opposition to any stable agreement for mutual international action to establish a new order of justice, peace and good will among men.

The flagrant disregard of human rights by Franklin D. Roosevelt in his utterance in regard to Hayti and Santo Domingo has led Senator Harding to an assertion as extreme, running counter to the policy of the Republican party from Grant to Taft. The United States ought to pursue the same policy of preparation for self-government in these islands as in the Philippines, but southern injustice to the negro, a daily wrong which Democratic success tends to foster and protect, throws Republican party utterance and organization off from a wise policy of development. England's acceptance in Egypt of our policy in Cuba shows how wise was the leadership of McKinley in our colonial affairs. Class appeal which warps Senator Harding's utterance on Hayti has no place in American political action, as Governor Cox and the American Federation of Labor will learn in the attempt of the latter to appeal to Americans to vote in the alleged interest of an

"organized" part of American citizenship. On this issue the Republican party is right and the Democratic party is wrong.

## Reading for Senator Harding

By Norman Hapgood

WHAT does Senator Harding select when he reads for pleasure? The answer would be of extraordinary interest. I am actually thinking less of the Senator as an individual than of the standpat mind in general. It would be a psychological adventure to get inside of the kind of brain that believes in 1920 that we can go successfully "back" to something. It was some time ago that Dooley took up the subject of "Arnachists." As usual with that philosopher he landed successfully on the central principle. The contemplative saloonkeeper was talking before the war, and analyzing the troubles that are now so much more obvious. As was his custom he found a homely illustration in his own experience. A certain family had unaccountably begun to quarrel, everybody blaming everybody else. The priest was called in. Being a wise man he got at the source. "'Ye'r sowls ar-re all r-right,' he says, 'fetch in a plumber,' he says." What public unrest calls for is also a plumber. "'Tis no good prayin' again arnychists, Hinnissy. Arnychists is sewer gas."

One of the reasons that I am pleased to think of the Governor of Ohio as our next President is that he has shown a realization that you do not cure social diseases by scolding, but only by getting at the cause and removing it. Politically he is a plumber, whereas Harding, Penrose, Lodge and their group in the oligarchy remind one of those medicine men among the Indians who used to get rid of tribal troubles by incantations. Probably the minds of these remnants of obsolete conditions are too rigid ever to have any realization of what the world's task in the future is to be. They will die in the effort to go "back." However, if it were possible to make one of them read carefully an up to date book it would be most entertaining to watch the impression. Take, for example, the latest expert presentation of modern conditions that has come my way. John Graham Brooks has been studying capital and labor for something like forty years. He has studied its manifold phases, and much of his work has been as an investigator on the spot, often as a Government investigator. His new book, "Labor's Challenge to the Social Order," is a storehouse of information and sound conclusions, that will be of great value to any reader except an ostrich. I wish all the standpat readers of The Independent (if there are such) would read this book thru carefully, and then write me why they are going to vote for Harding. A reactionary reader can begin at the beginning, or on almost any page, and he will find something to worry him. For example, he might begin on page 80. Perhaps if the reader is Senator Harding he knows already of the profits of nine steel corporations running from 78.92 per cent to 109.05 per cent; New Jersey zinc, 95.9; a sulphur company, 236 per cent. In food in 1916 the profits were in many cases over 100 per cent, and higher in 1917. Some of the most incredible profit is in munitions, which will be of special interest to Senator Harding, as I understand that among the many cares with which his herculean brow is wrinkled a high place belongs to the need of preserving armament and munitions for private enterprize. The coal profiteering will interest the women voters. A labor paper points out raises of 200 to 300 per cent on rooms and tenements and adds that it is from the owners of some of these houses that we hear "most blame for the workers because they ask for higher wages." Of course Senator Harding knows all these facts, but Mr. Brooks's book will help him to fit them into the history of our time and into the prospects of the future. Also the book might help him understand why the report

of the American Federation of Labor was so favorable to the statesmanship of Governor Cox. Conceivably it might even help him to understand what things were in the Governor's mind when he exposed the size and nature of the Republican "Boys, get the money" campaign fund, and what deeper meanings lie in Mr. McAdoo's christening of Chairman Hays and Treasurer Upham as the Gold Dust Twins.

## Campaign Predictions

IF you were a candidate for office you would realize how sincere is the confidence which candidates and their campaign managers express in the certainty of victory. The onlooker hears both sides and does not wake up every morning to shovel off the doorstep a small mountain of congratulatory letters and telegrams or spend the day addressing cheering crowds of supporters. If Mr. Cox and Mr. Harding really wish to find the pulse of the nation they should disguise themselves at least three times a week as each other and so visit the camp of the enemy.

Too much looking on one side will result in such a canvass as once took place in Kansas. The would-be Congressman buttonholed a farmer and asked for his support. "Vote for you?" shouted the farmer; "I wouldn't vote for you for dog catcher! I wouldn't vote for you if you were the last man on earth!" The politician sighed and took out his poll book. "I'm afraid I will have to put you down as 'doubtful,'" he said.

## Democracy Must Not Be Vindictive

By John Spargo

EUGENE V. Debs has never shown himself to better advantage, or in a more lovable spirit, than by his letter to the secretary of the Central Labor Bodies' Conference of New York, which has been trying to secure his release from Atlanta penitentiary. The presidential candidate of the Socialist Party says in the letter referred to: "I wish no special consideration and I wish to fare no better than my comrades. As long as they are held criminals and convicts my place is here. My comrades will therefore understand that they can serve me best by bringing their influence to bear in behalf of all."

The generous spirit which breathes thru these simple, forthright and courageous words will command the respect and admiration of every American whose loyalty springs from an intelligent attachment to the best ideals and traditions of democracy in general and American democracy in especial. Any attempt to maintain such a man in the criminal category is bound to defeat itself, to remove the stigma from crime, and to bring contempt upon the whole system of criminal law and its administration.

Whatever excuse or justification there was for treating Debs as a dangerous criminal during the war, passed with the cessation of hostilities. Personally, I have never believed that there was any shadow of justification for the exceptionally heavy prison sentences imposed upon Debs and other offenders against the special laws relating to sedition and espionage enacted under the extraordinary conditions of war. Differing fundamentally from Mr. Debs and his comrades upon the issues raised by the war, and freely admitting that the nation's right to self-defense justified stern and harsh measures of repression against all who sought to weaken the national morale, or to defeat the effort to carry the war to a successful issue, I cannot permit myself to condone, or remain silent concerning, the brutal and czaristic spirit which those in authority have manifested since the cessation of hostilities.

The dangerous and severe illness which so long incapacitated President Wilson, and which still limits alike his powers and the opportunities of citizens to reach him personally, is the only valid reason for moderating one's criti-

cism of his failure to act toward the offenders against the extraordinary wartime laws in a manner befitting this great democratic nation. At the same time, somewhere direct responsibility for that failure lies. It must be charged to the administration. Some person or persons in authority must be held responsible for permitting an ugly and indelible stain to besmirch the record of Mr. Wilson, the idealist, and, what is more important, the record of this greatest of English-speaking nations.

It is a matter for the deepest humiliation and shame for the American citizen to remember that even the most despotic and autocratic of governments have always granted pardon and amnesty to all such "criminals" as Mr. Debs after every war. I do not recall an instance to the contrary of this. Certainly the hated and despised Wilhelm II of Germany and Nicholas II of Russia never thought of keeping in prison men and women whose sole offense was the expression of anti-war views, no matter how dangerous these might have been regarded during war. Does anybody believe that a democratic nation ought to be less generous? Does anybody for a moment believe that Lincoln, for example, would have permitted himself to be excelled in generosity by the Butcher of Potsdam or the weak and cruel Czar Nicholas II?

Not for one moment do I believe either of these propositions. Neither do I believe that President Wilson would be less generous than Lincoln. It is unthinkable that he can be aware of the great wrongs perpetrated by the Department of Justice in the name of the Government of the United States; and it is equally unthinkable that he would justify—or willingly permit—the continued punishment of men and women whose sole offense was the honest and open expression of anti-war views, however mistaken those views may have been. Surely, Woodrow Wilson, who gave such matchless expression to the great spiritual aspirations and ideals of democracy—aspirations and ideals, be it noted, which alone justified our assuming the yoke and sacrifice of war—must understand how far most of these men and women were and are from being criminals. If by "patriotism" we mean a sincere and profound love of country, then I make bold to say that not a few of the men and women who now languish in prison, victims of a vindictiveness wholly alien to the democratic spirit, were and are as patriotic as President Wilson himself, or as any of the brave men who fell upon the battlefields of France.

I have been called a "patriotic Socialist" and given much—too much—credit therefor. But in truth my motives in supporting the war were no more "patriotic," in the true sense of that term, than were those of many other Socialists in opposing the war. I believed that our victorious participation in the war would be helpful to America and to mankind, and in supporting the war I sought to help America and mankind. I have not the slightest doubt that, with equal honesty, Mr. Debs, for example, opposed the war because he believed that by so doing he was helping onward the best interests of America and mankind.

Is it too much to expect from a nation which professes to be based upon democratic principles and guided by democratic ideals some recognition of the great spiritual and moral overstrain to which the exigencies of war subjected millions of men and women, including some of the noblest and best? Is it too much to expect that such a nation will draw a clear line between the two classes of offenders—those who, on the one hand, served the enemy, either by conveying to it military information, or by committing crimes against life and property in its interest, and those, on the other hand, who simply agitated against the war, or openly declined to aid in securing victory, because they could not make the mental and spiritual adjustments which their fellows found possible?

For the first of these two classes, which I believe to be so small as to be quite negligible, there need be very little

concern. For the second class, which is far from being negligible, there should be understanding and mercy and forgiveness. In their case mercy is no more than justice.

Every day Mr. Debs and others like him remain imprisoned the shame of America and the degradation of her best traditions are increased. If President Wilson has an intelligent friend near him in these times, that friend ought to tell him frankly that those who have most trusted and cherished his inspiration and leadership during the war are most hurt and ashamed to see him fail in loyalty to democracy here.

## Choosing Our Rulers

By Preston Slosson

**A**N American citizen met a Russian Bolshevik. "How can you call yourself a democracy," said the American, "when only a small part of your people enjoy the franchise and even they can only vote for local soviets, which in turn elect provincial soviets, and so on until you reach the All-Russian soviet which chooses the Commissars? In our country we vote directly for Congress and practically directly (since the electoral college is only a form) for President."

"Very true," said the Bolshevik. "You vote directly for your rulers, city, state and national. But can you vote for just anyone?"

"We-ell, in theory. Of course no one has a real chance of election unless he is nominated by one of the two great political parties."

"So your election is really in two stages. The second stage is democratic; you vote for whom you choose of those nominated. Is the first stage equally democratic; do you nominate directly?"

"No, I can hardly say that," confessed the American. "Party members choose delegates at caucuses or primaries and these meet in state conventions to nominate state candidates. Then there is the national convention on top of all which nominates for President and Vice-President."

"So you have indirect elections in several stages, too, just like us Russians. The only difference is that you have indirect election for nominations and then direct election as the final step."

"But recently," said the American, "we have been putting in direct primaries in place of the caucuses and local conventions."

"That ought to simplify matters," said the Bolshevik. "Does it?"

"I am bound to confess that it doesn't. You see the politicians get together just the same and make 'selections' or 'recommendations' or 'designations' for the various offices and these names get printed on the direct primary ballots along with the independent candidates nominated by petition. So while the direct primary acts as a check on the party politicians it adds still another stage to the business of nominating. The matter is very complex and puzzling and the laws don't seem to be the same in any two states. To tell you the truth the average voter doesn't know how the name of a candidate for the state legislature or the judicial bench gets on the ballot until it suddenly appears before his eyes on election day."

"So your democracy seems to be like the free choice granted at a cheap restaurant," smiled the Bolshevik. "You can ask for whatever you want but there is nothing but ham and beef in the house. The politicians, taking advantage of your cumbrous nominating machinery, get up two slates of candidates and then let you choose."

"Well, what remedy would you suggest?"

"It is hardly my business to suggest a remedy," replied the Bolshevik, "your political methods seem so much like ours that it is flattering. My own suggestion would be

# The New Regime at Ellis Island

*International*

From Ellis Island one can see the radiant statue of Liberty and the skyscrapers of New York piled like a dream city against the horizon. But more than the dream of a "sweet land of liberty" is needed to make the immigrant into a good American

*(C) Keystone View*

The new Commissioner of Immigration (right) has announced his intention of making the work at Ellis Island constitute a real contribution toward the Americanization of our immigrants. By showing them the best brand of United States courtesy and recognizing their need for individual consideration Commissioner Wallace hopes to make the incoming "foreigners" feel an interest and responsibility in America at the very start

*(C) Keystone View*

There was a time when immigrants got pretty much the same treatment as cattle, herded along from one inspection to another, kept standing in line for hours or waiting all day long in crowded, badly ventilated rooms—which isn't at all the best way to get a first impression. But the future citizens in these photographs, detained at Ellis Island over a Sunday, are developing their new patriotism in advance under the stimulus of a popular concert out-of-doors. Five thousand immigrants a day is the average of arrivals at Ellis Island now, material of enormous possibilities or dangers, according to the way in which Americanization is carried out

that you carry your admirable two-party system one step farther and have our Russian one-party system. Instead of offering the voter a choice between a Republican and a Democrat, both picked by the politicians and perhaps very much alike, we offer the voter a choice between a Bolshevik and another Bolshevik, exactly alike. Of course, if you were in earnest about democracy I imagine you would smash both the caucus and the primary and work out some third system of nomination.

"You might have all enrolled members of the party the country over choose their nominees by a simultaneous post-card canvass in which each party member could write in any name he chose in a blank space provided for the purpose. Thus on the same day the people would pick directly the men they wanted to vote for in nation, state, county and city without any intervention of caucus, convention or other machinery. Or, again, you could permit party conventions to meet as they chose but allow no names to go on the ballot used on election day except by popular petition of a certain number of voters. Or you could use a blank ballot on election day and require voters to write in such names as they wished to vote for."

"I see," said the voter, "but there are two difficulties. In the first place, if people could vote for anyone they wished instead of picking out one of two selected candidates, votes would be too much scattered. Congressman Jones might be very unpopular with the majority of voters and yet he would be reelected by a plurality vote if he could get his adversaries to scatter their strength among Messrs. Smith, Robinson, White, Isaacs, Murphy and Hendricks instead of concentrating on Smith."

"There are methods widely used in the bourgeois democracies of Europe," said the Bolshevik, "aimed to prevent just that danger. You must have heard of the second ballot, the transferable vote, proportional representation, and devices like that, tho they have been little used in your own country. If Jones gets a bare plurality you could either hold a second election between him and his highest rival or combine the two elections in one by allowing voters to indicate their second choice on the original ballot."

"My other objection," continued the voter, "is this. Such methods of direct popular nomination or election could be applied to prominent offices that the people knew all about, like President or Governor or Mayor or Congressman. But how is the average voter to pick out the minor offices on our long ballots—all the judges and comptrollers and state engineers and coroners and so on. Perhaps you don't realize that, counting national, state, city and county offices altogether the American voter must often choose among hundreds of names for scores of offices."

"And your democracy is so sensitive," scornfully said the Russian, "that rather than adopt the short ballot and vote for a few men, and those responsible, you permit the politicians to keep alive their caucuses and conventions and primaries for the nominating to scores of offices of whose qualifications the voter knows nothing. Rather than let the Governor pick a judge by appointment, you let a boss pick him by nomination. That is because you value the name of democracy above the fact. You Americans aim at democracy but you never take the trouble to study the machinery thru which it works. It is such folly which cheats you out of self-government and thus helps our propaganda in your country. If you gave half the care to devising methods for the majority to rule that we Bolsheviks have given to methods enabling the minority to rule you might with more reason call yourselves a democracy."

## New Sources of Paper

IF "the art preservative of the arts" is not to perish from the earth and the world relapse into the dark ages before Gutenberg some new supply of cellulose must be discovered. Norway, from which England gets her paper

pulp, and Canada, from which we get ours, are being denuded of their spruce and pine. Trees, once they are destroyed, cannot be grown in a northern clime fast enough to feed the press. So it is evident that we must look to the tropics for our future supply. Various candidates for the succession to the vanishing dynasty of the conifers have been nominated. Most conspicuous because the biggest is the baobab tree of Africa, whose bloated trunk, sometimes thirty feet thru, has never been found useful for it is too wet for fuel and too soft for lumber. But it may be just the thing for paper pulp.

Professor Dunstan, Director of the Imperial Institute, London, tells us that bamboo is the best yet. The Chinese have long used it for paper as well as for almost everything else they need. A bamboo shoot grows to its full height in a single season and will yield half its bulk in pulp. An acre of ground in the West Indies will grow forty tons of bamboo a year.

Sir Harry Johnston proposes to utilize the elephant grass and reeds that surround African lakes. Esparto grass is a proved possibility. Banana stalk can also be made into paper. The material wanted, cellulose fiber, is the substance of all plant life and it is merely a question of where it can be obtained most abundantly and worked up most cheaply.

## Wanted: A Pullmaneria

OUT of the West, where the pristine American spirit of independence still survives, have come the cafeteria, the groceria, the shaveria, the shineria and other self-help schemes. But the idea can be carried farther and should be brought to bear upon that earliest and most persistent stronghold of the tipping evil, the sleeping car. Why could not the Pullman be provided with the magic beds of the bungalow that come out of the wall ready made at the pressing of a button? Then with an automat installed in the dining car a man could travel without degrading himself by insulting his fellow citizens.

Worse than that the traveler has been insulting his Government by proffering bribes to its subordinate officials. He doubtless does not realize that the dusky palm which has of late been held open to him for the customary coin was that of Uncle Sam. Uncle Sam's tip during the twenty-six months that he ran the railroads was more than \$15,000,000. So it is figured out by the *Commercial Bribery and Tipping Review* of Washington—a new journal whose name belies its laudable purpose; it should be called the *Anti-Tipping Review*. When the Government took over the roads the Pullman Company employed about 7600 porters and maids, or rather partly employed them, forcing them to get the major part of their honest earnings by dishonest graft. They received on the average \$46 a month apiece, but got in tips from \$44 to \$200 extra, the amount dependent not upon their extra duties but upon the wealth and caprice of their passengers. In May, 1919, the Director General of Railroads raised the wages of the sleeping and parlor car employees, then numbering 12,000, by \$25 a month. But probably, at the prevailing rate of wages, the Government would have had to pay them \$120 a month instead of \$71 if it had abolished tipping, and counting in the hungry hands of the 10,000 dining car employees the Government must have been helped out to the extent of some \$20,000,000 by the enforced gratuities of the traveling man. Perhaps he found it pleasanter to contribute to the expenses of the administration in this way rather than by income or luxury tax, for it gives one a false feeling of generosity and an unwarranted sense of superiority to bestow a tip. But it is not a nice thing to think about that some 20,000 public servants are reduced to beggary to secure from half to four-fifths of their wages. In Newark 500 barbers are on strike for the abolition of the tipping system. No strike is more deserving of public support.

# The Story of the Week

## Harding on the League

THE long awaited declaration of Senator Harding's policy in regard to the League of Nations was delivered from his front porch at Marion on August 28 to an Indiana delegation. He began by rejoicing that the Treaty had not been ratified for if it had been America would now be called upon to bear the brunt of the Bolshevik attack on Poland. Congress would be in honor bound to provide munitions and men to defend the territorial integrity of Poland "against external aggression," as provided in Article X of the Covenant. Senator Harding voted to accept the League Covenant with reservations "most reluctantly and with grave misgivings."

But the conditions have changed. Experience has brought enlightenment. We know now that the League constituted at Versailles is utterly impotent as a preventive of wars. It is so obviously impotent that it has not even been tried. It could not survive a single test. The original League, mistakenly conceived and unreasonably insisted upon, has undoubtedly passed beyond the possibility of restoration. The maturer judgment of the world will be that it deserved to pass for the very simple reason that, contrary to all of the tendencies developed by the civilizing processes of the world, it rested upon the power of might, not right.

Passing from the critical to the constructive the Republican presidential candidate forecast his own policy as follows:

There are distinctly two types of international relationship. One is an offensive and defensive alliance of great powers, like that created at Versailles, to impose their will upon the helpless peoples of the world. Frankly, I am opposed to such a scheme as that, and I speak knowingly when I say that the associated powers, with whom we fought the war, were reluctant to accept such a proposition.

I am opposed to the very thought of our Republic becoming a party to so great an outrage upon other peoples, who have as good a right to seek their political freedom as we had in 1776 and have the same right to developing eminence under the inspiration of nationality as we held for ourselves.

The other type is a society of free nations, or an association of free nations, or a league of free nations, animated by con-

siderations of right and justice, instead of might and self-interest, and not merely proclaimed an agency in pursuit of peace, but so organized and so participated in as to make the actual attainment of peace a reasonable possibility. Such an association I favor with all my heart, and I would make no fine distinction as to whom credit is due. One need not care what it is called. Let it be an association, a society, or a league, or what not. Our concern is solely with the substance, not the form thereof.

This is proposing no new thing. This country is already a member of such a society—the Hague tribunal, which, unlike the League of Versailles, is still functioning, and within a few weeks will resume its committee sessions under the chairmanship of an American representative.

In that body we have the framework of a really effective instrumentality of enduring peace. The fact that the tribunal did not prevent the great war is, of course, manifest, but the cause of the failure is no less apparent. Germany, already secretly determined upon a ruthless invasion, was able to prevent the adoption of measures which might have proved effectual.

The condition now is wholly different. Not only Germany, but the entire world, has profited to the extent of an awful object lesson, the impressions of which cannot be erased from the human mind for generations to come. The horrors of war and the eagerness for peace have become universal. What once seemed at the Hague to be a mere academic discussion has become a positive, outstanding need of facing terrifying actualities. This makes vastly easier the task of so strengthening the Hague tribunal as to render its just decrees either acceptable or enforceable. It is not uncommon for the advocates of the League of Versailles to contrast unfavorably the Hague tribunal upon the ground that the tribunal "lacks teeth."

Very well, then, let's put teeth into it. If, in the failed League of Versailles there can be found machinery which the tribunal can use properly and advantageously, by all means let it be appropriated. I would even go further. I would take and combine all that is good and excise all that is bad from both organizations. This statement is broad enough to include the suggestion that if the League, which has heretofore riveted our considerations and apprehensions, has been so entwined and interwoven into the peace of Europe, that its good must be preserved in order to stabilize the peace of that continent, then it can be amended or revised so that we may still have a remnant of world aspirations in 1918 build into the world's highest conception of helpful coöperation in the ultimate realization.

I believe humanity would welcome the creation of an international association for conference and a world court with verdicts upon justiciable questions this country in common with

Stinson in Dayton Daily News

PULLING AGAINST THE TIDE

TOO BIG TO HIDE OR CAMOUFLAGE

IN DESPERATION

These three cartoons from Governor Cox's own newspaper illustrate the trend that his campaign against Senator Harding is taking. But as yet his charges have been in the nature of bird shot rather than bullets

all nations would be both willing and able to uphold. The decision of such a court or the recommendations of such a conference could be accepted without sacrificing on our part or asking any other power to sacrifice one iota of its nationality.

Senator Harding quoted with approval the suggestion of Viscount Grey, former British ambassador to Washington, that "the Americans should be entrusted with the task of drafting a reconstruction scheme," for the League "which would be consonant with the feeling not of one but of all parties in America." This, Senator Harding said, "comprehends substantially what I propose to do if elected President." It would not involve reconvening the entire convention or require any material delay. Mr. Harding would as President urge prompt passage of the resolution "declaring at an end the technical war when we are actually at peace." He has "no expectation whatever of finding it necessary or advisable to negotiate a separate peace with Germany."

## Root's World Court

THE new feature injected into the campaign is the adoption by Senator Harding of the idea of a World Court as a basis for international coöperation. In this policy the Republican candidate is following the lead of ex-Secretary of State Root, who wrote the League of Nations plank for the Republican platform and who has just returned from Europe where he has participated in planning the judicial machinery of the League of Nations.

The Advisory Commission of Jurists was selected by the Council of the League of Nations to plan the organization of the judicial body of the League. The scope of the Court's powers of interpretation and arbitration are defined in Article XIII of the Covenant, which article was drawn up by Mr. Root in consultation with Viscount Bryce. The Advisory Committee was composed of eminent authorities in international law from various countries chosen without regard to nationality. The Commission held its sessions at The Hague in June and July and reported its plan to the Council of the League of Nations meeting at San Sebastian.

According to the report of the Commission the Permanent Court of International Justice is to be "composed of a body of independent judges, elected regardless of their

nationality, from among persons of high moral character, who possess the qualifications required, in their respective countries, for appointment to the highest judicial offices, or are jurisconsults of recognized ability in international law."

By abandoning altogether the idea of national representatives the new plan dodges one of the main difficulties of the old Hague Court. The big powers were never willing to submit themselves to the ruling of a majority composed of minor nationalities and on the other hand the small nations insisted upon equal representation as a matter of right and dignity. The members of the Court are to be elected by the Assembly and Council of the League from a list composed of nominations made by national groups in consultation with their highest courts of justice, schools of law and national law organizations. The candidates will be nominated without regard to their nationality, but no two of the same nationality may sit in the Court. It is stipulated "also that the whole body should represent the main forms of civilization and the principal legal systems of the world." The Court will consist of eleven judges and four deputy judges elected for nine years. No member of the Court can be dismissed "unless in the unanimous opinion of the other members he has ceased to fulfil the required conditions."

The Court will meet regularly every year at The Hague. The official language is French. The judges of the nationality of each contesting party shall retain their rights to sit in the case before the Court. If in any particular case the bench contains a judge of the nationality of one of the parties only, the other party may select a judge of its nationality to be added to the bench.

The scope of the Court is defined in the following articles:

*Article 33*—When a dispute having arisen between states, it has been found impossible to settle it by diplomatic means, and no agreement has been made to choose another jurisdiction, the party claiming to have been wronged may bring the case before the Court. The Court shall, first of all, decide whether the preceding conditions have been complied with; if so, it shall deliver judgment according to the terms and within the limits of the Article which follows.

*Article 34*—In the absence of any special convention, the Court shall be competent to hear and determine cases of a legal nature, between states which are members of the League of Nations, concerning:

- (a) The interpretation of a Treaty.
  - (b) Any question of international law
  - (c) The existence of any fact which, if established, would constitute a breach of an international obligation.
  - (d) The nature or extent of reparation to be made for the breach of an international obligation.
  - (e) The interpretation of a sentence passed by the Court.
- The Court shall also take cognizance of all disputes of any kind which are submitted to its jurisdiction by a general or special convention between the parties.

In the event of a dispute as to whether a certain case comes within the categories defined above, the Court shall decide.

The Court is also authorized to "give an advisory opinion upon any question or dispute of an international nature referred to it by the Council or Assembly."

The Court hearings shall be public unless otherwise decided by the Court at the reasonable request of one of the parties. This clause was inserted by the Italians because the issues might involve high diplomatic secrets. If a party refuses to appear before the Court, the Court may pronounce upon the case if it finds the evidence submitted by the other party is well founded in fact and law. "Decisions of the Court shall be taken by a majority of the judges present." "The sentence shall state the reasons on which it is based," but no reasons shall be given for dissent or reservations. "This sentence is final and without appeal." An appeal for revision based upon the discovery of new decisive facts may be entertained by the Court within five years.

In the deliberations of the Commission of Jurists, Mr. Root took a very active part and some of its most important features are credited to him. He was aided by James Brown

HARDING

A Democratic comment on Senator Harding's campaign speeches. With apologies to the Handcuff King

© Underwood & Underwood

American sympathizers with the Irish rebellion picketed the dock as the British liner "Aquitania" left New York last week and displayed placards denouncing the "British" Government's treatment of Archbishop Mannix and Mayor MacSwiney of Cork

Scott and other American experts. It will be seen that the proposed Permanent Court of International Justice is so closely entwined that the League of Nations has hardly to be separable from it.

## Republican Campaign Fund

**W**ILL H. Hays, chairman of the Republican National Committee, has issued a flat and comprehensive denial of the charges of Governor Cox that certain interests had banded together to buy the Presidency and that a corruption fund of \$15,000,000 was being collected, much of it in large amounts, for the Republican campaign. In refutation of these allegations he presented the following figures to the Senatorial investigating committee at Chicago:

Since the 1920 convention there has been raised by the national committee for its own use \$618,013.54 up to August 26. During this period there has been raised by the states, where we have a joint working arrangement, for their own use \$399,241.78.

From June 14 to August 26, 1920, the national committee has expended \$843,009.50, which has been spent for headquarters expenses, including Washington, New York, Boston, Chicago, Denver and San Francisco; administration, mailing department, telephone, telegraph, furniture, additional fixtures, supplies, postage, envelopes, traveling expenses; also speakers' bureau, including salaries and expense of publicity incident to particular meetings, speakers traveling and other expenses; rent of all headquarters; general publicity, including news and cartoon service to Republican papers, pamphlets, booklets, lithographs, campaign buttons and general expense of all bureaus.

During this period from June 14, 1920, to August 26, 1920, there were 12,389 men and women contributors to both the national committee and to state committees through the joint collecting organization, an average of \$82.11. Of these none has been over the one thousand dollar rule except eight, which eight have given a total of \$13,500—an average of \$1,687.50. The highest of these was \$2500.

Mr. Hays says that the budget on estimate of the total amount to be spent for the Republican campaign was \$3,079,037.20.

Mr. Cummings, chairman of the Democratic National Committee for 1916, testified that his committee spent in that campaign about \$2,300,000, not counting the state funds.

## Brooklyn Strike

**C**OMMUNICATION between Manhattan and Brooklyn is largely cut off by a strike of the employees on the elevated, subway and surface lines August 29. The transportation companies and the public were taken by surprise and unprepared, for the vote to strike was taken spontaneously and suddenly in opposition to the union officers at a meeting of a section of the men held at 3 o'clock on Sunday morning. Negotiations had been going on for a month between the union and the Brooklyn Rapid Transit Company and it was thought that an agreement was in sight, for the men had withdrawn the demands most diffi-

cult to concede, the insistence upon the "closed shop." The increase in wages demanded averages 40 per cent. Motor-men and conductors on surface lines now getting 52 to 62 cents ask for 84 to 92 an hour. The men on the subway and elevated lines now getting 49 to 57 cents ask for 70 to 90. The strikers number nearly 12,000, comprizing 4500 on the surface, 2900 on the elevated and subways and 3900 in shop and power house.

The Brooklyn Rapid Transit system is in the hands of a receiver, Lindley M. Garrison, acting under Judge J. M. Mayer of the Federal Court. The receiver says that the increase asked for would raise the payroll from \$25,000,000 to \$40,000,000, which is all the company earns. The judge refuses the mayor's request to submit the whole dispute to arbitration on the ground that it would be illegal for him to consent in advance to unknown terms that may be ruinous to the company.

The company has made no attempt to run the surface cars because they are subject to attack by a mob, and only about five per cent of the subway and surface trains were kept running. Consequently hundreds of thousands of people, who had to make their way between the twin cities, jammed the bridges, streets and stations night and day. At the Atlantic Avenue junction, where all routes run together, the crowd numbered 250,000 and extended for five blocks in all directions, pushing and fighting for a chance at a conveyance. Commissioner Whalen put five hundred municipal busses into the service and free ferries were run across East River. All sorts of vehicles entered the transportation business, charging all that the traffic would bear.

## The Starving of MacSwiney

**T**ERENCE MacSwiney, the Sinn Fein Lord Mayor of Cork, who was convicted of sedition by court martial and sent to Brixton prison, London, has refused to eat ever since his imprisonment. Pressure of all sorts has been brought to bear upon the Government for his release and appeals have been sent to foreign powers for intervention, but with no effect. Premier Lloyd George in reply to a petition from Mary MacSwiney, the mayor's sister, telegraphed:

It is with profound regret that I hear of the pain inflicted upon you by the determination of your brother to starve himself. It is impossible for the Government to make an exception in his case. Were they to do so it would break down the administration of the law in the United Kingdom, for all prisoners would claim the same privilege.

In a public statement the Premier said:

A law which is a respecter of persons is no law. If the Cabinet departed from its decision a complete breakdown of the whole machinery of law and government in Ireland inevitably would follow. The release some weeks ago of hunger strikers in Ireland was followed by an outburst of cruel murder and outrage.

Personal appeals to the King for pardon were denied on the grounds explained by Lord Stamfordham, the

King's private secretary, in a letter to Horatio Bottomley:

You aim at the release of the Lord Mayor, but even if the King were in favor of such a course it would only be effected by the sovereign's personal action in face of the advice of his Ministers, and with the presumable result of their resignation and also the further risk that the country at large might regard the price paid as too high for the object attained and blame his Majesty for creating a grave political crisis at a time of special national stress and anxiety.

The Council of Action, established by the labor unions to prevent participation in the Polish war by threat of a general strike, sent the following message to the Premier:

The whole organized British labor asks you to consider Government's decision to allow the Lord Mayor of Cork to die rather than release him. His suffering is greater than lengthy imprisonment. His death would make an Irish solution more remote.

## Riots in Belfast

**A** WEEK'S fighting between the Sinn Feiners and Orangemen in the streets of Belfast totaled up twenty-one persons killed and some 250 injured. There have been 172 buildings set on fire.

The rioting originated in the erroneous report that the Nationalists had stoned the children going home from a suburban school. At the rumor and threat of reprisals mobs gathered on both sides, and beginning with stones passed on to revolvers and finally to rifles and machine guns. During the first days or rather nights of fighting the Nationalists had the best of it, being better armed and more venturesome, but later Unionists organized with the definite purpose of wiping out the Catholic quarter. They set fire to the grocery stores and public houses of the Shankhill district and stoned the fire brigades that tried to put them out. The military used armored cars to clear the streets before them, but suffered much from snipers on the roof.

In Dundalk the Sinn Feiners set fire to a milliner's shop in which thirteen assistants were sleeping. Two girls and a boy were burned to death. The handsome country house of Deputy Lieutenant Pike of Cork County was burned. Major Johnstone, a justice of the peace of County Donegal, was shot while at supper by men who fired thru the window.

Cardinal Logue, Primate of Ireland, in a letter read in the churches condemns the shooting of Constable Brennan as he was going home from the Protestant church and also condemns the brutality of the British authorities and the reprisals of both sides. He says of Brennan:

The poor victim I know to have been a quiet, upright man who never gave offense to any one in the discharge of his duty.

© Paul Thompson

### SELF-MARTYRED FOR IRELAND

Twenty-one days of hunger strike in Brixton prison had not shaken the decision of Terence MacSwiney, Lord Mayor of Cork, to starve himself to death if he were not released by the British authorities. His spectacular self-sacrifice roused bitter feeling among extremists on both sides of the Irish question

Am I to be told that this is an act of war: that it is lawful to shoot at sight any one wearing a policeman's uniform and honestly discharging a policeman's duty? I prefer to call it by its true name—cold, deliberate, willful murder. Hence, any one who plans, encourages, abets or even sympathizes with such an act participates in the guilt before God!

I know we are living under the harsh, tyrannical régime of militarism and brute force, which invites and stimulates crime: that all pretense of discipline has been thrown to the winds; that those professing to be the guardians of law and order have become most ardent votaries of lawlessness and disorder; that they have been overrunning the country and making the night hideous by raids, rifle fire, burnings and the destruction of valuable property; that towns have been sacked as in the rude warfare of the earlier ages and that those who run from fear are shot at sight and that reckless firing in crowded places has made many innocent victims.

All this professes to be done by way of reprisals, but reprisals are generally unjust and often fall on the innocent. Crime does not excuse crime.

## Wrangle Over Wrangel

**T**HE French Government in extending recognition and support to Baron Wrangel acted without the knowledge and in opposition to the judgment of the British Government. This brings to an open break a long developing divergence of policy in regard to the operations against the Bolsheviki in southern Russia. The British were the backers of General Denikin in his drive toward Moscow. They supplied him with millions of dollars' worth of arms, ammunition and uniforms. British officers organized his army and advised his staff. King George created him a Knight of the Bath, a very unusual honor for a man in his position.

Besides the Volunteer Army, composed largely of former officers of the Czar, Denikin had at first the support of the Cossacks of the Don and Kuban. With these he swept over the Ukraine and it seemed for a time that he would succeed in capturing the Soviet capital and also making connection with Admiral Kolchak of the Siberian Government, to whom Denikin professed allegiance.

But at the height of his triumphant advance came a swift reversal of fortune, due not so much to the valor of the Bolsheviki as to the dissensions that arose in his rear. Absorbed in his military measures he neglected to cultivate the good will of the people whose territory he overran. He refused the demand of the Ukrainians for national independence. He ignored the desire of the peasantry for land. He infringed upon the historic liberties of the Cossacks. He dispersed the Kuban Rada or National Assembly by force, imprisoning or hanging the members who opposed him. His troops ravaged the country they professed to liberate with about as little regard to life and property as the Bolsheviki.

Consequently he was harassed by peasant risings and partizan bands in his

Whitlaw in London Passing Show

IT'S A PROBLEM!

John Bull: "For heaven's sake, give that infant what he wants."

Nurse David: "I would if I only knew what it was!"

rear. Ukrainian towns set up soviets and the Cossacks deserted by wholesale or went over to the enemy. At this unfortunate crisis he quarreled with his ablest officer, Baron Wrangel, who had led the army in the capture of Tsaritsin, one of the most brilliant exploits of the campaign. Denikin accused Wrangel of being pro-German, probably on account of his Teutonic blood, and of conspiring to restore the Czar. Wrangel was forced to resign and retired to Sevastopol. But the British admiral at that port ordered him to leave Russia on account of his disagreement with Denikin.

In his letter of resignation Wrangel charges Denikin with incompetence and treachery toward Kolchak. A few of Wrangel's accusations of his late chief may be quoted:

Having tasted power, poisoned by ambition and surrounded by dishonest hangers-on, the struggle so brilliantly started by you and so unworthily lost is coming to an end. Into it have been thrown hundreds of thousands of Russia's best sons, innocent of your mistakes.

An army taught to loot and drink and the example of whose leaders demoralized the troops—such an army could not save Russia.

Not having an organized rear, not having prepared a single fortified position behind the lines and not a single point of resistance, retreating in a territory where the civil population had learned to hate it, the Volunteer Army, having begun its retreat, fell back and nothing could stop it. As the enemy's successes developed the pooriness of our strategy and policy became evident.

After Denikin's fall the officers of the defeated army elected Wrangel to the command. As the Bolsheviks had recovered the entire Ukraine, gained control of the Don and Kuban region and advanced beyond the Caucasus mountains, the remnants of Denikin's force sought refuge in the Crimean peninsula. The Bolsheviks would have followed them here and doubtless captured them as in a trap but the British interposed and saved them. British warships stationed on both sides of the narrow neck of the peninsula bombarded the Bolsheviks and kept them out of the Crimea. Sheltered here during the winter Wrangel reorganized his army and prepared a new offensive.

When Premier Lloyd George opened negotiations with the Bolsheviks the Soviet Commissioner of Foreign Affairs, Tchitcherin, on July 24, demanded as a preliminary to peace that the British withdraw their protection from Wrangel and that the latter surrender his army and all the territory under his control. This Lloyd George refused to do, but he declared his disapproval of Denikin's advance into Russia and warned him that he undertook it on his own responsibility. British aid to Wrangel was stopped last February when it was perceived that he was intent upon another invasion of Russia.

But as the British dropped Wrangel the French took him up. Premier Millerand some time ago announced to the Chamber of Deputies that he would recognize Wrangel's government whenever it would acknowledge Russia's previous engagements toward foreign powers. This means the repayment of the vast loans made by France to the Czar's Government and the extensive investments of French citizens in Russia before the war. Of course Wrangel was glad to promise this, so his South Russian Government receives French recognition. Washington correspondents report that our Government is likely to take the same action, but the British Government still distrusts Wrangel.

## Who Is Wrangel?

THE latest champion to enter the lists against Lenin is Baron Peter Wrangel. The outlaw knight of the blood-red shield has successively unhorsed Kaledin, Kornilov, Kolchak, Denikin and Yudenitch, but there is a sixth Richmond in the field. A young cavalryman who last year was routed by the Bolsheviks, was suspected of treachery

*Courtesy of New York Times*

General Baron Peter Wrangel, cavalryman, engineer, leader of the armies fighting the Bolsheviks, and head of the new government of South Russia. His success has been in part due to his skill in obtaining the co-operation of all foes of the Bolshevik government. "My slogan," General Wrangel is reported to have said, "is: *with whomsoever you please, but for Russia*"

to the Allies and his chief, was dismissed in disgrace by Denikin, was exiled to Constantinople and was brought to death's door by typhus, is now the head of a government recognized by France and in command of a formidable force that is making rapid inroads into Russia's richest province. The seat of the new "Government of South Russia," which aspires to become the Government of All the Russias, is the port of Sevastopol, which was captured by the combined French, British and Turkish armies in 1855 after a year-long siege. Here under the protection of the British fleet General Wrangel on his return from Constantinople last April set about the reorganization of the defeated and discouraged troops and refugees who had fled to the Crimea to escape the Bolshevik wave sweeping down from the north.

Peter Wrangel is not a Russian by blood or a soldier by profession. He is, like our Hoover, a mining engineer. He was born in St. Petersburg, the son of Baron Nikolai Wrangel, who having lost his fortune, had become a bank manager. The family belongs to the Baltic nobility and has contributed great names to the history of three countries, Germany, Sweden and Russia. Count Gustav Wrangel served in the Swedish army under Gustavus Adolphus in 1627. Count Friedrich Wrangel served in the Prussian army against Napoleon. Baron Ferdinand Wrangel, Governor of Alaska, gave his name to an island and a town which later, much to his disgust, passed into American possession.

Peter Wrangel was educated in the Petersburg College of Engineering and, after serving his year in the army, went to Siberia to engage in mining. When the war with

Japan broke out rejoined the army and was twice promoted for bravery. He entered the Great War as a non-commissioned officer in the Imperial Guards, but within a few weeks distinguished himself by a gallant feat that turned a rout into a victory. The Russian cavalry had fallen into the same trap as the British Light Brigade in the Crimean War. In charging a German battery they were drawn into an ambush and the Germans opened fire on them from both sides with machine guns. The troop was in danger of annihilation and retreat was sounded, but Wrangel, seeing that the only way out was straight ahead, collected such men as he could and charged the guns. The German gunners were sabered where they stood and the machine guns also taken. For this exploit Wrangel was promoted to a captaincy on the spot. He later became Major General of Cossack cavalry and after the revolution, when Kerensky attempted to renew the fighting on the Galician front, he saved the army from disaster. When the Bolsheviks overthrew Kerensky he fought against them in the volunteer army until his quarrel with its leader, Denikin.

## Wrangel's Policies

**W**HETHER Wrangel can accomplish what Denikin failed to do remains to be seen, for his present advance into the Ukraine can be explained by the fact that the Bolsheviks have now more than they can attend to on the Polish front. But he is evidently trying to avoid the mistakes of his predecessor by winning over the factions whom Denikin antagonized. Instead of striving to restore the old régime he has recognized that the economic revolution is irreversible, so he has announced that the peasants shall keep the land they have seized but must pay for it by turning over to the Government one-fifth of their harvests or the money equivalent. Out of this fund the landlords are to be compensated. This, says Professor Peter Struve, the South Russian representative in Paris, "should be regarded as the initial stage of an important agrarian reform tending to secure full possession of the land by those peasants who cultivate it by their personal efforts." Wrangel has set an example by dividing up among the peasants the 60,000 acre estate which came under his control thru his marriage in 1915 with the daughter of Ivenko, a rich Ukrainian landlord.

The Kuban Cossacks owed Wrangel a grudge because while in the service of Denikin he had suppress their Rada (parliament) with his troops. But now he has won over both the Kuban and Don Cossacks by promising not to interfere with their internal affairs or infringe upon their historic rights. He has even made an ally out of Makno, the Red bandit, who has been the terror of all parties in the Ukraine. Wrangel's slogan is: "With whomsoever you please, but for Russia."

To provide funds he has had a stack of paper money printed for him in London. This adds another currency to those of half a dozen defunct Russian governments, but

Brown in Chicago Daily News

ANOTHER CONVERT?

unlike his fore-runners Wrangel is not relying altogether upon the printing press to finance his campaign. He has made arrangements with an international trading company of British, French and Russians to obtain funds in exchange for the stores that will come under his control in his advance northward. Within three months he has gained possession of the country lying between the Dnieper River on the west and the Sea of Azov on the east, that is the whole province of Taurida. This puts him in command of the harvests and mineral wealth of the most productive part of Russia and the British and French shipping is already in the Black Sea to carry them off.

## Poles Refuse to Halt

**T**HE Poles, flushed with their tremendous victory, show no disposition to comply with the advice of their friends not to attempt a second invasion of Russia. France, England and the United States have definitely warned them against advancing beyond the boundary drawn by the Paris Peace Conference. But Marshal Pilsudski, chief of state, declares that to halt on the Entente line "would be to affirm by deed that this illusory eastern boundary corresponds to our aspirations." This is a frank confession of the intention of the Poles not to confine themselves to their ethnographical limits as President Wilson stipulated in his Fourteen Points and recent note. Pilsudski also argues that it is impossible for military reasons:

Our friends wish us to halt on the eastern front and maintain a solely defensive attitude. In my opinion that cannot be done. How is it possible for a small army not technically well equipped to create a defensive line on a front of hundreds of kilometers? There are only two solutions, either to advance to complete destruction of the enemy or else to halt on our illusory frontiers to conclude peace as quickly as possible. Even if we sign peace in such circumstances we shall always be the object of Russian aggression.

On the other hand the French generals are emphatic in their denial of any military necessity for an advance into Russia.

It is possible that the Poles may not have to decide the question after all for the Bolsheviks are rallying their scattered forces and have at some points recovered a little of their lost ground. The German Government has notified Poland that 70,000 fugitives from the Soviet army have escaped over the border into East Prussia. The permission of Poland is asked to send them across the Polish corridor into the interior of Germany.

The Polish peace delegates, finding conditions at Minsk intolerable on account of their confinement, lack of food and interrupted communications, have insisted upon the transference of the conference to Riga in Latvia and the Bolsheviks have consented. The Soviet Government has also agreed to withdraw the clause in their peace proposals to which Lloyd George protested, that is, the formation of an armed militia of Polish workingmen. The other terms are substantially the same as received the previous approval of the British Government, but the Polish delegation has declared them totally unacceptable.

## Where the Workers Own the Stock

(Continued from page 301)

pany requires the exercise of managing ability and control over methods of manufacturing and marketing, such as any executive, department head, principal foreman, chief clerk, branch manager, or principal salesman; or whose work shows the use of a high degree of imagination, tact or business judgment—those qualities upon which we believe the constant earning of profits to depend. To the directors is left the application of this rule, but the industrial partnership stockholders may from year to year pass votes further defining the directors' methods of choosing.

In 1913 there were 167 principal employees. In 1919 the number had risen to 320, about one-ninth of the total force. One-ninth are employees with creative imagination. They are the real industrial descendants of the great-grandfather of the Dennisons. It is they who "produce" the profits, and keep the concern going. The other eight-ninths produce wages.

Profits are in the future. It requires imagination to see them. Wages are paid every week in cash. These are paid for jobs which need but little imagination. Many of the employees are girls whose industrial life is soon over—two or three years in the factory after schooling time is past, in which to put by something for family or for self, with imagination more bound up with anticipations of romance than devoting itself to solving the perplexities of production.

For them, and all the others whom it has been thought advisable to keep on the other side of the industrial partnership line, weekly wages are deemed the full measure of their value to the company. They are paid mostly by the piece. Their performance can be seen and measured as they go along. Theirs is not the field of the creative imagination, of profit creation, nor should theirs be the reward.

Having discovered the one-ninth whose imagination creates the unseen profits, how shall they be put in control of the profits which they expect to create?

The absentees own the property. The absentees simply must be bought off. How much will they take to get out and in what currency will they accept payment. A simple matter, once it has been done. But it was a big imagination that conceived it and did it.

Induce the absentees to turn over their common stock *with* voting power to the imaginative workers and accept preferred stock *without* voting power. Clever enough. But the imaginative workers had to pay. They paid \$4,500,000 in preferred stock at 8 per cent—a permanent charge on the business of \$360,000 a year, where the dividends on the common stock had been running something like \$200,000 to \$250,000.

The preferred stock is doubly secure. If the workers fail to pay that full \$360,000 a year for a period of four years, then the preferred stock auto-

## McCutcheon's Fall and Winter Catalogue is ready

**Thirty-two pages of  
sterling values—all  
from "The Linen Store"  
—all selected with  
utmost care from our  
comprehensive stocks**

Reg. Trade Mark

Here is the McCutcheon Illustrated Fall and Winter Catalogue No. 14—a book of genuine delight to the discriminating shopper.

Occupying eight pages are illustrations portraying widely varied types of Pure Linen Handkerchiefs.

Then seven pages of exceptionally attractive, yet moderately priced, Table Linens including Damask Linens, and lovely Fancy Linens.

Immediately following, are three pages of Household Linens of standard McCutcheon values and exceptionally moderate prices.

Pages of New Neckwear, Sweaters, Lingerie, Negligees, Knit Underwear, Hosiery, Laces and Embroidery, Dress Fabrics and for the little folks, Underwear, Dresses and Suits.

Then, finally, a page of Haberdashery, especially selected for the very particular man.

30 DAYS TRIAL

matically gets back its voting power and the absentee owners step into control. The preferred stockholders are virtually bondholders but without the trouble of foreclosure if interest is defaulted.

Now about the common stock. They call it "industrial partnership stock." Where does it come from? By March, 1913, 15,122 shares had been issued to the 167 principal employees. The issue amounted to about one-third of the total salary-roll of the principal employees. Thirty-three and one-third per cent profit for imagination!

But it was not cash, of course. It was just that amount of profits put back into the machinery and buildings and business. In 1919, thirty thousand shares of industrial partnership stock were issued—45 per cent of the payroll of 320 principal employees—all of it going back into the business. A good depreciation account and several reserve funds have been built up for lean years and emergencies.

Besides, the industrial partnership stock has been getting dividends in cash—as high as 15 per cent in 1919. This dividend must always amount to at least five per cent before any additional stock can be issued.

Finally, another clever thing—in fact the heart of the whole thing—an industrial partner cannot sell, or give away, or bequeath, or even take away his industrial partnership stock, for every share of it is a reward for the continual exercise of creative imagination on the job in the interest of an ever expanding and improving Dennison industry. Not the investment it represents but its conferring of power on one who has been selected to help keep alight the Dennison imagination, this is the real significance of a share of industrial partnership stock.

If an individual partner severs his connections with the concern the reward for the use of imagination in the past is, of course, made secure. The company may pay immediately for his stock either at par or cash or by the issuance of a second preferred stock of equal face value which can be sold, given away, bequeathed, and taken away, but which has no voting power. On some other Dennison worker will descend in time the mantle of power as a reward for imagination, which this new absorbed industrial partnership stock used to hold.

That is the reason why every member of the board of directors is a worker.

The president of the board is president of the company. The vice-president exercises general supervision over the retail stores. The treasurer watches over manufacturing, warehousing, and shipping. The other members of the board are in charge, respectively, of foreign sales, purchasing and merchandizing, and selling personnel.

Not even a banker, or financier, or dummy director, or absentee of any kind on the board! All of them workers with the Dennison imagination!

What does it mean for the 320 industrial partners? Take an illustra-

tion: Suppose John Doe is head of a department with \$4,000 salary. Here is what it would have meant for him during the past three years, even though his salary had not been increased:

Year	Salary	I. P. Stock Issued % of Salary	Amount	Total Stk. held before
1916	\$4,000	25%	\$1,000	.....
1917	4,000	75%	3,000	\$1,000
1918	4,000	30%	1,333	4,000
1919	4,000	45%	1,800	5,333

Dividends on previously held stock none	Total Income
(10%) \$100	4,100
(10%) 400	4,400
(15%) 800	4,800

Suppose he were to remain in the service of the company for another ten years even without an increase in salary, and that each year the stock dividend should amount to only 25 per cent of his salary, which is the smallest issue to date, and that the dividends on already issued stock would amount to only 10 per cent, the situation of John Doe in 1929 would be like this:

Salary	I. P. Stock Issued % of salary	Amount	Total I. P. Stock Earn- ing Dividends
\$4,000	25%	\$1,000	\$16,133

Dividends on Stock (10%)	Total Income
\$1,613	\$5,613

At the end of seven more years, a total service of not more than twenty-seven years, John Doe would hold industrial partnership stock to the amount of \$23,133. Should he at that time decide to leave the employ of the company his income on the second preferred stock taken in exchange would amount to something over \$1,600 per year. Thus, even though he had saved not a penny of his salary or dividends in all his years of service, John Doe would be assured an income on which to retire.

Surely this looks promising for the workers with imagination! No absentee can ever get control if they continue to make the profits. The control is secure against the speculation of the manipulator, the financier.

But how about the 2700 wage workers? Is it not just as bad to be governed by industrial imagination in the shop as by financial imagination on Wall street? The Dennison people have not yet answered this question—completely. We have heard rumors that the non-stock-sharing workers are restless. We should expect they would be.

The Dennison management are at work on this question. They have asked the 2700 to propose something. The 2700 have appointed a committee of sixty and the committee is now at work also.

We know that the Dennison Company has been an outstanding pioneer in regularizing employment. We know, moreover, that by 1919 they had set aside \$100,000 as a starter for "unemployment insurance," and thereby made an important beginning in the direction of making the Dennison workers' future secure. But all of us live for the present as well as the future. We like to see the ounces of en-

ergy, mental and physical, which we are expanding transform themselves visibly into the reward which makes possible a higher standard of comfort. Such a reward the industrial partners know and the employees undoubtedly yearn after.

If by their industry, and let us also add their imagination, they can increase their production beyond the level which the imagination and judgment of the industrial partners have deemed satisfactory for them to attain, by all means with good grace let them be given the full reward of their striving. It is to evolve some concrete expression of this general purpose of paying a collective reward for a collective effort that the committee of sixty, with the hearty say-so of the industrial partners, is busying itself.

## The Call of the Offshore Wind

(Continued from page 296)

10 per cent of the men below the grade of officers placed on our ships by our New York office, were Americans. During the last six months the average has been 55.7 per cent.

It was necessary during the war to give wide employment in the merchant marine to nationals of the countries allied with the United States. Most valuable service was rendered by these men and theirs was a great contribution toward the winning of the war. But now the time has come to replace these men with Americans.

Every village is being reached by the Shipping Board in its effort to get boys from the interior to see life from a shipping point of view. We want boys of vision to see the life as it is on board ship and to know what fine training for future material happiness lies in store for them in the service of our merchant ships. It is easy work to get men to man the ships, but it is quite another matter to get men who are ship-minded and who enter the ranks with the hope and ambition to succeed as ship operators. Many of those who are now serving are rousing our hope that they are in this class. The future will tell.

The American boy at sea is no new thing to me. When one has put in forty-five years of the hardest kind of service he may be expected to write with some authority about the men who sail our ships. They are a splendid class, big in heart, strong of body and keen-witted at all times, especially in the face of danger. No better type of American manhood can be shown than that developed in the right sea service.

I became chief of naval operations in May, 1915, after forty years in the service of the American navy. During these two score years I personally saw our navy develop thousands of American boys who came to us as raw recruits. As chief of naval operations during the war there were under my direction hundreds of merchant ships

## Crack o' doom any day in the year

Midday—the sky suddenly overcast—a storm breaks in darkened fury—click, click go the electric switches all over town—lights twinkle cheerily in office, shop and home.

A scenario you'll recognize. It's being played somewhere every day. The storm is the villain, threatening inconvenience and danger, while in the nick of time the Electric Light Company steps in and saves the day.

But it is not by chance that this public servant can take care of the abrupt daytime demand, rising in a few minutes from almost nothing to full capacity. Such an emergency was anticipated in the very design and construction of your Electric Light Company's plant.

There are boilers specially devised to meet sudden calls for steam—stations interconnected by a network of wires, so that one can help another—generators built at great cost to carry an overload for hours.

Meanwhile to report the approach of trouble, the Electric Light Company keeps in constant touch with the weather bureau and maintains its own lookout.

Thus there is ample warning to stir the fires into new life and to bring extra generators and transmission lines into action, so that we may have light when and where and how we want it.

But if the engineers did not make ready before the actual need, a storm would be a time of darkness and fear. The stoppage of business might prove the least of the harm resulting.

Or if, on the other hand, the method of being prepared was to keep the entire plant going at full blast at all times without regard to demand, the waste in operation would lead to increased costs and ultimately to increased rates.

It is by applying economy to the solution of emergency demand that the central station protects the subscriber's dollar at the same time that it safeguards his service.

# To Soften Your Beard

## To Shave Easier, Quicker, Better

Shavaid, a new scientific preparation, will make your daily shave a pleasure. Use Shavaid before lathering. It softens the beard instantly. No Rubbing in. No hot water.

Home shaving is being revolutionized by this new way of softening the beard. It means an easier, quicker, more comfortable shave.

Shavaid, applied to the dry beard, softens it instantly. It makes the razor "take hold." It does away with all "pull." And it soothes the tender skin.

Simply apply a thin coating of Shavaid to the dry beard. Then apply your favorite lather. The lather stays moist and creamy.

Shave as close as you like. The old drawn, burning sensation is gone.

Shavaid makes your face feel cool and comfortable.

The daily use of Shavaid will keep your skin smooth and firm, free from the tenderness and excessive dryness which are caused by hot water and rubbing in.

Minor skin eruptions and abrasions yield quickly to Shavaid's soothing, healing influence.

IT was Sir Samuel Cunard and his associate founders of the Cunard Line who really gave the first impetus to systematic transatlantic travel, eliminating its discomforts and making ocean travel an allurements to countless thousands who now speed upon their way of business or enjoyment with a feeling of comfort and luxury.

The extended intercourse and greater intimacy between the old and the new world which have naturally resulted from increased facilities in ocean travel contribute greatly to cementing those cordial relations between America and England which mean so much in both nations' progress.

For eighty years, extending over a period of four generations, Cunard liners have enjoyed the unquestioned favor of American ocean travellers, a favor which we cherish and aim to retain.

engaged in overseas service, manned by American boys, many of them trained by the recruiting service of the Shipping Board.

Hundreds of our ships sailed thru the submarine zone with remarkably small losses of life or property. They were manned by Americans, who with few exceptions, had never before served at sea. If this performance of transporting American soldiers and their supplies and equipment could be accomplished in times of national stress, establishing a record never before equaled, there is no reason why our merchant ships cannot be manned by Americans in times of peace.

Our experience since the signing of the armistice has shown, in fact, that the American boy will go to sea and stick if he is given the right kind of treatment on shipboard.

When our ships are manned and officered entirely by Americans foreign nations will know, and we, ourselves, can feel assured that we have solved our shipping problem and that our merchant marine is destined to live and to grow in the competition for the world's trade. All of the other problems that now seem to bulk so large will disappear when the American boy takes again to the sea. Then we will have a ship-minded nation.

## Entering the Promised Land

(Continued from page 300)

ger than in the West, for instance."

"Then, by smashing precedents?" I asked Mrs. Annette Abbott Adams, the first woman—a California woman—to serve as an Assistant U. S. Attorney General.

"Precedents?" she pondered, with nice discrimination, "or conventionalities?"

"Well, isn't it true," I countered, "that when club women find a club constitution in the way they write a new constitution—every year if necessary?"

She merely smiled.

"Then," she was asked, "how shall women exactly express themselves?"

"Why, by the use of the ballot, of course," she answered. "That's the interesting thing—the ballot gives women the power given men."

"But aren't women at a disadvantage, when men have had control of the parties all these years?"

"Yes," she granted, "we are hampered by these long years in which the nation has neglected to make use of its woman-power. There is no use to deny that, but," she added cheerfully, "I think we will soon qualify."

And now, in the matter of entering public office: Should women strive behind the counters too?

Miss Martin answered decisively, in an interview. "It is necessary for the welfare of women and of the nation that women's viewpoint should be expressed in government. And why? Because women are not as men; theirs is a 'social motherhood' men cannot know."

And how? "I believe," Miss Martin answered, "that women should be candidates for state legislatures and for both branches of Congress."

And should they serve in office in the executive departments?

Without question. Scores already are in executive positions in Washington and elsewhere, in the executive departments. And why not? Would not a new state justly share in such responsibilities? One woman, Mrs. Frances C. Axtell, one of the three commissioners of the United States Employees' Compensation Commission and for two years its chairman, has without question, one of her associates said, been able better to understand and judge of injuries received by women, and other ills and their cure, than a man could do. Again, Mrs. Helen H. Gardener, now one of the three civil service commissioners, whose rank is just short of Cabinet positions, and the first woman to hold that high office, indicated in an interview that she is amazed by the enormous complexities confronting anyone who attempts to get order and equality of conditions, pay and promotion, between grades, between men and women, up and down the great ranks of the 700,000 federal employees, a very large percentage of whom are women. One can see, then, that aside from the question of the rightfulness of fair representation of women's natural interests in government, there are reasons enough why women should hold executive positions in the governmental departments.

"Why in the world shouldn't women as well as men occupy governmental positions for which their experience qualifies them?" the Assistant Attorney General, Mrs. Adams, inquired.

"I confess," I replied very hastily, "that for the life of me I can't see why they shouldn't!"

She added again that she couldn't see that women's interests in good government are different from men's.

She was assured that since in fact the Canaanites had at last entered Canaan I for one was for calling them in numbers from where they dwelt to be given places in the land for which they had labored.

"That," she answered, "should be a question of personal qualification."

"With women?"

"Yes—and with men!"

"And if the qualifications are the same?"

"Then there's an obligation for equal representation. As I said, it shouldn't be a question of sex but of personal qualification. And I should like to add that the women who go into governmental positions ought to give their best efforts to their jobs."

"And why, particularly?"

"Because there are still many men who doubt. Circumstances are such that there are many men who are slow to give women credit even when—"

"Yes, even when—?"

"Even when they have actually done good work."

Washington, D. C.

Puffed Wheat

## More Bubble Grains

### Millions of dishes coming

Direct from the harvest fields we get the choicest wheat that grows. Then we seal the grains in guns, apply a fearful heat and explode them. They come out as bubble grains, flimsy and flaky—puffed to eight times normal size. Yet the grains remain shaped as they grew.

Every night of the coming year millions of children will enjoy this Puffed Wheat in their bowls of milk.

### Three grains now exploded

Three grains are now puffed by Prof. Anderson's process, and each has its own delights.

Puffed Wheat and Puffed Rice are whole grains. Corn Puffs are corn hearts puffed.

All are thin and airy—all have exquisite flavor. And every food cell is blasted for easy, complete digestion.

Serve all of them in all the ways you can, for no other form of grain food can compare with these.

# Here are Books—and Books

## Across Three Continents

If you can't get away whenever the wanderlust calls you buy Kipling's *Letters of Travel* instead and divide your time between Japan, Egypt and Canada, with short runs into the United States. The book really transports you, as all volumes of travel are, most erroneously, supposed to do. The letters, or essays, or whatever you choose to call them, cover a period of twenty-odd years before the war. They are Kipling at his very best, beauty, color and romance, solid facts and sound thinking blended so skilfully that, whichever you are looking for, you take the other in your stride. Kipling observes so clearly and sanely that, without argument, he convinces you of what Katharine Fullerton Gerould calls the "extraordinary rightness" of his opinions, and he writes the English language so cleanly, strongly, easily and beautifully that it is a pure joy to read him. The pictures of Japan are full of color; the pictures of Egypt are full of age and mystery; the pictures of Canada are full of strength and freshness, but the very best of all is the winter scene "In Sight of Monadnock":

The night was as keen as the edge of a newly ground sword. . . . all the sheeted hills round about were as dumb as death. Only the Connecticut River kept up its heart and a lane of black water thru the packed ice; we could hear the stream worrying round the heels of its small bergs. Elsewhere there was nothing but snow under the moon—snow drifted to the level of the stone fences or curling over their tops in a lip of frosted silver; snow banked high on either side of the road, or lying heavy on the pines and the hemlocks in the woods, where the air seemed, by comparison, as warm as a conservatory. It was beautiful beyond expression, nature's boldest sketch in black and white, done with a Japanese disregard of perspective, and daringly altered from time to time by the restless pencils of the moon.

*Letters of Travel*, by Rudyard Kipling. Doubleday, Page & Co.

## Ape and Superape

Did you ever reflect how significant is the fact that man descended not only from the lower animals but from a particular type of lower animal—the Primate, the Ape, the Bandarlog, the Yahoo (to use in turn the names given our kinsmen by science, common life, Kipling and Swift)? Well, Clarence Day thought of it and has embodied his thoughts in the most amusing little essay of the year, *This Simian World*. He finds that the human traits are but the monkey traits—sublimated. The aimless curiosity, the busy hand, the roving eye, the chattering tongue of the ape become in the course of ages the mind-stuff of our human civilization with its elaborate and ingenious industry, its passion for gathering knowledge and hoarding it in museums and libraries, its gregariousness and sociability, its vulgarity and fondness for ridicule, its vanity, its credulousness, its cult of sex love, its hatred of snakes, and all other human

qualities, good, bad and indifferent. Suppose the world were ruled by super-ants or super-cats or super-elephants, creatures as superior to their ancestors as we are to the apes, would not a civilization equal in degree but different in type have developed? Can we not picture the rustic dignity of the elephant *Kultur* or the hard-working industrialism of the ants? Mr. Day can.

We like best his picture of the cat civilization. It is even finer than Swift's immortal description of a country governed by the super-horse. These descendants of the cats would be civilized; they would have tools, houses and clothes as we do. But their civilization would be more individualistic than our own, more austere, more graceful. In a word, more aristocratic. On the other hand it would be cruel; there would be no Red Cross for the wounded, no poorhouse for the destitute. The cats would not band together to fight wars, they are not gregarious enough, but they would resort frequently to the duel. Their keen intelligence would be more devoted to the struggle for existence and less to scientific research; the purposeful cunning of the cat would replace the impersonal curiosity of the ape.

*This Simian World*, by Clarence Day, Jr. A. A. Knopf.

## The Church Tomorrow

When the great war first burst over the earth men said, Christianity has failed; since the armistice was signed they have been saying instead, the churches have failed. We have had talk and writing, discussion, denunciation and destructive criticism from inside and from outside of the church. Men have said much about the need for reform and the reasons for that need but they have only just begun to offer suggestions for the lines which the reform might take. The suggestions run all the way from the revision of the Book of Common Prayer to the establishment of a community church. Anyone who is interested in the question will be interested in one or more of a half dozen recent books which treat the problem from various angles.

*Old Truths and New Facts and What the War has Taught Us*, two collections of sermons by Dr. Charles E. Jefferson of the Broadway Tabernacle, present religious truths and lessons in the new, strong light thrown by the war. They deal with principles rather than with the practical difficulties the church is confronting and are more suggestive than convincing.

The attitude of the Episcopal church towards changing conditions is set forth in *The Church and Its American Opportunity*, a volume made up of papers read at the Church of Congress in the

Drawn by Clarence Day, Jr., in "This Simian World"

The first thinker (after Rodin)

spring of 1919. They treat the relation of the church to the League of Nations, an American labor party and other national questions; and they treat also the necessity for readjustments in the training of the ministry, revision of the prayer book, the use of the Old Testament and similar internal questions. The papers reflect the general feeling that something must be done without offering any very drastic suggestions.

Interdominational federation of Christian churches is one of the most definite and concrete suggestions which is now being discussed and experimented with. Some very practical and informing light on the subject is thrown by Charles Otis Gill and Gifford Pinchot, in *6000 Country Churches*, a detailed statistical study of rural Ohio where some appalling conditions prevail many of which have been corrected by exceedingly interesting and successful experiments in church union, church federation and the establishment of community churches. The theoretical aspect of the federation question is discussed in *The Road to Unity Among the Christian Churches*, an illuminating address by ex-President Eliot of Harvard, in which he sets forth clearly and convincingly the various factors which are making for and against the church unity which he believes desirable and possible.

But more concretely and definitely constructive than any of these is the answer given in *The Community Church* by Henry E. Jackson who is attached as a Special Agent in Community Organization to the United States Bureau of Education. The first part of his book is unfortunately devoted to an attempt to explain why he left his church and ministry. A man attempting to justify himself, even with reason, is bound to be a somewhat pitiable object and the account of a quarrel in general terms makes very dull reading, but skip to Chapter V, or better still Chapter VII, and the book becomes definite and stimulating whether you agree with it or not.

The community center is the American church, the only national church which America has.

I believe that the time is coming when the community center will be the only church needed anywhere and even now I give to it the chief place in my affections. But nevertheless, I believe that for the present a private or volunteer church is needed to do what the community center is not yet able to do.

Statements like this are based on actual experiments and bulwarked by definite suggestions for the constitution, organization, management and program of a community church.

*Old Truths and New Facts, What the War*

*Has Taught Us*, by Charles E. Jefferson. Fleming H. Revell Co. *The Church and Its American Opportunity*, edited by Charles Lewis Slattery. Macmillan Co. *Our Country Churches*, by Charles Otis Gill and Gifford Pinchot. Macmillan Co. *The Road to Unity Among the Christian Churches*, by Charles W. Eliot. Beacon Press. *The Community Church*, by Henry E. Jackson. Houghton Mifflin Co.

## The Labor Puzzle

If our bookshelf is any indication, the question of industrial labor eclipses all others in the present mind of the reading public. If a solution has not been found (and no one can say that it has) for the problem of obtaining more and better industrial output in this period of reconstruction, at least the whole pack of sociologists, both amateur and professional, are hot on the trail.

Perhaps the best introduction to the whole field is Ray Stannard Baker's *The New Industrial Unrest*. Combining the lucidity of the trained writer, the quick eye of the reporter and the orderly reflectiveness of the born philosopher Mr. Baker's birdseye view of what is wrong with American industry is the best book of its kind which has yet appeared. It begins with a discussion of the steel strike at Gary and the issues involved and from that concrete instance branches off to the industrial problem in general: the inadequacies of welfare work, the Labor Party, the organization of shop committees and arbitration councils, the attitude of the labor unions and the factions within them, the attempts at Americanization and all the sound and all the ill-digested proposals brought forward by the leaders of labor and capital. In *The Social Unrest*, Dr. Lyman Powell has diligently collected a symposium of essays on economic topics of the times by such men as President Wilson, Matthew Woll, Dr. Butler, John D. Rockefeller, Jr., Talcott Williams, Paul Kellogg, Professor Taussig, J. A. Hobson, Herbert Hoover and a score of other statesmen, economists, business men, labor leaders and publicists. *Labor's Challenge to the Social Order*, by John Graham Brooks, is especially to be recommended as a clear account and discriminating criticism of the labor movement, especially in its more radical or Socialist phases.

All of the books thus far mentioned are designed to summarize the views of many men rather than present the personal opinions of the author. But we must have able advocates as well as able judges, and these are not lacking. Three idealistic and "inspirational" books on the industrial question, not without sympathetic leanings toward Socialism, are *The Unfinished Programme of Democracy*, by Richard Roberts, *The New Social Order*, by Professor Ward of the Union Theological Seminary, and *Is Violence the Way Out?* by Rev. John Haynes Holmes. A more critical attitude toward Socialism, with strong emphasis on the importance of thrift and a keen analysis of the real nature of "capital," may be found in *Why Men Strike*, by Samuel Crowther, and *The Unsolved Riddle of*

# BOOKS to Remember

THERE was a time when simply because a book was a book its purchase was in the nature of an event. In those days the possessor of a library of fifty volumes was a marked man in his community—but times have changed. Every day new books of all kinds and of all quality fall from the nation's presses in their countless thousands—at prices that are within the reach of all. We are no longer judged by the quantity of our volumes but by the matter that they contain.

It has been the object of the Abingdon Press to publish only such books as, once purchased, will retain their places on your shelves—books of something more than timely interest. Today the name of the Abingdon Press upon the title page of a book is a guarantee that between its covers the reader will find truth presented with clarity and interest—the very elements that cause a book to be remembered. Following are a few titles chosen from our extensive lists, any of which will amply repay a reading.

## A Reel of Rainbow

By F. W. Boreham

Another Boreham book. Original, epigrammatic, challenging. Fully maintains the author's wide reputation as a thinker and writer of unusual versatility and power.

Net, \$1.75, postpaid.

## Bergson and Personal Realism

By Ralph Tyler Flewelling

This new volume by Professor Flewelling is 1st—A critique of Bergson, showing his deficiencies on the side of the Philosophy of Religion.

2nd—A constructive discussion of Personal Realism, aiming to show that Personality is the supreme metaphysical and spiritual reality.

Net, \$2.00, postpaid.

## The Man Who Dares

And Other Inspirational Messages to Young People

By Leon C. Prince

An inspirational call to "Young America". A book of vision and life, incisively written, and portraying the essential values in graphic and forceful fashion.

Net, \$1.00, postpaid.

## The Rebirth of Korea

The Reawakening of the People: Its Causes, and the Outlook

By Hugh Heung-Wo Cynn

Principal Pai Chai Haktang, Seoul, Korea

"The entrance into English literature, and before the American public, of the Korean who wields such a facile and trenchant pen is an event of no small importance in the literary and political as well as the religious world. One of the elements of strength and durability is the chastened self-control of the writer. The book is bound to be an epoch-maker and to bring the pressure of the world's enlightened opinion to bear upon Japan."

—Wm. Elliot Griffis.

Illustrated. Net, \$1.50, postpaid.

## My Neighbor The Working Man

By James Roscoe Day

Chancellor of Syracuse University

A strong and trenchant discussion of present-day social and industrial unrest. The Syracuse Post-Standard says of it: "It will stand, no doubt, as the most forceful utterance of the present hour in support of the case of the employer as such, the representative of organized capital as such, the antithesis of all forms of modern industrial radicalism".

Net, \$2.50, postpaid.

Prices subject to change without notice.

## Do Twice the Work with Half the Effort

Edward Earle Purinton, world famous business Efficiency Expert, now tells you how.

At this very moment there are things on your desk which should be done immediately. You're going to do them all—when you can find time—but you never will until you learn the secret of getting things done with little effort.

This wonderful secret, which thousands of big business men are now using with amazing results, is disclosed in the Purinton seven manual course in Personal Efficiency. In seven hours of vitally interesting reading you will be able to apply to your daily life the whole of Mr. Purinton's remarkable ideas which literally makes supermen out of everyday men.

### Send No Money

Simply mail the coupon. We will send you charges prepaid, the complete Purinton Practical Course in Personal Efficiency. Keep it five days. Then if not satisfied, send it back and you owe nothing. If you are pleased it costs you only \$5.00 in full payment. Mail the coupon now, while you have the opportunity.

Name .....

Address .....

*Social Justice*, by Stephen Leacock. But all of these men are friendly to conservative labor unionism and social reform; as is also Ole Hanson in *Americanism versus Bolshevism*. Mr. Hanson opens his book with an account of the famous general strike which he did so much to suppress at Seattle, but soon ventures boldly into the general fields of history, politics and social theory to demonstrate the superiority of democracy to proletarianism. To find an extreme and unapologetic partizan of *laissez-faire* and capitalism it is necessary to turn to a striking book by the late Professor Sumner of Yale, *What Social Classes Owe to Each Other*, recently reprinted by Professor Keller. Here is the pure milk of the gospel, according to Herbert Spencer and the Manchester economists; here is a man with the courage (or rashness) to deny that the State "owes anything to anybody except peace, order, and the guarantees of rights." The whole fabric of social legislation is hewed down with one mighty blow of Professor Sumner's keen-edged ax. A weaker but almost equally extreme statement of the case against labor unionism is James Day's *My Neighbor the Workingman*.

There are also good books of the textbook and manual type: *Labor and Reconstruction in Europe*, by Elisha M. Friedman, giving concrete and compact information as to programs of industrial reform now projected in foreign countries; *An Introduction to Social Ethics*, by Professor Mecklin of Pittsburgh University; *Organized Labor in American History*, an historical essay by Professor Carlton of De Pauw University; *American Social Problems*, by Dr. Burch and Mr. Patterson, and *Problems of Labor*, compiled by Daniel Bloomfield for the Debater's Handbook Series.

Finally, there is a considerable group of books dealing intensively with industry and "getting right down to cases" on profit-sharing, factory management and welfare work: *When the Workmen Help You Manage*, by William Basset; *Industrial Administration*, consisting of an important series of lectures delivered at the University of Manchester by British economists and "efficiency engineers"; *The Six-Hour Shift*, by Lord Leverhulme, the British manufacturer who championed the six-hour work day by both preaching and practice; *The Industrial Republic*, by Paul Litchfield, giving an account of the Goodyear Rubber Company's experiment in shop self-government, and *Humanizing Industry*, a lecture on factory welfare work sugar-coated as fiction by R. C. Feld.

*The New Industrial Unrest*, by Ray Stannard Baker, Doubleday, Page & Co. *The Social Unrest*, 2 vols., by Dr. Lyman P. Powell. Review of Reviews Co. *Labor's Challenge to the Social Order*, by John Graham Brooks. Macmillan. *The Unfinished Programme of Democracy*, by Richard Roberts. Huebsch. *The New Social Order, by Harry F. Ward. Macmillan. Is Violence the Way Out?* by John Haynes Holmes. Dodd, Mead & Co. *The Unsolved Riddle of Social Justice*, by Prof. Stephen Leacock. John Lane Co. *Why Men Strike*, by Samuel Crowther. Doubleday, Page & Co. *Americanism versus Bolshevism*, by Ole Hanson. Doubleday, Page & Co. *What Social Classes Owe to Each Other*, by

William Graham Sumner. Harpers. *My Neighbor the Workingman*, by James Roscoe Day. Abingdon Press. *Labor and Reconstruction in Europe*, by Elisha M. Friedman. Dutton. *Introduction to Social Ethics*, by John M. Mecklin. Harcourt, Brace & Howe. *Organized Labor in American History*, by Frank Tracy Carlton. Appleton. *American Social Problems*, by Henry Reed Burch and S. Howard Patterson. Macmillan. *Problems of Labor*, by Daniel Bloomfield. Handbook Series. H. W. Wilson Co. *When the Workmen Help You Manage*, by W. R. Basset. Century. *Industrial Administration*. Manchester University lectures. Longmans. Green & Co. *The Six-Hour Shift*, by Lord Leverhulme. Henry Holt. *The Industrial Republic*, by Paul Litchfield. Houghton Mifflin. *Humanizing Industry*, by R. C. Feld. Dutton.

## A New Novelist

*Invincible Minnie* is an astounding person. It is no use to say that she is impossible; that is one of the most terrifying things about her, she isn't. Her creator, Elizabeth Sanxay Holding, calls her pure woman, woman unadulterated. Perhaps the idea is more clearly expressed if one says female. She is also the apotheosis of the terrible power of complacency, the worst of sins. Oh, no, you won't like Minnie, not in the least, but you will be thoroly fascinated by her; she is, with all her individuality, suggestive of so many people you know.

Then there is the weak and charming Lionel, whose destruction, as comprehensible as it is pitiful, is an extremely skilful piece of character drawing. There is Minnie's sister, Frankie, who strengthens Minnie's character by proving to you that the author isn't cynical after all, and there are Mr. Petersen and Horace and Julie and Miss Eppendorfer, all clear cut, definite, intensely interesting individuals. If you insist on plot in your novels there is plenty of that, quite unusual but perfectly convincing. Miss Holding knows how to write.

*Invincible Minnie*, by Elizabeth Sanxay Holding. Doran.

## The Critic Finds a Fortune

It is much more difficult to criticize a book you like enormously than one you dislike or enjoy mildly, just as it is easier to describe a casual acquaintance than your best friend. There is something about friendship which, while it does not blind you to faults, makes them appear relatively unimportant; and there is something illogical about friendship which makes it frequently impossible to explain just why you like the other person so much. You describe him to a third person by saying, "I like him and I think you will," which is just about the way we feel about Douglas Goldring's *The Fortune*. However, it is possible to be a little more explicit; there are several excellent reasons for liking it.

The story follows the usual lines of a modern English novel, public school, Oxford, the war; but in this case it ends in Ireland and has in addition the sanest, clearest, most convincing exposition of the conscientious objector's point of view that any writer of fiction has yet set forth. It ought to be read by the many people who have condemned the C. O., unheard, to outer darkness. It propounds, likewise an interesting theory that it was the "na-

tional cult of the gentleman" which was responsible for the war.

There may be plenty of people who do not like Douglas Goldring's novel, "The Fortune," because it deals with two of the questions on which we think with the most heat and the least reason: Ireland and the conscientious objector to war. But even tho you object violently to the author's attitude on these points you cannot fail to be impressed by his ability and skill, particularly in the drawing of unusual but very real and vivid characters. Consequently you will welcome with open arms *Margot's Progress*, in which you find the same skill without the dangerous problems. Maggie Carter started life behind the counter of a grocery store in Montreal. By dint of beauty, force of character, unlimited nerve and the happy expedient of changing her name to Margot Cartier she became a wealthy London hostess to whom duchesses said, "my dear." But she wasn't satisfied even then; she was too much of a person. She is an enormously interesting individual, and even the most New England conscience can't help rejoicing over the success of her utter ruthlessness and self-seeking. It is the kind of story which might easily be preposterous but is convincingly inevitable, and Margot isn't the only person in its pages who is worth meeting.

*The Fortune*, by Douglas Goldring. Scott & Seltzer. *Margot's Progress*, by Douglas Goldring. Seltzer.

### Cavaliers of the Steppe

*The Cossacks*, whose history is entertainingly related by Captain W. P. Cresson, former Secretary of the American Embassy at Petrograd, are a people little understood and, indeed, not easy to understand. Altho among themselves the most democratic of peoples, cherishing their ancient liberties with a tenacity that won important concessions from Russian Tsarism, they became the willing agents of autocracy for the oppression of others. Sprung from the submissive peasantry of southern Russia they constitute a class of warriors and adventurers comparable to the Norsemen of the Viking age. Barely civilized themselves, they brought civilization to the vast empire of Siberia.

So brief a history of a thousand years in the life of eastern Europe can make but little addition to the information of the special student, but Captain Cresson's work rests on the standard researches of French historians and the general reader can peruse it with confidence as well as with interest. A good English account of the Cossacks from the earliest times to the present has hitherto been lacking and should find a ready welcome with the American public.

Captain Cresson's book makes clear the important historical role of this indomitable race of Centaurs. By their revolt from Polish rule under Bogdan Hmelnitski, familiar to all readers of Sienkiewicz, they transferred the seat of power in eastern Europe from Warsaw to Moscow. Under Mazeppa they sustained the failing fortunes of King

## Less than a nickel a week

This is all that Swift & Company's profit cost the average American family in 1919.

Here are the figures and authorities for them.

The average consumption of meat per person for a year is about 180 pounds (U. S. Government).

The average American family is  $4\frac{1}{2}$  persons (U. S. Census).

Swift & Company's profit from all sources in 1919 average less than  $\frac{1}{4}$

cent per pound on all products including meat.

This averages for the family less than the price of—

1 cigar **per week** for father, or

1 street car fare **per week** for mother, or

1 package of gum **per week** for the children.

The complex service which we furnish the public is efficient and economical. The cost to the public in the shape of profit is too small to be noticeable in the family meat bill.

## Swift & Company, U. S. A.

Founded 1868

A nation-wide organization owned by more than 35,000 shareholders

## HOW TO USE THE INDEPENDENT IN THE TEACHING OF ENGLISH

This brochure prepared by Dr. Frederick Houk Law, Head of the English Department of the Stuyvesant High School, where nearly FIVE THOUSAND boys attend, is of special help to teachers of Oral Composition, Supplementary Reading, Public Speaking, Rhetoric, Journalism, Extempore Speaking and Oral Expression. It is free. Sending for it will not place you under any obligation. Address

THE INDEPENDENT

311 Sixth Avenue

New York

## SCHOOLS AND COLLEGES

Reopens Wednesday, October 6th

### The Veltin School FOR GIRLS

160 and 162 West 74th St., New York  
A Fireproof Sanitary School Building.  
Classes limited to twelve pupils.  
PRIMARY DEPARTMENT.  
GENERAL COURSE.  
COLLEGE PREPARATORY.  
Unusual advantages in French are offered  
in every class.

### UNION THEOLOGICAL SEMINARY

Broadway at 120th Street, New York City

The charter requires that "Equal privileges of admission and instruction, with all the advantages of the Institution, shall be allowed to Students of every denomination of Christians."  
Eighty-fifth year begins September 22, 1920.  
For catalogue, address

THE DEAN OF STUDENTS.

### Learn to Dance!

You can learn Fox-Trot, One-Step, Two-Step, Waltz and latest "up-to-the-minute" society dances in your own home by the wonderful Peak System of Mail Instruction.

New Diagram Method. Easily learned; no music needed: thousands taught successfully.  
Write for Special Terms. Send today for FREE information and amazingly low offer.  
WILLIAM CHANDLER PEAK, M. B.  
Room 531, 821 Crescent Place—Chicago, Ill.

### Training for Authorship

How to write, what to write, and where to sell.

Dr. Esenwein

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein, for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes: descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 20 cents; annual subscription \$2.00. Besides our teaching service, we offer a manuscript criticism service.

150-Page illustrated catalogue free. Please Address

The Home Correspondence School  
Dept. 304 Springfield, Mass.

ESTABLISHED 1897 INCORPORATED 1904

### DEAN ACADEMY

FRANKLIN, MASS.

54th YEAR

Young men and young women find here a home-like atmosphere, thorough and efficient training in every department of a broad culture, a loyal and helpful school spirit. Liberal endowment permits liberal terms, \$375—\$475 per year. Special course in Domestic Science.

For catalogue and information address

### New Invention

IMPROVES YOUR

### ENGLISH In 15 Minutes a Day

Sherwin Cody, the well-known teacher of practical English, has perfected a new patented invention which, in 15 minutes of your daily spare time, will quickly give you unusual command of language. Students of this "100% Self-Correcting Method" secured more improvement in five weeks than had previously been obtained by other pupils in two years. 15 minutes each day of YOUR spare time can now, thru Sherwin Cody, make you speak or write clearly, forcefully, correctly, and convincingly.

#### "100% Self-Correcting Course"

The average person in business is only 61% efficient in the vital points of English grammar. That is because the methods of teaching English in school left the student only a hazy idea of the subject—the "rules" did not stick in his mind. But Sherwin Cody's new invention upsets all old standards of teaching English. And it overcomes the only weak point in instruction-by-mail. It actually takes the place of an instructor at your elbow. It assigns you lessons in Letter Writing, Spelling, Punctuation, Grammar, Reading and Conversation, corrects them for you, and anticipates your questions. It even guides your paper and assigns you your class percentage till you reach the 100% mark.

#### Interesting Free Booklet

Mr. Cody has written an interesting booklet explaining his new course in detail. If you feel your lack of Language Power, if you are ever embarrassed by mistakes in grammar, spelling or punctuation, if you cannot command the exact, correct words to express your ideas, this booklet will be a revelation to you. Send for it now. Learn how Sherwin Cody's new invention makes command of language easy to gain in 15 minutes of your daily spare time. Mail a letter or postcard for this booklet, at once!

SHERWIN CODY SCHOOL OF ENGLISH  
Dept. 199, News Building, Rochester, N. Y.

Charles of Sweden in his war with Peter the Great. Today the Cossacks are the military backbone of the Republic of the Ukraine and the bulwark of resistance to Bolshevism in southern Russia and western Siberia.

The book contains a map of Cossack settlements and some well selected illustrations. We like best the frontispiece showing the Cossack chieftains composing their letter of defiance to the Sultan. We cannot forbear the pleasure of quoting this letter, as a model of a certain type of diplomatic correspondence:

Thou Turkish Devil!

Brother and Companion of Lucifer himself! Who dares call himself Lord of the Christians—but is not! Babylonish cook! Brewer of Jerusalem! Goat-Keeper of the herds of Alexandria! Swineherd of Great and Lesser Egypt! Armenian Sow and Tartar Goat! Insolent Unbeliever!

May the Devil take you! The Cossacks refuse every demand and petition that you now make to them—or that you may in future invent.

Thank us for condescending to answer you!

*The Cossacks, Their History and Country,*  
by W. P. Cresson. Brentano.

### Black Magic

Could you imagine an explanation which would account at one fell swoop for the great war, psychic phenomena, bolshevism, anarchy and the influenza? That is what Robert W. Chambers has done in *The Slayer of Souls*. It is a marvelous bit of invention and it makes a story full of mystery and excitement and thrills, tho you are never thoroly breathless, you are too sure in each struggle that the right woman will win. There is plenty of the exotic, luxurious atmosphere, devil worship and gold-clad temple girls, that Mr. Chambers always spreads thickly over his tales. It is a well told story, but Mr. Chambers, our most shining example of a debased talent, can write better than he does here.

*The Slayer of Souls*, by Robert W. Chambers.  
George H. Doran Co.

### German Spies—And Others

Many prophecies have been made and theories advanced about the effect of the great war on literature, but there is one field in which its quickening influence cannot possibly be disputed, what a boon the German spy has been to the insatiable reader and the weary inventor of mystery stories. Melville Davisson Post is responsible for certain very subtle German spies whose activities are recorded in some of the excellent stories in *The Mystery at the Blue Villa*. There are a lot of other people in the book; strong Englishmen, with a flavor of Kipling about them, who adventure in Egypt and India; wicked and beautiful ladies; Americans of various castes and shades. The stories are well told and the people have much more character and individuality than is usual among inhabitants of mystery tales.

Prussian spies and British noblemen and New York society folk weave the tangled plot of a more than ordinarily

## Stop the Leaks That Keep You Poor

Saving money is hard work until you get the secret. No matter how large or how small your income you will never save as much as you should until you get the knack.

If the average business were operated on the haphazard basis on which our household finances are run, there would be fifty times as many bankrupts. The truth, whether we admit it or not, is that very few families know where their money goes. At the end of each year we find ourselves little better off, if any, than at the beginning. We have earned \$800 or \$1,500 or \$5,000, yet practically all has been spent—and the pitiful part of it is we have nothing to show for it!

New Method Makes Saving a Pleasure Instead of a Hardship

If you are interested, write for free booklet called "How We Stopped the Leaks That Kept Us Poor."

THE INDEPENDENT, 311 Sixth Avenue, New York

entertaining detective story in *Pollyoos Dances*, by Edgar Jepson. Pollyoos herself is a dangerously fascinating young dancer with red hair, who is as clever as she is beautiful—and that, the author would have us believe, is praise indeed!

*The Mystery at the Blue Villa*, by Melville Davison Post, D. Appleton & Co. *Pollyoos Dances*, by Edgar Jepson. Duffield & Co.

## Good Stories

**KATHLEEN**, by Christopher Morley (Doubleday, Page & Co.). A gentle farce, impossible but entertaining.

**JOY IN THE MORNING**, by Mary Raymond Shipman Andrews, (Scribner's Sons.) Sentimental war stories well told.

**ON THE MAKALOA MAY**, by Jack London (Macmillan Co.). Some hitherto unpublished stories overflowing with the rich local color of Hawaii.

**BENJY**, by George Stevenson (John Lane Co.). A calm tale; the story of a Victorian couple and their numerous offspring; interesting incident and fairly interesting characters, but no particular point.

**THE LADY FROM LONG ACRE**, by Victor Bridges (G. P. Putnam's Sons). A lively romance of a runaway queen, an English millionaire; a musical comedy actress and several villains in an imaginary kingdom.

**HIS FRIEND AND HIS WIFE**, by Cosmo Hamilton (Little, Brown & Co.). A society tragedy-comedy set in a wealthy commuting colony in Connecticut. The background, cleverly and entertainingly sketched, is very much better than the overdrawn story.

**UNCLE SAM OF FREEDOM RIDGE**, by Margaret P. Montague (Doubleday, Page & Co.). The short story which President Wilson wished every American to read if he would understand the meaning of the League of Nations in terms of the honor of America.

**TRIMMED WITH RED**, by Wallace Irwin (George H. Doran Co.). Most people wail and gnash their teeth over Bolshevism; Wallace Irwin laughs uproariously at it. His tale of parlor Bolsheviki in Greenwich Village and on Long Island is pure farce, but most of it is really funny.

**PEACE IN FRIENDSHIP VILLAGE**, by Zona Gale. (Macmillan Co.) Americanization and after-the-war-what stories, plus a few others, all set in a typical small town; sentimental, but sincere, amusing and endowed with a good deal of shrewd psychology and good character drawing.

**THE SKELETON KEY**, by Bernard Capes (George H. Doran Co.). A murder mystery by a man who, as G. K. Chesterton says in his introduction, "always gave a touch of distinction to a detective story or a tale of adventure; and so gave it where it was not valued because it was not expected."

**THIS MARRYING**, by Margaret Culkin Banning (George H. Doran Co.). A good average modern story about an attractive average modern girl who comes out of college with plenty of youthful enthusiasm and a wholesome desire for romance. She finds it in her job, in her friends, in her lovers.

**AT FAME'S GATEWAY**, by Jennie Irene Mix (Henry Holt & Co.). The story of Josephine Prescott, whom Parksburg, Ohio, sent to New York to become a great pianist. A moral tale but interesting, it has a lot of musical good sense and is highly to be recommended to the concert-stage struck girl.

**LADYFINGERS**, by Jackson Gregory (Charles Scribner's Sons). All the world loves a crook if he is also an artist and a gentleman and Ladyfingers is a very charming specimen, but, alas, he begins to reform far too near the beginning of the story and becomes so noble that he is a little hard to bear.

**TUTT AND MR. TUTT**, by Arthur Train (Charles Scribner's Sons). Mr. Tutt is the successful result of an attempt to do that dangerous thing, create a character. Arthur Train's stories of the lean, lank lawyer and the things he did to the law in the conduct of his curious cases are good reading.

**THE CRUISE OF THE "SCANDAL"** AND OTHER STORIES, by Victor Bridges (Putnam). Those who think the art of writing short stories is peculiarly American should read Victor Bridges' *The Cruise of the "Scandal"*. Here is an English author who is satirical, keenly observant and above all humorous. "Squarky-Woo" is a funny little story, the tale of a mouse, penned with so light a touch as to almost conceal its moral.

# W. L. Douglas

THE SHOE THAT HOLDS ITS SHAPE

\$7.00 \$8.00 \$9.00 & \$10.00 SHOES

FOR MEN AND WOMEN

YOU CAN SAVE MONEY BY WEARING  
W. L. DOUGLAS SHOES

The best known shoes in the world. They are sold in 107 W. L. Douglas stores, direct from the factory to you at only one profit, which guarantees to you the best shoes that can be produced, at the lowest possible cost. W. L. Douglas name and the retail price are stamped on the bottom of all shoes before they leave the factory, which is your protection against unreasonable profits.

W. L. Douglas \$9.00 and \$10.00 shoes are absolutely the best shoe values for the money in this country. They are made of the best and finest leathers that money can buy. They combine quality, style, workmanship and wearing qualities equal to other makes selling at higher prices. They are the leaders in the fashion centers of America. The stamped price is W. L. Douglas personal guarantee that the shoes are always worth the price paid for them. The prices are the same everywhere; they cost no more in San Francisco than they do in New York.

W. L. Douglas shoes are made by the highest paid, skilled shoemakers, under the direction and supervision of experienced men, all working with an honest determination to make the best shoes for the price that money can buy.

W. L. Douglas shoes are for sale by over 9000 shoe dealers besides our own stores. If your local dealer cannot supply you, take no other make. Order direct from factory. Send for booklet telling how to order shoes by mail, postage free.

**CAUTION.—Insist upon having W. L. Douglas shoes. The name and price is plainly stamped on the sole. Be careful to see that it has not been changed or mutilated.**

## The Poison of Bolshevism

(Continued from page 297)

It is necessary for us, the intelligentsia, to go voluntarily and in all sincerity wherever the Soviet Government would send us, and to serve in that capacity to the best of our ability. It is necessary to do what Brusilov asks the officers to do. There is no doubt that the officers will enter the service wholeheartedly. It is necessary that we, the educated people of Russia, the Russian intelligentsia, should do in the rear, on the front of labor, what the officers are doing on the battle front. The Russian officers have found a place for themselves in the present-day Soviet Russia, and it is necessary for the intelligentsia to do the same thing.

It is not known what effect Professor Gredeskul's appeal has had upon the intelligentsia in Russia. It is doubtful, however, that it should meet with anything like a complete approval on the part of the majority of the intelligentsia. What Professor Gredeskul asks the intelligentsia to do now, is to forget all the insults and persecutions and tortures with which it has been terrorized by the Soviet régime in the course of the past two and a half years, and to begin to serve this régime for the purpose of establishing in Russia a Socialist state. He asks the Russian intelligentsia to do for the cause of what he considers the Socialist ideal, a thing which not a single Socialist group in Russia is willing to do, viz., to lend its prestige and its support to a realization of the Communist program which is so unmistakably doomed to failure.

When the Russian Mensheviks, despite everything, still consider that Bolshevism is impossible and that what it brings with it is anything but socialism, it would, indeed, be strange to expect the intelligentsia to lend its support in the name of the Socialist cause to what the Communists are doing. At one of the last Menshevik Congresses, Leo Deutch, the veteran leader of the Russian social democracy, said:

As long as there remains in me but one drop of common sense, I cannot go hand in hand with the Soviet ideologists, for according to my deep conviction the transition from the capitalistic system to a communistic order is absolutely impossible at the present time.

There is no doubt that as far as the Polish invasion was concerned many of the Russian intelligentsia have forgotten everything that had gone before and have done their share in saving Russia from the danger which threatened her. But as for the complete capitulation to the Soviet régime, such as is proposed by Professor Gredeskul, it is not likely that his appeal will find a very cordial response.

The Bolsheviks realized long ago that they would not be able to organize anything in Russia, unless they obtain the support and the services of the intelligentsia, of the educated men and women and of the specialists in the various fields. They have been doing everything to cajole or compel the intelligentsia to come to them. But their success has not been very great.

It is very characteristic of the supreme arrogance which the Bolsheviks still maintain that they want of the intelligentsia not collaboration, but submission. They do not admit the intelligentsia on a footing of equality in the political and economic life of the country. They still preserve in its entirety the system of party dictatorship which they continue to call the dictatorship of the proletariat. They have crushed the intelligentsia, and now they demand its moral surrender.

The position of the officers is different. Whether or not Brusilov and the other generals were actuated by any ulterior motives, it is impossible to tell. But whether they were or not, their work requires of them to serve that Government which makes at least an attempt at protecting the country when threatened by foreign military danger. For them a revolution that still leaves them to do their patriotic duty is merely a change of masters.

Not so with the intelligentsia. It has fought for generations against the injustices and the iniquities of the imperial régime. It refused to accept the imperial régime and to submit to it, and it swelled the ranks of the revolutionary movement. It is inconceivable that it should now submit to the Soviet régime, which has restored all the evils of its imperial predecessor in an infinitely worse form.

A very interesting reply to Professor Gredeskul has been given by Vladimir Bourtssev, the veteran revolutionary, now a bitter opponent of the Soviet régime, in an article published in his Paris newspaper, *The Common Cause*, entitled, "If You Are Slaves, Do Not at Least Become Lackeys!" Bourtssev says:

Gredeskul's letter proves to us that he and those like him have now gone far beyond that to which they are compelled by their involuntary enslavement; they now voluntarily transform themselves into lackeys of the Bolsheviks.

In introducing the subject matter of his article, Bourtssev quotes the words of an intellectual who had escaped from Soviet Russia, and in speaking of the boundless cynicism which the Bolshevik régime had introduced in Russian life, he said of the intelligentsia:

The worst is not that the Bolsheviks force starvation upon us; not that they make us freeze almost to death. The worst is that they have made such scoundrels out of us.

Some of the intelligentsia will, undoubtedly, accept Bourtssev's bitter argument; some will, doubtless, follow Professor Gredeskul; the majority will, most probably, remain as at present: crushed and humiliated, but still in more or less passive opposition to the régime that has ruined Russia and them. The Bolsheviks have made the most of the grave national crisis for the purpose of advancing their propaganda. Whether there are any appreciable results, and in what direction, remains to be seen.

## Pebbles

They had hash on Monday for dinner,  
after a roast of beef on Sunday, as hap-  
pens in all well-regulated families. Father  
had said grace, when Bobbie said:

"I don't see why you asked another  
blessing this evening, father. You did it  
yesterday over this. It's the same old stuff."  
—*Ladies' Home Journal*.

It was midnight on the ocean,  
Not a street car was in sight;  
The sun was shining brightly,  
For it rained all day that night.

We walked along a country road  
In a city dry and dusty,  
And piling thru the awful mud  
Sure made our axles rusty.

We came upon a farmer's house,  
No dwelling could we see;  
The busy farmer plowed his field,  
An idle man was he.

'Twas a zero day in summer,  
The rain felt just like glass,  
A barefoot boy with shoes on  
Stood sitting in the grass.

We asked him for some water,  
He brought us wine instead;  
"Miracles will never cease."  
The deaf and dumb boy said.  
—*Sun Dial*.

## Dad to Daisy

DAISY DEAR—It is wonderfully gratify-  
ing to see you finding yourself as you are.

I sent you the subscription to The Inde-  
pendent because, while I think your brother's  
interest in the questions of the day  
quite natural, I am just old-fashioned  
enough to take great pride in having a  
daughter who can discuss politics, baseball  
and Irish home rule as ably as you can.

The Independent is a healthy mental  
tonic because it presents the facts and news  
on the doings of the day, not simply as  
news, but in their relation to the history  
of the past that we have all studied or are  
studying.

Be sure to follow particularly the Mes-  
sages of Five Nations to the American Peo-  
ple because the prominent men of our na-  
tional neighbors who write these messages  
present their side of the international ques-  
tions that affect us all, in a way that no  
American could.

Did you notice Preston Slosson's article  
in the July 3 issue entitled "Great Men  
and Great Work"? It is a little eight para-  
graph classic that explains why some nota-  
bles are taken up in history, biography and  
fable so much more extensively than others.  
If you missed it be sure to look it up. It  
is one of those rare gems of thought that  
go to make The Independent, The Inde-  
pendent.

Your reading should either give you a  
thought or prompt a thought and from that  
standpoint I find The Independent an ideal  
publication, and I am very glad that you  
like the magazine so much. See to it that  
you always find time to read it, girlie.

Affectionately,

DAD

## Remarkable Remarks

W. L. GEORGE—Divorce is often a rather  
decent thing.

MADAME NAZIMOVA—Every night I read  
before I sleep.

REV. GEORGE CHALMERS RICHMOND—  
God bless you, Gene Debs.

ROSCOE GILMORE STOTT—Most red-  
blooded lads hate the classics.

GOVERNOR COX—I thank God that as  
your president I will be a free man.

CLINTON W. GILBERT—Cox does not  
follow genteel traditions in politics.

CHARLES E. HUGHES—The world can-  
not survive unless America survives.

QUEEN MARIE OF ROUMANIA—As a  
child I was taught to live for others.

ROY K. MOULTON—I never read letters  
that come in open faced isinglass envelopes.

DAVID W. GRIFFITH—Love of appro-  
bation is next to the law of self-preservation.

BERTRAND RUSSELL—Men hate the pain  
of thinking more than they hate the pain  
of death.

CARDINAL GIBBONS—I regret very much  
that the women have taken the plunge  
into the deep.

LADY DUFF-GORDON—What is the sense  
of being slaves to fashions that only reveal  
your ugliness?

BERNARD SHAW—The Lord Mayor is  
the sort of a martyr who burns with a  
bright, very fiery flame.

E. H. MOORE, DEMOCRATIC COMMITTEE-  
MAN FROM OHIO—Cox has nailed the  
Republicans to the cross.

CANON E. A. BURROUGHS—The human  
soul is forming the conviction that the  
whole war was a gigantic mistake.

F. L. MULFORD—It is important that  
the home should be carefully arranged so  
as to give the most helpful influences.

H. W. NEVINSON—Outside Russia I  
have never seen a people so unpunctual,  
so indifferent to time, as the Americans.

JOHN CHAPMAN HILDER—One of the  
most difficult problems a man is called  
upon to solve is the kind of collar to  
wear.

BEATRICE FORBES-ROBERTSON HALE—  
The modern woman is very largely still  
nothing but a shop window for her hus-  
band's success in life.

COMMISSIONER WALLIS—I've been try-  
ing for five weeks to find a girl to do  
general housework in my home and a boy  
to clip the hedges in the home of a friend,  
and haven't succeeded.

GEORGE LANSBURY—There is not a  
single minister of religion remotely ac-  
quainted with public affairs but is well  
aware of the fact that the Socialist Re-  
public of Russia in its dealings with other  
nations in the most pacific and Christian  
of all Governments, either in Europe or  
America.

*Hinges!* A clumsy world it would be without them. Human invention has never devised a substitute. In a simple way they perform an important task with the greatest possible efficiency. ❧ ❧ ❧ In the realm of business the Mimeograph is an important hinge, upon which the door of opportunity swings open to larger fields of service and profit. With its help five thousand beautifully printed copies of a letter may be ready for mailing within an hour—forty and more thousands a day. The work is done at negligible cost and privately; if need be, under your intimate supervision. A remarkable economy is the Mimeograph, for the rapid reproduction of all kinds of typewriting, handwriting, drawings, etc., for development work inside and outside of the organization. Get new booklet "E-9" from A. B. Dick Company, Chicago—and New York.

## By Their Laws We May Know Them

A Careful Comparison of  
Governor Cox and Senator  
Harding in Their Careers  
as Legislators

By Susan Brown Bristol

© Underwood & Underwood

Warren G. Harding

WITH campaign propaganda confusing and bemuddling the issues, the facts concerning the candidates are not easy to obtain. A man's position in the past may logically be regarded as an index to the future. Therefore to arrive at any conclusion or even guess as to what may be expected of Governor Cox or Senator Harding as President, it may be well to study the history of each as revealed thru official records.

What has each candidate done? On important issues, what is his attitude? Is he a party man, or independent? Has he initiated constructive measures? Has he defended important legislation? On international matters, has he given evidence of his realization of the existence of a world as well as of a nation? In a word, is he reactionary? Is he progressive?

In the following paragraphs, the Republican and Democratic presidential candidates speak for themselves on important issues, thru their recorded votes in Congress and thru excerpts from speeches delivered both before and after each had accepted the nomination for the presidency.

James M. Cox entered the House of Representatives on March 4, 1909. He resigned on January 8, 1913, to become Governor of Ohio. During his term of practically four years as Congressman he introduced in the House 930 bills and joint resolutions.

Warren G. Harding entered the United States Senate on March 4, 1915. From that date until the adjournment of Congress, June 5, 1920, five years, he introduced in the Senate 136 bills and joint resolutions.

These measures are classifiable as follows:

	Governor Cox (House)	Senator Harding (Senate)
Pensions .....	871	88
General pension bills .....	2	..
Relief of organizations or individuals..	22	27

Public buildings .....	6	..
Miscellaneous local bills .....	..	3
Remove charges of desertion .....	21	..
Change names of vessels .....	..	5
Restore to active list of the army.....	1	..
Perpetuate site of fort .....	1	..
Medical Corp appointment .....	..	1
Public .....	6	12

Total number bills and joint resolutions introduced .....	930	136
---	-----	-----

Of the 930 measures presented in the House by Cox Governor Cox, 871, 93.6 per cent, are pension bills. (This total does not include the two general pension measures.)

Of the total number of measures presented aside from these, only six, or 0.64 per cent, could be classified as public, as distinguished from private or local—an average of 1.5 public bills per year.

Public measures introduced in the House by Governor Cox included bills or joint resolutions as follows:

To make trade agreements with foreign nations.

To create a commission to inquire into the subject of old age civil pensions.

To regulate employment of minor children in the District of Columbia.

To prevent the desecration of the flag of the United States. (He introduced two bills relating to this subject.)

To distribute the surplus in the United States Treasury for the improvement of public roads.

(The two general pension bills mentioned in the table above have a certain claim to classification as public bills. These provide for the determination of length of service rendered by soldiers and sailors of the Civil War, and for granting pensions to certain classes of persons who served in the Civil War and in the war with Mexico.)

© Keystone View

Senator Harding looks much more aggressive in this campaign photograph than is evident from his Congressional record. During his five years in the Senate he has been a follower, a consistent follower, of Senator Lodge

Of the 136 measures presented in the Senate by Senator Harding, 88, 64.7 per cent, are pension bills.

Of the total number of other measures presented only 12, or 8.8 per cent, could be classified as public, as distinguished from private or local—an average of 2.4 public bills per year.

Public measures introduced in the Senate by Senator Harding included bills or joint resolutions as follows:

To encourage teaching of Spanish in the United States.

To provide for the free use, for military drill, of any discarded rifles to duly accredited camps of the Sons of Veterans Reserve.

To amend the act providing for the prevention of the extermination of fur-bearing animals in Alaska. (He introduced two bills relating to this subject.)

To authorize the appointment of an American Battle-field Commission.

To adjudicate the claims of Cherokee, Creek and Seminole Indians.

To provide for payment of members of local draft boards serving also as clerks of such boards.

To provide for the investigation of influenza and allied diseases.

To amend the National McKinley Memorial Birthplace Association Act.

To provide for a celebration of the anniversary of the Pilgrims.

To provide for the loaning of tents during the summer months of 1920 to relieve the housing situation.

To provide suitable memorials for persons who lost their lives while in the military or naval forces of the United States during the war with Germany.

#### LEAGUE OF NATIONS

On the great international question of the League of Nations, Governor Cox said in a signed article that appeared in the *New York Times* of May 23, 1920:

"No one contends that it [the Covenant] is a perfect document, but it is a step in the right direction. It would put the loose ends of civilization together now and do more toward the restoration of normal conditions in six months' time than can the powers of

the earth, acting independently, in ten years' time."

In his speech of acceptance, referring to a possible separate peace with Germany, Governor Cox said:

"This would be the most disheartening event in civilization since the Russians made their separate peace with Germany, and infinitely more unworthy on our part than it was on that of the Russians. . . .

"In short, America, refusing to enter the League of Nations (now already established by twenty-nine nations) and bearing and deserving the contempt of the world, would submit an entirely new project. This act would either be regarded as arrant madness, or attempted international bossism. . . .

"These are fateful times. Organized government has a definite duty all over the world. The house of civilization is to be put in order. The supreme issue of the century is before us and the nation that halts and delays is playing with fire. The finest impulses of humanity, rising above national lines, merely seek to make another war impossible."

Quoting the position of his party, as expressed in the platform, Governor Cox continued:

"We advocate immediate ratification of the treaty without reservations which would impair its essential integrity, but do not oppose the acceptance of any reservation making clearer or more specific the obligations of the United States to the League associates."

He then quoted two paragraphs from his signed article in the *New York Times* giving his interpretation of the Covenant:

"In giving its assent to this treaty the Senate has in mind the fact that the League of Nations, which it embodies, was devised for the sole purpose of maintaining peace and comity among the nations of the earth and preventing the recurrence of such destructive conflicts as that thru which the world has just passed. The coöperation of the United States with the League and its continuance as a member thereof will naturally depend upon the adherence of the League to that fundamental purpose. . . .

"It will of course be understood that in carrying out the purpose of the League the Government of the United States must at all times act in strict harmony with the terms and intent of the United States Constitution, which cannot in any way be altered by the treaty-making power."

Continuing, he said:

"The first duty of the new administration clearly will be the ratification of the treaty. The matter should be approached without thought of the bitterness of the past. The public verdict will have been rendered, and I am confident that the friends of world peace as it will be promoted by the League will have in numbers the constitutional requisite to favorable senatorial action."

Concerning any changes which would affect the vital principle of the League, Governor Cox said:

"Unquestioned friends of the League have made other proposals. Our

Clinedinst

As a Congressman Governor Cox is described as the facile politician inclined to an interest in progressive policies. As Governor of Ohio, however, he has comprehended the problems of the people and has provided solutions for them

© Keystone View

Governor Cox believes in taking the bull by the horns. In the four years that he was a member of the House of Representatives he introduced 930 bills and joint resolutions, as against 163 sponsored by Senator Harding during five years in the Senate

platform clearly lays no bar against any additions that will be helpful, but it speaks in a firm resolution to stand against anything that disturbs the vital principle.

"We hear it said that interpretations are necessary. That may be true, but they will at least be reassuring to many of our citizens, who feel that in signing the treaty there should be no mental reservations that are not expressed in plain words, as a matter of good faith to our associates. Such interpretations possess the further virtue of supplying a base upon which agreement can be reached, and agreement, without injury to the Covenant, is now of pressing importance."

Senator Harding's record in the Senate shows him as voting, whenever he voted on the subject of the Treaty, with Senator Lodge and his group. On November 19, 1919, he voted for the Lodge reservations. On March 19, 1920, when the Lodge reservations were again voted upon, Senator Harding is recorded as not voting. With Senator Lodge, he voted in favor of the Knox resolution declaring peace with Germany at an end.

Explaining his vote in favor of ratification with the Lodge reservations, he said:

"I have not liked this Treaty; I think, as originally negotiated, it is the colossal blunder of all time; but recognizing the aspirations of our own people and the people of the world to do something toward international coöperation for the promotion and preservation of peace and a more intimate and better understanding between nations, I have wished to make it possible to accept this Covenant. . . .

"If this ratification is made with the reservations which have been adopted, there remains the skeleton of a league on which the United States can, if it deems it prudent, proceed in deliberation and calm reflection toward the building of an international relationship which shall be effective in the future. . . .

"We have traded away America's freedom of action in order to establish a supergovernment of the world, and it was never intended to be any less. I speak for one who is old-fashioned enough to believe that the Government of the United States of America is good enough for me."

As presidential candidate, in his speech of acceptance, on July 22, Senator Harding said:

"Our party means to hold the heritage of American nationality unimpaired and unsundered."

"The world will not misconstrue. We do not mean to hold aloof. We do not mean to shun a single responsibility of this republic to world civilization."

Earlier, however, referring to aid for Armenia, Senator Harding had said in the Senate:

"I am not insensible to the sufferings of Armenia. . . . But I am thinking of America first. Safety, as well as charity, begins at home. Selfishness? No. It is self-preservation. Measureless as our resources are . . . we are not strong enough to assume sponsorship for all the oppressed of the world. . . . We in America have the republic to preserve."

Realizing that there is an "insistent voice" for peace which refuses to be silenced, and that this demand must be met, Senator Harding, in his speech of acceptance, proposes, in these words, an unexplained "Association of Nations":

"Heeding this call and knowing as I do the disposition of Congress, I promise you formal and effective peace so quickly as a Republican Congress can pass its declaration for a Democratic executive to sign. . . .

"I can speak unreservedly of the American aspirations and the Republican committal for an association of nations, coöperating in sublime accord, to attain and preserve peace thru justice rather than force, determined to add security thru international law, so clarified that no misconstruction can be possible without affronting world honor. . . .

"It is better to be the free and disinterested agent of international justice and advancing civilization, with the covenant of conscience, than be shackled by a written compact which surrenders our freedom of action and gives a military alliance the right to proclaim America's duty to the world. . . .

"... With a Senate advising as the Constitution contemplates, I would hopefully approach the nations of Europe and of the earth, proposing that understanding which makes us a willing participant in the consecra-

tion of nations to a new relationship, to commit the moral forces of the world, America included, to peace and international justice, still leaving America free, independent and self-reliant, but offering friendship to all the world."

On August 28, in a "front-porch" speech, Senator Harding made a public pronouncement concerning the League, and stated his *latest* position on the "Association of Nations":

"It is not uncommon," said he, "for the advocates of the League of Versailles to contrast unfavorably The Hague tribunal upon the ground that the tribunal 'lacks teeth.'"

"Very well, then, let's put teeth into it. If, in the failed League of Versailles there can be found machinery which the tri-

© Underwood &amp; Underwood

Senator Harding is not thrilled by such issues as Prohibition and Woman Suffrage. Toward them his attitude has wavered. But there is one thing on which his mind is quite made up—he is for America first, foremost and all the time

[Continued on page 355]

# Go North, Young Man!

A Message from the United States Government to the American People

By John Barton Payne

Secretary of the Interior

**A**LASKA'S imports and her exports, the measure of her trade with the world outside, have fallen off. Her white population has dropped from 50,000 in 1915 to 36,000 in 1920. These are not the signs of a healthy Alaskan development. What is the matter with Alaska?

I had been asked the question so often that I decided to go to Alaska and search for the answer. It is, there is nothing the matter with Alaska. Alaska has gold, coal, copper, oil, lumber and food products in abundance. The United States needs these things—needs them badly. The Alaskan storehouse is there waiting to be unlocked. It cannot unlock itself. Only the United States can turn the key.

What does Alaska need to make its riches available for our use? Principally it needs men—men of the right kind who will go to Alaska and stay there and work for the upbuilding of the country. And men need women. The thirty-six thousand whites now there—no more than the population of a small American city—are not equal to the task of developing a territory one-fifth the area of the entire United States.

The war took from Alaska 3000 of her best—her youngest and her hardiest—men to fight in the armies of the United States. Other thousands were attracted back to the states by the high wages being paid in the Pacific Coast shipyards and other war industries. The shortage of labor boosted wages in Alaska and gold could not be mined with the same profit as before. Copper mining took up the men who could no longer find employment in the gold fields, but with the ending of the war and the fall in copper prices these operations slackened. The war was not good for Alaska. War never helps in the development of frontier territory.

Alaska needs an understanding of her present problems by the people and the Government of the United States. When the men and women of this country understand her problems and know her opportunities, Alaska will not want for development.

The romantic picture that has been painted of Alaska, showing it as a land

*Underwood & Underwood*

Red top grass which in the United States grows to a height of eighteen inches, in Alaska often attains a growth of six feet and three inches.

I gathered this sheaf myself

*International*

Lest Alaska forget their visit, sailors from the Destroyer "McCawley" swung from the high cliff at the entrance of Skagway Harbor and painted the name of their ship on the cliff's sides

of ice and snow where only the hardest gold hunters can survive, has done incalculable injury to Alaska and greatly retarded its development. America needs a new picture of this half-forgotten land. A trip to Alaska is a revelation. Alaska is a picture.

Less than two days out of Seattle the destroyer upon which I traveled with Secretary Daniels put in at Ketchikan. From there we followed the narrow strip of coast belonging to the United States a distance of some five hundred miles to Yakutat Bay, stopping on the way at Juneau, one of the oldest of the coast towns and the capital of Alaska. We saw a most unusual coast line, indented with hundreds of bays whose waters were deep and filled with fish. The mountains we could see were covered up to the timber line with a luxuriant growth of spruce, with some hemlock and a little cedar mixed in. In the low places there was birch and cottonwood.

In Yakutat Bay there was a little ice, broken off from the glaciers that line its shores, but elsewhere none. There was snow only on the tops of the mountains. The valleys were filled with wild flowers. We watched the amazing Malaspina glacier for hours. It comes right down to the water and extends in an unbroken line for sixty miles along the coast.

From the deck of the destroyer one morning when the mist cleared we got our first view of Mount St. Elias, rearing its snow covered head into the heavens, 18,000 feet above the level of the sea. From this peak the Alaskan-Canadian border runs straight north to the Arctic Ocean. Superlatives are inadequate to describe its beauty. Unlike the peaks of the Rocky Mountains, which are viewed from an elevation of 5000 to 6000 feet, Mount St. Elias rises straight from the sea, and its grandeur is thereby enhanced. Were there no others, this sight alone would amply repay the tourist for the journey.

Alaska lies in about the same latitude as the Scandinavian peninsula, but no greater mistake could be made

than to judge its climate by the map. What the Gulf Stream does for Great Britain and Ireland and Norway, the Japan current does for the Pacific coast of Alaska. The ice is out of the rivers by the end of May. The days are very long so that the growing season, while short in months, is relatively long in hours.

There are two well developed farming areas, the Matanuska region near Anchorage and the territory tributary to Fairbanks. It is of these sections and the "sour dough" farmers who inhabit them that I am thinking principally when I speak of Alaska's need for women. These men in most instances did not go to Alaska to farm. They went to dig gold and make a quick get-away. Tho they were unsuccessful as prospectors they liked Alaska and settled down to farming there. The most of them are unmarried. They need wives.

The most of the produce of Alaskan farms is used for home consumption. The soil is very rich. In the valleys and on the hillsides wheat, oats, barley, buckwheat and vegetables thrive. Potatoes are raised in particularly large quantities. I gathered and was photographed with a sheaf of red top grass. In the United States this forage crop grows to a height of eighteen inches. In Alaska it attains a growth of six feet three inches.

The mineral resources awaiting exploitation in Alaska are enormous. There has been intensive development only in the gold fields. Traveling on the Government railroad up from Seward, Secretary Daniels and I inspected several coal mining properties in the Matanuska region.

We were particularly interested in the Chickaloon project, where a Congressional appropriation of \$1,000,000 is being used to dig coal for the navy. The coal is equal in quality to the Pocahontas variety of West Virginia, tho much of it has to be washed. In the Nenana field, north of this, there is a vein of lignite thirty feet thick. A railroad car can be run into the mine and the coal taken out with a steam shovel.

The establishment of a coaling station in the Aleutian Islands for naval and merchant vessels is feasible. Alaska's mines will be able with further development it is believed to supply the coal needed for shipping on the Pacific coast. By coaling at the Aleutian Islands each 8800 ton vessel sailing to or from the Orient can add more than 1000 tons to its space available for cargo. Approximately \$40,000 would be added to the earnings

of each such vessel on every round trip, and with five round trips a year, the increased earnings for each vessel per year would amount to some \$200,000.

One of Alaska's most pressing needs is additional transportation facilities. Freight and passenger rates have been greatly increased by the two American and one Canadian steamship companies serving Alaska since 1914. Lower ocean rates and a more regular and efficient service are essential to Alaska's further development. To this end the American steamship lines should at once be consolidated into one, since there is no competition, and the Shipping Board should give attention to providing additional vessels in the spring and fall when traffic is heavy. With improvements in water transportation there will come an improvement in the mail service to and from Alaska, which is of the greatest importance in connection with its further industrial development.

Another urgent need is the immediate construction of additional wagon roads and trails, in order that the products of the interior regions may be brought in increased volume to the Govern- [Continued on page 353]

## A Billion Dollar Bank

By Edward Earle Purinton

**W**HAT is your bank good for? Do you bank *on* it, or just *in* it? Have you formed the wise habit of consulting your banker, in crises or concerning problems of business finance and personal fortune? When you need authentic facts of a commercial nature, do you look to your bank for them? Did you ever undertake to find in how many respects the closer coöperation of your bank might be valuable to you?

These questions are born of experience. Having been called upon to advise many classes of people on many kinds of business problems, we have been amazed to discover how few people know what a bank is really for, and how it can serve them to best advantage. The only solid base for any man's career is the right use of the right banking connection; so the matter is vital, and universal. The modern bank is no longer just a bank. It is also a bureau of commercial information, professional service, community activity and trade expansion. Some way or other, everybody needs the help it can offer.

This new type of bank is exclusively American. Founded and perfected in New York, it is regarded both an ideal conception and a working model of banking operations by thousands of astute financiers in all parts of the globe. Due chiefly to this example, the growing power of the American banker is to be one of the main factors in the reconstruction of the world.

A social financier is a banker who capitalizes his experience for the joint benefit of society as a whole and his bank in particular. He is the new combination of statesman and business man, with a moral and a financial vision equally powerful. The bank of this type of banker is the coming bulwark of business.

Founders and exemplars of the new science of social financing, the heads of The National City Bank of New York are now bankers to the world. The bank, together with the International Banking Corporation (which it owns), has a total of eighty-four foreign branches, and the combined deposits of the two organizations were, at the time the last statement of conditions was published, slightly less than \$890,000,000. The total number of men and women required to conduct the business of The National City Bank, the International Banking Corporation and The National City Company is no less than 6500.

The National City Bank—"one of the most human business institutions in New York"

The National City Bank's total resources of more than one billion dollars show an increase in excess of 6000 per cent in the past forty years, and now exceed those of any other bank in the Western Hemisphere.

A picture of the world-wide organization of The National City Bank may be had thus: Imagine all the buildings occupied by the branches of the bank and the offices of The National City Company set side by side along Wall Street with the head office of the bank, and you would find the street filled on both sides from Trinity Church to the East River, a distance of about a third of a mile. As for branches, they are located all the way from Spain to South Africa, from India to France, from Panama to China. Last year thirty-two new branches were opened in foreign countries to assist the world-wide expansion

being made in American trade.

Features of note in the construction of the building were disclosed by a personal visit to the bank. The floor space occupied for banking purposes is nearly 150,000 square feet. The approach is formed by sixteen solid granite columns weighing over forty tons each, and the entrance to the banking room is guarded by two solid bronze doors weighing 3300 pounds each. The marble walls, bronze trimmings and mahogany furnishings produce an effect singularly harmonious, beautiful and restful—as unlike Wall Street as could be imagined.

Practically every piece of furniture was specially designed, when the bank moved into its new quarters, to meet the special requirements of the department using it. The entire floor is left clear, no desk or counter being less than ten inches above the floor. The sanitary cove at the rear of all standing desks and counters prevents the accumulation of dust, and the loss of checks or papers falling behind the desk. No roll-top desks are used in the working quarters of the bank.

A total of 432 telephones puts any official or department in immediate touch with any other. Checks, drafts and small papers, carried by a pneumatic tube system of the vacuum type, reach in a few seconds any one from any other of thirty-two departments equipped thus for instantaneous transfer of communications. The bank employs telegraph and cable operators, who take, on wires leased from the Western Union and Postal Telegraph Companies, all messages reaching New York from any part of the world between 9 a. m. and 5 p. m., thus

saving much valuable time in important transactions.

The main vault contains 400 tons of steel and seventy-five tons of fireproofing, the entrance to each compartment being a sixteen-ton circular door swung on perfectly adjusted two-ton hinges. The vault is built of steel armor plate, interspersed with wire-mesh cloth, which forms complete insulation for electric protection. The vault is raised several feet on piers of brick and cement, covered with white enameled tile, the view underneath being unobstructed, and the space enclosed by a grille. A steam pipe with nozzles at frequent intervals lies under a grating surrounding the vault; in case of attack, superheated steam from distant parts of the building would be turned on and completely envelop the vault in a few moments.

A financial and statistical library, considered by authorities the most practical and comprehensive of its kind, occupies 2,000 square feet, and puts all items of essential information at the immediate disposal of Bank officials. A card index of 24 trays gives references to magazine articles on various commodities, and facts of interest on all countries of the world—their finances, economic phases, natural resources, industrial developments, transportation facilities. A card catalog of 60 trays, referring to books and pamphlets, furnishes not only a guide to authors and topics but a synopsis of treatment often down to a paragraph, so keen is the analysis. Material available on about 90,000 corporations, domestic and foreign, covers balance sheets, indentures, circulars, listing statements and newspaper clippings, also magazine articles from other countries.

The general impression is that only factories keep a double shift of employees working day and night, but this Bank, like a factory, needs a regular night force of more than 100 people to handle checks between midnight and 8 a. m., as a large proportion of the many thousands of checks received during the twenty-four hours come at night. The checks are not endorsed by hand, but are put through a machine which stamps endorsements noiselessly, and so rapidly that all checks are ready for the Clearing House the next morning.

The National City Bank resembles a college as well as a business. These men, for instance, are working in its research laboratory which puts the material of actual economics and finance at the disposal of the student

The Bank resembles a college too. In its own structure it maintains a laboratory and study rooms, for the benefit of college students who, nominated by American college heads because of unusual ability, come to the Bank during summer vacations, rotate through various departments, and are, upon graduation, assigned to positions in the foreign branches. Members of this College Training Class may be seen working out in the laboratory the identical problems in finance, economics, and business procedure that they will have to face ultimately as members of the Bank's regular staff.

The institution is probably the most human of any banking house in the world. It is a living demonstration of the fact that a concern, or a man, can be dignified without being distant, and stable without being stolid. The current delusion that a financier is a cold, hard, mathematical machine was never more quickly routed than by a scrutiny of this organization.

A small, but eloquent, incident. While we were talking with a department-head, one of the vice-presidents came in, smiling, to ask for a special stenographer. The department head, also smiling, turned to a young lady typist nearby, and said: "Miss A., will you please work with Mr. B. for a little while?" Get that. "Please work with" the Vice-President. Not "Go and take dictation from" the Vice-President. The way to have your employees courteous to your patrons is to be courteous to your employees. The messenger boys of the Bank are little gentlemen—wonder of wonders;—and they move instantly and eagerly to obey orders—miraculous but true. The highest officials are always ready to serve you; and, while doing it, they forget to impress you with a sense of their own importance. The world's largest banking house had the reputation of being the most obliging long before it was the largest. The connection is obvious. The corporation that expects to grow must first get over being grumpy, haughty, mercenary.

The treatment of employees compels attention first, partly because it is most unusual, partly because the essentials of the system are available to any large business house, located anywhere, doing any kind of work. The best products of the world's business leaders are not the goods they sell, or even the services they offer, but are the demonstrations they give to other business men of the most valuable ways to use applied psychology, sociology, research, ethics and economics in the solution of the problems affecting employees. What a man makes or does is relatively unimportant; how he makes it or does it helps or hinders the whole world. Because every superior [Continued on page 349]

These are some of the homes owned by employees of the National City Bank thru the bank's housing plan, which permits men to pay for their homes at easy rates

# What Shape Shall the League Take?

By Talcott Williams

THE concept of a Union of Nations has in five years won a place and prospect no one deemed possible when a small group, a little over a hundred strong, met at Independence Hall, in June, 1915, and organized the League to Enforce Peace, in order to educate American public opinion to be ready for a new world order based on nations organized and allied for peace instead of for war.

Press, public and Government then treated the step as desirable, but visionary. Today, five years later, a League of Nations in Europe is in being, functioning, but it has not been effective in stopping war between Poland and Russia. In this country both leading political parties and both their candidates are committed to a permanent "society of free nations or an association of free nations or a league of free nations, animated by considerations of right and justice," to quote the utterance of Senator Harding, candidate of the Republican party, of the two parties least favoring the League so far as its present leaders are concerned, yet steadily forced by events and opinion to present a plan for a League by the manifest pressure of public opinion and the peril of defeat.

Some organization of nations is today the paramount issue, as was the disappearance of slavery three-score years ago. Suppose by mid-September, 1860, all parties and candidates were for the abolition of slavery in principle but differed as to the steps, how much more wisely could freedom have come, how much safer, saner and surer the steps toward the ultimate result, how much better our race problem today than after war and the loss of 1,000,000 lives!

The issue is no longer League or no League, as the supporters of world peace above any party success feared. The question is what shape the League shall take. On every member of either dominant party rests the responsibility of making certain that his party stands for an effective League. Steadily the two plans approach each other. Those who are for some League hold the balance of power. Their task and duty is to cast their votes for the party which presents the better plan. Neither party has reached its final position and every candidate, President, Senator or Representative, must be brought to a record.

When the Wilson League was the only League, no path was open but its support. The Versailles Covenant is certain to be amended. Europe agrees to that. If Governor Cox is elected, he cannot secure ratification without concessions to Republican senators. If Senator Harding becomes President his "creation of an international association for conference and a world court whose verdicts upon justiciable questions, this country, in common with all nations, would be both able and willing to uphold," would need Democratic votes to go into effect.

The old isolation of America in 1914 cannot return. Senator Harding explicitly denies in his speech of August 28 that he has "any expectation of finding it necessary or advisable to negotiate a separate peace with Germany." The Versailles Treaty as to peace will therefore stand, whoever is elected President. The issue is whether the Versailles Covenant shall shift from emphasis on a council, executive in its functions, to a court judicial in its action. Either affords a basis for world peace and world organization, and the issue is over amendment and not elimination.

The practical difficulty with the Wilson League is that its Council has broken down in action during the past year, because even the Entente Allies could not agree and so secure a unanimous vote. As Lloyd George said in Parliament within a month, the League Council could not prevent

war between Poland and Russia because it could not agree and its members had to agree unanimously in order to act at all. France wanted Poland to attack. England did not. Nothing doing. Suppose in 1914 the same League and the same Council had been in existence, with Germany, Austria-Hungary and Russia as members. No vote could have been secured to advise the members of the League to protect Serbia against Austria. Germany would have blocked action. The only issues on which a majority of the Council can act are questions of procedure, making a report on a difference between members of the League, and adding new members to the Council on the majority action of the Assembly, and some treaty issues. All other action must be unanimous to be effective—Articles IV, V, XV.

The articles drawn by the League Commission, of which Mr. Elihu Root is the head, for a new international court are practically an amendment to the Covenant. They have taken the Hague Court, given it a permanent membership, stated sessions, defined its jurisdiction, and given it all the powers needed, except explicit provision for "upholding" its decisions. Senator Harding proposes to put force behind this Court. The Covenant of Versailles does not do this for the court it proposes. England is probably opposed to such action because, on the maritime rights of peaceful traders at sea, the British Empire is opposed to the rest of the world and to the decisions that any international court is likely to reach as to the rights of neutral ships at sea during war. Other great powers have their doubts. The lesser powers over the world, even in Latin-America, feel safer with a court than with a council.

THIS is for the same reason that a great body of public opinion in this country prefers a court as the pivot of the League instead of a Council. Lawyers are apt to feel that way. The drift of our public law, constitutional and statute, favors courts. In England, the ministry and Parliament have final power. With us the courts have the last word, "to the end that this may be a government of laws and not of men." Every journalist learns the respect that exists in this country for the laws, the Constitution and the courts, and all three are in their turn responsive to the people.

A council is, however, indispensable as a clearing-house of opinion and policy between the five great nations that now rule the world—the seven, when Germany and Russia take their place in it after it is clear that both are representative republics. Besides this clearing house of power and policy, it is as indispensable that any "league, association or agreement" shall also furnish a clearing-house for progress in international law and its adjudication, as well as in international reforms and the relations which call for common action between the nations.

The conferences, organizations and commissions provided by the Covenant, which have already begun to deal with armaments, labor, finance, colonies, sanitation, marine affairs, international rivers and canals, children, the suppression of international prostitution (the white slave trade), traffic in arms, alcohol and opium with backward lands, and much else, are as important as either the Council or the Court. The votes in the Republican Senate and House against the Labor Conference in the League are blunders, born of the scheme, policy and action of the American and English labor unions, blunderers also. Votes are being gained every hour by the Republican platform plank for free labor, by the smiling and triumphant reminders of railroad conductors to passengers that travelers

must pay more for ticket and berth, because the railroad unions propose to work less and get more pay. This is cited from personal experience in a trip of 3000 miles just as the last advance took place.

Nothing is worse for labor than this attitude, but it must not be allowed to postpone or prevent the international treatment of disarmament, labor and the subjects just named. American children can never be protected from exploited child labor until no child the world around works before fourteen. The only effective Christian, Christlike way to avoid the competition of cheap labor is to make it our national aim to have no such labor anywhere. This can only be gained by international action, conducted on a permanent basis.

Labor to make this coming organization perfect by getting League and other organizations to put questions to candidates for President, Representatives and Senators. Write yourself, if you can get no one to act with you, particularly if your state or district is close.

Senator Harding must define what he means by "upholding" the international court he proposes. Governor Cox cannot be silent as to whether he favors such a court, proposed by but not in the Covenant. What compromises will he offer on the Covenant, or will he defeat it, as President Wilson did, by refusing any substantive change, bringing another deadlock? How does he stand on the League Labor Commission? Does he want its American representatives chosen by labor unions or by Federal officers chosen by the people? How does Senator Harding stand on these various commissions, and particularly on the Military Commission for reducing armaments?

He is wholly wrong in proposing that the United States shall cease preparing Hayti and Santo Domingo for self-government as it did Cuba, so successfully that England is following our example in Cuba for Egypt.

## White Collars and Red Choler

THE Reign of Terror in Russia came to an end when the laundry workers went on strike. There were thenceforth no more "white collar men" to be put to death.

## A Simple Problem in Finance

IF a man owes a debt that he cannot pay, cannot even keep up the interest on account of financial embarrassment—and if the man owned a large tract of undeveloped land that he had to pay taxes on but could not work for lack of men and money—would it not be good sense for him to sell, or if he did not want to part with it, to lease the land to his creditor who was well able to work it and could so recover his loan and relieve the debtor?

That anyhow is the way the problem would be solved by one of the foremost economists of the world, Professor Charles Gide of the Faculty of Law, University of Paris. He points out (in *France extérieure* of June 6, 1920) that it would be "the wisest of policies" and "a master stroke of finance" for France to dispose of some of her surplus colonial possessions to the United States or England, which could profit by them and could cancel a corresponding part of the French debt. He forestalls the objection that the alienation of territory would be derogatory to French pride by suggesting that the mandate plan be brought into play, that the French flag continue to fly over the territory while the creditor be given a mandate to administer and develop it.

France owes the United States over \$3,000,000,000, for loans made to her during the war. We feel too much sympathy for her undeserved misfortune to press her for payment even if we should never get it. But France owns one of the Guianas, Cayenne; as large as New York State and much more fertile; largely uninhabited, uncultivated,

undeveloped, unexplored; utilized merely as a convict colony and costing the French Government \$1,000,000 a year to keep up.

But Guiana is nearer to the United States than France. It produces what we need most, rubber and sugar, lumber and rice. With American capital and American enterprise it would be productive and profitable, greatly to the relief of France, greatly to the advantage of America, greatly to the benefit of the sparse and poverty-stricken populations. Why should not Uncle Sam offer to buy the land or lease it on shares?

## The Senate Despotism

By Norman Hapgood

THROWING dust in the eyes of the public is not difficult. The Republicans in this campaign, having no issue at all except the desire to get into office, have been compelled to take every stand, no matter how unworthy, that would gather together the disaffected groups: those Irish who wish to entangle us in controversies with Great Britain; those Germans who think the best way for Germany to get out of her obligations, just and unjust, is to upset the League of Nations; those negroes in our northern cities who would like to have the tragic race problem again made part of politics, as in the days of carpet-bagging and the famous Lodge Force Bill; those few big special interests that hope again to rule in Washington as they ruled in the days before Wilson cleaned out their lobby, banished them from the White House, and drove thru Congress the Federal Reserve Act and the purified tariff law; and lastly the bitter-end group of Senators, who think that a noble follow-up to our part in the war is to stand off and caterwaul about our "Americanism," while the nations of South America and Europe try painfully to work out the principles for which we used to say the war was fought.

A motley throng, and yet it is easy to understand the psychology of any one of these groups. It is also not difficult to understand the psychology of the stereotyped voter who, whenever he falls on evil times, be it grasshoppers or world war, promptly seeks a solution by voting against the party in power. What is hard to understand is the man trained to thinking, yet voting always with his party, however big the issue, however wrong his party on what is paramount in the campaign. In an intellectual magazine like the Independent there is no use in writing for low brows. The person to appeal to is the man, and particularly, perhaps the woman, who takes questions seriously; particularly, the woman, I say, because she has not quite so much become hardened into party habits, and because coming fresh to public questions she may put more reality into what it means to vote for a man who favors war with Mexico, who puts partizan subserviency ahead of the attempt to prevent another world war, who puts the cost of living for the ordinary family aside as of no account, saying that cheap prices mean cheap life, while he studies how he can strengthen the hold and increase the earnings of the armament trust, the sugar trust, the wool trust, and all the other favored machines that have created a system by which the householder pays several times the actual, necessary cost of production. How any person capable of thinking for himself or herself about these matters can work for the admitted tool of the predatory Senate oligarchy is the most difficult thing in the campaign to understand.

Are those words about the Senate machine too severe? Let anybody who knows the long and distinguished service of that outstanding Republican, Samuel W. McCall, former governor of Massachusetts, seek the answer in his article in the September issue of the *Atlantic Monthly*. Nothing

Wide World

## A Photograph Sent by Telephone

By means of a new invention this picture of Swedish women athletes marching in the Olympic games at Antwerp was transmitted over the telephone to Paris, 200 miles away, in eight minutes. The photograph appears here just as it was received by telephone. The process still needs perfecting to attain clarity of outline and definition but the very fact that a photograph can be sent over long distances as quickly as a verbal message opens enormous new possibilities, especially in the field of news reporting. The instrument is shown below

Wide World

M. Edouard Belin, the French engineer who invented the process of telephoning pictures, is shown above in the very act of sending a photograph of the Olympic games from Antwerp to Paris. The instrument used is based on the same principle as that of the Edison phonograph, but instead of giving sound waves the variation of intensity in the electric current is recorded on a mirror. By means of lenses and a transparent screen of graded tints the light reflected from the mirror falls on a revolving cylinder covered with photographic paper and the image is formed by successive projections of light corresponding to the variations in the surface of the transmitting photograph

that I can say about the usurpation, venality, partizanship, degeneracy, and danger of Mr. Harding's Senate oligarchy can surpass in thoroughness the indictment of Governor McCall. In usurping the powers of the President and the House of Representatives the Senators have been "like little foxes." They have "deprived the country of that safeguard of vast importance which comes from the independent action of two branches of the Government." Their methods have been "piratical." The body is run by "an inner ruling ring which differs in nothing from an oligarchy." This band of usurpers can openly boast, as Lodge does, that they will pay no attention to the mandate of the people at the polls, because it takes three elections, two years apart, or six years altogether, to get them all out of office, whereas the President and the Representatives have to answer squarely to the people. Talk about the solid south! This controlling Senate despotism grows out of a system by which less than one-fifth of the population sends to Washington Senators enough to control the whole Government of the United States. As the wise and far-seeing Benjamin Franklin objected to having any Senate, now McCall, one of the few free-minded and educated Republican statesmen, favors taking away its power to ruin the President's functions and also its power to control the people's money, which was supposed to belong to the popular house until the Senate seized that power also. Governor McCall shows how that seizure has been used for the welfare not of the people but of the big special interests. Penrose and Lodge are not up for re-election, under our system of special protection for the Senate; but Smoot and Brandegee and others are; and above all the Republican candidate for the Presidency was chosen by the Senate ring and boasts himself their darling and obedient child.

### The Irish Carrie Nation

THE Orangemen of Belfast have smashed up all the Sinn Fein public houses. Now if the Sinn Feiners will only return the favor and smash up all the Orange public houses the first step toward Irish freedom will be taken.

## Lo the Rich Indian

By Edwin E. Slosson

ACCORDING to the last report of Franklin K. Lane, Secretary of the Interior, the American Indians now own property amounting in value to more than \$1,500,000,000. Since there are only about 265,000 Indians in the United States this means that they are worth on the average \$5,600 apiece, every man, woman and child of them.

The race is increasing. Mr. Lane assures us that "there are now a greater number than in Lincoln's day, perhaps as many as in Washington's." But their wealth is increasing more rapidly than their numbers, not thru their own exertions for the most part, but chiefly from the incidental increase in the value of their lands and mineral deposits due to the enterprize of their white neighbors. This billion and a half of property is mostly what the single-taxers call "the unearned increment" which automatically accrues to the land owner whether or not he does anything to earn or to deserve it. The Indians have not earned it all and they deserved it only in the sense that the needy, improvident and incompetent always deserve the support and protection of the community in which they live. And if in our liberality we have overendowed them, if we have enabled them to accumulate more than we have ourselves, we should not regret it nor envy them their easy fortune for it is better to be over-generous than unjust.

The American Indians are the wealthiest people in the world, the wealthiest that ever lived. No other race, however industrious, brilliant and economical, ever has become

half so rich as they. The white Americans with a per capita wealth of about \$2,000 are not half so well off as the red Americans. The Britisher, lord of a quarter of the globe, had acquired only \$1800 before the war. The thrifty Frenchman had not saved so much and is now very hard up. The enterprising German is \$800 in debt. And lo! the poor Russian whose untutored mind sees God in Lenin had only \$250 to his name before the war and has not much of that left even if communism meant common-wealth which it does not.

Not only are the Indians richer than any other people but their holdings and the automatic increase of these are more secure than any other property in the world for they are secured by the good faith of the Government of the United States. While white folks are being cheated out of their coal and oil rights the Indian is protected. "Out of tens of thousands of leases, contracts and agreements made during these seven years there has developed not one case of scandal," says Secretary Lane. This guarantee is being gradually withdrawn and "within those seven years 17,241 Indians have been released from all forms of governmental control." Eventually the Indians will have to look out for themselves like other folks. This will be better for them tho they will not be so well off. The Indian has been a ward long enough. It is time he became a citizen. During the period of his immaturity he has been carefully cared for by a paternal government, trained in habits of industry, protected from imposition, well fed, clothed and housed, safeguarded against disease and immorality, set up in business and liberally endowed. Uncle Sam has looked after his wards much better than his own children—as is quite proper since they needed it more. He protected his wards against alcohol while his own children were getting drunk. He provided industrial schools for the red children while white children had to get along without such advantages.

When I was a boy I used to wonder at the partiality of Uncle Sam as I saw on the Oto Reservation in Nebraska rich lands uncultivated and fine two-story frame houses built by the Government, and the Indians receiving regular rations and clothing and stock without having to work for them, while just across the line the white settlers were living in dug-outs and sod-houses, trying unaided to raise enough to live on and if they failed there was nobody to stop them from starving. But this governmental generosity, tho sometimes excessive and more often misapplied, proved in the long run to be the best policy. It was cheaper to feed the Indians than to fight them and they have in many cases showed themselves capable of acquiring the virtues as well as the vices of civilization. Many of them are wealthy and some of them work. Dowried by Uncle Sam the Indian heiresses have attracted suitors from the white race and it is not mere Caucasian conceit to assume that the red race has thereby been raised. The Indians seem destined rather to absorption than extinction.

Whether or not the Indians are more numerous than when Columbus discovered America they certainly live better, have greater freedom of movement, action and development, and possess more property; acquire more education, and receive more protection; in short, they have been raised from savages to civilians. It is a curious delusion afloat that the invading white man has robbed the Indian of his land. The Indian never owned any land, he never pretended to, not even the little plots of ground on which his squaw raised corn whenever the tribe stopped long enough in one place. His hunting grounds were only his to hunt in and only so long as he could kill off others who wanted to hunt there. He possessed no real estate and his personal property consisted of his hunting gear, his scanty skins, his dog and his squaw. The iron and gold, the coal and oil, which were to enrich his descendants, he did not discover and has not developed. The Indians who sold Manhattan Island for \$24 were unscrupulous profiteers for they sold

property to which they had no title in law or equity and for a price far in excess of any land values in America from the creation down to that date. If this parcel of real estate has enhanced in value since they certainly cannot lay claim to the increase.

As for the blood debt, that must be about even. The poet who wrote, "The savage here the settler slew," set a puzzle that has caused lots of unnecessary argument among students of grammar, unnecessary because the line is equally true whichever way it is read. Anyhow it is time to bury the tomahawk since eight thousand young Indian braves served in the American army in the Great War.

Uncle Sam has been often unintentionally clumsy but never intentionally cruel. With all our failings in the handling of the Indians it remains a fact that no other nation has ever devoted so much money and attention to the care and elevation of a subject race nor have the aborigines of any other land been so richly recompensed.

### The Germans and the Germs

IN 1918 the British lost 105,205 men fighting in France. During the same year 112,329 of the folks at home in England died from the influenza epidemic. Peace hath her casualties no less severe than those of war.

## The Strong Man Panacea

By Preston Slosson

IT is somewhat too easily assumed that the disordered countries of the earth, such as Russia or Mexico, owe their misfortunes to the absence of "a strong man to boss them." Perhaps the trouble is less with the phrase itself than with certain implications which lie behind it. If a "strong man" is used in the sense of a wise and tactful statesman who is resolute as well as shrewd there are, indeed, few limitations save death to what he can achieve for a nation. Too frequently it is assumed that what is needed is simply a strenuous and ruthless dictator "with no nonsense about him" who can bark out his orders and shoot "at sunrise" all who oppose him.

So long as there is only one efficient and ambitious man in a country the dictatorship is a workable form of government. Such was Paraguay under Francia, the man whom Carlyle admired above all other Latin American statesmen. The hard man ruling a soft country needs no other quality than his hardness. But let there be another man of the same type and temper within the boundaries of the nation and there is civil war. Let there be a third and there is anarchy. We are told that Kerensky lost control of Russia because he was irresolute and merciful. But what has become of the procession of strong men who sought to take his place: Yudenitch, Kolchak, Semenoff, Denikin and the rest? Have they succeeded better in crushing Bolshevism? Have they failed because their methods were too gentle? Is Lenin more successful? He has clung to power but the country has rotted to decay beneath him and all his great projects are still unachieved. Russia could afford to trade all of her "strong men" for a little civic common sense.

Mexico is not suffering from the lack of "another Diaz" but from the presence of too many would-be Diazes. Let it be granted that Madero was not sufficiently drastic in his methods. But his administration was a success compared to the chaos invoked by that pseudo-strong-man Huerta, or the energetic bandit Villa, or the not very scrupulous Carranza, or the military Obregon or any of the other fifty or sixty "liberators" and "restorers" who were quite as ruthless as Carlyle himself could have wished. Shooting people down in the streets is very easy, if you have the guns on your side. But it is not the whole art of government, even among a backward people.

But the Russian generals and Mexican dictators are not

the most impressive examples of the inefficiency of mere unscrupulousness. Germany alone has given a fair trial to the theory of government by the "strong man," because in Germany there was discipline in the mass and an adequate development of the technique of administration. Carranza and Korniloff might complain that they never had a fair opportunity to show what they could do; Ludendorff and Tirpitz cannot. The German General Staff brushed aside the entire civil administration from the posturing figurehead of a Kaiser to the timid clerks who called themselves Chancellors and Foreign Ministers. Never perhaps in human history had anyone such power as the military dictators of Germany enjoyed; certainly never in history did any rulers use power with less restraint. Bismarck and Moltke might have envied their gigantic opportunities. But spiked helmets and mailed fists are not a complete substitute for supple brains.

There is a deep fallacy in the cult of the superman. If you find him, let him govern as he likes, say the Carlyleans. But how are you to find him? If you let the people elect him you have simple representative democracy with a popular politician at the top. If you try to get him by heredity you will find a weak Napoleon the Third trying vainly to occupy the big shoes of a Napoleon the First or a lunatic Kaiser imagining he is Frederick the Great. If you let the superman select himself your nation will be torn by the wars of several supermen or persons who think themselves to be such. Neither ambition nor ruthless energy nor both combined is a self-evident proof that the right man has been found. Democracy is a possible form of government, for it rests on the right of a recognized majority. Aristocracy is a possible form of government, for it rests on the right of a recognized minority. But the "rule of the strong man" is, save by accident, not a possible form of government since it rests on the right of an undiscovered minority; a right to which any minority can, and probably will, lay claim. In other words it is anarchy. Anarchy is simply government by rival strong men, each of which claims the sole power; it is not the absence of government, but the presence of too many governments.

### Young Women Take the Lead

WHILE politicians of the sex that has hitherto monopolized public affairs are mostly still mulling over the old issues and mumbling over the old shibboleths, a fresh force in thought and action is coming to the front, the Young Women's Christian Association. The national convention at Cleveland last April showed not merely the zeal and devotion that was to be expected, but a courage and practicality in dealing with vital questions of the day that have not always been accredited to their sex and age. Probably the most radical convention that has been held in the United States was the International Conference of Women Physicians held under the auspices of the National Y. W. C. A., the proceedings of which have just been published by The Woman's Press, New York. Radical, we say, not revolutionary, for radical means getting at the root of a thing while revolutionary means merely turning it upside down. For plain speaking it was unprecedented and the views that were voiced by the seventy or eighty speakers varied from the most conservative to the most unconventional. The motto of the conference might well have been the remark of one of the speakers: "Mrs. Grundy is a goddess whose worship does not advance the human race." They discussed the health of women and children and how to get it. They considered marriage and how to get it and how to get along without it. Evidently the new woman is determined to eradicate the oldest of social evils and she is looking about open-eyed for some new way of solving the problem on which man has failed. The discussions were as a whole remarkably free from the visionary, fanatical or sentimental element.

# The Story of the Week

## The Mystery of the Polish Note

IT is hard to follow the course of our diplomatic intervention in the Polish question from the information given out at Washington. On August 10, when the Bolshevik wave threatened to engulf Poland and the fall of Warsaw was reported imminent, Secretary Colby delivered to the Italian ambassador a note in which he expressed the fixed determination of the United States never to treat with Soviet Russia and promised all possible aid to maintain the independence and integrity of Poland within her ethnographic boundaries. This timely encouragement stimulated the Polish resistance to the Bolshevik armies in the field and to the Bolshevik peace terms at the Minsk conference. Being communicated in advance to the French and British Governments it apparently precipitated the action of Premier Millerand in recognizing General Wrangel's South Russia Government, but Premier Lloyd George regarded it as thwarting his hopes of Polish peace and he accused President Wilson of having gone back on the policy he advocated at Paris of getting all the Russian factions, including the Soviet, to confer at Prinkipo.

On August 21, when the Poles had inflicted a crushing defeat on the Bolsheviks and seemed likely again to undertake the invasion of Russia in pursuit of the flying enemy, Secretary Colby took occasion to warn them against a revival of the imperialistic spirit. The essential passages of this note are:

The United States applauds the steadfast gallantry of the Polish Army in its defense of Warsaw and is sympathetic with all necessary measures which Poland may take to preserve its political and territorial integrity. This Government, however, urges that every reasonable effort be made to terminate the present bloodshed. It could not approve of the adoption of an offensive war program against Russia by the Polish Government.

The American Government is of the opinion that the Polish advance into Russia tended to create a national sentiment in that country which ignored the tyranny and oppression from which the people suffer and afforded an undeserved support to the Bolshevik régime, which enabled its leaders to embark upon the invasion of Polish territory.

To prevent a recurrence of the present situation the United States Government believes that the Polish Government might well take the opportunity afforded by the favorable turn of events to declare its intention to abstain from any aggressions against Russian territorial integrity; to state that its policy is not directed against the restoration of a strong and united Russia, and that, pending a direct agreement as to its Eastern frontier, Poland will remain within the boundary indicated by the Peace Conference.

This was very unwelcome advice to Poland and to France. Pilsudski, the Polish Chief of State, declared publicly that the Polish armies would not respect the boundary drawn by the Paris Conference because that would imply acceptance of it by Poland. The French Government countered on Colby by giving Poland the opposite advice, and to make clear the disagreement between the French and American policies the French Foreign Ministry on August 27 gave out an announcement to the press:

that France has counseled Poland to attain the best strategical military position possible until peace is signed, regardless of her ethnographical frontier, because the military situation will influence the peace terms.

But while all the European news indicated that Poland had no intention of being limited in her military operations by what Pilsudski calls "the illusory line" laid down by the Paris Conference, the Washington correspondents reported day by day that the State Department was receiving assurance of Poland's willingness to comply with

American advice. On August 26 it was announced that the Polish reply was received and that the Polish Government had, according to the *Tribune* correspondent, stated "its intentions to confine its military operations within the ethnographic frontier laid down by the peace treaty." According to the *Times* correspondent "the statement was authorized that the note so far as could be ascertained did not appear to contain anything that might be construed as disappointing to this Government." Secretary Colby said that "he had not had the opportunity to examine the note completely," but that it would probably be published next day.

Next day it was still thought inadvisable to make the note public, but the State Department officials were cited as saying that it was not a disappointment. In fact the Polish note was not given out by our State Department until September 2 and then it was found to be a flat refusal to comply with the Colby request. In it the Polish Government called attention to the fact that:

In spite of the diplomatic intervention of our allies, the Red Army has for a whole month advanced and ravaged territory which is admitted by all as being ethnographically Polish.

Notwithstanding the sympathetic attitude of our allies, the Polish nation had to face the danger alone, and political events proved that it must in the first place rely upon its own military strength. If military operations necessitated the measures to prevent a renewed invasion of Poland, it could hardly be considered fair that artificial boundaries that do not bind our opponent should interfere with the military operations of the other.

The curious thing about it is that this note was not delivered to the State Department until August 31. How then did the Washington correspondents all get the impression that a note of the opposite tenor had been received five days before?

## Lithuanian Polish War

LITHUANIAN troops trained and armed by the British are now fighting Polish troops trained and armed by the French. There are Americans in both the opposing armies.

The Lithuanians demand complete independence from Poland as well as Russia, but the Poles claim that the ancient union of the two kingdoms in 1386, when Prince Jagiello of Lithuania married Queen Yadviga of Poland, has never been dissolved. Last year the Polish armies in their northeastern movement occupied considerable Lithuanian territory, including Vilna, the capital of Lithu-

© Kadel & Herbert

### IDOL OF THE POLES

General Weygand, who during the Great War was aide to Marshal Foch, has taken a leading part in directing the successful operations of the Polish troops against the Reds

ania. The Lithuanians complained to the Supreme Council of the Allies against the encroachments of the Poles and accused them of killing off or driving out the Lithuanian population and closing their schools and churches. But the Council took no action on the alleged atrocities and General Foch decided that the Poles had a right to use Vilna as a base in their campaign against the Bolsheviks.

This summer when the Bolsheviks got the upper hand and drove the Poles back to their own frontiers the Lithuanians received the Soviet troops as deliverers from foreign tyranny. An agreement was concluded on July 12 between the Soviet and Lithuanian Governments by which Lithuania was granted not only Vilna but also Grodno, Suwalki and Augustowo, cities southwest of Vilna, and a hundred miles nearer Warsaw. The Letts, the neighboring nation on the north of Lithuania and of kindred race, also concluded, August 11, a treaty with the Soviet by which the boundaries of Latvia were clearly defined and its independence recognized.

But now that the Poles have got the Russians on the run they are again occupying Lithuania. According to the Warsaw despatches the Polish troops that entered Augustowo "were enthusiastically received by the population" and the Lithuanian soldiers were friendly. But the Kovno despatches giving the Lithuanian version of events say that the people took up arms against the invaders and that the Lithuanian forces drove them out of the surrounding country, taking many prisoners and much material. Lithuania by her treaty with Soviet Russia is bound to maintain neutrality and the Lithuanian Government holds that the violation of her territories by the Polish armies is as indefensible as the German invasion of Belgium. The Poles on the other hand held that unless they occupy this corner of Lithuania their left flank will be perpetually exposed to attack by the Bolsheviks. A Polish delegation has been at Kovno negotiating an agreement with the Lithuanians as to the boundary line, but when the Polish army crossed the Lithuania frontier the Lithuanian Government charged Poland with treachery and packed the delegation off home.

Poland has now in turn appealed to the League of Nations against Lithuanian encroachments on her frontier and accused the Lithuanians of being allied with the Russian Reds to attack Poland thru Lithuanian territory.

The Bolsheviks do indeed retain a strip of Lithuanian territory north of the Nieman River in order to use the railroad to Grodno for military purposes. No valid objection could be raised against the Poles for making war on the Soviet forces in this region, but Poles, in sending their cavalry into the Suwalki and Seiny district northwest of this, were clearly trespassing on Lithuanian land, whatever may have been their strategic justification in so doing.

## Two Sides of the MacSwiney Case

A NUMBER of British labor leaders and members of Parliament sent the following protest to the British Government:

We are convinced that the Government's treatment of the Lord Mayor has already seriously jeopardized the hope of an early settlement of the Irish question on a basis of conciliation and appeasement, and has stained the name of Great Britain with dishonor in the eyes of the civilized world.

By its persecution in prison of the Lord Mayor of Cork, the Government has outraged public sentiment everywhere, and his death will bring about a terrible explosion of anger, which can only lead to further bloodshed in Ireland.

In reply to this appeal Bonar Law stated the Government's side of the case as follows:

The Lord Mayor was one of the leaders of the Irish Republican army, which has declared itself to be at war with the forces of the Crown, and according to his own written word, in one of the seditious documents for the possession of which he was con-

These Polish children are being washed and fed and their clothing sterilized in the effort to stop the spread of typhus in Poland now. Americans are leading the fight against disease there, but against their relief work are the heavy odds of insufficient equipment and poverty and malnutrition among practically all the people

victed, he and his followers were determined to pursue their end, asking for no mercy and making no compromise.

He was arrested while actively conducting the affairs of a rebel organization under cover of a Mayoral court. Had he been taken at his word and dealt with as an avowed rebel, according to the universal practice of civilized nations he would, having regard to the circumstances of his capture, have been liable immediately to be shot. Instead, he was tried by a legally constituted tribunal, sentenced to a moderate term of imprisonment, and given at once all the privileges of a political prisoner.

From the moment of his arrest he sought to defeat the ends of justice and to reduce the forces of the Crown to impotence by refusing food, no doubt in the belief that that course would lead to his speedy release.

To release prisoners who, like the Lord Mayor, have been guilty of complicity in a movement which uses as one of its main instruments assassinations and outrage would be nothing short of betrayal of those loyal officers on whose devotion to duty the fabric of social order in Ireland rests. Since the arrest of the Lord Mayor fifteen officers have been brutally and treacherously done to death without even a chance of defending themselves. Surely the sympathy which has been given in such full measure to the Lord Mayor, whose condition has been brought about by his own deliberate act, is due rather to the bereaved widows and families of the murdered Irish policemen.

## Obregon Elected

GENERAL Alvaro Obregon was elected president of the Mexican republic on Sunday, September 5. The polling was peaceable and it was not necessary to call out the troops. The vote was light for the election was a foregone conclusion. The conservative candidate, Alfredo Dominguez, made a poorer showing than was anticipated. But the opponents of Obregon will carry their fight into congress on the ground that he is disqualified for election under Article 82 of the constitution which says that any candidate shall not have taken part, directly or indirectly, in any uprising, riot or military coup. Obregon was a leader in the revolt that started in Sonora and led to the overthrow of Carranza in the early part of the present year. But Obregon says that the constitutional provision does not apply to him since the anti-Carranza movement was not a rising but a revolution. Carranza owed his office to Obregon's defeat of Villa.

Obregon, like various other revolutionary leaders in Latin America, is of Irish descent on his father's side as might be surmized from his name. On his mother's side he is of Indian blood as was Diaz, Mexico's greatest president. He is now forty years old. He is friendly toward the United States and will favor the immediate industrial development of Mexico.

## Mexico Disarming

THE Provisional Government of President de la Huerta is rapidly reducing the armed forces of Mexico, both regular and revolutionary, by paying them off and providing them with farms.

Under Carranza the army cost 132,000,000 pesos a year, but the new budget is to be lowered to 50,000,000. The present army consists of 5000 generals, 18,000 other officers and 100,000 men. Of these 332 generals, 4000 other officers and 13,000 men are to be dismissed from the service. Among those discharged is Dr. Maximilian Keller, a prominent pro-German and anti-American agitator, who

THE NEW PRESIDENT OF MEXICO

"I would rather teach the Mexican people to use a tooth brush than to handle a rifle," says Alvaro Obregon, the Irish-Indian who has just been elected to the Presidency of the Mexican republic. General Obregon is expected to develop friendly relations between Mexico and the United States; this photograph of him with his wife and children was taken during his visit to Nogales for a conference with Governor Campbell of Arizona.

had been placed upon the army list as colonel by Carranza. The revolutionary troops to be mustered out number 28,000.

Francisco Villa, the most persistent of the Mexican bandits, has retired from the profession and his 900 men have been pensioned off by the Government.

An intended imitator of Villa's career appeared in Jalisco in the person of Pedro Zamora, who started out with 400 men and only 500 rounds of ammunition, but soon gathered in considerable booty by the looting of Autlan. Among the booty were many women, but ten of the girls of the higher class are said to have escaped the clutches of the band by jumping over a precipice. Half a dozen foreigners were kidnapped and two of them held for ransom: W. A. Gardiner, the American superintendent of the Esperanza Mining Company, and W. B. Johnstone, a British ranchman. Zamora demanded 200,000 pesos ransom for the American and 50,000 for the Britisher. But the Minister of War, General Calles, promptly took the field against Zamora with 5000 men and he was forced to surrender his prisoners. His band was finally defeated and dispersed in a fight at Devisadero.

The rebellion in Lower California that last month seemed formidable and threatened to lead to secession, has quietly and completely collapsed. Governor Esteban Cantu of the northern district of Lower California has for the last ten years had things his own way in the peninsula. Under his protection the two border towns of Mexicali and Tia Juana have done a thriving business in catering to Americans who sought over the border the freedom to indulge

in drinking, gambling and other vices denied them in their own land. President de la Huerta endeavored to displace him by appointing Baldomero Almada of Los Angeles as governor in his stead, but Cantu refused to retire and set about organizing a force of 1200 men to defend Lower California against the Mexican Government. A number of American machine gunners and aviators joined Cantu's army. But the American Government declined to give any encouragement to the secession movement and on the contrary aided the Mexican Government by permitting free passage thru the Panama Canal to the warship "Progreso" carrying troops to the peninsula. Seeing that the Government was in earnest Cantu agreed to compromise and consented to the appointment of General Luis M. Salazar as his successor. The Mexican Government proposes to prohibit saloons, gambling houses and dance halls within a zone sixty-three miles wide along the United States border.

The Government is now turning its attention to rooting out Bolshevism, which has gained considerable headway among the industrial classes and landless laborers, as well as among the discharged soldiers and even in the army itself. A Soldiers' and Workmen's Soviet has been organized in Mexico City. Colonel Augustin Preve declared a Red republic in Campeche, but he was captured and brought to the capital to be tried as a traitor. One of the leaders in the Mexican Communist movement is an American, Lynn A. E. Gale, who fled to Mexico to escape the draft in 1917 and has published there a bitterly anti-American paper under the Carranza régime. The Mexican Government, acting under Article 33 of the new constitution, intends to deport Gale and his wife to the United States. One of his associates, C. F. Tabler, in charge of propaganda among the miners, is a German and he also will be sent home.

## Soviets in Italy

IN the industrial region of northern Italy the metallurgical plants have been seized by the workmen and are being run by their councils or soviets as in Russia. The movement arose in Milan where 280 industrial establishments were taken over on the first three days of September and other cities soon followed suit. In some cases the managers and superintendents were forcibly retained to direct operations or were kidnapped from their homes for that purpose. At the Lombard automobile factory at Milan six directors were imprisoned in the works as hostages to secure payment of wages. The workmen in the Fiat factory have announced that they will sell the automobiles they make on their own account. Red flags are hoisted over the soviet plants and pictures of Lenin are displayed on the walls. The factories have been fortified against attack by barricades and barbed wire. In some case bare wires carrying high voltage currents are strung around the building. Machine guns are mounted on the roofs and at the entrances. Abandoned munition plants have been seized and set to making arms for the insurgents. In Venice they have captured the arsenal. The workmen mostly live in the factories to serve as garrisons. They are under military discipline and allowed only a limited amount of liquor. At Genoa and Naples all the shipping in the harbor has been forced to raise the red flag by orders of the seamen and dockers committees.

The occupation of the plants by the employees has been accomplished with little bloodshed and little effort has been made to recover them. The Government remains neutral and inactive. The Minister of Labor, Signor Labriola, is a Socialist and holds that this is an industrial dispute in which the Government has no right to interfere so long as the movement does not take a political form. The General Federation of Labor has endorsed the action of the metal workers.

## Free Fiume

GABRIELE d'Annunzio, the flying poet of Fiume, celebrated on September 12 the anniversary of his dictatorship by declaring the independence of the city. The new state includes the harbor, the railroad and the two islands in the Gulf of Quernaro that guard the entrance to the port. The name given to the new state, the "Italian Regency of Quernaro," would indicate that d'Annunzio has not given up hope of ultimately turning over Fiume to the Italian crown. This is in open defiance of Great Britain and France, who had offered the Italians and Yugoslavs two alternative solutions to the problem, either to make Fiume a free city under the control of the League of Nations or to accept the Treaty of London, which gives Fiume to the Yugoslavs.

President Wilson, in his notes of February 10 and 25, 1920, holds both solutions bad and wants the question settled by direct agreement between Italy and Yugoslavia on the basis of his two fundamental principles of self-determination and of free access to the sea. The latter principle would give Fiume to the Yugoslavs, since it is their only convenient seaport. The application of the principle of self-determination would probably lead to the same result, for altho the city proper has a preponderance of Italians, the suburb, Sushak, and the surrounding territory is Slavic. Even the Italians of Fiume would very likely vote against annexation to Italy, for their financial interests are dependent upon the city serving as the outlet for the Yugoslav hinterland. The National Council of Fiume, which is the only body having any claim to represent the people, is out with d'Annunzio and anxious for him to leave.

The Yugoslav Government has declared its willingness to accept the vote of a plebiscite as to where the boundary should be drawn, but the Italian Government refuses to submit to that verdict.

The constitution which Dictator d'Annunzio has drawn up for Quernaro is a unique document, written in poetical style and containing all the latest political notions. It follows the Soviet in including the referendum and recall and in providing for the nourishment and medical care of the women and children of the proletariat, but differs from Russia in guaranteeing the right of freedom of speech, print and association and the inviolability of domicile. Women have equal rights with men in all respects and are equally liable to be called on for military service. A minimum wage is established and pensions provided for illness, old age or

Thomas in Detroit News

Don't overlook the wood pile!

unemployment. The legislature consists of two houses. This curious constitution contains a provision for its own suspension by the selection of a dictator "in time of extreme danger."

Commandante d'Annunzio is looking for the support of the Italians of America, especially thru the influence of President LaGuardia, of the New York Board of Aldermen. He has appointed Whitney Warren, a New York architect, as the official representative of Fiume in the United States.

But his latest act is not likely to ingratiate him with Americans. Among the ships that his fleet has seized in the Adriatic is the steamer "Coyne," which was conveying a cargo of automobiles worth 10,000,000 lire and consigned to the United States. Since Fiume has as yet no standing as a state it would be difficult to distinguish such acts from piracy.

## Harding on Labor

ON Labor Day Senator Harding expressed his views on the question of capital and labor. Some fragmentary quotations will show the drift of his remarks:

The menace of the present day is inefficient production. I hold that the slacker, the loafer on the job, is not only the greatest obstacle to labor's advancement, but he is cheating his fellows more than he does his employer. The workman who deliberately adds to cost robs a fellow workman who must buy, and impedes the way to that ideal condition where wage exceeds the cost of living.

There will be employers so long as there is leadership among men, and there will be employees until human progress is paralyzed and the development of human kind dies on one common altar of mediocrity. Our problem then is to find the highest order of employment, the ideal relationship, the conditions under which we may work to the highest attainment and the greatest common good for all concerned.

I do not believe in government ownership. The government must do many things, but it has enough to do without invading the field of private activity, not, at any rate, until government demonstrates its capacity for efficiency.

We cannot have compulsory arbitration, because all parties must consent to establish arbitration and enforce its conclusions. I think we can have, and ought to have, volitional arbitration.

I believe in unionism, I believe in collective bargaining, I believe the two have combined to speed labor toward its just rewards. But I do not believe in labor's domination of business or government any more than I believe that capital shall dominate. We had our time at that, and we learned the danger and ended it. We do not want to substitute one class for another; we want to put an end to classes.

International

Having looped the loop eighty-seven times and brought her aeroplane to a safe landing on Curtiss Field, Long Island, Miss Laura Bromwell's first concern was to see that her nose was properly powdered, and her second to hear the judges confirm her own impression that she had broken the world's record for a woman pilot. Miss Bromwell is only eighteen years old and she has been flying hardly more than a year.

# Echoes of the Campaign

## Harding on the League

THE Republican candidate for president has amplified his proposed policy in regard to a League of Nations as follows:

If I am elected to the Presidency I will become the negotiating agent of the United States, and will have the authority to undertake the negotiation of a new covenant, which I would promptly proceed to do, after first advising with the Senate, which has the Constitutional power to make any treaty effective.

I hold the international court to be a creation for one thing, namely, a decision on what we call justiciable questions. It is true, however, that causes which most frequently lead to war do not come under that title. For the consideration of such causes as are not justiciable I would suggest an association, or a society, or a League of Nations—it little matters what we call it—which shall constitute an international conference for the free and open discussion of international questions which may lead to conflict. It is not possible to say that this conference always is going to prove effective in the prevention of conflict, but such an association could bring to the world a complete

Thomas in Detroit News

The Vampires

revelation of the questions which are menacing peace and readily bring to bear the opinion of mankind against an offending nation in case it refused to yield to the recommendations of the conference.

I quite agree that there can be no league which approximates the character of super-government without something akin to Article X.

I have never been able to escape the impression that super-government was the thing aimed at, and I am sure that such a creation is a thing to which America will never consent.

One cannot have much patience with the contention that America will never be endangered because each member of the council of the League has the veto power. If one member of the council of the League has the veto power, if one member of the council can forestall action on the part of that body, it is evident it will never be able to exercise any authority. Moreover, if the cause of America itself were concerned, its member would not have any veto power.

In spite of all the fine arguments about it, the simple truth about the League covenant is that either it constitutes world government with power to enforce its decisions or it is going to prove the colossal disappointment of the ages. If it is only an international organization for conference, without power to act unless every member has agreed, then it is only a debating society designed to portray an international situation to all the world.

If this be true, I think we will be dealing with ourselves and the world more fairly if we understand that fact from the beginning.

Governor Coolidge, Republican candidate for Vice-President, says:

I believe humanity would welcome the creation of an international association for conference, and a world court whose verdicts upon justiciable questions this country, in common with all nations, would be willing and able to uphold. The decision of this court or the recommendations of such a conference could be accepted without sacrificing on our part or asking any other power to sacrifice one iota of its nationality.

## Liquor Men Support Cox

CHAIRMAN Hays of the Republican National Committee in testifying before the Senatorial committee investigating campaign funds produced a letter signed by George T. Carroll, president of the New Jersey Federation of Liquor Interests, and addressed to a saloonkeeper, which said:

Dear Sir and Brother—The organized liquor trade of New Jersey has set out to do its part toward the election of James M. Cox as the next President of the United States, and it becomes my duty to call upon you to help. . .

The nomination of Governor Cox for the Presidency by the Democrats is a big victory for our interests, and it can be attributed to a great degree to the activity of our trade organizations here in New Jersey and throughout the nation. Governor Cox is a pronounced wet, and he can be relied upon to approve an amendment to the Volstead act as suggested above.

We must have money at once to carry on the work that we have planned. Jump in and help us fight. Give as much as you can afford.

In reply to this Governor Cox says: "The wets have not contributed a dollar to our campaign fund and they will not."

## Hoover on the League

HERBERT Hoover speaking at the Lafayette-Marne Exercises at West Point, September 6, devoted most of his address to a eulogy of Roosevelt who had spoken on that occasion in 1918, and of whom he said:

I could not stand in the footprints of that great American who two years ago repeated the aspiration for a League of Nations to minimize war, that he was indeed the first to voice ten years before, without making a reference to it. I believe it is the hope of practically the whole of the American people that we may enter upon this great experiment in its broad sense.

Both our political parties advocate the great principle of common action that underlies it. Some thirty-five nations, comprising the governments of nearly 75 per cent of the entire people of the world, have joined the League. I have no fear but that some day we will compose our differences over the form and its obligations of the League, and in some manner join in this common effort, this necessity to a world groping but slowly from chaos.

## Cox on Ireland

WHILE talking about the League of Nations in the St. Paul auditorium a man rose in the rear of the hall and asked, "Governor Cox, if you are elected president will you recognize the Irish Republic?" The Governor asked "Are you an American?" and when his interlocutor said that he was and also from Ohio, Governor Cox answered:

There is no phase or feature of the whole plan of the League of Nations which is more explicit than that which deals with the self-determination of the peoples of the earth. Before the League of Nations was devised came the armistice. That was founded upon fourteen principles and major among them was the principle of self-determination.

The philosophy was that the League of Nations desired not only the peace of the world now but continuing peace. The provision in Article X against external aggression was to protect the smaller nations against the bullying attitude of the big nations. You can't take the mountains and rivers as boundary lines and try to break up the homogeneity of a people and expect them to be happy.

I am in favor of the application of the principle of self-determination in Japan, in China, in Turkey, in Ireland or anywhere else.

A Little of Everything

By W. J. Clarke

A black and white illustration of a man in a striped shirt and trousers standing on a rocky shore, looking out at a body of water. A small dog is sitting on the rocks near him. In the water, a person's head is visible above the surface. The background shows a dense forest on a hill. The illustration is signed '© C. C. C. C.' in the bottom right corner.

345

celestial equator is also clearly marked in the interior of the sphere, and the ecliptic, or apparently yearly path of the sun among the stars is also plainly shown.

The impression gained by looking out at night upon a clear sky is that of a hemispherical dome of infinite size, studded with stars. The Celestial Sphere gives a miniature reproduction of this surface which we call the sky and in which the stars are commonly supposed to be placed. Necessarily, the sphere is of almost microscopic size, as compared with the universe. If the earth were represented in proportion, it would be an infinitesimal ball located in the center of the sphere, while an observer standing on this ball would be correspondingly tiny.

The earth, as we all know, looks flat to anyone standing on its surface, and we can see only one-half of the heavens at one time—the half which lies above the plane bounded by the horizon.

The same effect is gained in the Celestial Sphere by providing it with a so-called horizon table, which extends out from the inner surface of the sphere almost to its center, surrounding the observer and lying in the same plane as the center. There is thus exposed to a person standing in the center of the sphere a complete hemisphere, corresponding to the one we see above the surface of the earth, the other hemisphere being hidden by the horizon table, in just the same manner as the earth conceals the other celestial hemisphere.

Not only is the Celestial Sphere a perfect pattern of the firmament, but in every other respect, with the possible exception of shooting stars, the idea is carried out in detail. In it, the sun, moon and stars rise in the east and pass overhead, following certain definite paths, just as the real stars do in the real sky.

Fortunately for the observer, however, the effect is produced in exactly the opposite way, since, if this were not so, he would at times be put to the inconvenience of standing on his head. We know it is the rotation of the earth on its axis that causes the stars to move across the heavens, and that the sky itself does not move. In the Celestial Sphere the sky actually does rotate, being so mounted as to turn about the miniature earth, which we have imagined as being placed at its center.

Why not teach astronomy by this novel method?

Why give the birds all the benefits of high, cool, airy, quiet bedrooms? A man in California decided to stop envying the inhabitants of bird houses and imitate them instead. And now his neighbors are all talking of following his example

## High Living

How fortunate the little birdies who, on hot summer nights, sleep high up in the tops of trees, where they get the benefit of every breeze that blows and where they are not in danger of catching rheumatism when the ground vapors rise up on damp evenings!

So concluded Mr. L. H. Gregory, of Winters, California, after he had passed a number of sleepless nights tossing about on a hot bed in his stuffy bedroom. The result was that he decided to emulate the birds and roost high. But there were no trees in his yard large enough to hold a hammock up at the top, so he had to set his wits to work to devise another plan. Being an engineer, his thoughts naturally turned to an artificial tree, or something like it, and a few weeks later his neighbors were surprised to see in Mr. Gregory's backyard a steel tower

forty feet high at the top of which was a screened chamber about ten feet square.

Looking a little closer, they observed inside the chamber a bed and a couple of chairs, and then the secret was out; Mr. Gregory was using the chamber as a bedroom. But there were no steps or ladder reaching to the chamber from the ground, and everyone wondered how a middle-aged man could possibly shin up the steel supports forming a tower. The riddle was explained a short time later when a small elevator descended from the top of the tower and Mr. Gregory stepped out of the lift.

The elevator is operated by electricity and is made to just fit an opening in the bottom of the bed chamber, so that when it enters the chamber thru a trap door, which is used to keep out mosquitoes and flies, all the owner has to do is to step right out into the room.

Mr. Gregory has kept a careful record of temperatures which shows that up in the tower it averages ten degrees cooler than down on the ground. The air is also better at that height.

Not to mention the gentle zephyrs that play around!

## The Price of Success

*"You want success. Are you willing to pay the price for it?"*

*"How much discouragement can you stand?"*

*"How much bruising can you take?"*

*"How long can you hang on in the face of obstacles?"*

*"Have you the grit to try to do what others have failed to do?"*

*"Have you the nerve to attempt things that the average man would never dream of tackling?"*

*"Have you the persistence to keep on trying after repeated failures?"*

*"Can you cut out luxuries? Can you do without things that others consider necessities?"*

*"Can you go up against skepticism, ridicule, friendly advice to quit, without flinching?"*

*"Can you keep your mind steadily on the single object you are pursuing, resisting all temptations to divide your attention?"*

*"Have you the patience to plan all the work you attempt; the energy to wade thru masses of detail; the accuracy to overlook no point, however small, in planning or executing?"*

*"Are you strong on the finish as well as quick at the start?"*

*"Success is sold in the open market. You can buy it—I can buy it—any man can buy it who is willing to pay the price for it."*

## Cancer Millions of Years Ago

Among the most dreaded of all the afflictions to which, since the downfall of Adam and Eve, the human race is heir, is the curiously rapid growing tumor generally known as cancer. So little is known about the origin, cause and treatment of cancerous growths that this is one of the most important problems before the medical world today. There are several institutes devoted exclusively to the study of the causation and possible cures of cancers, their research output being contained in periodicals devoted exclusively to this disease.

It is a curious popular fallacy that diseases of all kinds are visited on the human race on account of the sins of their ancestors. One early writer closed his monographic study of the diseases of the old cave-bears of Europe in 1825 with the statement:

We have no historical data to prove how old disease is nor when it first attacked the poor, sinful human race. In every case disease is the fault of inheritance, and since they are visited upon the sons and daughters because of the sins of their fathers, they are the true sins of inheritance.

Rather somber philosophy, which

This cancerous growth existed millions of years ago in the tail of a large Mesozoic reptile. The tumor is shown by the large bulge seen in the middle of this segment

more recent studies have served to disprove.

We now know that disease existed before sin, since this latter seems to be an attribute only of the human race. Was it possible for a cave-bear to sin?

Cancer and tumor-like growths of many kinds are certainly not to be laid to this cause, since the gigantic land reptiles, the dinosaurs, which roamed the plains of the western part of the United States millions of years ago were afflicted with these uncomfortable growths. One of these tumors has been especially well studied and is known to have existed far back in the tail of one of those horrible creatures who in the Mesozoic stalked the earth with ponderous footsteps. Their tails dragged for a length of thirty feet on the ground and the afflicted individual possibly had his tail injured at the point where the cancerous growth appeared. We cannot be sure of this, however, but we do know that cancers develop more frequently today at a seat of injury than elsewhere.

The growth occupies the space between two backbones joints and has fixed them firmly together. It is a mass of solid bone or almost solid. On examination under the microscope, however, the growth is seen to be filled with many thousands of small blood spaces, exactly like some cancerous growths today which are known as haemangiomas. The bone is well preserved, after its millions of years in the shales of eastern Wyoming, and still retains the structure of bone similar to that seen in human bones. The specimen is not large, weighing only about twelve pounds in

its fossilized condition. The tumor probably was of little consequence to the dinosaur dragging it along the ground. A mass of only twelve pounds is a mighty small matter to an animal of twenty-five or thirty tons. Its chief value lies in proving to us that cancerous growths are a very ancient affair and were quite fashionable when birds were first learning to fly.

## Preserving the Tangled Web

Amateur entomologists will be interested in a suggestion made by Dr. Lutz for the preservation of all kinds of spiders' webs. The webs should be sprayed from an atomizer with artists' shellac, and then, if they are of the ordinary geometric form, pressed carefully against a glass plate, the supporting strands being at the same time severed. After the shellac is dried, the plates carrying the webs can be stored away in a cabinet. Even dome-shaped webs may be preserved, in their original form, by spraying them with shellac and then allowing them to dry before removal from their supports. Many spiders' webs are very beautiful, and all have interesting characteristics of the species to which they belong.

## Odds and Ends

Cigar ashes make good fertilizer.

\*\*\*

The Junior Red Cross has approximately 1,000,000 members.

\*\*\*

In the White House there are about 175 miles of electric wire.

\*\*\*

The deepest well in the world is near Fairmont, West Virginia. It is 7579 feet deep.

\*\*\*

Illinois has the largest membership of any state in the American Bankers' Association.

\*\*\*

One out of every 100 persons in the United States earns his livelihood by retail selling.

\*\*\*

The value of automobiles and accessories exported in the fiscal year 1920 is \$275,000,000.

\*\*\*

A woman has been named Collector of Customs at Salt Lake City. She is the first woman to receive such an appointment.

\*\*\*

The United States loaned \$11,800,000,000 to foreign nations during the war. Chief among the debtors are England, \$5,000,000,000, and France, \$3,300,000,000.

\*\*\*

Immigrants are now landing at Ellis Island at the rate of 5000 a day, which if it keeps up thruout the year will result in a third more arrivals than the highest record before the war, 1907, when 1,285,349 immigrants came in.

\*\*\*

The Forest Service estimates that 2,215,000,000,000 feet of timber now remain in American forests. This is only two-fifths of the amount which the country contained when the first colonists arrived, and we are now using timber four times as fast as we are growing it.

## Mr. Alligator Cleans Sewers

Consider the alligator! Generally he is supposed to be good for nothing except to furnish the makings of traveling bags—and he can only do that when years have added to his bulk. But Mr. Ben R. King, superintendent of waters and sewers at Fort Meade, Florida, has found a novel use for this ungainly creature. He trained one to aid in cleaning out 600 feet of clogged up twelve-inch sewer pipe after some \$1,500 had been spent without success on various sewer-cleaning contrivances, and when it seemed that the only thing left to do was to rip out the sewer pipe.

Mr. King happened to have a pet alligator by the name of "Dick" and noticing him crawling thru a piece of tile pipe out in the backyard one day, had an inspiration. Forthwith he seized "Dick," tied a rope about his body and sent him on several excursions thru the pipe. Dick learned readily enough to proceed on his way when the rope was given a slight jerk and the rest was easy. Attached to a stout rope he was lowered into the sewer manhole, and finding that he could not get out, finally proceeded to the next manhole, dragging the rope after him. This accomplished, it was a simple matter to fasten a chain to the rope and by dragging this back and forth remove the congested mass of sand and dirt.

Dick now has quite a reputation in South Florida and Mr. King is kept busy shipping him to various points where his services are in demand as a sewer crawler.

Central News

## THE LIGHT THAT LIES

An enterprising newspaper in Tunis recently borrowed a publicity stunt from the West and held a beauty contest. Among the thousands of contestants from all over that part of the world this little Arab girl was chosen as the most beautiful. Proving again, as Mr. Kipling subtly remarked, that "East is East, and West is West; and never the twain shall meet"

# Two Kinds of Walking

By Edwin E. Slosson

There are two kinds of walkers. Some walk to get somewhere; others walk for the walk. The former fix their eyes on their goal and steam ahead by the straightest route. The others stop on the way to look into the shop windows—or to pick flowers, as the case may be—and may even make a detour into inviting by-paths.

There are two ways of living. Some people spend their lives preparing to live. They are always looking forward to the time when they can begin to enjoy themselves, when they have got thru college, or when their children are grown up, or when they can retire from business or when they get all the money they need. Other people take their enjoyment as they go along, a weekly or daily pay-envelope containing such pleasures or satisfactions as may be within reach.

There are two sorts of readers. Some read to see how the story will come out. They rush thru the volume as tho it were a race course with a prize at the end, impatient of any delaying incidents, keeping close hold of the clue to the plot. If they miss the last chapter of a serial because somebody has thrown away the magazine before they get around to it—they are as irritated as tho the story were a riddle with a lost answer. Others read for the joy of reading. They know that life is not modeled after the "well-made play" of the school of Scribe. In real life there is no denouement, no simultaneous untying of all knots, no final harmonizing of all discords; there is no concluding curtain, only individual exits. Life just runs right on like an interminable motion picture film with more or less exciting episodes but no apparent plot. The person who loves reality in life and fiction will read the serial he finds in any stray copy of a magazine with the same interest that he watches the episodes he may observe on the street or in his circle of friends. If he gets the next chapter, so much the better, but if not, he is content with what he has already. On the other hand, the reader whose interest lies at the end of the book is invariably disappointed because when he reaches the end he finds only a blank page before him.

The reason I am making this classification is to warn the said parties of the first part, to wit, those who merely want to know how the story turns out, against reading *The Old Madhouse* by William De Morgan, or indeed any of his novels. The author had to leave before he finished the story. It is therefore even more true to life than his former books, and those who love life in the living of it will find it as

fascinating as "Somehow Good." His widow adds a chapter giving the explanation of the mysterious disappearance of Dr. Carteret, but it does not add to the interest of the volume to the true De Morgan lovers, for they got their money's worth in the preceding 555 pages. It might as well have been left unfinished like Dickens' "Mystery of Edwin Drood," which people are still puzzling over fifty years after. But if any one buys the volume on the recommendation of the orange-colored cover he will be entitled to a 33 1/3 per cent rebate, for the publisher guarantees that "there is a triple romance: Fred Carteret's with Nancy; the love affair of Nancy's sister, Cintra; and Charles Snaith's romance with Lucy." But the first romance exists only in the publisher's imagination. There was a love affair between Fred and Cintra and Fred and Lucy, and between Charles and Lucy and Charles and Nancy, but in all this crossing of the wires Fred and Nancy do not connect at any time. But advertisers do not read their books any more than do illustrators.

In Mrs. De Morgan's account of how her husband worked we can see why his novels have a substantiality and genuineness lacking in most of the fiction of the times. They read like real life because they were written as life is really lived, that is, from day to day with only a vague idea of the *terminus ad quem*.

When my husband started on one of his novels, he did so without making any

definite plot. He created his characters and then waited for them to act and evolve their own plot. In this way the puppets in the show became real living personalities to him, and he waited, as he expressed it, "to see what they would do next."

As the story was always read to me while in progress I too got to believe in the reality of the characters, and found myself thinking of them as real live people. and I have frequently asked him when he came down to lunch, or had finished writing for the day, such a question as, for instance, "Well, have they quarreled yet?" and he would reply, as the case might be, "No, I don't know if they will come to a quarrel; after all, I must wait and see what they do." However, towards the end of the book when an intelligible winding-up of the story became imperative, the plot was taken up and carefully considered, all the straggling threads gathered together and finalities decided upon, the latitude was always allowed for details to shape themselves after their own fashion.

My husband's handwriting was wonderfully clear and distinct, with very few erasures. He considered that he wrote very slowly, but judging by the amount of work he got thru, this cannot be regarded as having been the fact. He never made rough copies and practically finished as he went: everything was so complete that he found even a slight alteration in the text would often let him in for as much work as the writing of a whole chapter would have given him.

Latterly he found that he did his best writing after tea, but he never could be persuaded to give up the traditional working hours of the artist, with the result that he usually spent the whole day in his study, now allowing himself a short walk before dinner.

William De Morgan was sixty-four when in 1904 he wrote the first chapter of his first novel, "Joseph Vance." Between that time and his death in 1917 he wrote eight long novels, equivalent to about sixteen of the usual length. It would be well if all our authors would wait till they are sixty-four before they undertake to write novels. By that time they may understand something about the world they presume to describe. If they must write earlier let them write poetry. But it is absurd for them to plunge into fiction before they know fact. They rival one another in precocity. The record for early romancing has been held by America since Bertha Runkle produced "The Helmet of Navarre" at the age of seventeen, but now that Daisy Ashford has written a popular novel when only nine years old the precocity prize must go over to England.

By the way, "The Young Visitors" has been dramatized and produced in London, to the great joy of English children.

*The Old Madhouse*, by William De Morgan. Henry Holt & Co.

## Words

By Marion Hendrick Ray

Words, words, words,—  
You curious little things—  
Irresponsible parts of an intricate puzzle  
When moved by a sluggish mind.  
Chosen at random,  
Placed in conjunction,  
You carry messages of life—  
You carry prescience of death—  
You are handmaids of the Infinite,  
Bearing endless possibilities.  
Let but the breath of an intelligence  
Warmed by the pulsings of Spirit  
Blow upon you,—and you burst  
Into glowing flames of glory,  
Holding the world enthralled.  
Ever changing fragments  
In the kaleidoscope of language,  
May you flow from the facile pen  
Of many an Emerson, many a Browning,  
Bringing us visions of greatness,  
Becoming in your completeness  
Enduring talismans of light  
For the guidance of mankind.

## A Billion Dollar Bank

(Continued from page 333)

method becomes a shining example to every superior man.

It is more and more a puzzle to large employers to know how to conduct, or even describe, their employees' mutual benefit department. Words are so easily misunderstood. "Welfare work" smacks of paternalism. "Social service" sounds like the interference and obtuseness of a charity society. Even the term "industrial relations" implies that Capital and Labor have differences to adjust, with a game of strategy a necessary evil. A perfect solution of the difficulty has been evolved by The National City Bank.

The social, recreational, musical, even educational, features of the house are handled by the City Bank Club, composed of employees of The National City Bank, the International Banking Corporation and the National City Company. The income from a permanent endowment of some \$200,000 partially guarantees expenses. The management is up to the members, and the business done requires a modern suite of offices and a paid secretarial staff. We do not know any other instance where an employees' club is a complete business organization, operating as such. The dues are \$1.00 a year. Club members do such a variety of useful things that we can here note but a few of the most valuable and unique.

They publish an illustrated news magazine, which serves also as an open forum, a question box, a fund of humor, a field of sports, a treasury of biography, and a guide to advancement.

They conduct a bulletin board clearing house of information, with attractive posters and placards, changed every week on a regular schedule; some announcing events, campaigns, drives or contests appealing to members, others outlining special advantages or opportunities for promotion, others acting as "bracers" to help each worker improve his work and himself.

They administer an attractive, safe, investment fund, whereby more than 2000 club members have received 8 per cent interest on the \$750,000 deposited so far.

They manage a coöperative buying department, called "Buydirect Service," enabling members to purchase almost anything, from a paper of pins to a piano, at material discounts from current prices, with a bargain page in the club magazine, and a discount card entitling the holder to a rebate of 10 to 33 1/3 per cent at various leading New York stores. (The magnitude of operations is evident from one deal—the purchase last May, at lowest prices, of 18,000 dozen finest fresh eggs, the consignment thereof to storage, and the withdrawal and sale to members for winter use at prices then far below the current.)

They provide a home center for bachelor members by running, on a cost basis, a comfortable and spacious dormitory clubhouse at Brooklyn Heights, only ten minutes by subway from the

Transparent Leaf Body, showing Proudfit mechanism locked and ready for use.

—for all  
**Loose Leaf Binding**

*Proudfit*  
**LOOSE LEAF DEVICES**

IT is difficult to identify Proudfit binders by casual inspection, because they have the appearance of bound books. It is easy to identify Proudfits by greater serviceability, because they provide quickest and easiest leaf insertion and removal, and because they can accommodate from 1 to 1,000 sheets without adjustment.

Proudfit Catalogue Binder and Salesman's Portfolio combined.

Proudfit Loose Leaf Blue-Print and Catalogue Binder.

Proudfits have no rings or posts to distort their covers or scratch office furniture. They present a flat writing surface at all times and require less than one-half inch of the sheet edge for binding. They hold the sheets along the entire binding edge and prevent tearing; are adaptable for all loose leaf binding purposes: and are used to preserve the appearance as well as usefulness of printed or written loose leaf matter that must be kept constantly up-to-date, such as salesmen's portfolios, price lists, catalogues, photos, blue-prints, ledgers, accounting books city, county or state records.

Proudfit Loose Leaf Binders are sold direct or through factory branches in all large cities—they are supplied in a wide variety of sizes in four standard lines, as well as made to specifications.

**Proudfit Loose Leaf Co.**

Grand Rapids, Michigan

Transparent Leaf Body, showing Proudfit mechanism unlocked.

bank, with a splendid view of the ocean bay and the Manhattan sky-line, elegant drawing rooms, and a sea breeze thrown in for good measure.

They operate a realty company, buying for members houses selected by them, within commuting distance of New York, at a price consistent with the members' salary and savings; the plan works out so that members who participate will have paid, after a certain period of years, little more than they would have paid for rent, and will own their homes besides—a complete solution of the difficult New York housing problem.

They hold the usual athletic events in baseball, basketball, tennis, golf, bowling, skating and swimming; also they specialize in original, unique entertainments, hiring for these gatherings such places as the Hippodrome or the dining room of the largest hotel in New York, with programs, decorations and souvenirs long to be remembered.

Such notable activities, and many others, of a practical sort explain why the club has a membership of 3200, said to be the largest of its kind, with branches thruout the world. The heads of a bank are generally supposed to be formal, stiff and unapproachable; yet here they have come so close to the hearts and lives of their employees as to set up a world-breaking record for united action leading to mutual benefit. Not only every banker, but also every manufacturer, storekeeper, college president and church pastor would be greatly helped in his work of handling men by a detailed study, then a personal application, of The National City Bank psychology of organization. You can do almost anything with a man if you first put in him faith, knowledge, action. The faith of the church, the knowledge of the school, the action of the mart, must all be combined. Here, in this club, they are.

Let us see what happens to a boy of fourteen, starting to work as a page or messenger, and eager to advance. He meets club members and officers on the first day, so as to learn the ropes from helpers he considers not bosses but pals—a process of establishing right industrial relations that, praise be, is not called by that name. The lad is coached by the director of boys in the use of telephones and tubes, location of officers and departments, spelling of proper names and technical words. He is given a preliminary test in English, spelling, arithmetic, penmanship, and vocational psychology—then told what position will be his when he masters the fundamentals of the bank's principles and methods. He learns the value of promptness, neatness and courtesy before he starts his regular job.

Thereafter, he keeps in touch with the director of boys by daily visits, and keeps on going to school, attending morning classes from 8:15 to 8:55 in subjects like English, office practice, elementary economics, duties of citizenship. He can go thru high school in night classes, by aid of the club which

shares the cost; after eight years he can, if he desires, obtain thus a college degree—and be holding at the same time a responsible and remunerative position with the bank! The doors of Columbia University, New York University and the College of the City of New York are wide open to City Bank Club members. Add the further attraction of delightful recreation—athletic sports, gymnasium, orchestra and band, summer camps and vacations—and you offer a combined incentive that makes a boy in the bank vote himself a lucky lad indeed.

A full description of the educational features, many of them applying specially to the bank girls, would occupy all our space. The noteworthy fact is that the educational base is not pedagogical, but social, industrial, coöperative, instinctive, democratic. The way to fill a boy's head is to find his heart first. If you don't, you make of his head a rubbish heap.

WE turn to the broader activities. Reviewing the unprecedented growth of the bank's business—the deposits today are in excess of the total deposits of all the 2000 national banks in the country forty years ago—a head official explained thus:

"The career of the City Bank is closely identified with the history and progress of New York and of the United States. Its growth has been an integral part of their growth. Its success has been measured and determined by the ability of the management to judge and serve the needs of their business life. In every crisis the institution has been a reservoir of strength not only to its patrons, but to the community and the Government.

"Our supremacy lies most in the field of undeveloped service. Here we have had little competition. The unusual things a bank is able to do for its customers and the community may be the really essential things. Of course it is easier to confine oneself to the obvious, traditional, superficial service. Leadership, however, demands initiative, courage, foresight, human sympathy, ready coöperation, eternal progress. A bank that does merely the routine things expected of a bank will never emerge from the rut of mediocrity. The way for any bank to take the lead over its competitors, and become the dominant financial force in the community, is to render needed services that no other bank offers."

The demonstration of this truth resolves to a description of the organization and operation of The National City Bank itself. We give, therefore, a partial description of the most important and unique undertakings not often associated with general banking.

Perhaps the first essential is the development and maintenance of the personal element in banking relationships. By dividing the domestic territory it serves into districts, following roughly the lines of the various Federal Reserve districts, and by assigning certain officers to care for the transactions arising in each state, the

bank is able to maintain a personal contact with every customer, whether located in New York or San Francisco, New Orleans or Chicago.

The bank is in every way truly national in scope. Its officers are selected from all sections of the country, and of its official staff of nearly a hundred, the majority were raised, educated and received their early business training in cities other than New York. Likewise, the bank's operations reflect the same nation-wide character. The bulk of its loans are not made to Wall Street, but instead are extended to manufacturing and mercantile establishments located in all sections of the country.

Scientific research is equally emphasized. A trained statistician, backed by a corps of assistants, devotes much of his time to investigating, analyzing, and reporting facts of current interest bearing on world commerce. A statement from this department, for business men everywhere, is published in the large newspapers each Monday morning.

The special requirements of the bank's industrial customers led to the founding of the Industrial Service Department which furnishes a clearing house for information on industrial management and relative subjects, coöperates with manufacturers for improvement of industrial conditions, and offers aid to business concerns in obtaining competent efficiency advice. As a result of the work of this department there is assurance of closer coöperation between the banker, the manufacturer and the business man. The outcome of this coöperation must inevitably be that those so variously engaged will better understand each other and thereby be in a position to be more helpful, each to the other. This spirit of mutually coöperative teamwork cannot fail to be strongly promotive of the country's business welfare.

The volume of foreign mail necessitates much work in the Translating Department, whose experts both speak and write French, Spanish, Italian, Portuguese, Russian, Scandinavian, Greek, and the unfamiliar Oriental languages. A visitor from any foreign land finds an official interpreter stationed on the bank floor, at instant call.

Few business houses, with the exception of great factories and department stores, handle complaints with proper system, care and respect. The aim of department heads here is not only to do this promptly and satisfactorily, but to forestall criticisms and complaints by keeping records of errors, adjusting them, furnishing periodic detailed reports thereon, making constructive suggestions regarding the method or management of different departments with a view to preventing recurrence of errors.

A frequent source of mistakes lies in the overlapping of authority and responsibility, due to insufficient or inefficient organization. I have never seen a financial institution so thoroly

and effectively organized. The bank maintains eighty-seven separate departments, named alphabetically as follows: Accounting Voucher Register, Advertising and Publicity, Americas, A. M. & T., Analysis, Auditing, Bond, Bookkeepers Domestic, Bookkeepers Foreign, Bookkeepers Our Account, Branch Bank Accounting, Branch Bank Inspection, Branch Bank Training, Commercial Credit Export, Commercial Credit Import, Certification, Check and Statement Files, City Bank Club, City Collection, Cloak Room, Collection Export, Collection Import, College Class, Country Collection, Coupon Collection, Coupon Paying, Credit and Files, Customers Drafts, Customers Securities, Discount Domestic, Discount Foreign, Educational, Files Foreign, Files General, Files Record, Foreign Trade, Industrial Service, Information Foreign, Information General, Interest Domestic, Interest Foreign, Legal, Letter of Credit, Loan, Mail Incoming, Mail Incoming Registered, Mail Outgoing, Medical, Merchandise, Messengers, Money Counters, No. 8, Paymaster, Personnel, Petty Cashier, Photostat, Platform East, Platform West, Printing, Purchasing, Receiving Room, Reconcilements, Restaurant, Securities Shipment, Signature Control, Stationery, Statistical, Stenographers Emergency, Stenographers Foreign, Telegraph and Cables, Telephone, Tellers Foreign, Tellers Mail, Tellers Note, Tellers Paying, Tellers Receiving, Test Words, Ticket Journal, Time Keeping, Traders, Transfer, Transit, Translators, Trust, Tubes, Typewriter Repair, Vaults.

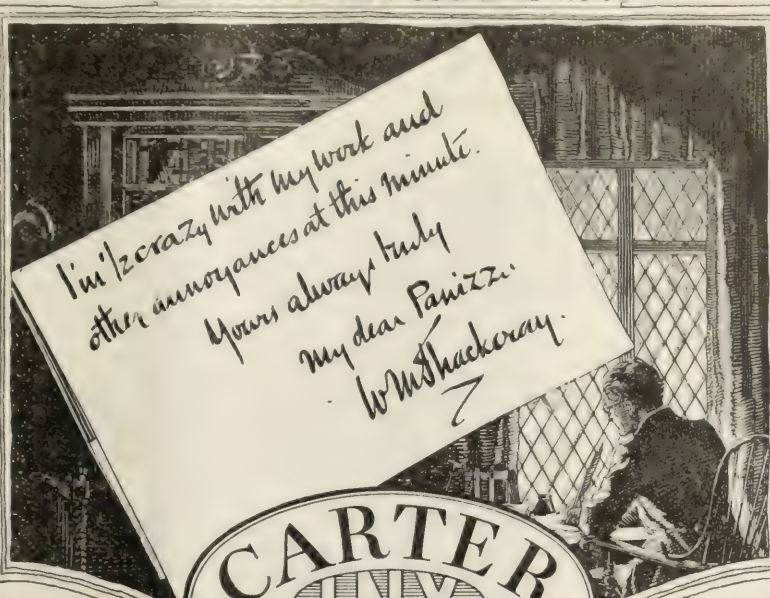

The National City Bank men are bankers to the world. How have they gained this one supreme title? And what are they doing to hold it?

A high official gave the answer in one word: *Character*. He said: "Only character begets confidence. Old-fashioned honesty of purpose is required today in a business organization, quite as much as new-fashioned rapidity of motion and utility of method. Since 1812 this bank has been developing a personality, based on character, that is now recognized universally and trusted wherever known. The secret of the growth of the bank lies in the growth of the faith of the people we have served.

"The reason for this faith is too subtle to define—a mental and moral influence outreaching the financial scope of all our branches, and preceding them in point of time. We never tried to build the largest banking house in America, or thought of doing it. Size is a by-product of service. The enlargement of our sphere of activity has resulted from the improvement of our sense of responsibility. The enlargement of any business is secondary to the improvement, and consequent upon it. The bank that fails to grow lacks character. We value most not our wealth, nor our size, but our character.

"A spirit of active and effective coöperation is possibly our main strength. All a community's interests

## HISTORICAL MANUSCRIPTS-NO 5

Excerpt from  
letter to  
Sir. Anthony Panizzi  
from W.M. Thackeray

**C**OULD Thackeray's "other annoyances" have included the persistent irritation of poor ink? We know that ink can be extremely annoying.

Make this experiment. Have the ink-well washed clean—to clear away any old sediment, which would otherwise affect the new ink. Then fill the clean well with Carter's Writing Fluid.

In no other way can you so fully realize the *helpfulness* of good ink—the clear, rich blue and free, even flow which makes writing a pleasure. Try this before you sign to-day's mail, or take in hand your personal correspondence—and see how much better the letter looks.

are mutual and reciprocal. The banking interests are identical with the manufacturing, merchandizing, and housekeeping interests. Just in proportion as we have recognized this joint-relationship and evolved satisfactory ways of promoting all community interests have we gained a world eminence, that only marks our desire to be of use to the world."

Every keen business man is awake to the new era of foreign trade possibilities. Both the manufacturing and merchandizing interests of American firms are actively promoted by such means as the following, now available to clients of The National City Bank, on the principle that American banks should more effectively serve American business men by handling their foreign business all the way thru to their foreign customers.

Trade investigators furnish trade reports to the bank's clients. Financial aid is given in the matter of foreign shipments. Good connections are made abroad. Solutions are suggested of business problems and difficulties arising in other lands. The inauguration or expansion of the foreign business of clients is promoted. By the aid of documentary credits, foreigners purchasing our goods can offer shippers here payment as soon as the goods are in transit, but know that payment will not be made until the goods are safely on their way.

Hundreds of foreign merchants visiting this country last year found the makers and sellers of goods they wanted to buy. Numbers of domestic correspondent banks were enabled to establish a foreign trade service of their own, by taking advantage of the City Bank resources, facilities and accommodations. Business firms requiring legal services abroad were given the desired assistance. Others learned how to organize an export department. Others located foreign selling agents for their products, or buying agents for goods they needed from abroad.

The whole idea of the Foreign Trade Department is to bring together the man abroad who has something to buy or sell and the American who has something to sell or buy, then to aid both, impartially and effectively, as their need may prompt. This ideal could be attained only by the organization of branches thruout the world, each branch to offer both a complete local banking service and a range of international banking facilities and commercial opportunities. Any branch of The National City Bank is an aisle to the markets of the world.

Innovations requiring much labor, thought and expense have proved invaluable. A trade file, for example, is kept in which all concerns with which the bank has dealings are listed by products; inquirers wanting the names of good export houses, shipping brokers, forwarders, and others in particular lines, may secure from the trade file immediate, accurate, knowledge. A more important feature is the credit report system. Prior to the development of this, American merchants, hav-

ing no means of establishing a credit rating on foreign customers, quite frequently demanded cash in advance, thereby offending and often losing their best patrons. The bank now has authentic data covering more than 200,000 foreign names, sharing the information with clients on request.

But education is the object of life, and the institution, whether home, church or business, that fulfils a high destiny must put education first. So the bank distributes yearly to its agents, clients and the world in general a larger number of publications than is catalogued in the Congressional Library at Washington. Of the 2,500,000 pieces of literature thus given out, more than two million are of distinctly educational character.

"Foreign Trade Opportunities" is a mimeographed report issued weekly by the Foreign Trade Department for the bank's clients, setting forth specific opportunities for American producers to find markets abroad. The "Foreign Trade Record," issued weekly by the Statistical Department, analyzes trade statistics and presents germane facts regarding the production, exportation, importation and consumption of specific articles of international commerce. An illustrated monthly magazine, "The Americas," dealing with world finance, trade and economics, reaches a yearly circulation of more than 300,000 copies, and is now a recognized authority in its field.

The most widely read of the bank's publications is the "Monthly Bank Letter," in English, French and Spanish, treating of current problems in business, finance, economics, government and sociology, having a circulation of more than a million and a quarter a year. New requests from those wishing to be placed on the mailing list are now received at the rate of 2000 per month. More than 300 correspondent banks in this country have the bank prepare special editions of the Letter, each local bank circulating from 100 to 10,000 copies among its own customers, friends and inquirers.

A special need, local, national or international, for special knowledge is met by a special publication, written by an expert, usually a vice-president or other high official of the bank. Among the pamphlets and booklets of international scope already prepared and now being written for the benefit of the public are those entitled "Trading With Our Neighbors in the Caribbean," "The Function of Imports in Our Foreign Trade," "Our South American Trade and Its Financing," "Trading With the Far East," "The Development of Scandinavian-American Trade Relations." (The latter two are in preparation.)

The most prolific author of these special publications, Mr. George E. Roberts, was formerly director of the United States mint. He is now a vice-president of the bank. Impressed by the wonderful scope and mission of these publications, I asked Mr. Roberts to give a personal message to the bankers of America regarding the possi-

bilities in educational work of this character. The weight of the message lies in the summation it offers of the experience and success of the world's largest banking organization.

The vice-president said: "We have only done, perhaps on a larger scale, what every bank in America could and should do, each in its own way. Some of the very smallest banks, in towns of only a few thousand population, are conducting service departments, distributing service literature, and therefore leading the business thought, industries, and finance of their community. Even the smallest bank will best promote its own interests by studying the needs of its customers and finding a way to meet them in advance of, or in excess of, their fulfillment by other agencies. The banker who becomes known as a courteous, reliable counselor in the community should finally double the business of the bank. It all comes back to the bank in the end.

"Teach your customers, actual and prospective, how to do more, earn more, save more, have more, be more. Take an active interest in community prosperity. Aid the farmers, or manufacturers, or other business men, to stimulate production. Plan a generous distribution of literature specially valuable to the largest classes of wage-earners and wage-spenders. Offer to help solve the commercial, financial and economic problems of your constituents. Make your bank known as a consultation service bureau, if you would make it most widely known as a bank."

All the good we sow we reap again. But the greater joy is in the sowing.

ment railroad and thence to the seaboard for export. An appropriation of at least \$1,000,000 should be made by Congress for road construction in Alaska. The appropriation would be fully justified by America's need of the commodities Alaska can give us if she in turn is given transportation.

At the same time additional moneys should be given for further investigation of the mineral, pulp-wood, water power and other resources of the territory. Investors cannot be expected to put their money to work in Alaska nor settlers to go there without more explicit information on Alaska's resources than is at present available.

From the standpoint of value of annual produce and numbers of men employed, the fishing industry is the most important in Alaska. The investment in salmon canning increased in the five years from 1913 to 1918 from \$31,341,670 to \$63,901,397 and the number of canneries was nearly doubled.

However, the Alaskan salmon catch has probably reached its maximum and any effort toward a more intensive development of these fisheries would lead to their rapid depletion. Additional safeguards against over-fishing are needed to permit the present salmon

# Paint Your Car *with*

## A Million Cars Made New—

**I**SN'T your car actually running as well or nearly as well as the day you bought it? Maybe better! Does it need anything to make it a new car except a smooth, glossy coat of enamel?

Let's see what that means.

Next Saturday afternoon give the car a thorough washing and allow to dry thoroughly. Pry off the top of a quart can of Murphy Da-cote Motor Car Enamel and flow on a coat with a soft varnish brush. Lock the garage doors. Next day roll her out, pack in the family and flash a bright, brand new car on the neighborhood.

Doesn't sound difficult, does it? More than a million car owners have done this very thing.

Da-cote is so smooth that it flows just a bit before setting, so that all brush marks and laps disappear.

Da-cote comes in black and several popular colors. Send for a color card and for the name of a merchant who sells Murphy's.

## BON-OPTO

SHARPENS VISION

It's a system of treating the eyes at home; is practiced daily by hundreds of thousands of people with great satisfaction. The Bon-Opto system quickly relieves inflammation of the eyes and lids. It cleanses, soothes, and rests tired, dusty, work-strained eyes and is a help to better eyesight. Ask your druggist. He knows. He will refund your money without question, if you are dissatisfied. There is no other home eye treatment like Bon-Opto.

industry to yield a large and continuous annual return.

The salmon catch overshadows all the rest of the fishing industry, but there have, nevertheless, been notable increases in the halibut, cod, herring and other Alaskan fisheries in recent years. The herring and cod fisheries are enormous and the present annual yield is but a fraction of what might be produced. The halibut fisheries, on the other hand, need additional protection to prevent exhaustion.

The United States has a special responsibility in Alaska. It grows out of the fact that nearly all of the territory's resources are directly or indirectly controlled by the federal government at Washington. About 99 per cent of the land still is held in Government ownership. The development of coal and oil deposits is under Government leases. Water powers and fisheries are under federal control, and nearly all of the timber in Alaska is owned by the Government.

The control of Alaska's resources is vested by law in a number of bureaus and departments of the Government. Rules and regulations relating to Alaska must be made at Washington under existing laws. This long distance administration of Alaska's affairs undoubtedly has been a serious handicap to her development. Regulations are made that do not always meet local requirements and sometimes unjust decisions are rendered, simply because those who must make them are not familiar with local conditions and cannot visualize the situation.

All this should be changed, if Alaska is to prosper. The different activities relating to Alaska, the administration of railroad construction and operation, the building of roads, public lands, leases, waterpowers, fisheries and timber, should be concentrated in one department. The man or men administering Alaska's affairs should have a more intimate touch with the Alaskan territorial government. And they should be held more directly responsible for the development of the territory.

If the American Congress will do the things that are necessary to give Alaska its chance, Alaska in return will show us a development during the coming years second only to the development of our own western states during the last half of the nineteenth century.

bunal can use properly and advantageously, by all means let it be appropriated. I would even go further. I would take and combine all that is good and excise all that is bad from both organizations. This statement is broad enough to include the suggestion that if the League, which has heretofore riveted our considerations and apprehensions, has been so entwined and interwoven into the peace of Europe, that its good must be preserved in order to stabilize the peace of that continent, then it can be amended or revised so that we may still have a remnant of world aspirations in 1918 build into the world's highest conception of helpful coöperation in the ultimate realization.

"I believe humanity would welcome the creation of an international association for conference and a world court whose verdicts upon justiciable questions this country in common with all nations would be both willing and able to uphold. The decision of such a court or the recommendations of such a conference could be accepted without sacrificing on our part or asking any other power to sacrifice one iota of its nationality."

### WOMAN SUFFRAGE

Cox To a delegation from the National Woman's Party on July 16, 1920, as presidential candidate, Governor Cox said:

"I find nothing in Holy Writ or elsewhere which shows the Almighty ever gave man the right to say that he could vote and women could not. . . .

"I give to you without any reservations the assurance that my time, my strength and my influence will be dedicated to your cause as our combined counsels might suggest, with a view to procuring a favorable result in Tennessee."

As far back, however, as 1913 he is recorded at the National Woman's Party headquarters as in sympathy with the movement.

In his speech of acceptance Governor Cox said:

"The women of America, in emotion and constructive service, measured up during the war to every requirement, and emergency exacted much of them. . . . They helped win the war, and they are entitled to a voice in the readjustment now at hand.

"Their intuition, their sense of the humanitarian in government, their unquestioned progressive spirit will be helpful in problems that require public judgment. Therefore, they are entitled to the privilege of voting as a matter of right and because they will be helpful in maintaining wholesome and patriotic policy. . . . I have the same earnest hope as our platform expresses, that some one of the remaining states will promptly take favorable action."

Like Senator Harding, since his

## How About Your Lawn?

—do you have trouble keeping the grass cut and sod rolled?

The Ideal Power Lawn Mower has simplified the grass cutting problem for hundreds of large estates, public parks, colleges, golf clubs, etc.

Wherever the Ideal is used, labor troubles vanish and smooth, velvety lawns are maintained at a minimum expense.

The Ideal will cut from four to five acres of grass per day; doing the work of five or six hard working men with hand mowers. Moreover, the Ideal is a power mower and roller in one—the sod is continually

kept smooth and firm because it is rolled every time the grass is cut.

There is still time to get your Ideal and making a big saving on the care of your lawn this Fall, and at the same time have your machine ready for the early Spring rolling and mowing.

Furnished with riding trailer at nominal extra cost; also with special set of blades for use on putting greens.

You can secure the Ideal through your dealer or direct from factory. For Catalogue and complete details, address

nomination Governor Cox has kept in close touch with the suffrage situation in the various states in which the legislature has convened during the summer, and has openly worked for ratification. The "neck and neck" race between the candidates as to who could persuade Tennessee first is one of the interesting phases of the campaign thus far.

On August 18, when ratification of the suffrage amendment by the Tennessee legislature was announced, Governor Cox said:

"The civilization of the world is saved. The mothers of America will stay the hand of war and repudiate those who traffic with a great principle."

**Harding** Senator Harding's apparently intense interest in woman suffrage manifested since the Chicago convention, and particularly during the last few weeks, seems not to date back five years.

He is on record as having said to a delegation of suffragists who interviewed him on June 24, 1915:

"I have never been permitted to go into the suffrage question in detail in any way. You may not like it, but I am perfectly frank to say that I have up to this date been utterly indifferent to the question—neither hostile toward it, nor for the suffrage cause."

On October 1, 1918, Senator Harding was recorded as paired—not voting—on the national woman suffrage amendment. On February 10, 1919, he voted in favor of the amendment, as he also did on June 4, 1919, when the amendment was passed.

On June 22, 1920, as presidential candidate, Senator Harding received a delegation of suffragists at Marion, Ohio, whom he addressed as follows:

"I need not tell you of my interest in the consummation of woman suffrage. I voted for it in the Senate, and a vote records a Senator's purpose quite as faithfully as anything he may do."

"Nothing would please me more than to have ratification made effective to give American womanhood full participation in the elections of next November. This desire, sincerely spoken, does not conflict with my determination that I could not, with propriety, attempt to force any state executive to hasten action in violation of his own sense of duty. . . . I would not wish my party to believe me inclined to wield a club. If any state executive should ask my opinion about extraordinary efforts to consummate suffrage, I frankly will commend the thing that you desire."

In his speech of acceptance, Senator Harding said:

"The womanhood of America, always its glory, its inspiration, and the potent uplifting force in its social and spiritual development, is about to be enfranchised. Insofar as Congress can go, the fact is already accomplished. By party edict, by my recorded vote, by personal conviction, I am committed to this measure of justice. It is my earnest hope, my sincere desire, that

the one needed state vote be quickly recorded in the affirmation of the right of equal suffrage and that the vote of every citizen shall be cast and counted in the approaching election."

On August 18, upon receiving notification that the Tennessee legislature had ratified the suffrage amendment, Senator Harding said:

"All along I have wished for the completion of ratification, and have said so, and I am glad to have all the citizenship of the United States take part in the presidential elections."

#### PROHIBITION

Notwithstanding the fact that Cox Governor Cox has been termed a sympathizer of the "wets," it must be conceded that he has stood for law enforcement, and was the first Governor of Ohio to enforce the Sunday closing laws.

Referring to the prohibition amendment to the Ohio State Constitution, voted on November 5, 1918, Governor Cox said in his message of January 13, 1919:

"The objectives in this amendment are very plain. There is no conflict between intent and phrase. The electorate has issued the mandate that intoxicating liquors as a beverage shall not be manufactured for sale, nor sold, and the responsibility of providing the means and method of law enforcement is with the legislature."

"This amendment is not the expression of a caprice. The subject in question has been persistent as an issue for several years. Nothing can be more subversive of the public interest than indifference to, or defiance of, the organic law of the State."

"It has been suggested that the enforcement of the prohibition law be left to the communities, and that the State content itself with the thought that local officials are sufficiently vigilant, and the public interests will be safeguarded. . . . Reduced to plain terms, . . . the enforcement of the law in the first instance should be with the public officers in the community, but a vigilant eye should be with the State, and power of removal from office should be given the Governor in case of delinquency."

On the question of prohibition, Senator Harding's position seems rather indefinite. He voted for the national prohibition amendment, altho he is on record as not regarding the question as a moral one.

"I am not a prohibitionist," Senator Harding said in the Senate on August 1, 1917, "and never have pretended to be. I do claim to be a temperance man. I do not approach this question from a moral viewpoint, because I am unable to see it as a great moral question."

Over the President's veto, Senator Harding, on October 28, 1919, voted in favor of the Volstead bill dealing with prohibition enforcement, altho he had previously expressed his doubts regarding the practicability of enforcement, thus:

"I do not think a prohibition amendment will be effective. . . . You cannot

make any law stronger than the public sentiment which sees to its enforcement. I have watched the progress of this question . . . and while I stand here and fully express my doubts about its practicability, at the same time I recognize that it is growing and insistent and persistent and it must be settled."

"Ever since I have been in public life in a small way I have seen men continually measured by the wet and dry yardstick, and the submission of this amendment is going to measure every candidate for public office by the wet and dry yardstick until the final settlement. When I say that, I have expressed my strongest reason for putting a limitation upon the pendency of the amendment. I want to see this question settled. . . ."

"I am willing to go further and join in a movement to make it effective thru a process of compensation to the business destroyed."

Upon most of the "wet" and "dry" issues considered during the time he has been in the Senate, Senator Harding has voted with the "wets"—according to Washington legislative experts, thirty times out of thirty-two.

The following is his verbatim pronouncement on this subject, as a presidential candidate, in his speech of acceptance:

"I believe in law enforcement. If elected, I mean to be a constitutional President, and it is impossible to ignore the Constitution, unthinking to evade the law, when our every commitment is to orderly government. People ever will differ about the wisdom of the enactment of a law—there is a divided opinion respecting the Eighteenth amendment and the laws enacted to make it operative—but there can be no difference of opinion about honest law enforcement."

#### LABOR
